From that day Pat took an active part in the good work that was carried on. While organizing the dirt-jobs through the Northwest, many a cook was put on the tramp without notice, for putting out bum chuck in camps where Pat was active. Many a contractor was told to give the mulligan mixer whatever he ordered in the line of supplies. A good cook was always sure of plenty of support, and the boys were there to see to it that he got whatever he wanted from the commissary when job organization existed.

Many a "hard-boiled Bossman" was told to take it steady, and was shown what job organization meant to a bunch of dirt-movers. There was none of this old "Come on with 'em, boys," or "Hurry up, John" on the works, no "Stand 'em out, and go and get your time"; for experience had taught many a Bossman that when one Wobbly left by request as a general rule it means paying off the entire outfit. Pat never forgot to explain that their motto was, "An injury to one is an injury to all."

Many a contractor knew what it was to have the Wobbly preamble thrown at him, and his outfit tied up, unless he conceded to the demands of the workers. Many a time Pat was on the committee that presented these demands. Whenever the contractor didn't see fit to come through, it would have done you good to have seen how quick a bunch of skinners could hook it. In fact, it was nothing to see the outfit tied up and the stock standing out on the works. It often took the contractor until the wee hours of the night to gather up his plugs after he had had "the flag hoisted on him."

It could never be said that Pat McGoogan was one of those to "grape-up" around an outfit, but it is nevertheless a fact that Pat had a certain amount of influence over an element who followed this work. The funny part of it is that several

of the eontraetors in that part of the eountry were more aware of this faet than Pat himself. On a big new job Pat took on the bossing.

Talk about your "faney skinner's" and effieient dirt-distributors. Pat MeGoogan had the finest aggregation in the eountry. There was no ehanee of setting in, unless you had a "Hy-ster" and a rep like "Race Horse Shorty" or "Dan Pateh."

Well, this wasn't sueh a tough looking spread that Pat was running, but to say the least, it eould stand some improvement in the ehuek-line. As a rule, one thing that Pat was strong on was the best of ehuek; he sure believed in padding the "old bread basket," but being as he was bossing, he kind of overlooked this little matter.

Instead of finding a high place to stand and holler: "Come on with 'em, boys," Pat used different tacties to get effieiency. He would remark: "The contractor knows that I'm a Wobbly, and he knows that I am working a solid Wobbly crew on this job. We will show this eontraetor what a bunch of real dirt movers can do. We'll show him that we are not a buneh of Hoosier's that seatter muck all over the eountry. They call us I. W. W.'s 'I Won't Works,' We'll show him that we can move dirt and not only that, but put it between the stakes where it belongs."

Well, to show how the slave is guided by influence, Pat, with his old bull made a regular raee traek out of the wheeler run. Yes, and the eonversation around eamp was used to keep things moving too.

Pat would eome right into the bunk-house with the hands after supper. The first remark would be, "Not sueh a bad supper, men," then he would tell about the "Vineyard" (where the Bossman eat at one table and the hands at another) in the eamp below. Pretty wise old Pat! He told them anything to keep their minds off the bum conditions that existed in "his" outfit. Then the old timers would tell about the tough layouts in some of the dirt outfits of a few years back. Pat sure could talk this stuff. It was duck soup for him.

He often made mention of outfits being run in that locality, that were not in the same class as "our outfit", and if some of the agitators wanted to make better eonditions, he advised them to take on one of the "bum outfits, as 'we' already had conditions suitable to all" (exeept a few disrupters) as Pat ealled them.

The nature of this big job was somewhat similar to all dirt work. It was building a railroad grade, whieh was to open up some rieh timber land. This timber was owned by a million dollar outfit, but by the interest that Pat and some of the lead hands took in the work you would of thought that they were doing the job for themselves.

In one case, one of the hands was taking it kind of steady, and Pat remarked: "Say you! What kind of a Wob are you anyway? Are you laying down on a fellow worker? (refering to himself). The answer was: "Why, no, this is a million dollar outfit that is doing this work, and the working elass and the employing elass have nothing in eommon, so why should I hurry?" This was belittling Pat's prestige to put the eoncern ahead of the fellow worker Bossman (himself), so the skinner that was using the slow down taeties was paid in full, right up to date.

There was a "big ehump" earrying water, who was sure juggy and found it no trouble "slowing down on the job" even when working at the essential oceupation of "paeking water." The water-boy had been resting in one of John Farmer's hay shoeks, whieh was elose by the grade.

After about an hour at this, he pieks up the bucket and makes the rounds. The hook-skinner, when offered a drink, remarked, "That dam water is hot, I don't want that."

"Fine and dandy," says the water-boy, "the less you drink, the less I have to paek."

This was more than MeGoogan eould stand, so he says to the water-boy. "You are a hell of a Wob. Go get the fellow workers some good eold water."

The answer was, "Say, Pat, if these apes don't kick about the bum ehuek they are getting, they have no kiek coming about the water. If they get better ehuek they will get good eool water to wash it down."

Pat eomes baek with, "You got it in for that fellow worker that is eooking."

The answer was, "I don't know whether it is the eook or the eompany. But if we tied the outfit up for a eouple of days, we might be able to find out."

This ended the argument.

Not long after this a strike was deelared on the whole line. Onee the strike started, Pat got into the game with his old pep. This is where he got next to himself and saw that he was still a member of the working elass. The outfit was tied up solid and "his" camp came out to a man.

Pat went through the sehool of experience. He learned that is was impossible to emaneipate himself with a boss man job. As long as there is a elass struggle, there will always be strife between the working elass and the employing elass. This sentiment may seem dead at times, but it is always bound to flare up, even on a job with a fellow worker like Pat MeGoogan bossing.

It makes little differenee to him now whether it's a big seissor, or a fellow worker doing the gaffering. Pat's eard is paid up to date, and he now uses it as a weapon to combat the employer, instead of as a means of holding down a job bossing, for, of you remember right, he took out this eard to get back at some of these bossmen.

More power to Pat!

## MONOPOLISTIC IMPERIALISM

The world has entered a new era. Even real scholars in the field of economics often fail to understand and allow for the workings of this new period. The means of production have become monopolised. The few dozen big financiers of the world have, through financial and banking machinery, obtained practical control of the world's industries.

Labor tactics to meet this new situation must be revised. Onto the scrap heap at once go the old already decrepit craft bargaining methods. Peaceful wage bargaining is an idle dream when trying to bargain with a monopolist such as Gary or Rockefeller. Craft unionism, outworn and useless from a class point of view for the last quarter of a century, will be impossible from now on.

The I. W. W. need concern itself little with arguments against craft unionism. It need concern itself little with polemics against class compromise. We MUST concern ourselves greatly with industrial tactics and maneuvers at once, if we are to win success over the consolidated might of the completed monopoly.

The drive, the campaign, the practical alignment of organization forces, these are the most important subjects for consideration by the I. W. W. and revolutionists everywhere. We have the greatest industrial program theoretically of all of them. Through practical organization workmanship we can realize that program. On to the job! Plan and organize!

## GETTING BORED

A strange fact in revolutionary circles is the aptitude which persons with an apparently realistic outlook on life have for adherence to principles and formulas. For more than a year now the I. W. W. has been a target for the advice of groups of rebels who have repeated over and over the dictum that radicals should bore within the reactionary trade unions.

After listening to repetitions of this advice for many months it seems to us that the matter has become a fixed idea. Boring from within has become a manifestation of dementia praecox with some purveyors of revolutionary ideas.

The I. W. W. is not opposed to the PRINCIPLE of boring from within. It is opposed to the TACTIC of boring from within in specific instances. How ridiculous is the idea that the I. W. W. membership should join and bore from within the Timberworkers' Union a still born, officials' paper union, that never had any power, purpose or prestige. The thing is absurd.

On the other hand the I. W. W. realizes that among the organized miners in the coal fields of America the way to reach the membership with the ideas and teachings of revolutionary industrial unionism is not by staying away from these workers but by getting on the job and working with them.

The I. W. W. attempts to tackle the situation that exists in each industry and branch of industry according to the special facts which bear on the situation there, and not according to general made to order theorems for public consumption.

The sincere advocates of boring from within have drawn up no definite constructive plan for action in any of the industries. They do not seem interested in the industries anyway. No specific industrial problem has been taken up and worked out according to the special facts that obtain in the industry under consideration. The sum total of the activity of the active borers seems to be in the giving of general advice. It is rather boresome.

# Splitting the Big Drive

**By Wm. Dimmit**

THE annual convention of Agricultural Workers' Industrial Union No. 110 is over. According to all precedents that means that the drive is completed and that all will be dormant till the next harvest of wheat calls for men and more men.

This year has not been a customary year, however. The drive in all its earliest stages assumed new forms, and greater strength and economic power was developed than ever before. This year the convention has not ended the drive. **On with the organization drive,** was the slogan there and everywhere.

### New Tactics

It is going on and is carrying into new fields all the energy and spirit that were generated in that great two thousand mile sweep that astonished many of our own members as much as it did the boss. The I. W. W. has learned that successful organization requires not only the perfected theoretical program of Revolutionary Industrial Unionism, but also detailed plans for action based on the facts of the industry that is under consideration.

The big harvest drive was not altogether a spontaneous result of social conditions. The organization strength and solidarity displayed there were generated by skillful maneuvering on the part of the active members and delegates who worked in accord with the big central plan. The same tactics applied to other industries will bring the same results and to prove this theory the active membership is directing the biggest drive that the organization has ever known into fields never before covered.

### Splitting up for Fresh Starts

In northwestern Dakota the many thousands of members of the I. W. W. were finishing up the last work of the Central American harvest. On into Manitoba the work was spreading and in the prairie centres of Canada the plans were being laid to co-ordinate the Canadian organization work. Hundreds of members and delegates crossed the line into the "King's" territory and are even now tossing the last bundles while the early snows are coming down. To the east of the Dakota centre lies the short log country of Superior district. Hundreds of active workers and delegates have gone into the woods there, and transferring into the lumber workers' union are carrying and pushing the work of organization individually.

To the West turned the greater part of the vast body of Red Card members. Into the beet harvest of Montana they poured and on through Butte, branching down into the beets of the Idaho Falls irrigated lands and so into Utah.

### Westward Bound

Billings, Montana, became wobbly congested. Delegation after delegation arrived from Dakota and then after the local harvest of beets was finished, they split two ways. To the west towards Butte and Idaho Falls went one section to sweep on into

**A. WENATCHEE ORCHARD**

the battle scarred territory of Spokane, where the Palouse harvest was in its last stages. Then on into the fruit harvest of Wenatchee and into the beets, hay and fruit of Yakima.

Let us follow this westward split from Billings, remembering that we are only dealing with a branch of the great drive. From Wenatchee and Yakima on over the Caseades onto the coast the harvest workers poured and into the Marine Transport Workers many active men have transferred. Into the woods also have spread the seasoned harvest stiffs and the spirit of the great drive goes with them.

Down the coast from Seattle sweeps the wave of red card agitators and under the noses of the surprised native sons they unite with their compatriots from Billings, who have played the Idaho Falls and Utah country. In California the rice harvest is on. New life and pep is being injected into the workers of this section who have struggled so long and with such hardships against the frame up gang and their rule of iron.

The California drive on the rice fields and then on the orange and citrus orchards is being laid out in detail. The plans are carefully worked out in regular 110 fashion and this winter will see the big summer drive repeated on a big scale in sunny California.

### The Southern Split

The other split from Billings, Montana, went south into the oil fields of Wyoming and down into the beets of western Nebraska and eastern Colorado. The fruit of Colorado was not neglected and the Wobbly is on the job throughout all sections.

From the beets near Scott's Bluff, Nebraska, hundreds came back to Omaha, which territory had been covered by the northern sweep of the summer harvesters. Here was held the convention by the elected No. 110 delegates and here was laid the plans for the big oil industry drive that is now just gaining momentum.

A special conference of oil workers who took in the No. 110 drive met and laid preliminary plans for the big organization campaign that is now sweeping the mid-continent oil field. This unofficial conference submitted their plans to the No. 110

THOUSAND MILE LINE DISCOVERED

convention, which went on record to back up their new oil drive in every way and which donated $2,000 to start the big clean up.

On November first an official oil workers' conference was called to complete the plans for field work. Dozens of the active delegates, who are oil workers, participated in this conference and were assigned sections to cover in the oil industry.

### The Oil Fields

The time for the oil drive is well chosen. The lack of activity shown by the Blue Card union has disgusted its membership with it. Not only has this union done nothing to improve conditions in the mid-continent field, but seems unable to lend active support to the members of the California fields who struck to maintain conditions already won by them.

The twelve-hour tower and the ten-hour shift will have to go declare the militant drillers and pipe liners and the I. W. W. shows the way to win. The new tactics of throwing groups of active workers and delegates into section after section and backing them up until the entire industry has been covered, will succeed in developing the organized economic power.

### The Marine Industry

The two industries into which the harvest workers are now concentrating are Marine Transport and Oil. No. 110 is anxious to boost the M. T. W., but no plans have as yet been laid out to sweep this industry with a drive carried out in accord with the new methods.

That the M. T. W. presents a most important opportunity for organization by the I. W. W. none recognize as well as the marine workers themselves. Thousands are joining the organization and in the near future it is hoped that the final phase of organizing these workers according to plan will be entered into.

Many No. 110 members have transferred to the M. T. W., especially on the Pacific coast, and with the unity that now has been restored to the ranks of this union, the organization opportunities look better than ever before.

Oil and Marine Transport drives are the need of the hour and the harvest workers are doing their best to fill the need. Also in lumber and railroad organization they are being felt as an organizing force.

The eastern fruit drive did not materialize. The failure of the crops throughout the East made it impossible to go through with the plan for organizing the workers in this section. Next year will see the apple knockers in this big country worked over by the wobbly delegates.

No, the harvest drive is not over. From coast to coast rings the slogan today—ON WITH ORGANIZATION.

# Book Review

**The New Policies of Soviet Russia.** By Lenin, Bukharin, Rutgers. Chas. H. Kerr & Co., Chicago. $1.00.

This book is a compilation of three essays. The first, by Lenin, in his customary clearcut, analytical style, discusses the new policies of Soviet Russia and proves by quotation and logic that the policies are not new, at least so far as he is concerned. With a notable absence of metaphysic he forces home point after point.

We learn that social ownership and control of industry is not to be had in the same way that mushrooms are gathered after an unexpected storm.

Even with the social power in the hands of the Russian workers it is emphasized that industrial communism comes into being by the **evolutionary** substitution of communistic methods to replace the patriarchal, small commodity, or private capitalistic forms which exist in Russia side by side.

The road to socialism lies through a period of national accounting and control—which means a form of state capitalism for Russia. The victorious struggle by the revolutionary workers for power does not alter the necessity for this evolutionary development. The dictatorship of the proletariat may make possible the hurrying of some of the stages of small scale production and private ownership, but it cannot jump them.

"Military communism," Lenin says, is not communism at all. Although necessary, under the circumstances of civil war. "It did not and could not meet the problems of proletarian policy."

The new policies of Soviet Russia are formed to give aid to the development of general production and state capitalism. Communism can only be built on the completed structure of large scale industry. It is the policy of the Soviets to build up that large industry in the only way it can be built up—through capitalism. But the capitalism that they propose is not the capitalism of Stinnes, Morgan or Gary , but state capitalism by a proletarian state.

Is it possible to combine and have side by side a Soviet state, the dictatorship of the proletariat and state capitalism? Consideration of these questions are guiding the Soviets in the formulation of their new policy.

The short essay by Bukharin deals but little with the new policy except as a sounding board against which to throw his ideas as to the relative impossibility of conducting a revolution without a paralysis of industry. Ignoring completely the chances of forming revolutionary industrial organizations to function in industry for both industrial production and class struggle during revolutionary periods, he hastens to the analogy that one cannot make omelets without breaking eggs.

He quotes the fact that in the old bourgeois revolutions the middle classes had already built the structure of the new bourgeois society in the shell of the old feudal one and so prevented a paralytic breakdown of production. He refuses to glance at this historic fact in the light that the industrialist would at once see it. He refuses to grasp the ready idea that he himself unearths, and that is that in order to prevent a complete demoralization of industry during a proletarian revolution, it is necessary that the workers build the structure of the new society in the shell of the old capitalist one.

Bukharin through absorbtion in political subjects, which perhaps are vital to Russia, overlooks the vast industrial field which is the most vital and potent factor in the coming revolution in all capitalist countires. Because of this fact he not only fails to give information of value to those of us who are anxious to get points on American problems, but he sheds little light on the problems of Russia, which today are largely economic.

---

Rutger deals with the attitude of the intellectuals in the Russian revolution. He has little to add to the ideas that have long been current among the I. W. W. He brings forward much proof that bourgeois intellectuals will not readily conform to the workers rule and will not be liable to develop any dynamic constructive qualities while in the service of the workers.

He comes forward with no program for the production of trained workers now, for future use. The essay, while valuable in that it upholds much that has for some time been accepted as fact by all real class-conscious workers, brings little of a constructive nature to the solution of the problems which are restated.

---

**Communism and Christianism.** Sixth edition, revised and enlarged. By Bishop Wm. M. Brown.

Two hundred and twenty-five pages are filled to overflowing with a gentle, reminiscent, conversational grouping of ideas for the militant purpose, as is openly declared on the cover of this book, of banishing gods from the skies and capitalists from the earth.

Quotations are injected constantly from every sort of authority on questions of life and better living. Jesus, Ella Wheeler Wilcox, Thomas Paine, Omar, Karl Marx, Lenin and hundreds of others lend their wisdom to the project of the bishop.

The revisions include a most complete list of Marxian definitions going into the differences in theory between all the various groupings of revolutionists and reformers.

The easy rambling style of the whole book reflects the peaceful philosophy of the writer. As a compendium of revolutionary and social knowledge it is invaluable to the active revolutionist or propagandist. To the person still enveloped with the haze of superstition and reverent belief the book is an eye opener. This latest edition will go much faster, we believe, than the five which preceeded it.

---

**The Workers in American History,** by James O'Neal, revised and enlarged. Rand School of Social Science, New York.

Delight must certainly creep into the heart of the one hundred per cent American over the subject matter of this book. Here no foreign agitator creeps in with insidious propaganda. A straightforward account of the sacred beginnings of our great American institutions leaves one breathless. No statement is advanced without the documentary evidence noted to back it up.

Economic and political history marches hand in hand through the early days of slavery and indenture, wage payment and political trickery to the ripe results of Industrial Feudalism and Gompersonian craft unionism of today. It is a book filled with data that reveal without argument, to the most prejudiced, the facts of American capitalism and the exercise of our political and economic "rights."

As a text book of historical facts in the labor movement this little volume can hardly be surpassed, yet in many ways it leaves much to be desired. The industrial vision is lacking. The social thinking is in terms of politics rather than of industry. The linking up of militant labor organization to the structure of the industrial processes is a factor but negligently dealt with.

*R. W.*

---

**Stories of the Cave People.** By Mary E. Marcy. Chas. H. Kerr & Co. $1.00.

Whether dealing with economics or sociology, Mary E. Marcy has the knack of "putting it over" with such directness and simplicity that a child can understand.

Written in story form, this book contains twelve chapters dealing with the development of primitive man through Savagery—based on Morgan's "Ancient Society." How to kindle a fire, the uses of fire, the wearing of skins and ornaments, the invention of pottery, how to plant seeds, the use of the bow and arrow, the belief in gods, and the sheer necessity which brought these developments about, is convincingly and clearly brought out.

The nature of man—his greed, his inarticulateness, strength, speed and agility—these attributes

# Grabbing them Young

From time to time there has been considerable discussion in the columns of the radical and industrial union press about the need for childrens books, which would treat of the life of people and society in a realistic manner. Such an article appeared in the Industrial Worker of Seattle in the issue of November the Fifth and brings plainly to the attention of the readers of the I. W. W. press that we have fallen down on the job of supplying childrens propaganda books to the little ones.

We know that the capitalists have not failed to poison even the innocent minds of children with their slave ideas and no one but will readily agree with Fellow Worker Welinder that each branch of the organization should have in stock a few good readable and interesting childrens books written from the working class view point.

The Industrial Pioneer has been making investigations of the books put out by other publishers which come in the class of real wholesome works for children. We find that there are many of them and that we should push their sales seems logical and indeed imperative if we intend to compete with the institutions of enslavement that exist on every hand.

Some there are that deal with simple stories with deep underlying literary and social values. Such is a story by Mark Twain that in power and literary merit surpasses any thing else that he has written. It was published after his death. The name of this book is 'The Mysterious Stranger'. It has been suppressed after the first edition and is almost impossible to obtain. Yet other books are openly on the market and are little noticed by either radical publications or organizations.

Some of these deal with stories of the prehistoric days. The lives of the cave and tree people form subjects for fancies based on the solid facts of the evolution of man. The economic basis of man's devolpement is shown over and over in many series of these tales.

---

are woven in cleverly with his environment—the thick forest, the many wild beasts, the varying food supply—so that we perceive them not as unusual, remarkable phenomena, but as the natural, the only possible qualities for the cave men of that period.

A list of questions pertaining to each chapter supplements the volume and makes it ideal as a study book. Both youngster and grownup will find it instructive and amusing.

As a substitute for the insipid fairy tales of the Sunday school type this book cannot be recommended too highly.

*R. A. W.*

The Pioneer intends to run one or two book reviews each month of the various books which it considers ought to be read by the working class children everywhere. We have not completed the arrangements neeessary yet for handling all these books throughout our book department but will be able to quote all prices direct to our readers in the January issue.

Elsewhere is a review of a book written by the well known author of works widely read by members of the I. W. W., Mary Marcy. This volume should be distributed to every little wobbly boy or girl and given to the children of other families where a gift of that sort would be appreciated.

As a special inducement to our readers we will supply a copy of "Stories of the Cave People" which sells for one dollar and a yearly subscription to the Industrial Pioneer priced at a dollar and a half, both for the sum of two dollars. We can supply all orders for the book alone at the straight price of one dollar.

Editor—Industrial Pioneer

The Industrial Pioneer book department recommends the following children's books which it can supply to the readers through our office at the regular prices which are quoted below. You will note that the ages of the children for which these books are suitable are attached so that you can pick out appropriate reading matter that will not convey the capitalistic taint to the young minds.

Stories of the Cave People by Mary E. Marey, for ages 9 to 15 years. Price $1.00.

Early Sea People by Katherine Dopp, for ages 9 to 12 years. Price $1.00.

Early Cave People by Katherine Dopp, ages 7 to 9. Price 90c.

Later Cave People by Katherine Dopp, ages 7 to 9. Price 90c.

Tree Dwellers by Katherine Dopp, ages 7 to 9. Price 90c.

Before Adam by Jack London, ages 14 up. Price 60c.

These books will make splendid Christmas presents for the children. Get the idea of evolution to them young. Help the Pioneer to enlarge its book department and educational work. Other books will be on hand for the next issue.

We wish to correct the statement that appeared on Page 30 of the November Pioneer. Instead of the October issue showing a defieit of $77.49 it was the September issue.

# The Cut Glass Industry

**By Richard James**

SYSTEMATIC abrasions on glass ware technically known as cut glass, first gained prominence in the city of Prague through a German designer and cutter named Lehman. He taught the art to others, the most skilled of whom found favor with the Austrian Court.

Power was supplied by water-mills; the tools were crude, and the patterns only a vague promise of the aesthetic destiny of the trade. Europe is now behind this country in production of cut glass of merit. We shall speak of the trade here.

Glass factories make the shapes. Some of these plants have cutting shops, but most cut glass is produced by independent firms. Three lines of ware are cut, heavy and light table ware and shades for lighting purposes. Table ware includes such articles as jugs, tumblers, goblets, bowls, nappies, vases. etc.

Not much capital is necessary to start a cutting shop, hence the great number of small one-, two- and three-men shops. Glass manufacturers frequently threaten to boycott these shops but for both economic and artistic reasons they have thus far largely supplied the cutting shops outside. There are probably five thousand cutters in this country. It is understood we are not including those who bevel plate glass and mirrors, or who trim stained mosaics. The cutters were once on the road to organization in the American Flint Glass Workers' Union, attaining 2,000 members. This has dwindled to about half. War industries offering greater remuneration took many from the trade.

When one spoke of cut glass twenty-five years ago heavy table ware was meant—"deep cut," polished to brilliancy. Heavy ware has weight, fine material and beautiful finish. Formerly the "blanks" came to a cutting shop perfectly plain. Now the majority are pressed in process of moulding at the factories. In the case of the plain blank the design is marked on mainly with red lead. It is then "roughed." Roughing is an abrasive operation accomplished by pressing the glass against a steel mill revolving perpendicularly and fed with a constant stream of watered sand, alundum or carborandum. The latter is best, and most used. The mills are fastened to a spindle, and this is held between wooden blocks. The entire working stand is called a "frame." The mill-surface is shaped flat, cupped, convex or to a "mitre" by means of a file. The point of a sharp mill is its mitre.

When the rougher completes, say, a dozen bowls they are given to a smoother. This mechanic works on a frame, too, but uses stones instead of mills. The stones are very smooth and true, with water constantly running on their points and a sponge pressed against them to clear the residium. The stones are of two general natures, those quarried, and those manufactured. They are "turned" or "dressed" with solid carborandum bricks. When the smoother follows a rougher he removes the sand, alundum or carborandum by placing the glass against his stone, in the "groove." The cut then becomes "white" and smooth. Smoothers also add finer details of design without other marks. When they smooth "figured" or pressed blanks the process is identical but mold instead of "sand" is cut out. Good smoothers detest working on pressed ware.

The smoothing finished, a polisher next takes the work. He uses a "wood" fed with wet pumice. The glass pressed against this wood and gritty pumice is made "soft," free from surface imperfections impossible of removal through smoothing process.

The glass is then washed, dried, and inspected. It is then "waxed"—painted with hot wax on the inside. An acid-polisher now immerses it into a mixture of powerful acids. All parts exposed, not covered by wax, are affected. The result is a brilliancy that reflects in highlights all colors of the spectrum. Acid-polishers wear rubber gloves, but are sometimes badly burned from splashes.

In the wash-room another immersion in hot water removes the wax almost intact. The glass is washed again, dried and given to a buffer, who works on a wheel of hard felt dressed with rotten stone, pumice and putty powder, all wet. This operation removes "acid-marks." The glass is then washed for the third time and wrapped for shipment.

Light ware—articles of utilitarian and ornamental values in table ware—has been decorated in various ways, chief of which are etching, cutting and engraving. Some is also painted. The thinness of the glass necessitates more shallow cuttings. This makes for greater speed of output. Roughers and polishers are largely unnecessary. Very little of the cuts are polished. During the past few years this class of work has been gaining great popularity. While most of the designs little deserve to be called cut glass due to lack of beauty and skilled workmanship, it is also true that some manufacturers have seriously attempted to produce meritorius work. Some have succeeded with designs favorably reflecting the true aesthetic possibilities of cutting on light blanks. Patterns known as "grapes" and "stars" are an abomination. No one who really understands beauty in art would defend them, to say nothing of exhibiting such cheap stuff as worthy cut glass specimens.

But there is a line of junk in the cut glass trade

that is even worse than grapes and stars. It is called "semi-cut." This grade of work consists of heavier blanks of the pressed order and a "fire-polishing" method is used in the glass factories producing the stuff. This method is an imitation of acid-polishing. Cutters decorate the semi-cut ware just here and there putting onwhat is called "grey work," cuts of floral designs, usually, that are left "grey" or "dull."

Shades and domes are cut by stones just as the other branches. But the cutter of a shade follows certain main marks scratched or drawn on the outside surface, which is coated with wax. This leaves the cut shade ready for acid-polishing. Acids used for polishing cut glass are resisted by both wax, lead and rubber. The shade or dome itself, before waxing and cutting, has been sand-blasted, converted from a transparent into a translucent state. This class of merchandise has been steadily losing ground on the market.

Engraved work is accomplished best on stones. Copper wheels wet with oil are also used. The wheels whether of stone or copper, are quite small, and are threaded on small spindles and run in small lathes. Good engravings constitute the purest artistic expression of the whole technique. They are as limitless as the dreams of an Angelo; as beauteous as the creations of Rodin. Flora and fauna are represented, and I have seen engraved human forms of exquisite perfection. The product is necessarily very expensive and relatively little engraving is done, but the tendency now is for better examples of the whole art.

In union shops a four-year apprenticeship is required. Many shops have declined to train their own mechanics, preferring to recruit their industrial complement from the general journeyman mass. Other firms have made full use of the union rule permitting one boy to four journeymen, and even try to gain a larger proportion. Wages of apprentices are controlled exclusively by the employer, but hours must correspond to those governing the journeymen. When the latter are laid off a similar number of apprentices must be laid off. This rule was designed to frustrate attempts of employers to displace journeyman labor by intensive use of their apprentices.

Except during industrial conflicts these boys are not permitted attendance at union meetings, but at such times they are given seats, no votes and four dollars weekly for relief. The men receive seven when striking. Apprentice glass cutters are usually loyal to their class during strikes. Their employers super-exploit them by a general scheme of deductions ranging from ten to fifty per cent less than journeymen piece-work prices. It should be understood that most of the work throughout all the various branches is done on a piece-work basis.

In 1914 cutters received about $18.00 weekly for 55 hours. The schedule was then changed to fifty hours, and during the war wages rose to about a dollar an hour average. Cutters do not work after 12 on Saturday. At their recent conference with their masters they accepted a wage reduction approximating 20 per cent. They are conservative and quite individualistic. The nature of their work, where each one expresses his own creative ability in a pronounced manner, brings this about.

They have in one respect shown wisdow in the past, with regard to a well practiced ca canny. For a time limitation of production was abandoned by them, but the recent conference demonstrated conclusively their error, and I feel that they will revert to the one intelligent and militant practice that previously distinguished them from utter seissorbills.

The proposition is this: If glass cutters receive, say, a dozen bowls to cut for $12, and the job should pay fifteen in order to permit the mechanic to work as a human being should, it is obvious that the cutter must take fifteen hours, assuming that one dollar an hour is the prevalent rate. He must then contest the price himself or through his

# Three Big Drives in One

WE ARE going to raise a Christmas Fund, to express remembrance for our fellow workers who are in prison.

There is great need for a Relief Fund, to help take care of the wives and children of fellow workers who are now compelled to waste their lives behind prison walls.

We **must** have a Deportation Fund, to assist and help on their way the members who will be deported upon completion of their prison sentences for the "crime" of attempting to organize the working class; and also those others who will be sent out of the country for their activity in this great cause.

So there must be **three** funds—and each one is as important as the others.

The General Defense Committee has been ordered to arrange for the collection of these three funds, because by having the drive carried on from a central point it can be handled with less expense and with better results for our prisoner fellow workers and their needy families.

We shall have **two** ways of collecting these funds:

One way will be by giving entertainments and applying the receipts to the three funds, and by holding meetings to bring forth collections for this purpose.

The only other resource will be voluntary donations from members and from the well-wishers of our organization.

The drive is on! And it will continue until January 1, 1922.

All delegates should write immediately to the General Defense for a receipt book, and get busy "on the job."

These receipt books will be handled in this manner:

The original receipt will be given to the donor; the first duplicate will be sent in with the remittance; and the second duplicate will be kept by the collector, for reference.

In this way clear reports can be made weekly to the General Defense Secretary, and remittances can be sent in promptly as the collections are made. Thus a systematic account can be kept all the time, and we shall always know just where the drive needs "speeding up."

We are going to get this money for our fellow workers—and we shall need all the help that can be given us. No member who is true to our slogan of "Solidarity" will fail to do his part in making this Big Three Drive a great success.

"They are inside for us; we are outside for them!"

Address all communications, and send remittances to:

**Harry Feinberg, General Defense Secretary, 1001 W. Madison St., Chicago, Ill.**

---

shop committee to get the three dollars needed. "Fast" men are always used to set prices on new jobs. Our friends of 120 would call them high grade Gypos. To prevent a sort of elimination contest among these speed-maniacs, who boast their high-power proclivities, the production limit is absolutely necessary under this system.

Since 1912 girls have rapidly been introduced into the trade. They are now admitted to Flint membership under the same rules as their brother slaves. The trade requires no great strength, but it is a tedium, uses up the eyes, and sometimes destroys the "grip" of the hands requisite to perform the work. There are all sorts and sizes of shops, and some few have good lighting and sanitation. Most of them, however, are not well ventilated, are cold in winter. Cutters frequently have been forced to work under really frigid conditions, and this obtains so long as they stand for it. When they march out in a body in defiance of contractual relations which do not cover such essentials as warmth, ventilation, etc., they get as far as the door when the dear boss promises heat, fresh air, and toilets fit for humans.

At this time slackness of work has them all discontented. When glass workers of the Flint Glass trade in hot metal departments organize industrially, the cutters will follow suit. Cutters have ever been under-dogs in the industry. The union has eight salaried officials; one is a cutter. He ostensibly strives to organize cutters. Actually he works to keep them separated.

The Flint treasury has about $500,000. There are 11,000 members, with headquarters at Ohio Building, Toledo, O. It publishes a reactionary monthly magazine. Even pink socialists are not tolerated.

# WOBBLES

"How I envy you sailors," said the sweet young thing. "It must be wonderful to smell the clean, salt air all the time."

"Yes," said the fireman, "it must."

---

Conundrum—If the A. F. of L. has 5,000,000 members and it loses a million evey year, how long will it take the Communist Party to revolutionize it?

Note—To the first one sending in the correct answer to the above question we are prepared to mail, free of charge, a handsome picture of some of our colored fellow workers unloading a car of coal on a dark night. Be the first to enter this contest.

---

Kenesaw Mountain Landis, the well known baseball umpire, after being chosen as arbitrator in Minneapolis in a dispute between a Soo Line conductor and a brakeman, decided in favor of the brakeman. Who said Landis was unfair to Labor?

---

The remedies offered by the daily press for solving the unemployment problem are like soup eaten by some people we have overheard.

They sound good.

---

The American Legion is going to rid the state of North Dakota of the I. W. W.

That job is about as easy as selling Ford cars in Jerusalem.

---

Industrial Solidarity refers to Linn A. E. Gale as "Judas." Some one on that paper must be sore at Judas.

---

The trouncing that Sheriff Don Chafin and his army of misfits gave the West Virginia miners, reminds one of the deaths of the I. W. W. and the falls of Soviet Russia.

---

The recent million dollar robbery of Uncle Sam's mail truck is enough to make any self-respecting business man turn green with envy.

Every nation has its favorite musical instrument. Italy has its accordion, Ireland the harp, Spain the guitar, and the United States adores the National Cash Register.

---

The American Legion is greatly put out over the Industrial Worker regaining its second class mailing privileges and the five hundred smacks from the Postal Department.

The least that these heroes should do is to take the Postmaster General out and lynch him.

---

Now that the railroad strike is again called off, it seems up to the English workers to "threaten" a general strike for a while. These threats remind us of Burleson's bombs. They never go off.

---

Ain't it darn funny how they always discover a bomb plot just in time to save the life of somebody that no one wants to kill?

---

The other day Marshal Foch was so busy, he forgot a dinner engagement which he had with King George.

Which goes to show how much kings amount to these days anyway.

---

The time is now ripe for another news dispatch "from a reliable source" informing us that Lenin and Trotsky have again put each other in the can.

Alas, even our newspapers are suffering from the decay of capitalism.

---

Fred H. Moore, attorney for Sacco and Vanzetti, deplores the action taken by the French workers on behalf of his clients.

Wonder what Sacco and Vanzetti deplore? The "action" of the American worker?

---

Deporting King Carl out of his country makes him as important a personage as the average Wobbly. Move over there, fellow workers! Make room!

---

The electrification of Soviet Russia is probably just another scheme to extract power out of the many falls she has had. **C. G.**

# The Janitors

**By John H. Fleming**

THE two last conventions of the A. F. of L. have given special attention to the condition of the janitors, or— to use the more pretentious phraseology of the Gompersonian clan— "the men and women engaged in the maintenance of buildings."

So far, those efforts have met with no appreciable results. No new international has been formed to swell the already too large number of crafts through which the efforts of American labor are frittered away. The field organizers report a well defined dislike or a decided indifference in the matter of organization.

To a large extent, this is due to the incapacity and ignorance of the professionals of the A. F. of L. machine and their lack of familiarity with the status of this class of workers. Also, the distrust of the A. F. of L. by those whom it contemptuously dubs as semi-skilled or unskilled has rendered its appeal ineffective.

### The Facts of the Job.

To organize a class of workers one must have a clear conception of the reason of their existence and the economic conditions that created them. The man who starts out from the old and outworn notion of handicraft is unable to understand the why and the how of a category of workers which owes its existence to the very thing that has destroyed the importance of craft in production: the machine process.

The janitor is the direct result of the machinization of the production of one of the three main requirements of human life: food, shelter and clothing. The application of the machine process to the providing of shelter made the individual home inefficient in all instances and frequently a luxury. The machinization of the human dwelling brought into being the various types of collective and communal dwellings known as flats, appartment houses, multiple lodgings, resident hotels, rooming houses, etc.

Under the handicraft method of production, men provided their own shelter. Under the more complex conditions of machine production, they buy or rent shelter. The providing of shelter thus ceases to be a function of the home to become a new branch of industry organized for profit: the shelter industry. The janitor is a wage-worker of this new branch of industry.

In a general and indefinite sense, all persons connected with the upkeep and maintenance of buildings are jantiors. In a more precise way, a janitor is the man responsible to the owner for the upkeep of the building with its heating, power and lighting plants, if any. In large buildings division of labor leads to specialization and the janitor is associated in his work with such specialists as engineers, electricians, vacuum men, scrubbers, elevator operators, room cleaners, housemen, porters, etc.

### The Development of Shelter.

During the early stages of the "shelter" industry, the owner is frequently the manager and the janitor lives in close association with his employer. As the accumulated fortunes and mass production causes the buildings to grow larger, the owner ceases to be a useful factor and abandons the building entirely to hired men, satisfied with appropriating the profits on the strength of his property title.

Since the industry is a recent one, we find today side by side with the larger office buildings and apartment houses intermediate types of technical and economic shelter developments, efficient in the same measure as they are less obsolete. In all those various types of buildings and business enterprises an increasing number of workers is employed under special conditions. Frequently they reside on the job and the character of their work as labor of attendance makes it exceedingly hard to confine them strictly to a basic working day.

### Janitors' Conditions.

The nature of the work does not lend itself to regulated hours. The janitor frequently has a twenty-four hour a day job, being called upon in cases of emergency at any hour of the day or night. The wages are small because there is a presumption on the part of the owners that special services to the tenants call for tips and because the refuse of modern life is a commodity with a saleable value which gives the janitor a chance to eke out his scanty pay through the sale of waste paper, bottles, rags, old clothing, etc.

As far as the nature of his work is concerned, the janitor is neither an engineer, nor a fireman, nor a plumber, nor an electrician, nor a steamfitter, nor a painter in the craft sense of the term, although in fact he is all of these with a few more qualifications thrown in for good measure.

The janitor is a composite of many trades and his status improves with the technical development and equipment of the building. The janitor of the Pacific Coast, whose heating plant is equipped for oil buring, gets higher wages than his Chicago fellow worker, who only shovels coal into a furnace.

As the janitor becomes more efficient in his work, he comes into conflict with the various craftsmen of the organized trades. Painted walls in a large traffic building cannot be kept clean by being washed. They are maintained in good condition by being "touched up," which is only another way of saying that the building is being constantly

repainted on the installment plan. Thus the necessity for periodical general repainting, the uncontested domain of the craftsman painter, disappears.

**The Janitor and the Craft Union.**

The same could be said about several other sides of the janitor's work, which lead to a direct conflict with the organized crafts. The main purpose of the A. F. of L. in its attempt to organize the janitors was not to improve the condition of the latter. The labor aristocarcy of the A. F. of L. does not care a rap for the unskilled janitor. The purpose of the craft unionists is to protect their own vested rights and craft monopoly and to get the consent of the janitors themselves to reduce them to the level of a watchman sweeping a few stairs, cleaning some halls and rendering a few small personal services to the tenants.

Through the nature of his work, the janitor—like all those whose occupation is a direct result of the machine process in industry—is not amenable to craft organization. It is a well known fact that in all the newer occupations derived from the machine process and therefore not susceptible of organizatiion along craft lines, the artificial fostering of such a form of organization will, at its best, only create petty grafters and social parasites who, as a rule, become an easy mark for the capitalist, whenever he deems it advisable to suppress them.

**The Janitor and Industrial Unionism.**

The collective dwelling has created the janitor, and he is going to develop with it regardless of the attitude of various crafts bent on maintaining a selfish and unjustified monopoly.

Industrial organiziation centered around the job, a practical application of the one big union idea, is what the men and women engaged in building maintenance want and what the A. F. of L. cannot give them.

In no other phase of present day life is there such a basic necessity for solidarity. The buildng tends more and more to become an autonomous unit, a kind of enlarged but self-contained home. Its only weak spot is its supplies, its heat, light, fuel, ice and food. From that point of view, the largest and most up-to-date building is leading a hand to mouth existence.

Here is an urgent demand for solidarity in quick-acting practical form. Shut off the supply and the building becomes worthless as a revenue producer.

The janitors want an organization that transcends the narrow confines of organized craft selfishness. Only the I. W. W. can give it to them.

# I Might Suggest

By T-B-S.

I

If drinking makes the poor man poor—
  And makes the rich one rich;
One cannot designate for sure—
  Just, which of these . . . is which.

II

And . . . if my premise isn't right
  That drinking brings the plunder—
Or that it operates to blight,
  And drive the poor one under—

III

'Tis then, I find that what they do
  Leaves matters in a murk.
(I may as well presume it through)
  They're poor . . . because they work.

IV

Lies somewhere in this land of gloom
  The gentle art of seizure.
Yet, I would just as soon assume—
  They're rich because of leisure.

V

And . . . though I hold—the drunken rich
  Exploit the sober poor . . .
I am not keyed up to the pitch
  —To cast a slur on lure . . .

VI

Were I, so much as to assert,
  They're rich because they idle;
The plutes would roll me in the dirt—
  Or sue me for a libel.

VII

Intoxicated—of the best
  Or drunk on Fusel Oil—
The men of wealth are those who rest—
  The poor—are those who toil—

# A Personal Squint at Steel

**By Robert Maddux**

OF COURSE you know, that the steel worker is not working now. If he did get a job his wages would be thirty cents an hour. As a matter of fact, the only ones that ever got real living wages in these places were the rollers and heaters and the lads that poured the steel. About three men on each turn got big wages and I don't think they will get anything to brag about if they ever go to work again.

I guess the chief slave driver had pretty good pay. He was the big flunkie known as the shift or turn foreman. He got a real salary instead of wages and no one knew just how much it was. Under the chief were fifteen or twenty straw bosses and if the grind stopped a minute this guy threw fits and spasms.

In lots of cases the day men who got the small wages, had to work just as hard as the tonnage or piece workers in order to keep from blocking production and so spoiling the pay envelopes of the speed maniacs. Once in a while these day men tired of continuous speed and put a damper on the rush. Occasionally they were not quick enough on the fly and ditched an engine off the track, which put the kibosh on the works.

The moulds would be absent from the pouring floor and all the day men would get a chance for a breath, and could mop up the sweat. The chief slave driver imagined that was sabotage. They always accuse the I. W. W. of that sort of stuff, but the fellows on the job there were of the rank scizzorbill type. They were homeguards who had never been away from town until they made the trip to France against their wishes.

Most of them have nothing under their hats except football or baseball per centages and scores. They are sure at home there. All the different departments have ball teams. The only thing that I can see in it is to keep the workers from thinking about the class struggle and pulling a strike.

In 1919 the baseball boys were A. F. of L. exponents in the steel strike. I did not join this great union during the strike. I was holding a card in another scab union at this time. It was a Brotherhood of Railway Trainmen card. I have dropped it and intend to stay out of it. The stunt in 1920 was enough to turn anybody with enough brains to think a single thought.

One night in September 1919, just before the steel strike was pulled off, I came out of the gate on my way home when I was approached by an A. F. of L. organizer who was going to force me into "his" union whether I liked it or not.

I says to him, "Why, Buddie, I belong to a union."

He wanted to see, so I pulled out the Fink Trainmen card and showed it to him. Right away he told me that it was no good.

I shook hands with him on that and told him that I was sure of it myself. He went on to tell me that the Brotherhoods hauled scab coal out of West Virginia when the Ohio miners were on strike in 1914. Which I admitted wasn't half.

"Now," said he, "join one of the twenty-four crafts of the A. F. of L. and you will be doing something."

I wanted to know which one to join and after telling him that I was a conductor he said, "You will have to join the Amalgamated Association of Iron, Steel and Tin Workers."

"My God," thinks I, "what a long name."

I wanted him to explain the idea of having twenty-four different unions. "Oh," he said, "they all come under one head." But he didn't know whose head, so I never found out whether it was Sam Gompers' or Z. Foster's.

I mentioned the I. W. W. and Industrial Unionism and he explained to me that the wobblies were a bunch of anarchists and didn't believe in either the God or the Devil. I didn't either, so I didn't get shocked.

At any rate, the steel worker struck and today is worse off than before, for he has neither union nor job nor soles on his shoes.

I suppose you have heard of Blowing Out. They draw all the steel out of the furnaces and turn water into them and put on the wind. Then you see the white smoke fly, which means that you are going to be thrown onto the street to hunt another master or starve. The furnaces of the steel trust are blown out.

Some of Gary's slaves are blown out, too. These slaves have lots of callers around Bellaire. The grocer, the landlord, the butcher, the insurance plug all want to know when they can get something on the little old back bill. If the thirty cent men could get work he couldn't keep going anyway, but he thinks that he would like to try in most cases.

That if is a big word. There are a lot of doubts about there even being thirty cents offered by the boss when the gates do open. That is unless the slaves wake up and get wise to themselves. They still have the old habit, when speaking of the job that the boss once let them use, of saying "My job." They still boast of ownership, and as a matter of fact lots of them really do think the job is theirs.

The steel worker can be organized if the industry is tackled as a unit. But to lay out such a campaign plan and then bust things wide open again by the separation tactics of the A. F. of L. is sure enough to give any one the willies. When the I. W. W. goes at the job with planned action, then the slaves around here can feel justified in getting ready to say "My job." Because the Wobbly way is the only way to job ownership for the worker.

★

# SACCO and VANZETTI

**By Jim Seymour**

What's all this fuss the're makin' about them guys?
Darned if some people ain't kickin' because they got
What was comin' to 'em;
Sayin', be Jesus,
It's 'cause they're reds.
That's bad enough,
But that ain't all—
Not by a dam sight.
Why, man alive,
They're only a couple o' God damn dagoes!
I don't see how anybody can expect white people
To do anything for the likes o' them.
What are they good for anyway?
What's their whole damn tribe good for?
There don't any of 'em know anything
Till they get over here.
When they get over here they hear some good music—
Band pieces an' grand op'ra an' jazz.
Why, they can put a nickel in the piano
An' hear the very latest!
An' as fer arky—arky—
Fine building—
Why, you'd think they never even looked
At our office buildings.
An' how about that statue of McKinley in the park!
Solid cast iron, be Jesus!

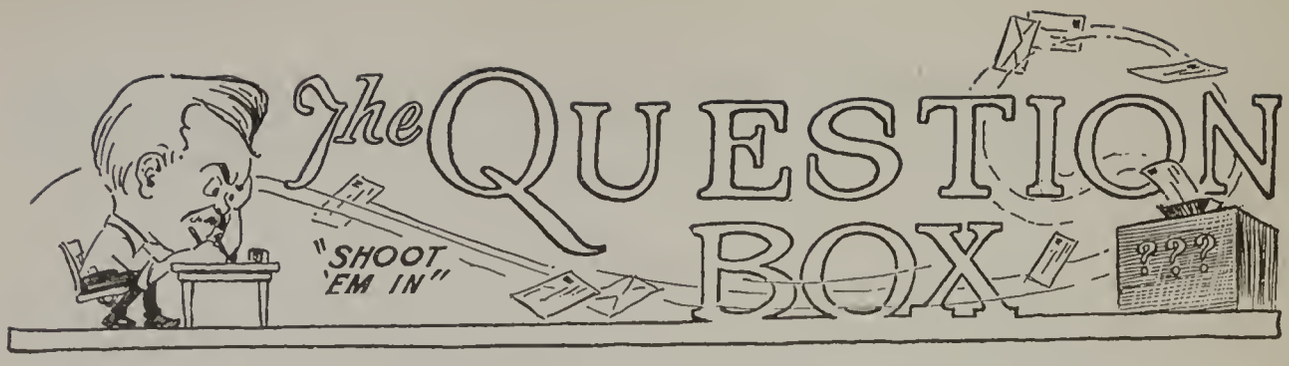
An' books—oh, boy!
Didn't they ever hear about Elinor Glyn?
Or Diamond Dick?
Or Marie Corelli? . . .
Or the free pote-ry?
Why the hell don't they read
An' learn something?
Then maybe they'd ketch up with the people
Tha't got wireless telegraphs.

But the hell of it is, they ain't got no—
Wotta ya call it?—
Oh yes, no historic past.
If they ever get one o' them they'll be all right.
Then they can talk about 1776
Instead of yellin' their fool heads off
About Garrybaldeye an' Spartycuss.

But they're nothin' but God damn dagoes.
Now **me**: I'm an American, I am.
We're the real people, **we** are.
**We** ain't dagoes—not on yer tintype.
We got railroads, 'n' telephones 'n'—
**Automobiles** 'n'—
Office buildings 'n'—
Them places where ya look at the stars.
An' we got some of the biggest deserts in the world.
An' we keep 'em unirrigated in spite o' hell 'n' high water.
These ain't nobody gointa make **our** land so dang cheap
That ev'rbody can own a piece of it
An' put the price o' truck
Down t' nothin' . . .
Not us. . .
**We** ain't dagoes.

No s'r, I ain't sheddin' no tears
Over them two guys.
It serves 'em right.
It ain't so much because they're reds—
That's bad enough, God knows,
But bein' a damn ignorant foreigner is the limit.
They not only don't know nothin' about books 'n' music,
'N' inventin' 'n' science,
'N' makin' purty pictures 'n' such things,
But they don't even know howta talk
The American language right.

Send 'em up, say I,
Show 'em that **our** courts is American.
We don't get our law from Italy.
We don't care whether they done it or not.
To hell with 'em!
They're dagoes.



# The QUESTION BOX

**Does the I. W. W. by advocating and fighting for better conditions act in contradiction to its revolutionary aims? J. B.** Any organization working to a definite end must work with the materials it has on hand. The I. W. W. working to the end of a social revolution must use the working class materials that it finds. It cannot choose to bring about the revolt by organizing and educating any other group than those who are in the social class that will bring about the revolution and sieze and wield the power once the revolution is a fact. We must win the actual workers to our side.

The biggest single factor in developing a militant revolt is the creation of a new way of looking at things. This new ideology can only substitute the present dominant one by slow growth and development. The capitalistic ideas of money grabbing, of individualism, patriotism and religion are the basis of the present thinking of the worker. The capitalists themselves have by their science broken the back of religious thought. While the desire for individual gain is a handle that we must grab hold of often enough if we want to attract the attention of the slaves.

The I. W. W. then, in order to gain the attention of the workers, appeals to their individual desire for gain, for financial and social betterment. We have often made mistakes because of our failure to use the most efficient methods of educating the workers into class consciousness, solidarity and militant ideas after we had gained their attention.

The worker does not change his ideas and his whole viewpont over night. Becoming an I. W. W. is a process that takes months and years. It is because we have often used inefficient methods of propagandizing our new members and our audiences that we have made our failures, but the I. W. W. does not act in violation to its revolutionary aims because it takes advantage of the opportunities that arise in the battle for better working conditions.

Rather would the I. W. W. act in **practical** violation to its revolutionary principles if it failed to take advantage of its opportunities to gain the attention of workers engaged in **direct struggle** with the capitalist class even though the struggle was only for such reforms as better hours and wages.

With the development of greater efficiency in educational matters the I. W. W. would be in a position to take more active part than ever before in the battles of the entire working class for shorter hours and more wages. It would be able with more efficient propaganda methods to swing more rapidly the ideas of the workers away from the ideology of capitalism to the methods of thinking of the militant workers. It is not less participation in the battles of the working class that we need, but more participation and better and better propaganda methods.

**What is the difference between the I. W. W. and the Syndicalists? J. W.**

The Industrial Workers of the World take as their basic philosophy the three theories of Karl Marx. These theories are briefly: The Class Struggle, Economic Determinism (sometimes called the materialistic conception of history), and the Theory of Surplus Value.

The I. W. W. from these theoretical foundations has evolved a labor union composed only of wage workers, formed into the structure of the industries, and subscribing to a form of administration that allows for unified, co-ordinated action. This centralizing of administration is the outstanding feature in the theory of the I. W. W.

The Syndicalists on the other hand take as their basic philosophy the theories of the great anarchists Bakunin, J. Guillaume and Cafiero among others. These theories, briefly stated, are in opposition to the ones of Marx on two points. They have first an individualistic conception of society instead of a class conception, and secondly, they modify the theory of Economic Determinism. All students of economics accept the theory of surplus values.

From these early theoretical beginnings the Syndicalists have evolved a federated organization, decentralized, practicing local autonomy, and placing greater emphasis on the development of individuals. This is their theoretical stand.

In practice, however, both organizations have modified their theories. Much autonomous action has occurred in the ranks of the I. W. W. Many groupings of members have been formed whose alignment in definitive industries is only on paper, as they meet and act largely as language groups rather than as industrial units. Among the syndicalists the tendency has been toward unified and

# An Open Letter from a Closed Shop

SUPPOSE a few men grabbed all the air and all the water on earth, sealed and bottled it up, and put other men with rifles and guns to guard it. Suppose also, that you wanted to use some of these things and they told you it was theirs, and you would have to pay for it or you could not use it. No doubt you would call those men "hogs."

You would reason like this: that the said air and water was put on earth for all the people and not for a few. I think that you would rise up in all your might, the might of right, and sieze and hold that which by right belonged to the whole people.

I don't think that you would allow your religion or your patriotism to interfere with your desire. Why would you do this? Because self-preservation is the first law of nature.

But you have already allowed a few men to grab something which is just as necessary to the whole people as air and water, and that is the industries on which we depend for our food, clothing and shelter.

These plutocrats that have been so quick on the grab are well organized. They have so arranged things that they not only keep what they have secured but by their manipulations they are increasing their hold on everything vital to life and are extending their institutions of control. They act in the interest of their own position.

The millionaire, for instance, is never troubled with a little thing (to him) like unemployment, as he just packs up—or rather he has servants do it for him—and goes on a vacation. And so it is no wonder that he wants to keep up forever this system of society, commonly called the capitalist system, that brings in such golden returns to him. It is to his interest to do so.

**The Owners Power.**

The strange part about it all is the ease with which the looters of our common wealth get men to protect the stolen industries and machine processes. The men who guard the industries are the army, navy, militia, national guards, American Legion, police, etc. Some day, when the thieving goes too far, the age-old instinct of self-preservation will again assert itself, and all of us for our own salvation will sieze the industries.

When a few men own and control everything that the whole people must have in order to live, and will not let the whole people use them unless they can make a profit, thus having control over the very lives of the people, would you not call the few masters and the many slaves? **Slaves!**

When I think of the word slave, it brings to my mind a picture of chains. We, the workers, have chains, although some of you workers cannot see them. Our chains are the chains of starvation, poverty, unemployment and ignorance.

Before the Civil War, colored men, women and children were bought and sold on the auction block. Today, in the big cities, especially Boston, white workers are being bought and sold on the auction block. The Civil War was supposed to make the colored workers free. The World War was also supposed to be a war for "democracy."

The colored slaves used to work for food, clothing and shelter. The white and colored workers now work for wages, with which they buy food, clothing and shelter. What, I may ask you, is the difference between the colored workers of 1850 and the colored and white workers of 1920—between chattel slavery and wage slavery? Just this. In the old days the master owned the slave's body. Today, he **controls** it.

The Civil War slave ate, whether he worked or not. Today we eat only when we have a master. If we do not find a matser, we postpone our meals; unless we beg or steal or otherwise break the capitalist laws made to keep us in the mire of wage-slavery.

This is the machine age, and as a worker cannot compete with a machine which can do the work much faster than the strongest and most skilled can do it, he is forced to go to the owner of the machine for the job. You have noticed that it is a rule of the boss in business to get a certain amount of interest when a loan is made. So the capitalist loans us the job and the interest we pay is the surplus value of the products of our labor power—the profit that the owner of the machine makes out of the worker after "paying" labor power costs.

He lets us use the job until we, the workers, have filled up his warehouses with all kinds of good things to eat, wear and use. He then calls it "over-production" and takes our job away from us, deflates, that is, closes up the business. That

---

concerted, action and a general development that is proceeding in both organizations promises to produce in the future, forms of organization and activity that are more alike.

Both organizations maintain propaganda groups inside trade or craft unions. The I. W. W. has its members spreading education in every craft union in the country that is of any economic or social significance. That the I. W. W. has not been a pure and simple boring from within propaganda group is probably because of the fact that in the United States the craft unions had organized but a tiny fraction of the workers. The syndicalists have used the same tactics in the European countries where the same situation exists.

business will not start up again until those surplus goods are sold. It never seems to occur to the workers that the faster they work, the sooner they will be out of a job.

You know what happens then. We, who produced everything in those warehouses, go hungry because the wage we received was not enough to buy back the things we made—the main reason for your unemployment. If we got all we produced—if we got five-fifths instead of one-fifth, we could buy back those things we produced and so keep the wheels of industry turning.

We, the workers, have bought and paid for this great group of machines, the industries, many times over, with our sweat—yes, and blood—and therefore we should own them. We should own our jobs instead of renting them. They belong to us.

Probably some of you think that we need the capitalists to run the industries. Oh, no! He hires technical experts and engineers, the highest of skilled workers, for that purpose. We need these workers just as they need us.

A capitalist is a parasite—one who receives something of value without giving an equal value in return. When a ship is out to sea, the shipowner is not on board, and when John D. Rockefeller is out on the golf course the oil, railroad and coal industries he owns do not stop running.

The Industrial Workers of the World say that this crazy system, where the workers who do everything get nothing, but a slave existence, while the loafers who do nothing useful get everything, is falling to pieces because of its own rottenness and the greed, corruption and ignorance of the master class.

So when it does break down, we, the workers, must be ready to take over the industries and run them for the benefit of the whole people. But industry is like a finely adjusted watch—each part dependent on the other. Therefore, we need your help and co-operation, Mr. Worker. You must take one side or the other, as there is no middle course. Will you take the side of the militant demanding workers, or will you be patriotic to the millionaire? Will you stand by your class, the working class, or will you be on the side of the ones who keep you in slavery?

We, the Industrial Workers of the World, commonly called the I. W. W., hereby extend to you the hand of fellowship and invite you to join us in this great struggle of the workers for freedom from wage-slavery.

And, then, out of the travail of labor will come real democracy—the Brotherhood of the Workers of the World.

**Bob Hatton.**

**LOTS OF WATER BUT A POOR PLACE TO SWIM**

# The Spanish-Moroccan War and the Revolution

**By Theodor Plievier**

THE kingdom of Spain has been at war with Morocco for many years. The Spanish troops are fighting beneath the banner of imperialism;they are sacrificing blood and energy to conquer a land, which was given to Spain by the powers of Europe long, long ago.

For decades Spanish soldiers, torn away from their families by force, and shipped across the Mediterranean, wandered through the mountains, deserts and steppes of Africa; they suffered hunger, want and fever; slew Cabyles (Moroccan tribesmen) and were slain by them: one day ten, another day twenty. So it has gone on for years.

### The August Uprising.

In August 1921, when Spain least expected it, the situation reached a crisis. Abd-el-Krim, the chief of the Moroccan tribes, sympathizing with Spain, reported to Fernandey Silvestre, the military commander of Morocco, concerning the discontent, which had spread amongst a number of tribes. He asked for money, with which the rebels would be contented. Fernandey Silvestre not only refused to give the money, but he insulted the Arab chief and had him beaten. When leaving the house, Abd-el-Krim swore vengeance and drew with his bloody hands a sign at the commander's door.

Shortly after a superior force of Riff-Cabyles attacked the garrison in the dead of night, killed thousands of Spanish soldiers, captured 10,000 rifles and all ammunition. The head of Fernandey Silvestre was cut off and carried through the country on the top of a spear.

This was the signal for the uprising of all Moroccan tribes.

The authorities in the Spanish kingdom declared Spain in a state of war. They have mobilized the army, censured the press, murdered, deported and imprisoned militant workers.

### The Spanish Workers' Position.

The Spanish workers are anti-militaristic; factions even of the middle classes detest the war, and they express not only in words but in deeds their aversion. Indignant, silent and sombre, the soldiers allow themselves to be shipped to Morocco, but there are no patriotic addresses, no general enthusiasm on the side of the Spanish bourgeoisie, as would be the case in any other country. And the Moros, the Arab national rebellious tribes, are advancing and are already standing before the doors of Melilla.

The standing army of Spain does not suffice to crush the uprising of the Moros, but the government hesitates to call the reservists to arms.

The reason for this hesitation has its roots in the general uprisings of 1909.

### The Workers Revolt of 1909.

In that year the Spanish met defeat at Baroncodel-Lobo in Morocco, after which they called in the reservists. This was the signal for an anti-militaristic revolutionary movement of the people. Huge protest meetings were held. The cities and villages of Cataluna demonstrated against the war. Not only the workers but also some of the middle classes were united in demanding "Abajo la guerra!" (Down with the war).

When the workers of Cataluna proclaimed the general strike, the street car employees at Barcelona were the only section trying to go on working. When the strikers fired shots at them and the police troops entered the scene the signal was given for the revolutionary struggle, the aim of which was not only the abolition of war-service but the destruction of government, state and capitalism.

Street cars were capsized and barricades grew up before the working class districts. Labor-quarters were transformed into camps.

And when the army was sent to attack the barricades no shot was fired but cheers from thousands of voices greeted the assaulting soldiers, "Viva el ejercito!" (Long live the army), and out of the ranks of the soldiers arose a cry, which carried far into the streets of the workers, "Viva los trabajadores!" (Long live the workers).

This was the fraternization of 1909. It took the greatest effort of the bourgeois imperialists to crush and defeat the revolt. The authorities of today recall all these events to mind and therefore they hesitate to call the reservists to arms.

In the year 1909 they could defeat the revolutionary movement because Cataluna was struggling alone. At that time the government could spread the propaganda that the uprising in Cataluna was a movement of separation.

### The Workers Today.

And at that time the revolution of the people was drowned in lies, blood and repression. But the year of 1921 has brought the government face to face with the very same situation and problem. Already the Moros are knocking at the doors of Melilla in Morocco. The imperialistic Spanish government will be forced to call in the reservists and so once more will give the Spanish workers the signal for the struggle against imperialism.

---

Soon after the declaration of war this summer the workers of the metallurgical industry of Bilbao declared a 24-hour general strike. It was sup-

pressed with the greatest atrocities. All papers were suspended. Hundreds were jailed, transported and murdered.

The trials of many of these workers are just finished at Granada and the cruelities revealed during the course of the trial are unbelievable. Papers have been suppressed for printing extracts from the court record. Few workers' papers are left in circulation. The socialist periodicals are about the only ones not entirely done away with.

There have been great riots in all parts of the country. Especially in Castilla and Galicia, the riots have been numerous, as the peasants have refused to pay taxes. Whole municipalities have failed to make any tax rteurn whatever. The Imperialists, however, still vote immense war credits for the Moroccan adventure, although the nation is bankrupt.

Many of the most intelligent imprisoned workers connected with the revolutionary unions have been killed in the most cowardly way. They have been taken out by troops of white guards and shot in the back under the pretense that they were escaping. Since these tactics became known the jails have been under guard of women pickets day and night, who watch to see that any further murders will have to take place inside the prisons, so that the authorities will be held responsible. Many of the women pickets have been arrested. But the picket line remains intact.

Such is the condition in Spain today. Chaos and uncertainty are the present order.—Editor.

# TACTICS IN OIL

**By Nick Wells**

THE California oil strike is settled. On November first the District Council of the International decided that it was best to call the strike off and so recommended to the seven locals. There is little social significance to the event either of the pulling of the strike or in the return to the job. It proves one thing, however, and that is that oil workers can be organized and organized with strength to tie up any section of the industry tight.

There are hundreds of thousands of oil workers in the United States and they are nearly all unorganized. Some few belong to craft unions, some to the blue card union and some to the I. W. W. The fact that this district strike in California was pulled emphasizes the possibilities of action in the oil fields.

As a study in tactics the Blue Card eruption is intensely interesting. These workers developed a new picketing system more flexible and complete than any before worked out in an area of equal size.

The I. W. W. has introduced many new and startling methods of picketing and striking from the mass picket lines in Patterson, New Jersey and Lawrence, Massachusetts, to the thousand mile picket line in the harvest fields and the picket camps of the logging woods. But the oil workers of this A. F. of L. union sprung something new. They militarized the picket line.

Not that there was any of the superior officer stuff or any of the other autocratic measures adopted, but the picket men did guard duty, and centralized their patrol system. Each patrol or picket crew carried one so-called law and order man, one auto driver and three other strikers. Each patrol had a definite post to occupy and definite territory to guard and keep free of scabs.

There were wireless stations at several central points and each station kept in touch with the pickets by means of a blinker signal system from the lights of the autos at night and by heliograph by day. The district headquarters kept in touch with all the wireless stations and was able to rush re-enforcements to any part of the field needed.

Regardless of any other features of the strike this organization of the picket lines makes interesting study.

With such a system worked out to cover the entire industry in America a strike could be successfully pulled by the I. W. W. that would make the previous strike efforts not only of the decrepit A. F. of L. but even of the I. W. W. itself seem dwarfed in comparison.

The carrying out of such a program would of course demand an extension of the policy, of industrial study of the facts, that has marked the harvest drives and is now marking the planned action in the big I. W. W. oil drive that is going forward.

Gathering the facts of the industry and laying plans based on those facts must become a more and more important phase of labor organization work in this country. The oil workers International seems to have studied the ground well in the strike region regardless of whether they failed in the use of other tactics or not. They have established some new facts in regard to picketing.

# WORK

**By Charles Gray**

SINCE time immemorial, as the novelists say, man has concentrated his mental faculties on devising ways and means to either successfully dodge work or permanently acquire and hold onto a chunk of something to work at.

Judging from their past actions the working class view the subject of work with feelings as mixed and varied as the contents of a Hamburger steak.

The master class holds the worlds record distaste for work, although at times, the workers have run them a close second, judging from they way they have invented machinery to do away with their jobs.

At other periods the slaves have shown a fanatical passion for hard labor, else why should they exhibit such a murderous longing for the ten, twelve or sixteen hour day?

In 1914 there were five millions of us clamoring for a job. In 1917 we lost all desire for work and the respected Government had to issue the ultimatum: "Work or fight." Five million able bodied young men went to fight.

Towards the end of 1918 it was necessary to call the war off, because the workers of Germany were beginning to develope a new and unheard of attitude toward their jobs. Some even went so far as to claim that the jobs belonged to the workers that used them, which was something disregarded by any other people excepting the Russians, who are not civilized anyway.

The conclusion of the war saw the development of such a craving for doughnuts in the United States, for which the Salvation Army is no doubt responsible, that it overcame the preceeding aversion for work, and now we see seven or eight million clamoring for work, **work**, WORK.

It begins to look like this work proposition is an emotional disease, which can only be psycho-analyzed by such labor experts as Frank Harris and Linn A. E. Gale. The situation is so bad that senators, congressmen, bankers, labor leaders and other respectable persons have gotten together in an unemployed conference, after giving out oil on th troubled waters to the effect that they don't intend to employ anybody anyhow.

In the meantime some wise birds hold the opinion that work is not so bad if everybody takes on a little of it and just works for the whole bunch, and ditches all unnecessary overhead wastes such as financiers, politicians and so on.

The I. W. W. is the only organization in America with a practical program to permanently abolish unemployment for all classes.

Put this program across and work will be a problem no longer.

---

THEY WENT TO FIGHT

# THE SIGN

Awaken ye! The light is on the hills.
The dawn bursts with sky-embracing gold:
Rise, the time has come!

Down-trodden generation of a world forlorn,
Awaken!
Souls of wild delirium and mad despair,
Unbosom your secret to the rising sun!
Drink of the morning air!

Blinded are they! by the flood of heavenly light:
Dazed by its gleaming-glory.

The light is but a sign . . .
And out of the valley the task begins.

I. INGIANNI.

# The Great Kataklysm

**N HISTORICAL REVIEW of Latter Day Capitalism Covering the Wondrous Era Extending From Smith's Discovery of Radium in the Human Eye to the Devitalization of the Supermen by Radiosity in the Hands of Revolutionists.**

**Being a series of lectures delivered by Snow Allbrayne at the University of Timbuctoo in the Year of Our Lord 9799.**

**Edited and published by Stanislaus McGee in the year 9800.**

## Lecture III.

Smith's discovery of radium in the human eye was shown, after painstaking experiments by French and English chemists, to be quite correct, and von Balderdasch retired from the controversy covered with the opprobrium and ridicule he had accumulated for his antagonist Smith.

Smith now became famous and his residence in Kalamazoo the Mecca towards which biologists, chemists and physicians of the world guided their footsteps. He was given a position under the Rockabilt Foundation and so greatly was he esteemed he was nominated by the Taxpayers' League for the position of mayor. This honor he, however, declined.

Before proceeding to recount the facts as to the further development of the radium industry for your instruction, I desire to dwell a moment upon the more important historical materials which are still preserved us from that long-distant era.

Of course, I am well aware that I could take up several lectures on this topic alone, so my remarks must be brief and of a very general character.

It is well to say that my familiarity with the subject enables me to do this, for I myself am responsible for not a few of these materials being brought to light.

First of all, we have the records of the various American and European legislatures, peculiar bodies which were created by people of the better class through the exercise of their economic power in political fields, and divided in the most extraordinary manner into geographical groups such as precincts, counties, towns, states and so forth. Then there are the records of the courts, scientific societies, municipalities, police records and the like.

Considering the vast changes that have taken place since these distant days, I find the majority of these documents very well preserved. We have, too, a wonderful number of direct histories of specific periods and upon all sorts of specialized aspects of the life of that day which may be read with interest.

Histories, for the most part, must be examined with care as they are often remarkable for concealing, rather than revealing, the true aspect of affairs. This was due to the fact that histories were written with the very praiseworthy intention of having those who read them think particularly well of their own people and their own policies, and particularly ill of the rival countries with which their own had been, at any time, at issue.

It was considered highly proper and patriotic to have the Supermen especially well thought of, so care was taken that nothing likely to excite a criticism adverse to established things might result from the perusal of these remarkably correct volumes. Events, as they did happen, then, were molded by the historian to the needs of the social thought rather than a knowledge of the correct events which might result in an undesirable trend in public thinking.

The various records of the churches have come down to us, together with a number of edifying lives of, and instructive sermons by, the great men who flourished in those ages. I need not tell you how spiritually uplifting it is to read of the acts of these men and their ability to secure money from the people and the Supermen. Indeed, the number of men who made a good living specializing on teaching the benighted how to live well found in the lives of these teachers an instructive lesson, for as far as I can glean, they enjoyed every luxury and were a visible witness to the truth that the laborer was worthy of his hire when he worked in the Vineyard.

I attach particular importance to the Court Records. I will say that of all these the decisions of the American Court, especially those handed down by Abinadab Fudge, are of inestimable value and are to me a constant source of pleasure.

For authentic facts I can recommend the Congressional Record and I am really at a loss to understand how such an epitome of eloquence, lofty purpose, fine philosophy and historical fact can be

considered for one instant dry and tedious reading. There's not a dull line in this vast record and I am very much surprised that Dr. Wyse should have proclaimed such a misleading assertion to his history classes. Not even the more voluminous British Hansard compares with this important work.

To emphasize the love of exact truth that filled the minds and hearts of the great numbers of Congress, I find that when preparing their remarks for the Record, the speech they delivered was not reported, but another which they amended by revision was inserted instead, and in order that good intention might not lose out by lack of opportunity, even the things they had intended to say but did not, were admitted to insertion by an interesting rule called the "right to extend remarks." I think this privilege was quite a guarantee of sincerity of effort upon the part of the worthy members which should have satisfied the most demanding consituency.

Mr. Bobolink, the well known novelist, has called the attention of students of history to the records of the Rockabilt and the Barneby Foundations. Doubtless, on account of his devotion to fiction and especially to historical fiction which his particular talents so adorn, he is inclined to place a higher value upon these records than I do.

I can never quite overlook the fact that it is impossible to find at any time that the writers of these records, the salaried officials of these institutions, could completely disassociate themselves from complete and blinding reverence for the great and worthy founders. So it is that they are prone to indulge in hyperbole and exaggeration and at times are inclined to deify the Supermen—a length to which we would hesitate to follow them.

One writer confidently asserts that Rockabilt wrote those dramas which were the work of a man called Shakespeare, and yet another that he was the original author of the Four Gospels. To show what slight authority there was for these statements so credibly alleged by the Foundation officials, I just mention that on one occasion Mr. Rockabilt bought one of the original volumes of Shakespeare's plays, and on another he taught a lesson from the Gospel in a Sunday school, founding his teaching upon a well worn but generally regarded as spurious, text: "It is easier for a camel to go through the eye of a needle than for a rich man to enter the Kingdom of God." In this connection I may state that it was authoritatively taught, and very probably was correct, that this text had no application to rich men in democratic and twentieth century nations.

Remembering, then, the inclination which was quite general, to regard the founders of these institutions as a God, you can examine them more as matters of some curiosity than as sources of historical fact.

Finally I come to the Press of that age. Newspapers have been collected and properly catalogued by me in infinite variety and in a very perfect state of preservation.

Now I yield to no man in my admiration for the style, the methods and the high ideals which animated the ancient journalists but, except as scientific exponents of current natural history in the Sunday Supplements of the great daily organs, for reasons which I shall later point out to you, they cannot be accepted as impartial repositories of facts.

None the less, there are certain phases of domestic life which they portray, which are fairly accurate and truthful.

Thus, when a great and bloody atrocity was committed, such as a demented man slaying his mistress, the particulars are given with an exactness of detail truly admirable and always reliable. Crimes of conspicuous brutality had an undying charm for the readers of these papers, and when a particularly salacious scandal was to be told, it lacked nothing in the telling. Of course, sometimes these scandals unfortunately affected the Supermen, whereupon a prudent respect for the stability of society prevented any mention of them in these papers.

Before passing from this subject, I may venture to take your attention and your time to pay my respects to those colored supplements which Art-loving America insisted should be issued every Sunday morning with its paper.

Today these antique paintings are the wonder and admiration of all real contemporary genius and I confess, that for technic, coloring, delineation and tout ensemble they easily defy any comparison with modern art.

I am sorry to note that a later day critic has taken upon himself the right to decry these charming prints. He alleges in a weak attempt at facetiousness that they were meant to be funny, and that from week to week their popularity and circulation depended materially upon some recondite element of humor he affects to discover in them.

This itself is poor humor. It would be as lame and preposterous were I to assert that the Pyramids of Egypt were funny and that the Bridge of Sighs was erected to excite laughter.

They were published, it is obvious, for the lofty purpose of cultivating the artistic instinct of the people, and I have no doubt that Mr. Morganheim was sincere in his confession when he admits that when he first began to make his famous collection of art, he received his first true conception of real art from this relatively humble source.

I will say further that I have often thought that if our art-teachers of the present time would devote more attention to a study of these ancient works of art, they would come far closer to inculcating

true conceptions of artistic beauty than by perpetually following the more decadent modern standards.

I am rejoiced, indeed, that so eminent a critic and artist as my friend Swabstick, is entirely in accord with me in this opinion, and I may also confess that I invariably turn to his works on art and culture when seeking either instruction or information on this head, not, I hope, without result.

I want, fiinally, to impress upon you the great value that is to be attached to my recent discovery of ancient cinema records which were dug up in the buried cities of New York, Chicago and London.

These are truly in endless variety and afford a field for instructive recearch which, I entertain the hope, will be plowed by many of you younger men.

How sublime was the lofty art conception of the Ancients may be gleaned from the fact that only such films as passed their acute judgment upon art and culture were allowed exhibiton and hence so many bear the script "Passed by the Board of Censors."

Any picture which was not of super excellence was denied the right of display by these cultured judges!

## THE PREAMBLE

OF THE

INDUSTRIAL WORKERS OF THE WORLD

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of management of the industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, tbe trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# INDUSTRIAL PIONEER

*On the San Pedro Slave Market* *"R. U. R."*

*UNDER THE IRON HEEL* - *By Ex-Senator R. F. Pettigrew*

# Boycott All California-Made Goods!

THE state of California has put itself outside the pale of civilization.
It has taken from workingmen the right to organize.
It has suppressed free speech and free assemblage.
It persecutes men for reading in public the Constitution of the United States.
BOYCOTT ALL CALIFORNIA-MADE GOODS!

The state of California wants to reduce the working class to a condition worse than chattel slavery.
It sends men to prison for believing in and advocating industrial unionism.
It has reverted to barbarism and the dark days of the Spanish inquisition.
Its criminal syndicalism law is an outrage and an insult to the working class of the whole world.
BOYCOTT ALL CALIFORNIA-MADE GOODS!

The state of California has sentenced over fifty workingmen from one to twenty-eight years in prison for being members of a labor union — the Industrial Workers of the World.
These men are now rotting in Folsom and San Quentin penitentiaries for the "crime" of trying to improve the miserable living conditions of their class; for the "crime" of having the courage of their convictions.
Scores of others are now on trial, or out on bail, awaiting sentence.
The crimes being committed by the state of California cry out to high heaven.
BOYCOTT ALL CALIFORNIA-MADE GOODS!

The state of California keeps in prison for life men who are admitted by the whole world to be innocent — Mooney and Billings, Ford and Suhr.
The city of San Pedro has arrested and herded into stockades like cattle over six hundred peaceful striking marine workers and sympathizers.
The state of California is paying ten dollars a day to three professional witnesses, Dymond, Coutts, and Townsend. moral and sexual perverts. who have confessed to having committed so many crimes that they ought to be put behind prison bars for the balance of their lives.
The corrupt and vicious powers that rule and control California have caused the arrest of Upton Sinclair, internationally known writer and idealist, for upholding the United States Constitution.
BOYCOTT ALL CALIFORNIA-MADE GOODS!

Demand the liberation of all workingmen and women incarcerated in California's dungeons!
Demand the repeal of the infamous criminal syndicalism law!
In the meantime—
BOYCOTT ALL CALIFORNIA-MADE GOODS!

# On the Blacklist —

You will not find these books in 99 out of 100 Public Libraries or so-called Carnegie FREE Libraries. Because these institutions are boss controlled. Because these books have wised up thousands of workers. If you want to be an intelligent fighter in the ranks of the militant I. W. W., this is your opportunity.

1 **Capital,** by Karl Marx. Volume I, entitled "The Process of Capitalist Production," is practically complete in itself. It explains the thing which, up to the time that Marx came on the scene, had confused all the economists, namely, Surplus Value. It explains exactly how the capitalist extracts his profits. A notable and valuable feature is an elaborate alphabetical INDEX containing about 1,400 topics, which makes reference to this vast storehouse of information very easy, and constitutes the best Economic Dictionary available in any language. Cloth, 864 pages. With a year of The Industrial Pioneer, both for..... $3.25

2 **History of the Supreme Court of the United States,** by Gustavus Myers. A master class must have some supreme institution through which it can express its consecutive demands and enforce its will. In the United States the one all-potent institution automatically responding to these demands and enforcing them has been the Supreme Court. This History of the Supreme Court, being a narrative of the deeds of the chief bulwark of capitalism, constitutes at the same time the best history of the United States that has yet appeared. Cloth, 823 pages. With a year of The Industrial Pioneer, both for..... $3.25

3 **The Ancient Lowly,** by Osborne C. Ward. A History of the Ancient Working People from the Earliest Known Period to the Adoptation of Christianity by Constantine. This work represents a life-time of research, and summarizes practically all of the information regarding the working people in classic histories and inscriptions. It concludes histories of the revolts of slaves in ancient Rome, notably that of Spartacus, and accounts of the ancient trade unions. Vol. I or Vol. II, with a year of The Industrial Pioneer for..... $3.25

4 **History of the Great American Fortunes,** by Gustavus Myers. A real history of the United States is this story of the class struggles waged by the middle and working classes against the growth and increase of the power of the owners of the Great American Fortunes, vested in the mines, the timber lands, the railroads and the vast industries. **Volume I** is the story of the theft of fertile valleys and priceless timber lands, the growth of the great proprietary estates, the rise of the trading class, the beginning of slavery, the origin of shipping and city estate fortunes. **Volume II** is an account of the origin and development of the railroads, the great lumber steals and frauds, the coal land gifts, the mineral thefts and the source of the Gould and Vanderbilt fortunes—together with the story of incessant warfare between the robbers and the robbed. **Volume III** contains the story of the concentration of capital, the rise of the Morgan, Jim Hill and other fortunes, stories of unrestrained thefts, grabs, arson, swindling coal steals, with the accompanying corruption of public officials and Congress. Any one volume with a year of The Industrial Pioneer..... $3.00

# Smashing the Chains of Slavery

By VERN SMITH

NO, the revolution is not here—not yet. The great strike—the General Strike in all industries—is still in the future. When that comes, there will be no need to discuss whether we shall go back and strike on the job. The job will be ours, the capitalists will be in flight to Java, Honduras, or the North Pole, anywhere out of the vicinity of their former wage slaves

But the General Strike of the Industrial Workers of the World, the May Day Strike of 1923, will be remembered in that future day of revolution as one gigantic step forward—the second step, for the first was taken in 1917.

The theory of the General Strike is this: Concentrated Capital breaks the ordinary single unit, single shop, or single industry strike. "Scab-herding" is a profession now, and there are many flying squadrons of strike-breakers, some openly and avowedly in the business of scabbing, like Black Jack Jerome's personal industrial army, some masquerading as private detective agencies, like the Pinkertons and the Baldwin-Felts, some pretending to be labor unions, like the Loyal Legion of Loggers and Lumbermen. These mobile, highly paid expeditionary forces of slavery can be concentrated in sufficient number in the rebellious neighborhood, the district where a small strike takes place, to crush that movement, then they can be shipped to another district, and crush some local strike there, and then to another, and another.

The theory of the General Strike is that there are only a limited number of these scabs, and that if everything stops at once, the scab armies could not begin to fill the orders, they would be needed everywhere at once, and could not possibly be everywhere at once.

### Job Trust An Obstacle

It is all very well to have a theory, it is another thing to put it into practice. The I. W. W. has always understood the tactic of the General Strike, and has always lacked the weight in numbers to bring it about.

It was necessary to wait for favorable times, when the unorganized, and the misorganized could be led into the fight, and it was necessary to depend on but a part of the industries, since the laborers in those where the job trust holds sway, such as for example, railroading and coal mining, could not be enthused sufficiently. Years of dependence on leaders, years of fear of expulsion, years of bartering and bickering over contracts and jurisdiction, had deadened the old timers to the point where an audacious slashing charge, a flaming revolt against intolerable tyranny, a generous wrath, had become impossible for them.

The strike could not be completely general, therefore. It was by circumstances narrowed to the field that lies between the petty, suspicious job trust unions and the masses of unorganized workers, who had not been sufficiently touched by radical propaganda to understand what it was about.

In plain words, this means that at the time the strike was declared, it could affect the timber workers, the construction workers, and the marine transport workers. Strong minorities in each of these industries

are organized in the I. W. W., and enough propaganda has been put out to give the unorganized in those industries a pretty fair notion of the situation. Later, it is expected the harvest workers will join, but until there is a harvest, there can not be a harvest strike.

Considering all these things, it is evident that this general strike is in the nature of grand maneuvers, of experimenting with the theory, rather than of a life-and-death fight. It is a partial general strike, and is to serve as training for greater, more serious conflicts to come.

### The I. W. W. General Strike

This general strike is a thing to learn from. Let us then proceed to learn. First, what actually happened?

A building boom was on. Transportation, and logging and sawing of lumber were known to members of the I. W. W. to be speeding up. The time was ripe for action. Furthermore, extensive amnesty campaigns had failed to release the class-war prisoners, but had supplied the moral justification for more serious measures . (No real Wobbly would need any such excuse to test his strength against that of the master—but there are the unorganized.)

In conformity with I. W. W. tactics, the exact date of the strike was not set very far in advance. There is no sense in handing over a vital secret of this nature to the boss. Many employers did not believe there would be any strike. Some of the lumber barons seem to have made an extremely serious blunder. They believed their own lies. They had so often stated that the I. W. W. was dead, that they thought they were seeing ghosts when the thousands of men poured out of the camps, swamping the stage lines, thronging the streets of Seattle, Portland, Klamath Falls, Tacoma, Everett, and the California redwood cities.

### Strike April 25

The "zero hour" was April 25. This was another little surprise for the bourgeoisie, for most of those that feared a strike were expecting it on May First.

There was great difficulty in getting the news into the camps. Liberals and patriots have a feeling that the U. S. mail is something holy, sacred, and inviolate. In my youthful days I used to read in "Youth's Companion," and "The American Boy" stirring tales of heroes who defended the sanctity of the mail against, oh, well, everything,—Wobblies by this time, probably—but this is just one of those beautiful ideals that you can't get a camp superintendent to understand. He has no respect for the mail. If the strike committee had a dollar for every letter they sent to announce the strike that did not get delivered, they could issue strike benefits. The entire Hoods Canal territory in Washington did not receive a single strike notice by mail. Two delegates from the strike committee made a flying trip through that district and carried the declaration of war from camp to camp, covering twenty-two camps in all. In each of these, one man applied for a job, while the other slipped around to the shacks the "timber beast" is allowed to sleep in, and spread the news. All the camps came out. Not one of them would have ever heard of the strike otherwise.

### Gunman Murders McKay

It required caution in some of these camps. The company "gun-men" were right on the job. That they are not merely for ornament, nor an idle threat, is proved by an event on the seventh day of the strike. A picket line was organizd to stand in the public road in front of the Bay City Lumber Mill. They acted as pickets usually do, they called to the men going in to work, and told them there was a strike. They tried to explain the situation, and while engaged in this undertaking, a picket, William McKay, attracted the attention of a guard, a man old and cruel and proud of his servitude to the master, one Green, a former sea captain. Green fired at him as he was walking away, the bullets crashed through his brain, and—a coroner's jury of Aberdeen business men exonerated Green.

The story the killer told was so incredible. that one Seattle newspaper, (not a la-

bor paper) wrote up the incident like this: "Green states that he drew his gun and fired two shots up into the air, to frighten the crowd away. Both bullets struck McKay in the head."

Further acts of violence have not been wanting. Two delegates who left Aberdeen to call out the workers in Stimpson's Camp have not been heard from since, or had not been up to the time of this writing. The engineer on a railroad near Feather River Mill, a struck concern in California, looked up as he rounded a curve, and saw an I. W. W. picket, a new man in the organization, lying wounded between the rails. The man was just able to raise one leg feebly, before the engine struck him. His body was shredded; the whole eighteen cars passed over him before the train could be stopped. These are just some of the ways the capitalist fights, all the time howling that it is the I. W. W. who are violent. There were the usual number of assaults by police officers, in various cities, Stockton, Calif., Portland, Ore., Seattle, Wash.

### Newspaper Acrobatics

The acrobatics of the newspapers were wonderful things to see. The suddenness of the strike evidently caught them unaware. The policy was divided. Judging from past experience; the capitalist press treats a strike in one of two ways. Either it conceals and ignores, or it exaggerates, for the purpose of proving violence, and getting out the troops. In the case of this general strike, the papers of the West tried to do both. The city of Seattle has three evening papers and one morning paper. One evening paper, the A. F. of L. "Union Record," was very cautious in the beginning about printing anything. Long ago, last summer, the city editor of this journal had expressed himself to various persons as being of the opinion that talk about a General Strike was nonsense. After the strike got under way, the editor found it difficult to believe that there were so many men out. When the strike committee counted 30,000, the Union Record reported 10,000. However, after the first two days, the paper gave the strike hearty support, front-page publicity, and an editorial which tried to combine an appreciation of the activity of the Wobblies, with a boost for the Farmer Labor Party.

The Star and the morning paper, the Post Intelligencer, featured the "Revolution," and

Workers in Aberdeen, Wash., Parade in Memory of Murdered I. W. W. Picket

the Times said not one word until the fifth day, when it announced that the strikers would probably go back to work, soon. The Times, by the way, is the only paper allowed into the Discovery Bay Logging Co. Camps, near Seattle, and gun men turned back all the first class mail, even.

Down in Portland, the paper of widest circulation had a regular battle, with itself. The adjutant General of state militia told them he was establishing machine gun nests all over the woods, and the poor credulous editors ran the story.

The funniest thing was in Los Angeles. The Los Angeles Times hates union labor. It is so poisoned on its spleen, it looks on organization with such a jaundiced eye, that even the spiritual sons of Gompers cannot get a smile from it. It dos not even like Lewis of the U. M. W. of A., and that's saying a great deal. This Los Angeles Times saved many a Wobbly from facing criminal syndicalism. When the first man went out to distribute the first hand-bill announcing the strike, the reporter of the Los Angeles Times was right on his trail, and the Times put out an extra, with a magnified facsimile of the hand-bill on the front page, boxcar headlines, and ten point type in the article. The strike has been unusually good in Southern California.

### Strike A Success

The strike has been from the very start unusually good everywhere. Old timers of the 1917 days were surprised. The strike committee was surprised. Wherever the news reached the camps, the men came out. The Loyal Legion of Loggers and Lumbermen was but a straw in the gale. As for strike-breakers, there were none.

The first news of the strike reached Seattle from two sources almost simultaneously. About noon on April 25, Wednesday, came a wire that the lumber camp at Clear Lake, with 130 men, had quit clean. Even the head loaders and hook-tenders (these are bosses—straw bosses) had left their jobs. Also the gyppoes (contract laborers) had quit.

This feature of the strike is fairly universal. The foreman and the contract laborers have just as much reason to protest against executive tyranny and the imprisonment of class-war prisoners, just as much reason to hate dirty camps, long hours and low wages, as any one else, but usually they don't. They lack the feeling of class. They think of themselves as being on the master's side, not on the laborer's. This strike has proved that when you gather momentum enough, when the strike fever is catching, the gyppo and the strawboss are not immune. They are human, and this is one case where mob psychology is on the side of the worker.

The other surprise was the action of the International Longshoremen's Association, Everett Local. They struck right along with the Marine Transport Workers' of the I. W. W. A hurry up call for speakers was sent to Seattle, and so great was the agitation in Everett, so unexpected the action, that when the meeting came off, there were three I. W. W. speakers present, each expecting to do all the talking.

All day Wednesday, Wednesday night, Thursday and Friday the logging camps came out. In Tacoma, in Aberdeen, in Olympia, there was very little change left in the banks, when the loggers had finished cashing their checks. The Peninsula, Hood's Canal, Grays Harbor, and Puget Sound districts (look them up on the map), are the important areas of the so-called "long logging" of Washington state. "East of the Hump" (across, over the Cascades) lies the Spokane, Eastern Washington, Montana, Idaho, "short log" district. This is the home of the "gyppo" and was not the scene of such open propaganda and organization work as the Western district. But how it did strike! The workers of the Brooks Scanlon Company of Eureka, Mont., had just finished a successful walkout, about two weeks before the General Strike. Their demands were all granted; no matter, they struck again, for release of class-war prisoners. One of these same class-war prisoners, Archie Sinclair, a man the government is trying to find a country for, so they can deport him, came through Montana and

Idaho during the first days of the "Revolution." Everywhere he found striking Wobblies, silent camps, discouraged bosses. It was splendid.

### Oregon and California

In the Klamath Falls district, and around Marshfield, Oregon, the strike was scheduled for April 28, through some misunderstanding. Nevertheless, the boys walked off the jobs. The mills were not much affected, but the logging camps were shut down tight, and even the slave killing southern company the Long Bell, failed to meet the test.

In California, the criminal syndicalist law prescribes one to fourteen years for anybody who joins the I. W. W. Of course, the law is not enforced. They only pick off an active member now and then. But the mere existence of such a barbarous state of affairs shows that organization is relatively weak yet. Nevertheless, the Feather River district struck and many other camps and logging operations were closed down. Last summer, the I. W. W. had great strikes in the Hetch Hetchy Construction camps, (the City of San Francisco water project) and in the camps of the Southern California Edison Co. (The Electric Power Trust). The strikes were only partially successful last summer. Just the same, these men who could not win all their demands for themselves, did not hesitate to "have at 'er" again, for their fellow workers in the prisons.

This is the season of the first crop of alfalfa in the San Joaquin Valley. Dairying is the great industry there. The heavy work, the hay pitching, is done by hired help. And one thousand of the hired help quit. There was a mighty wail from the farmer. The San Joaquin Valley farmer has been a great supporter of the criminal syndicalism law, but hay will spoil unless it is cut at the right time. It is not so certain now that the California farmer likes the criminal syndicalism law.

In San Pedro the docks were tied up as tight as if the harbor had frozen. The reports were, first, that 46 ships could not be worked (have cargo unloaded, or loaded), then that it was 62, and at last as this is being written, that 87 ships lie idle in the stream, and that one mate is amusing himself by running the winch on one of the ships, swinging the same sling-load of cargo into the hold and out again, and back again —putting up a bluff.

### Oil Workers Come Out

There was also the strike of the oil fields. Southern California has a great petroleum production industry, and in a new field recently opened at Signal Hill, the I. W. W., especially the men indicted for criminal syndicalism in Los Angeles, have been organizing lately. Sixteen of them were indicted a couple of months ago, charged with trying to burn up the field. The only fires they carried, were the flames of discontent, though these did more damage to Doheny and Rockefeller than dynamite could have done, for the oil field workers struck, first 500, then, as this is written, a report is received that thousands are on strike.

Tear Bomb Thrown Into a Mass-Meeting of Striking I. W. W. Lumber Workers

In such wise the workers left their jobs, for the class-war prisoners' sake. By the fourth day, 120,000 were out. After that, more quit.

No sooner was the strike fairly launched, than another big business got an awful jolt. I refer to the bootlegging industry. The sale of very high-priced, very poisonous moonshine and the presence of many "tin-horn" gamblers has been relied on for decades to break strikes, by making the strikers "broke". It has always been known that the man who wakes up on the second day of the strike with no money, and no courage, sick, disgusted and despondent, is a potential scab.

In this strike the officers of the law made no attempt to shut off the supply of "smilo," "grappo," hard cider, etc. The gambling games in all the Pacific Coast towns are wide open all the time, anyway. The vultures were gathered together on the morning of the strike to feed up, a little.

### Hits Bootleggers

But on the morning of the strike a drama was being enacted in the office of a certain high official in the city government of Seattle. There was a small room, and on one side were a group of red-faced loggers, very firm and determined. They were the "de-horn committee". On the other side was a great leader of the people, and a man of power, representing several hundred policemen's clubs. He was a city official and he was "on his high horse.". He said, "Are you trying to run this city?"

"No," said the chairman of the 'de horn committee,' "we want to run industry, but meanwhile, we will see to it that you run the city."

A compromise was effected, and the police department consented to co-operate. A troop of loggers with a sergeant of police went into Our House—the infamous Our House. There was a table of gamblers, a black-jack game.

The sergeant said not a word. He might have hated to do it, but it was too public not to do his duty. He put his knee under the edge of the table and kicked it into a corner. They went to the next gambling joint and did the same thing. Similar events took place in other cities. Stocks of synthetic whisky were unearthed, broken, and poured into the gutters. It was the first real clean-up that ever took place in a country of puritans, raids, and crusades.

In Portland the police would not co-operate. The I. W. W. picketed one hotel where a blind pig was operated. The police arrested the pickets. The situation was too much for the populace; after a couple of days they took part in the fight. The I. W. W.—always called lawbreakers—was enforcing the law against bootlegging, and the Mayor of Portland and the police,—sworn to defend the law—were defending the bootleggers! This is, from the capitalist's point of view, one of the most uncanny features of the whole unnatural affair. Hundreds of petty political squabbles are raging in as many different cities and towns of the Pacific Northwest over this indecent exposure of the Guardians of the Peace, the angels of good government.

The next and most disconcerting event is the strike on the job. Monday, May 7, the loggers of the Northwest went back to work, but the strike is STILL ON!

The strike committee of the Northwest branches of the I. W. W. has issued the following bulletin:

Seattle District, May 7, 1923

**Take the Strike Back to the Job**

Fellow Workers: The I. W. W. does not believe in long drawn-out strikes off the job. These exhaust the workers and eventually end by the workers losing all they have gained. The strike for the release of all class-war prisoners has been transferred to the job by the vote of the membership. This change of tactics will be carrying the fight into the bosses' territory and the boss will be forced to pay the expenses of the strike.

Monday, May 7, 1923, is the date set for the strike to be transferred on to the job.

(Signed) **I. W. W. Strike Committee.**

WOBBLY LUMBERJACKS IN A "MULLIGAN CAR"

A good many companies are granting demands.

Conditions were improving very rapidly before the strike, because the lumber camp superintendent fondly imagined that he could bribe the loggers not to strike. This improvement was reflected into the construction jobs. Now many of the companies are openly bidding for the return of their former men, and almost all are promising almost any improvement demanded, though fulfillment of the promise is not so ready. Still, it will come.

In the camps where least has been granted, in hundreds of lumber camps, in dozens of construction projects, bosses are rushing about, tearing their hair, and discharging a man here and another there, and hiring some one by guess, from a list of ready willing men, too ready, and suspiciously willing to draw pay, if not to work. Efficiency experts are having nightmares, and engineers are furiously recasting their figures. The output per man is "all shot to hell," and there are lawsuits threatening the contractors on construction jobs. And the end is not yet. The end will not come until all the demands are granted, including the first—**the release of all class-war prisoners.**

# The Ballad of Sandy McCole

By ARCHIE SINCLAIR

THIS is a tale of the logging trail,
A story crude and plain,
That was told to me by Danny McPhee
One night in the Coeur d'Alene.
Outside it was cold, the Storm King bold
Was holding high revelry,
The north wind screamed until it seemed
The devil was laughing in glee.
The flames leaped higher in the pitch-pine fire
And they boomed like a deep toned bell,
And the pattern they wove on the red hot stove
Looked like a map of Hell.

Dan looked around till his pipe he found,
And he filled the blackened bowl,
Then he turned to me, and, "Scotty," said he,
"Did you ever know Sandy McCole?
He worked around the Puget Sound,
In the short-log country, too,
Wherever he went he was a malcontent,
An Ishmael, a Wandering Jew.
He talked of a time when out of the slime
The slaves of the earth would rise.
Now some maintain that McCole was insane,
While others maintain he was wise.

"He seemed possessed of a great unrest,
His voice with passion would ring:
Such things don't go in the land of snow
That is ruled by the Lumber King.
He may have been crazed or fuddled or mazed,
But his heart was true as steel,—
It seemed his fate to agitate
In spite of the Iron Heel.
We were sitting one night in the dim fire-light
Of a camp on Pigeon Lake,
The camp was run by a son-of-a-gun
The 'jacks called 'hard-boiled' Drake.

"He was a burly guy about six feet high,
And he weighed two hundred and ten.
He could whip any two of his logging crew
And gloried in driving his men.
Well, McCole blew in with Barney Quinn
And they sat on the deacon seat,
And after a while Quinn said with a smile,
'Let's go get something to eat.'

They started to go to the shack below,
But Drake was lurking near,
And he said to Mc Cole, 'God damn your soul,
What the hell do you want around here?

"Get out of the camp, you dirty tramp,
I'm sick of your lousy breed.
You think you can strike any time you like,
But you're glad to come bumming a feed!'
McCole never spoke, but I thought he'd choke,
His face turned red, then white,
He started to shake as he looked at Drake,
Then he calmly said, 'We'll fight.'
Now McCole could scrap, he was the sort of a chap
That would die before he'd give in,
Each man in the crew but one or two
Wanted to see him win.

"For an hour or more they fought by the door
Of that shack on Pigeon Lake,
Then McCole stepped in with a hook to the chin
That humbled the bully Drake.
'T was an awful clout and it knocked him out—
He couldn't get to his feet;
The man of steel was made to feel
The bitter sting of defeat.
Now after they fought each one of us thought
We'd seen the end of the fuss,
But little we knew of the horrible brew
That Fate was mixing for us.

"Drake got to his feet as if to retreat,
McCole went into the shack,
The boss withdrew a pace or two
Then turned and started back;
There was a muffled roar by the bunk-house door,
The floor was splashed with red,
And Sandy McCole (God rest his soul)
In a pool of blood lay dead.
Yes, Sandy's gone to the Great Unknown,
And some of us mourn his loss,
His murderer Drake for his loyalty's sake
Was raised to walking boss."

One night in the Coeur d'Alene.

# What Is Industrial Unionism?

By JACOB SILBERT

A LOT of people talk about industrial unionism and the Industrial Workers of the World without really knowing what either of these actually mean. There are others who imagine that by merely amalgamating a few craft unions into one union, they thereby create an industrial union. The whole question is, in the minds of a vast number of workers, sadly muddled, to say the least.

The outstanding feature about capitalism is the development of the machine process and the gradual disappearance of skill. The more machinery is perfected and installed the less are the requirements for skilled labor and the greater the technical subdivision of labor and the disappearance of skill. The result of this process is that the few remaining craftsmen who are still needed in some of the industries have become absolutely helpless unless they bind themselves with the great bulk of the industrial workers who are either semi-skilled or wholly unskilled. The day of the mechanic or craftsman is over, and the day of the semi-skilled machine-tender and unskilled industrial worker has arrived.

The craft union is an organization which embraces in its membership the workers who are experts at some particular trade or craft. That form of an organization had a useful service to perform in the early and later stages of capitalist development; it is safe to say, however, that during the last ten years the importance of the craftsman has steadily diminished and that in the not far distant future he will become pretty much of a negligible factor in the scheme of industries. His place is being taken by the unskilled and semi-skilled industrial worker.

### Concentration of Power

Hand in hand with the machine process has gone the concentration of the control and ownership of industry into fewer and ever fewer hands. Only the other day Armour & Company absorbed the big Morris & Company packing concern. The deal involved a transfer of fifty million dollars. The United States Steel Corporation thru its subsidiaries and interlocking directorates, controls the entire steel industry in the United States. The same might be said about the Standard Oil Company in regard to the production and refining of petroleum. Control of the various railroad systems is fast converging into a very few hands. The same applies to most of the other industries; even to the retail merchandising enterprises. Witness the tremendous growth of the chain store, restaurant and grocery businesses. Witness the displacement of small grocers by the Piggly Wiggly Corporation.

All of this is but the reverse side of the same phenomenon—the logical working out of the machine process of capitalist development. It means more efficiency in the management and control of industry by capitalists, and more intensive exploitation of labor. It means firmer intenchment in power of the capitalist industrial oligarchy, by virtue of the stranglehold that they have on industry.

Such being the case, it ought to become apparent to everybody that the only way for labor to fight these powerful combines of capitalism is by organizing on as large a scale as the capitalists themselves are organized upon. The workers have to form unions which embrace every class of worker in each industry. Only by having an organization of this kind will they have the least chance of being able to combat the exploitation of the capitalists.

### The Gospel of the I. W. W.

This is just what the Industrial Workers of the World preach—and practice. Let us take, for instance, the steel industry, which is in itself but a part of the metal and machinery industry. A few years ago the American Federation of Labor made an attempt to organize the steel workers into twenty-four international craft unions. It

failed. The reason why it failed ought to be as obvious to any man possessing sound sense as the nose on his face. It is a logical and practical impossibility for workers who work side by side in the same industry, after they have been divided into twenty-four different and often mutually antagonistic unions, to fight the highly efficient and centralized organization of the steel barons, and win. There are rumors abroad that a similar attempt is to be made again. We would advise these A. F. of L. organizers to take this money that they intend to spend in this organization campaign and donate it to the Salvation Army; it would probably do more good there.

The name "Industrial Workers of the World," or as it is commonly abbreviated, "I. W. W.," means just exactly what it says. It means organization of the industrial workers of the world. In effect, therefore, it stands for the industrial international of the future.

If instead of dividing the steel workers into twenty-four different craft unions, we would organize all of them into one union, then we would have a genuine industrial union. This means that not only the manual laborers in the steel mills would belong in the union, but everybody who is in any way, shape, manner, or form employed in the steel industry. For instance, all of the mechanics or craftsmen who work around the steel mills, such as electricians, plumbers, carpenters, engineers, bricklayers, steamfitters, would belong to the one industrial union instead of belonging in their respective craft organizations. Further, this applies to the office personnel as well—to the clerks, bookkeepers, accountants, stenographers, purchasing agents, salesmen, and everybody else in any way connected with the office end of the steel industry; all these would be members of the same union. This, and only this, will constitute a genuine union of the steel workers. The steel workers will in their turn be part and parcel of the greater industrial union which comprises all those employed in the metal and machinery industry.

### Marine Transport

As another example, let us consider the marine transport industry. The workers in this industry have been split up into various small unions, each of them having separate contracts with the shipowners and working at cross purposes with each other. There have been separate unions for the longshoremen, sailors, oilers, firemen, engineers, masters, pilots, and captains, to say nothing of the divisions that obtain owing to geographical reasons. For instance, the sailors on the Pacific and Atlantic oceans and on the Great Lakes have been organized in separate unions. Such being the case, is it any wonder that up till now the marine transport workers might as well not have had any unions for all the good that they have done them? The workers have been almost entirely at the mercy of the shipowners.

Now, the I. W. W. scheme in regard to the marine transport workers is to organize all of them into one union, the Marine Transport Workers' Industrial Union No. 510, of the Industrial Workers of the World. This union embraces sailors, firemen, cooks, stewards, longshoremen, mates, pilots, engineers, and everybody else employed in the marine transport industry on sea or on land. The phenomenal success that the I. W. W. Marine Transport Workers have obtained through their recent strike, whereby they won an increase in wages of from 15 to 20 per cent and obtained practically all of their demands, excepting the liberation of class-war prisoners, goes to point out the effectiveness of this form of organization.

There is only one thing which the master class actually fears, and that is the organization of the workers into genuine industrial unions. The possibilities of such an organization are tremendous. They are so great and far reaching that most workers even today do not appreciate them. If even a comparatively small number of all workers would be lined up and effectively mobilized into genuine industrial unions, they would be in position to take away the

industries from the capitalists and to abolish thereby the present system of wage slavery.

### The Railroad Workers

By way of an ilustration, let us say that all of the railroad workers were organized into an industrial union, so that whenever they had any grievance against their employers all of them would go out on strike at the same time. Just stop a moment and consider what this would mean! Don't you see that their power would be so great that they would not even have to go on strike? They could paralyze the life and the industry of the entire country inside of a few days. They could obtain every one of their demands by merely threatening to go on strike.

Yes, they could go farther and declare the railroads the property of the nation and nothing could be done about it. The way it is now, the workers on the roads being split up in some sixteen craft organizations, when one goes on strike the others break the strike by remaining on the job.

It has been said that the craft unions have been organized for fighting the master class. There is a grain of truth in this if we consider as such their attempts to safeguard to some extent the narrow craft interests of their members. However, when looked upon from the broader point of view of the entire working class, we are forced to admit that they are doing nothing of the kind. In most industries the craft unions function to the end of keeping the workers divided, and thereby they do exactly the opposite of what they are proclaimed to do. They play into the hands of the master class. Little by little the workers are beginning to see into this, which is one of the reasons for the diminishing membership of the craft unions. As has been pointed out elsewhere in this magazine, during the last year the American Federation of Labor lost over eight hundred thousand members.

The Industrial Workers of the World consist of twenty-nine industrial unions, which comprise the entire industrial scheme of the country. No matter what occupation one might have, he will find a place for himself in one or the other of these unions. We thus see that the I. W. W. offers the most comprehensive system of organization to be found anywhere in the world.

### Organize the Unorganized!

There is less organization among the workers in the United States, in proportion to the total number of industrial workers, than in any other capitalist country. Only one out of every six or seven workers belongs in any kind of union whatsoever. We thus see that the field is practically open for organization. The natural, logical, and sensible thing to do, therefore, is to make an attempt to line up these unorganized workers into genuine industrial unions. Of late a campaign has been started by the advocates of amalgamation to organize the unorganized into the A. F. of L. unions. Beware of this move. It ought to be apparent to everybody that it is the height of folly to line men up into craft unions which later will either have to be destroyed or else consolidated into industrial unions—provided this is possible of accomplishment. The proper thing to do is to organize these unorganized into real industrial unions to start out with.

The big job that confronts us today is to keep in line those who, owing to stress of economic conditions, were organized during strikes, and to reach the now disorganized and uneducated workers. Let the I. W. W. slogan, which found expression in the columns of this magazine last month, reverberate from one end of the land to the other: **"Organize the Unorganized!"**

# GENERAL STRIKE

## Strike One Strike All

## Strike Strike Strike

**Final at Last !**

The voice of the meu in prison has been heard, they who have suffered for the cause of labor. Their families have had enough of this sufferiug.

COME ONE! COME ALL!

Pnll your labor off the joh for a short time and wake up this monster of Capitalism. Show him that you are still Free Men!

STRIKE ONE! STRIKE ALL!

And open the prisou doors, whatever your material demands may be, put them at him at the same time. This is the strike call issued by the strike committee of the Industrial Workers of the World.

### General Strike Demands
### of the Marine Transport Workers

Release of all working men and women who are in prison for organized labor and working class aetivities.

To do away with the Shipowners Association employment office, better known as the Fink hall.

A minimum wage for seamen of $100.00 per month.

Three watches to prevail for all seamen except coal burning firemen who shall have four watches.

A minimum scale of $1.00 an hour for longshoremen.

A 44-hour week for harbor workers.

All overtime at double rates.

That we the strikers, pledge ourselves to continue the strike until all class war prisoners are released from prison and jails and also pledge ourselves to be orderly throughout the strike, and refrain from indulgence of intoxicating liquors.

STRIKE COMMITTEE
Marine Transport Workers I. U. No. 510
SAN PEDRO, CALIFORNIA

# The San Pedro Strike

By ART SHIELDS

I HAVE just come from the city of San Pedro, the port of Los Angeles, where one of the most remarkable strikes in the history of American labor is now going on. I am frankly amazed at what I saw there and so is everyone else coming into the town, and so are the people of San Pedro themselves.

What, San Pedro, the busiest port on the Pacific tied up tight, and by the wobblies? Impossible! The report was so extraordinary that I came down from San Francisco on a voluntary investigation tour to see for myself. I had passed through San Pedro earlier in the year on an intercoastal freighter and had seen no signs of a labor sunrise. At that time the town was in the hollow of the shipowners' hand. Mr. Nichols' "scab hall," as the shipowners' employment office is colloquially called, was handling the labor problem with thorough satisfaction to the employers, and there was no organized protest from the workers.

Longshoremen who denied union membership were allowed to work from eight in the morning till eleven at night, when ships were in. They were driven at insane speed and accidents were frequent. I have never seen winch drivers swing cargo with such desperate hurry as at San Pedro, or stevedores plunge about so frantically. Nor was this all. Longshoremen told me that the worker who fell under the frown of Mr. Nichols as a union suspect, or for any other reason, went on the scrap heap. Women used to go down and weep to him to give their husbands a share of the work so they could eat, but to no use; Mr. Nichols got a kick out of being hard.

As for the wobblies, yes, there were a few, but most of them were in jail. The sovereign state of California makes it a crime, punishable by one to fourteen years imprisonment, to belong to the industrial union movement. Today the law is a farce in San Pedro. Two thousand folk of the town are openly carrying I. W. W. cards and seem very proud of it. This criminal syndicalism law is now getting a dose of the same wholesome irreverence that I saw the liberty-loving miners of Kansas pay Governor Allen's Industrial Court. But three months ago how different it was in San Pedro. In those days the wobblies were a small minority and Swelled Out Authority jumped on them as hard as bullies can.

### I. W. W. Educational Campaign

What I did not know then was that these hundred or so I. W. W's. were carrying on a quiet but effective educational campaign that has perhaps never been equalled in such a short space of time. In three months, from January to April, every house in San Pedro received three pamphlets and other literature setting forth in clear and simple language the benefits of organization! How to do away with the tyranny of the "scab hall"; how to raise wages to a living standard and to equalize working hours so that every one would have his share of labor instead of one getting sixteen hours a day and the other none. All these problems were dealt with and the literature also took up the ultimate program of the I. W. W., its plan for the final emancipation of labor from the idlers who live on its back. And, more particularly, the free literature exposed the infamous criminal syndicalism law of California, which sends workingmen to penitentiaries for fighting for better living conditions.

No brass banding marked this work that paved the way for the big strike. The longshoremen and sailors who were distributing this literature and giving street talks in between jailings, knew how to get results. They knew their people. They knew that their fellow workers, the other sailors and longshoremen who make up the bulk of the population of this marine city, would listen to the facts presented in a reasonable way.

The result was that membership in the Marine Transport Workers' Industrial Union began to grow quietly, but by hundreds. The union had no hall, only a "floating headquarters," but its strength began to bulge up on all sides. And when the big strike call for the release of the labor prisoners, the elimination of the "scab hall" and the improvement of job conditions went out April 25, San Pedro went over the top. As the strike progressed swarms of sympathizers joined the union, and the Marine Transport Federation, a smaller and unaffiliated organization, fell in line. And then came the merchants.

### One Hundred Ships Tied Up

In a week the strike was ninety-five per cent effective. As I write, one hundred ships are tied up in the harbor. Lumber schooners loaded weeks ago in Puget Sound, Coos Bay, Oregon, or Eureka, Cal., lie idle at their wharves. Cargo vessels of all nationalities are anchored in the outer harbor or crowding the almost deserted docking spaces. A half dozen lines have already declared an embargo on freight to San Pedro and railroad com-

panies are cutting off car service from the shipping companies because of insufficiency of business.

This big strike has grown to such proportions that it can no longer be called a mere I. W. W. strike. Nor even a mere waterfront strike. It passed through both those phases. Today it is a community affair. The people of San Pedro as a whole are back of it and the red label doesn't bother them. The sentiment is astonishing. At last night's meeting I heard the wife of a local business man make a strike speech and hand a check for twenty-five dollars to the committee. A few nights before, the names of sixty business men, mostly small merchants, were read off as strike fund contributors, the sums ranging from one dollar to one hundred. And the Japanese fishermen of East San Pedro were among the contributors. The fact that every member of the strike finance committee which handles this relief money is a member in good standing of the I.W.W. and carries a red card in his pocket in spite of the syndicalism law does not bother the donors a bit. They know the boys. They are their customers and friends and they want them to win so there will be more prosperity for all.

### Down with Hootch!

I was about to add here that the Industrial Workers of the World have twice the influence of any force in San Pedro, but I will not do so. It would sound like propaganda and my trade is that of a newspaperman, not a propagandist. Instead I make a significant statement that speaks for itself. **The I. W. W. has closed up the bootleggers for the duration of the strike.** It did this by its own authority and in its own way, and without the fuss and flurry, the sly tasting and sensational raidings of the official closers. The ukase against bootlegging was read out at the first mass meeting and it was enforced. And now the bootleggers are on strike too, as one of the clan put it sadly and meekly.

In a week's time I saw only two men under the influence of liquor, and they but slightly. Both came from Los Angeles. San Pedro is as dry as Charles W. Wood found Emporia, Kansas, as related in a recent issue of Colliers' Weekly.

The wobbly dry action made me decidedly curious. I had always known the industrial unionists as a group that dealt with job reform to the exclusion of the so-called political issues, and this action led me to ask questions of the strike committee.

"Nothing strange," they said. "We're out to win this strike and no bootlegger is going to stop us."

"Boozing might ruin the strike," they explained. "If one of our boys got drunk he would be apple pie for some agent provocateur to incite to some act that would hurt the organization. And another thing: We don't want anyone throwing away eight dollars a quart for "jackass" when there are women and babies to be fed."

It sounded logical so far, but there was something else I couldn't understand.

"Why is it," I asked, "that the zealous police force of San Pedro and the federal agents haven't taken the initiative in this?"

"They are too busy," smilingly answered a wobbly; "too busy arresting workingmen." He was one of the defendants in the Los Angeles criminal syndicalism trial, now out on bail and assisting in the strike.

Another thing I was about to say was that this is a young man's strike, but the memory of a grey-haired, sinewy veteran, Fellow Worker Gelpke, stops me. Gelpke says he is a real Industrial Worker of the World because he has worked in industry in each of the five continents of the world. He took a sixty-day jolt as a wobbly last winter without minding it a bit, and is one of the most effective speakers in San Pedro. And is he enjoying himself? Say, you should have heard his greeting, "Ain't she a moose?" when I stopped him on the street and asked him about the strike.

### Free Speech Fights

Somewhere in this magazine you will see a picture of Leo Stark handcuffed to a telegraph pole. It was his way of winning a free speech fight. He guaranteed

During the wholesale arrests of open air speakers, Fellow Worker Leo Stark chained himself to a lamp-post in order to continue speaking while the dicks went after the keys.

that the police couldn't drag him away till he had finished his organization talk. That was the night Captain Plummer's brave "bulls" arrested thirty wobblies for exercising their constitutional rights of free speech, and it was before a woman loaned her lot on Liberty Hill to the strikers for their meetings. Well, Leo Stark isn't exactly a youngster, though he's only been in the radical labor movement for thirty or forty years in nearly as many continents as Gelpke. Stark is a speaker and newsboy. He sells five hundred copies of each issue of "The Industrial Pioneer," "Industrial Solidarity" and "Industrial Worker," and is said to be a wizard at disposing of wobbly song books, pamphlets, and so forth. Of course he's out on bail as a criminal syndicalist and has a forty-day jail term awaiting him for a street speech charge, but that doesn't bother him after the Wichita oil workers' case, in which he invested four years.

One might go on to mention some of the vivid old veterans among the Spaniards and Mexicans who make up half the working force of San Pedro. Particularly in my mind there stands out one keen old strategist, a sturdy, grizzled fellow, with black eyes glowing out over high bronzed cheek bones and an aquiline nose. He is a man of much influence among his countrymen in surrounding towns and the steps he has taken to ensure solidarity from the Mexicans in the coast towns to the south would make an article in itself. And they have been effective. There is even less scabbing from Mexicans than from others.

But the young men are in the majority. They are running the strike committee, publicity committee, finance committee, launch committee, and so forth, and they pack the grounds on Liberty Hill where the strike meetings are held twice a day. And when the songs of labor brotherhood are sung there under the stars it is an inspiration to hear their clear voices rise in the night.

### Wobbly Enthusiasm

I had heard that the days of wobbly singing were over, that the movement had become too hard-headed for music, but San Pedro dispels that illusion that came from too long a sojourn with the theoreticians of the East. I have never heard anything sung with more enthusiasm than the song that peals from the throats of thousands every night on Liberty Hill. It is the class-war prisoners' song "Remember," which Harrison George wrote in the Cook county jail, with its commanding refrain:

**"Remember you're outside for us**
**And we're in here for you."**

That is the outstanding thought in this strike which was primarily called for the release of the class-war prisoners. The illusion is forever shattered in me that the American workingman would fight for nothing but more "pork chops." The fact is that the strikers here in San Pedro are talking more about forcing the release of their fellow workers from Leavenworth, Walla Walla, San Quentin and other prisons than

**Mass-Meetings Like This Were Held Every Day On the San Pedro Water Front.**

for anything else, even the abolition of the hated "scab hall." And by the class-war prisoners they do not mean only wobblies. Mooney and Billings are emphasized as much as Ford and Suhr. Every speaker, and there are many,—rank and file speakers talking five minutes each—stresses the demand for the release of the federal and state prisoners and the abolition of the syndicalism law.

* * *

Will the strikers win? That depends on the rest of the marine industry. San Pedro is a safe unit in the fight. The men are determined and their wives are behind them. Economic support is coming from all sides. Two bakeries are supplying free bread and wobbly fishermen give a ton of fish a day to the needy and money is given freely. San Pedro is doing its part.

One thing seems certain. The movement in San Pedro is now so deeply grounded that it will not blow away. It is grounded on a clear understanding, by hundreds of active members, of the issues involved. It is an unusually intelligent rank and file. Marine workers proverbially have a broader and clearer view of world movements than the stay-at-homes, and these men have also received an enviable postgraduate educational training in the last three months in San Pedro. Best of all, the movement is organized on broad human lines and is not limited and sectarian. That is shown by the policy of extending relief to all workingmen, whether members of the I. W. W. or not. The movement, though under the banner of the I. W. W., is a popular community movement against local injustices and vicious state and national persecution of labor.

Against such a wall the propaganda of hate of the Los Angeles Times and the San Pedro Pilot, a slimy local sheet which is trying to sic the Ku Klux Klan against the strikers, will beat in vain.

And ornithologists say the raven is croaking over the "scab hall."

# Under the Iron Heel

By R. F. PETTIGREW, Ex- Senator from South Dakota.

THE people of the United States are playing with fire. They are experimenting with an unworkable system of social organization—a system that has been tried repeatedly during the past three or four thousand years and that has destroyed civilization as often as it has been tried. The form of the experiments has been different, but their essential features remain the same.

Let me review these features briefly, because they lie at the foundation of our whole public life.

First, there is the concentration of wealth in the hands of a few men—"self-made," "irresponsible"—owing no allegiance to anything save our own destinies and their own ambitions. These wealth-lords, or plutocrats, ruling by virtue of their wealth, have been the bane of every great civilization from Assyria and Egypt to Rome, Spain and Great Britain.

Two per cent of the people of the United States own sixty per cent of the property of the United States. Yet they produced none of it. By legislation, by craft and cunning, by control of Congress and the courts, they took to themselves what others produced.

Sixty-six percent of the people of the United States own five per cent of the property of the United States. Yet they produced all of the wealth and have none of it. Why do not the producers of this wealth have what they produce?

### The Constitutional Convention

Because the making of the laws and the control of the industries and of the courts is in the hands of those who do not work, and this has been true from the beginning of the Government. The convention, which framed the Constitution of the United States was composed of fifty-five members. A majority were lawyers—not one farmer, mechanic or laborer. Forty owned Revolutionary Scrip. Fourteen were land speculators. Twenty-four were money-lenders. Eleven were merchants. Fifteen were slaveholders. They made a Constitution to protect the rights of property and not the rights of man, and ever since, Congress has been controlled by the property owners, and has framed laws in their interest and their interest only and always refused to frame any laws in the interest of those who produce all the wealth and have none of it.

In the second place, the wealth-owning class, because of its wealth-power and its hold on the machinery of society, takes a tribute from the mass of the workers. The character of this tribute varies from age to age. At bottom it is the same. The owner of wealth, because he possesses the things without which the masses would starve, compels them to pay him a return for their use. In Egypt and in feudal Europe, the masters owned land and exacted rent. Here, in the United States, the masters own the forests, mines, factories, railroads, banks and insurance companies. These things they own through the instrumentality of corporations and therefore their income takes the form of dividends on stocks and of interest on bonds. The form is immaterial. The fact remains that the few—whether as landlords or capitalists—hold the choice spots of the earth, and the many, for the privilege of enjoying these choice spots, pay tribute to the few who own them.

### The Workers—Wage Slaves

These masses—the workers—the producers are rewarded with the least possible amount upon which they are willing to go on working and reproducing their kind. In old times they were chattel slaves; today they are wage slaves. Formerly, their masters took all of their product and guaranteed them a living. Now, a part of the product goes to the workers, but they must keep themselves.

In the past the work done by the slave for his master kept the master in luxury and enabled him to live a life of ease, and, if he desired, of dissipation and waste. Today

the rent, interest and dividends paid by the workers to the owners of lands, bonds and stocks enable these owners to live in luxury, in idleness and, if they desire, in wasteful dissipation. The owners of American wealth, according to the returns published by the Internal Revenue office, state on their income tax blanks that their incomes amount to tens and hundreds of thousands, to millions and tens of millions of dollars each year. The most skilled of the workers seldom make over $100 a week with steady work, and seven-eights of them make less than $50 a week.

Furthermore, when hard times come, it is the worker who goes on the street and starves. The bondholder continues to draw his interest and the stockholder continues to receive his dividend. The bondholder, under the law, can insist upon his interest. The corporations take care of the stockholder long after the workers have begun to walk the streets looking for a chance to work.

These owners freed from the necessity for labor, develop rapidly into a leisure class, while the workers, struggling for existence, constitute a labor class. The leisure class controls the surplus wealth of the community. Out of this surplus it feeds, dresses and houses itself; buys privileges, corrupts the machinery of the state; invests in foreign exploiting opportunities; struggles with the leisure classes of other countries for the chance to exploit and rob.

### Poverty and Want

Among the masses, who are laboring and producing without getting the value of their product, there is poverty and want. Diseases waste and ravage; vitality is sapped; energy deteriorates. Perhaps nowhere in the modern world is the picture more clearly presented than among the exploited British factory workers during the forty or fifty years preceding the World War. If the soldiers on on the field were cannon fodder, the men and women of Lancashire and Birmingham were factory fodder. While the leisure class of Britain was shooting grouse and chasing foxes across the plowed land, the men and women and children belonging to the working masses were huddled in garrets and cellars—the prey of tuberculosis, rickets, anæmia and want.

The leisure class, having nothing better to do, plays at ducks and drakes with international affairs, plunges the country into economic and military conflicts, heaps up great debts, and wastes its own and the country's resources, while the workers do the mass-fighting, pay the taxes and suffer from starvation and disease. Between the two classes there springs up hate, class conflict and perpetual dissension. It was not for nothing that Alexander Hamilton wrote, "The various and unequal distribution of wealth."

When I entered the public life of the United States, the economic ruling class was just stepping into power. There was no leisure class to speak of. There was still an abundance of free land to the workers. The America that I knew in my young manhood was still talking, in all sincerity, about "government of, by and for the people." In the brief period of my own public experience we have adopted a species of feudalism more inhuman and more vicious than any of which history bears a record—a feudalism of artificial persons (corporations) using their power to exploit the workers in the interest of the parasites. Within my lifetime we have become a government of corporations whose attorneys are in the House and Senate and throughout the bureaus and departments of the Government, looking out for the interests of those who pay them their retaining fees.

This is capitalism—the control of the machinery of society in the interests of those who own its wealth. This was feudalism in France and slavery in Rome and in Assyria. This is the system of dividing the community into two classes—owners and producers—and of rewarding the owners at the expense of the producers. As I read history, this method of social organization has had and can have only one result. The leisure class rots out and drops to pieces; the workers starve and suffer and die. Sometimes they revolt—particularly in later years.

Generally they are too weak and too ignorant to do anything more than labor and reproduce.

### Owners Rob People

In the preceding pages I have tried to show how this system was getting its grip on the United States. Out of my own experience in public life I have indicated the activity of the land-grabbers, the bankers, the money-ring, the beneficiaries of the tariff, the trust magnates, the railroad operators and the other masters of the economical world. In Congress and out, year by year, they have taken possession of the country's best resources, robbed the people through monopoly, exploited and plundered the workers by means of low wages and high prices.

Then, with their ill-gotten gains, they have invaded other lands—Cuba, Porto Rico, the Philippines, Mexico, Panama, Costa Rica, Nicaragua and Haiti—and there they have repeated the same process, by fair means or foul, gaining possession of timber, oil, copper and iron, and then forcing the natives to produce these commodities for a pittance wage. Behind them, in these ventures, the plutocrats had the army and navy of the United States to be used when necessary, as they were used against Spain, the Philippines, the Mexicans, the Haitians and the rest.

Meanwhile, at home, through the subsidy of political parties—through the passage of legislation—through the courts—through the private control or, where necessary, through the open purchase or coercion of public men, the interests have taken possession of the government of the United States, shaping its institutions, and directing its policies along lines calculated to yield the largest net returns to the plutocracy.

### Suppression of Free Speech

The last move in this direction involved the entrance of the United States into the World War; the conscription of men; the dispatch of an army to the battlefields of Europe; the suppression of free speech and a free press; search, seizure, indictment, trial, imprisonment and the deportation of men and women in open and flagrant violation of constitutional guarantees and long-established precedent.

The Wilson administration and the Supreme Court have demonstrated and established that in time of war the Constitution, with all its amendments, is but a scrap of paper and of no force and effect. Hereafter, all that the people who do not work and produce no wealth have to do is to unite and get control of Congress and other branches of the government and declare war on some country—any country—and at once proceed to enact laws in total disregard of the Constitution, and all its guarantees, and arrest and imprison all who disagree or protest. It is well for the people who toil to make a note of this fact.

No man who has regard for the welfare of this country, or who is concerned for its future, can fail to be alarmed at the course that it has followed, and is still following, along the road that leads to empire and imperial institutions. There may yet be time, but unless we turn back soon, it will be too late. It behooves the working class to take over the industries and operate them for use instead of for profit, which will make it possible for the workers to erect an industrial government and to enact laws so that every man shall have all he produces.

Capital is stolen labor, and its only function is to steal more labor.

* * *

**Editor's Note:** The foregoing is reprinted, by special permission, from former Senator Pettigrew's book, "Imperial Washington," published by Chas. H. Kerr & Co. This book contains the frankest exposé and the most stinging indictment of the Washington government "of, for and by big business," that we have ever read. Mr. Pettigrew spent twelve years in the United States Senate, and knows what he is talking about. We might disagree with some of the author's conclusions and remedies, but when it comes to giving an intimate and vivid picture of how the powerful trusts and corporations own and control the governmental machinery, this book has no equal.

The book contains 441 pages and sells for $1.25. In order to carry the message of The Industrial Pioneer and the lesson of "Imperial Washington" into thousands of homes over the length and breadth of the land, we will send you the Pioneer for a year and the book for $2.25. Regular price for the two: $3.25.

"My Old Kentucky Home"

# The New Migration — Northward

By ALOIS SENNEFELDER, JR.

A REVOLUTION is going on in this country. The direction of migration is being changed. Instead of flowing from east to west, or descending from the colder climes, it is going from the balmy south to the bleak north. Another historic exodus is on that will effect great transformations and perhaps simplify old problems. The Negro is leaving the South for the great industrial centers nearer the Arctic Zone.

The primitive white settlers living in the Appalachian mountains, descendants of original American stock, are also migrating north. They are being enticed from their mountain fastnesses into the modern factory. On top of it all come the Mexicans, who are being imported by the steel, mining and agricultural corporations, in violation of the contract labor law, from beyond the Rio Grande, for a life of slavery. Surely, all this means—or will mean—"something." What?

First, it looks as if "the Solid South" is being broken up, or is disintegrating. **Since it would not absorb capitalism, capitalism is absorbing it.** The Negroes are being drawn into the great melting pot of the country, which has always been to a very great extent located in the North East. They will become artisans, laborers,—thereby complicating the problems of labor and its organization. What to do with the Negro question in the South, is a problem that is being solved by its absorption into the labor problem of the North. And be it said, to the credit of the Negroes, they are willing to hasten this solution by clamoring for admission into labor unions and by embracing, to a more limited extent, revolutionary ideals. Be it said also to the credit of the I. W. W. in this connection, that it has always welcomed the Negro to its folds, convinced that in the solution of the labor problem would be found the solution of the problems of race, color, and creed.

With the whites of the Appalachians and the Mexicans, it is the same. Absorbed into the northern labor forces, they also tend to become a part of the labor problem and are inseparably bound up in its solution. The I. W. W. has set out to organize them also. In the rubber factories of Akron, in the construction enterprises of Ohio and the coal mines of that state and West Virginia are the mountaineers being brought into contact with modern industrialism and the I. W. W

The I. W. W. influence among the Mexicans is even more extensive. This is par-

ticularly true of workers in the agricultural, marine transport and mining industries in California, Nevada, Utah and Montana. In these and in the Gulf states, as well as in Mexico and South America, **Solidaridad, the Spanish organ of the I. W. W.,** wields considerable prestige, with the result that many Spanish-speaking workers have been won over to the cause of the Industrial Workers of the World.

Among the Mexican steel workers a like connection prevails. Many imported Mexicans are to be found in the Bethlehem, Pa., steel mills. Thanks to the efforts of some Spanish marine transport workers and to the vigorous organization campaign being conducted by Metal and Machinery Workers' Industrial Union No. 440, of the I. W. W., a great part of them have been reached by the gospel of class solidarity. The I. W. W. press and organization have been of invaluable assistance to them in their fight against steel trust enslavement.

While this is creditable to the I. W. W., it is only a drop in the ocean. The I. W. W. must exert itself more stupendously than ever before, or the reactionary elements that are utilizing the exodus from the South will overgrow the organization and prevent its development, to the destruction of its great ideals. Make no mistake, the great labor problems of the future will center in the North and the East. Unless they are faced and settled there, no advance or solution can be had elsewhere. Let us, then, turn our faces in these directions and build up more organization there. And then still more organization. Nothing but complete, thorough and extensive organization will do.

That is one side, the northern and eastern side, of the revolution in migrations now going on in this country. But there is the other side. How will it affect the South? Will it leave the South in economic ruin and chaos? Or will it compel improvement and development? More likely the latter; especially as the South is failing in its attempts to stop this exodus. A regular war is going on for the control of the labor power of the South. The employment agents of large corporations are arrested and jailed. Negroes known to have slipped out to northern destinations also suffer the same fate. On all sides, the southern planters, bankers, and manufacturers are resorting to every means "to keep the Negro in his place." But all to no avail, the South is playing a losing game that will force modifications in its structure,—economic and otherwise. The South will have to step upward in the plane of industrial development, for it has been tried and found wanting; the exodus amply attests to this.

Mexican Workers

What will all this mean to white labor? For years there has been a tendency for white workers to drift South, especially in the textile, coal, marine, construction, and

other industries. They have taken with them the first weak beginnings of labor unionism. It is likely that, under the new circumstances, more of them may be needed and induced to go South. More labor unionism is likely to result. And so a greater capitalist South may develop, with a stronger industrial unionism.

One thing is certain—that the northern migration has its reactions on the South. The northern Negroes, writing home of northern conditions, affect the South profoundly. New visions, new aspirations, are created; and the leaven of discontent, the soul of progress, is set to work; with the result that even the stay-at-homes become a force for southern regeneration.

And then think of Mexican contact with American industrialism! Its reaction will also mean an upward pull in social development for Mexico and Mexicans. Already is this evident in the connections that are being made between the labor movements of both countries; especially the boycott by Mexican labor of California-made movies as a protest against the continued incarceration of the class-war prisoners and the Golden State's unjust criminal syndicalism law.

Verily, those who believe western migration to be "everything," have overlooked the newer migration northward. It is a revolution of profound import, and we had better wake up to the fact. Let us get on the trail of this new social phenomenon. And let us be lively about this, or else we will find it overcrowded by others who, grasping its great possibilities, will get there before us.

# Escaped!

(The boiler house whistle is blown "wildcat" when a prisoner makes a "getaway.")

By RALPH CHAPLIN

A MAN has fled . . . ! We clutch the bars and wait;
The corridors are empty, tense and still;
A silver mist has dimmed the distant hill;
The guards have gathered at the prison gate
Then suddenly the "wildcat" blares its hate
Like some mad Moloch screaming for the kill;
Shattering the air with terror loud and shrill,
The dim, gray walls become articulate.

But Freedom! Freedom is not there nor here!
In those far cities men can only find
A vaster prison and a redder hell,
O'ershadowed by new wings of greater fear.
Brave fool, for such a world to leave behind
The iron sanctuary of a cell!

# For a Mess of Pottage

By HENRY VAN DORN

ON May the tenth, sixty people, representing the Farmer-Labor, Socialist and Workers' parties, met in the Morrison Hotel in Chicago to outline and make announcement of the purposes and program of the labor party convention to be held in Chicago on July third. It was a meeting of heterogeneous elements — wage workers, farmers, politicians, intellectuals, and members of the middle class. A collection of over four hundred dollars was taken up.

The Morrison Hotel is one of the finest in the city of Chicago. A collection of over four hundred dollars for sixty people averages seven dollars apiece. We leave it to the judgment of the reader to make of these two observations what he will.

The I. W. W. is concerned with the welfare of the man who works in industry for wages. The industrial proletariat as a class is the strongest numerically of any in the United States, not excepting even the farmers. The thing for us to decide, therefore, is whether or not this class has anything to gain through political action, engaged in by a party such as has been proposed at this meeting.

In the first place, can any ground be found on which such divergent elements as were here represented could work in concert for the common good? Is there any precedent either in current or past history that this can be done?

We will have to admit that there is not, and that, therefore, to advise the industrial workers to spend time, money, and energy in political action is pure and simple opportunism. Opportunism is a mortal enemy of the working class. Witness the present rulers of capitalist Europe.

### Working Class Renegades

Premiers Mussolini and Branting of Italy and Sweden respectively, and presidents Millerand of France and Ebert of Germany, are all of them ex-socialists, political opportunists and traitors to the working class. Almost the whole of Europe is ruled today by politicians who once professed to be fighting in the interests of the working class. Now they are the henchmen of capitalism.

Is the same thing to be repeated in the United States? If such be not the professed purpose of the proposed labor party, the results undoubtedly will be the same, should it ever attain the same strength reached by the European political movement.

The agitation for working class political action rests on the fallacy of popular democratic government; it is the duty of all those who have the interests of the industrial worker at heart to do everything in their power to check the spread of these wrong and injurious ideas.

No such thing as democracy exists on the earth today, nor is there the least chance for it to come into being for a long time to come. The electoral system in all countries is part and parcel of capitalist dictatorship. By telling the workers that they can gain anything by taking part in the electoral system, we are miseducating them and merely blinding them to the facts as they actually are.

The powers that be are not afraid of political action by the workers, no matter how revolutionary this action may be proclaimed to be. As a matter of fact, they would welcome it if they realized how serviceable it is to them; and sometimes they do. It is one of the safety valves through which popular discontent fizzles off without doing any damage to the capitalist system.

### Futility of Political Action

If anybody wants to be convinced of the futility of political action, let him consider some of the European countries: Italy, England, Germany and France. Is anybody rabid enough to say that if the workers

in these countries had not been misled and miseducated for so many years by their political leaders, that they would be in such a deplorable condition today?

England has close to a million and a half unemployed. Many millions more are receiving wages of from $5 to $8 per week. There is a housing shortage of about one million homes. In short, the British worker is in as sorry a plight today as he could well be. Yet the Labor Party is one of the three strongest parties in Parliament. The working class is represented by over one hundred members.

In the face of this, the mass of workers are helpless and starving, and will no doubt continue in that condition for quite some time to come. Their bodies are enslaved to the master class and their minds are enslaved to the fetish of political action, which prevents them from doing anything to rid themselves of the bonds of slavery. All they have been able to attain has been a lot of fine sounding phrases, such as the resolution introduced in Parliament by Phillip Snowden to abolish capitalism and substitute in its place socialism; it sounds nice and revolutionary, but that's about all the good it does to the unemployed and starving British workingmen.

The classic illustration of the failure of political action is, of course, Germany. There they have the socialist Frederick Ebert as president of the German republic. Yet the whole of Germany is today in the hands of a few industrial magnates who practically exercise powers of life and death over the working people. In no other country has trustificaton of industry reached such an advanced stage and in no other country are the industrial workers so absolutely at the mercy of their industrial overlords; yet to all intents and purposes Germany is today a republic run by socialists who are supposed to be the representatives of the working class. Of course, the truth in the matter is that these so-called representatives of the workers are nothing but puppets in the hands of the big capitalists who are masters of the situation by virtue of their control over industry.

### The Italian Fascisti

But the greatest lesson is to be learned from Italy. There the workers were getting too strong to suit the purposes of the bourgeoisie. It is safe to say that what happened in Italy will be repeated in other countries as soon as the workers actually become strong enough on the political field to be even remotely a menace to the ruling class. At one fell blow the Fascisti demolished the Italian electoral system and substituted in its place the rule of brute force. When the disguise of democracy no longer serves the needs of the ruling class, it is done away with and other more drastic methods are used.

Let the dictatorship of the Fascisti in Italy serve as an example to all those who try to fool themselves and others by pointing to the great benefits to be obtained for the working class through parliamentary action. All political parties in Italy have been practically abolished. The Chamber of Deputies might as well be dissolved for all the good it does to anybody. Thousands of duly elected municipal and other officials have been put out of office; in hundreds of cases, they have been literally thrown out through the windows. Opposition newspapers have been mercilessly suppressed. Hundreds of buildings, newspaper offices, party and union headquarters have been razed and burned to the ground. Many thousands of men and women have been murdered by the Fascist bands—the Ku Klux Klan of Italy—and over sixty thousand have been arrested on various charges, many of them being sentenced to long terms of imprisonment. The very last vestige and semblance of popular government has been abolished.

The accumulated labors of many years of hard work by the workers and peasants to gain control over city, provincial, and federal governmental institutions have been done away with inside of a few months. That is what is to be expected whenever the working class begins seriously to encroach upon the prerogatives of the master class by the use of political action. The labor unions and the co-operative move-

ment also suffered in this onslaught, but not to the same extent. The demoralization in the unions would not be near as great had they not been, not wholly excepting even the syndicalists, so closely linked up with the political movement.

The following statement by Premier Mussolini is highly illuminating: "Fascismo is not afraid to declare itself liberal or anti-liberal. It has already passed, and if necessary will pass again, without the slightest hesitation, over the body, more or less decomposed, of the Goddess of Liberty."

The dangers of reposing faith in a political party have been amply illustrated in Soviet Russia. The main concern of the Russian Communist party at present seems to be the enforcement of the new economic policy, which is tantamount to the reintroduction of capitalism with all its evils. The logic of events and the course of evolution no doubt demand it, but to imagine that on this score the immediate interests of the industrial workers and of the present government are identical, is to have a wrong conception of the Russian situation.

### An American Labor Party

Bearing these things in mind, we can now return to the United States. No doubt a labor party will spring into existence in the future, and it might even attain considerable strength in some localities and might become a factor of national importance, but this will not prove anything one way or another. The question is, of what earthly use can it be to the industrial workers either in their struggle with the employers for immediate demands or in the ultimate struggle for the abolition of the wage system?

We claim that it can be of no use at all, and that for anyone who actually understands the modus operandi of capitalism to say and preach the contrary is to deliberately miseducate the working class. For any body of men which professes to have the interests of the industrial worker at heart to devote its energies toward the formation of such a labor party is to run wild with opportunism. We consider it our duty to warn the workers of the false prophets who are trying to lead them into the by-paths of confusion and political folly.

Five men sitting on the bench of the United States Supreme Court can declare unconstitutional any law passed by both houses of Congress and approved by the President. It can overrule all of the laws passed by any of the state legislatures and its executives. This was recently demonstrated by the Supreme Court declaring unconstitutional, by a majority of one, the Minimum Wage Act of the District of Columbia. In the face of this where does the usefulness of parliamentary action come in?

### Economic Power

The basis of all power is the possession of economic power. Just so long as their supremacy in industry is not menaced the capitalists are sure to remain safe in the saddle. They are, therefore, not afraid of anything which looks forward to a change in the personnel of political institutions—the handmaidens of the big capitalists and financiers. As long as the industries are safely in the control of the powers that be, it makes no difference under what name the various political representatives might be put in office, the capitalists would remain masters of the situation. While economic power is still in the hands of the capitalists and the structure of the governmental machinery is not changed, Congress would continue to function in the interests of the capitalists even if every representative and senator were a socialist, laborite or communist.

The only place where the workers can fight the master class effectively is in industry at the point of production. Only there can they obtain their immediate demands for higher wages, better conditions, shorter hours; only there can they obtain their demands and ambitions of whatever character.

The master class knows this; that is one reason why it is so afraid of militant industrial action. That is the reason why it per-

secutes the Industrial Workers of the World. It realizes that the I. W. W. offers the only means through which the workers can come into possession of the good things of life; in other words, of the whole product of their labor. Knowing this, the employing class is exceedingly vicious in persecuting our organization.

While the so-called working class political parties are weak, the capitalists are not afraid of them, under whatever name they might masquerade; the capitalists are not afraid of revolutionary phrases. When they get stronger, as in Italy, they are crushed. What the master class is afraid of is that the workers might get a stronghold on industry by organizing themselves into genuine industrial labor unions.

It is the duty of every class-conscious, militant industrial worker to disillusion his fellow men about the mirage of political action.

# The Logic of To-Day

By RAGNAR REDBEARD

THEN what's the use of dreaming dreams—
that "each shall get his own"

By forceless votes of meek-eyed thralls,
who blindly sweat and moan?

No! a curse is on their cankered brains—
their very bones decay:

Go! trace your fate in the Iron Game,
is the Logic of To-day.

# The Marine Transport Industry

By A MARINE WORKER

THE World War withdrew workers by the millions from productive industrial occupations into the industries producing ammunition and other war supplies for the support of huge armies. It recruited millions of men from the army of peacetime production to carry on war, thereby causing a rapid increase in the prices of food, clothing and shelter. It decreased the number of unemployed to such an extent that the workers finally found themselves in such demand that they could ask for and get more wages and better working conditions than formerly. The employers had to give in. The shipowners were no exception; they had to grant some of the demands of their employes; they had to be "good" to their workers in order to obtain young men and boys for the fast-growing fleet of ships of the American Merchant Marine.

### The International Seamen's Union

The unions affiliated with the International Seamen's Union of America were speedily built up, especially on the Atlantic Coast, mostly through the aid of the U. S. Shipping Board and the shipping commissioners. The functions of these unions were mainly to aid in insuring the necessary discipline and to supply the demand for seamen at the prescribed rate of wages and conditions given by the owners and agreed upon by the union through contracts. They thus served as a convenient medium by which the shipowners kept the marine workers down to the terms of the contracts during a time when the seamen, had they been differently regulated, or organized, would have been able to get much greater remuneration for their labor power.

During the latter part of 1920, shipping decreased to an alarming rate. The agreements of the shipowners with the unions of the I. S. U. of A. very wisely had been set to expire on the first of May, 1921, when shipping had decreased to the desired point for the shipowners to reduce the standard of living of the crews to the lowest possible limit. The many autonomous parts of the I. S. U. had been very carefully kept apart from one another and were but loosely federated through a per capita to the general office, with Andrew Furuseth as its president. Internecine strife and hatred between the crafts were openly maintained; the longshoremen and their international, which also was and is still affiliated with the American Federation of Labor, came in for a large share of this foolish hatred.

Owing to this state of affairs, and chafing under the iron-fisted rule of their well-fed, highly paid and conserv tive officials, who could not be removed from their positions, the members at last woke up to their own helplessness, the weakness of their separate craft unions and the corruption of their officialdom. In the fight that followed whatever good work had been done in the past was destroyed. The members got disgusted and deserted the unions by the thousands, until today there remains only the corrupt officialdom, reigning supreme, supported by finks and a few dupes who are offering their services to the shipowners, and are "stooling" on members and delegates of the Marine Transport Workers' Industrial Union No. 510, of the I. W. W.

The I. S. U. of A. has in this strike degenerated into a scab-herding outfit and the few members it still possesses were during this strike scabbing on the seamen under police protection. Every self-respecting seaman of today abhors it. Thus ends the last chapter in the history of the once prominent International Seamen's Union of America.

### Industrial Union No. 510

In contrast to the above, another and greater organization sprang into existence, strengthened and purified in spirit by the many battles it has waged against the master class, and recognizing no craft divisions, creed, nationality, or color; an organizatino having great aims and ideals, without high-salaried officials, industrial in form and using up-to-date tactics in the fight against the employers; an organization which declares that the workers are the producers of all wealth and that therefore all wealth must go to labor. This organization, international in scope, and having for its motto "An injury to one is an injury to all," is the Marine Transport Workers' Industrial Union No. 510, of the Industrial Workers of the World.

This union held in its ranks a few seamen illuminated by its ideals, who realized the greatness of its work and the importance of its mission. They were aware of the obstacles in the way of building up a powerful marine transport workers' organization, yet they were filled with hope and enthusiasm, energy and determination. They acted as missionaries of a new faith, always busy, always eager to learn from past mistakes in order that in the future they might be victorious. They got many converts who again in their turn got many more.

And so it came about that these seamen who had lost faith in their old leaders—who had been proved to be blind leaders—began instead to place all confidence in themselves and to build up their own organization, in conformity with the principle of always keeping power in their own hands instead of delegating it to someone else.

This organization is steadily growing into still greater power and prominence. Since its inception it has been an inspiration and a fighting weapon to stop the encroachments of the masters and to gain improvements for the workers both ashore and afloat. Shorter hours, higher wages and better working conditions had been obtained on many ships even prior to the calling of the big strike.

That the members knew when to act to their best advantage, has been demonstrated by crews striking either when signing on or at the last minute before departure of shps.

### The Marine Strike a Success

Several months ago these M. T. W. seamen began in various ports to draw up demands for more of the good things of life, realizing that the organization would seon be strong enough to make the strike general on all American ships and on all foreign ships hiring crews out of American ports. Boston branch a few weeks ago started the ball rolling by tying up ships for more "dough" and improved conditions of labor. This met with great response and enthusiasm in other ports. New York, the greatest port in the world, went out on the 25th of April, and communicated by wire their action to the other branches. The response was wonderful; by the 26th every port on the Atlantic, the Gulf and the Pacific coasts had struck. The general strike in the marine transport industry was on.

The first demand of the marine workers was the release of all political and class-war prisoners. With the marine and lumber workers striking, with many thousands of workers out in other industries throughout the United States, this strike certainly has served as a forceful reminder to the owners of industry what can be expected from the wobblies in no distant future. The bosses will eventually be forced to admit that it is too expensive to continue keeping our fellow workers in prison. More of this spirit might hit them in their pocketbooks so hard that they will order their politicians to let our fellow workers out. That for the time being the marine workers have gone back to work merely means that they are gathering their forces for another and stronger assault on the master class for the liberation of our class-war prisoners.

The strike went over with a bang. Many ports were tied up from 80 to 100 per cent—including the longshoremen. It was the most extensive spontaneous strike in the history of the marine transport industry, for it came at the most opportune time. The lakes were opening up, giving employment to thousands of seamen up there; owing to the improved industrial conditions thruout the United States plenty of work could be found ashore at fairly good wages, which left fewer seamen on the beach hungry and willing to become scabs. The demand for carriers at the time was great, freight rates were high; the owners could not afford a prolonged stoppage of their ships. As it was, the strike cost them millions of dollars. These are the principal reasons why the shipowners came to terms so soon, granting wage increases of from fifteen to twenty per cent, and most of the other demands. Except the liberation of our class-war prisoners, but **—we never forget!**

The prospects are highly encouraging that out of this strike will come closer co-operation between the M. T. W. in the United States and the marine workers of foreign countries. In England and Germany, and especially in Mexican and South American ports, a number of crews walked out. However, we cannot expect much for some time to come because of the disorganized and demoralized state of the foreign marine workers.

### Sentiment for O. B. U. Strong

The sentiment for our organization—for the One Big Union—is growing with leaps and bounds, here and abroad, aboard ships and ashore. The hardest job confronting us is the lining up of the longshoremen, teamsters and truck drivers, whose outlook is distorted by their craft unions, but we are confident of being able to accomplish even this.

The Marine Transport Workers' Industrial Union 510, of the I. W. W., is already the most popular and best liked union among the seamen all over the world, and is becoming more and more so from day to day. The reason is its superiority in every way; it is the most militant, the most inclusive and democratic of all marine organizations; It has a far-reaching and comprehensive program. It has given new hope and inpiration to the marine workers everywhere. The One Big Union of all the workers is the only weapon by the use of which the producers of wealth will be able to come into their own.

# Mr. Kyne Joins the Head-Hitters

By JOHN NICHOLAS BEFFEL

IN California the popular sport among the leisure class is to hit the head of the nearest I. W. W. with any object that happens to be handy. Now and then the best citizens get together with tar and feathers or a rope, or with baseball bats, and hold a merry party. Again, they vary this diversion by invoking the magicians of the local county prosecutor's office, who with the presto-wand known as the criminal syndicalism law can transform any man who helped to build the roads into a poisonous reptile with promptness and dispatch.

Baseball bats have been found exceedingly effective, especially among the smart set of Los Angeles, in battering the fingers of Wobblies who, having fled a sportsmen's party of superior numbers, are hanging by the hands from lofty window ledges of the I. W. W. Hall with a nice, soft pavement below on which to fall when their fingers give out under the hammering.

This genial sport in a multitude of forms has been in vogue in California these 14 years. The I. W. W. have been regarded as the poor relations of those who ride the roads in high-priced cars. They are convenient figures on which to blame any untoward happening, such as a forest fire set going by locomotive sparks; the collapse of a reviewing stand built by a contractor who is a good politician; or the poisoning of guests with soup from copper kettles at a banquet tendered to notables from England and Iowa.

Almost every newspaper editor in California is both a golf enthusiast and an ardent hunter of I. W. W. heads. And the Head-Hitters' Club membership is open to any writer who can wield a typewriter with a preponderance af accuracy in the direction of an Industrial Worker's ear.

Peter B. Kyne is a recent notable addition to the ranks of the Head-Hitters. He qualifies for membership in Hearst's Cosmopolitan Magazine in a marine short story entitled, "The Thunder God." Thus a million onlookers watch while Mr. Kyne swings his bludgeon; and Mr. Hearst's native heath is saved once more from the "menace" which interferes so often with the comfortable enjoyment of wealth brought home by shackled oarsmen in one's galleys.

In Mr. Kyne's story there is to be a ship launching in San Francisco harbor. Something happens. The low pressure turbine gets jammed so the boat can't start. Valdemar Sigurdson, whom Old Man Hickman has raised from a pup, is now port captain, and he gets wrought up. He sets out to find the cur who did this thing.

He finds a sailor named "Frenchy" packing his things. From this point the story proceeds thus:

" 'I'm going to search you,' said the Viking.

" 'You can't search me without a search warrant. I'll have the police on you,' the man screamed angrily.

" 'You damned sea lawyer. Shut up.' The Viking cuffed the man with his open hand gently, as a mother bear cuffs her cubs. Then, holding Frenchy fast with his left arm and leg, he went through the man's pockets until he found a battered pocketbook.

" 'It ought to be in here,' he mused; and with a shove sent his prisoner reeling back into the stern-castle. 'Ah! It is. Here is his membership card in the I. W. W. showing his dues paid to date. Damned rotten French anarchist. Well, he'll never cripple another ship—the rat!'

"Frenchy pulled an automatic pistol from his pocket.—But Valdemar did not stand aside.

" 'No,' he said patiently, 'you can't get away with this. Shoot and be damned to you. Even if you get me through the heart, I'll live long enough to get my hands on you; then I'll break your neck and you'll die lingeringly. You're an enemy of this world, you crazy swine, and I'm going to destroy you.'

"Frenchy fired one bullet, missing. The next was defective. Valdemar knocked the gun out of Frenchy's hand, and the man fell to the deck screaming.

" 'Get up,' said Valdemar Sigurdson, 'and die like a man.' "

There is much more of this chivalric action. And at the end:

"Old Man Hickman walked up to the moaning Frenchy and spurned him contemptuously in the ribs. 'Score one for capitalism,' he piped."

The Cosmopolitan's editors liked that story so well that they asked Mr. Kyne to write a series along the same lines. But on completing that one Mr. Kyne was taken ill. So it seems that the Head-Hitters' Club will have to struggle along without him for a while.

Nina Wilcox Putnam has been invited to become a member of the California club, in view of her chain-shot hurling in a fiction story in the Saturday Evening Post—the chain-shot being aimed at Sacco and Vanzetti while they were on trial for murder committed by payroll bandits in Massachusetts. And Emerson Hough, who lately died, was a worthy eligible by reason of his book, "The Web," which celebrates the achievements of the illustrious American Protective League during the European unpleasantness.

"A Working Machine Must Not Play the Piano, Must Not Feel Happy, Must Not Do A Whole Lot of Things."

# "R. U. R."

THE time will never come when scientific research will have evolved a method of manufacturing human beings quicker and cheaper than is done by nature. Yet from the time when the primitive cave-dweller turned a stone into a tool, the human mind has been at work putting inert matter and the living forces of nature in the service of society. In the play "R. U. R."—Rossum's Universal Robots—which has created such a stir both in Europe and America, a scientist by the name of Rossum daringly conceives the idea of manufacturing artificial workers, human automatons, known as robots. This is but a figment of the human brain, a far-fetched fantasy, but the moral that it points out is of tremendous importance.

What could be more alluring to our present captains of industry than to obtain a formula whereby an army of standardized, model workers could be manufactured on a large scale, equipping them with only such physical organs and mental attributes as would make them useful working machines, devoid of everything that tends to hinder the making of profits? They would be creatures without ideals or souls, lacking even the slightest interest in themselves.

The play is the product of the intrepid mind of a young Czecho-Slovakian playwright, Karel Capek. He has succeeded in weaving a most lurid and, at the same time, ironical melodrama around the theme of the class struggle—the degradation of the present-

day industrial worker into a veritable mechanical working machine which lives and moves and has its being with but one end in view—to make profits for the master class. With an uncanny insight into this profit-mad world, he produces a sociological fantasy full of old ideas in new attire: The supremacy of one class over another; the resentment felt by class-conscious slaves toward their masters; the subsequent revolt and destruction of "those who do not work but live off the labor of others."

The action in the play takes place on an island where Rossum's Universal Robots are being manufactured on a large scale, at cost of one hundred and fifty dollars apiece. The impregnation of these robots takes place in the test-tubes in the factory laboratories. They are then put through various processes of manufacture; bones are supplied by the bone factory and nerves, brains, and all the necessary accessories, including a "high class human finish," in their respective departments. A perfect "human" machine is produced to supply the world's industries with docile mechanical workers.

The factory heads are typical. They range from a general manager, who holds idealistic theories about liberating "mankind"—from the "drudgery" of labor by letting the robots do all the work, to a psychological experimenter who provides these working machines with pain nerves—without them they would wastefully break off their fingers and other members. Little thought is given to anything else but industrial efficiency and the satisfaction of an insatiable greed for profits. Their motto is: "The cheaper the labor power, the greater the output, and therefore the greater the profit."

The making of the robots goes on unhindered, until a young woman, a member of a "humanity league," comes into their midst to remonstrate with the factory managers on the inhuman treatment of the robots. Her appeal, to provide these workers with more human feeling, with ideals, is met with amusing ridicule. They explain, that were the robots to have ideals, to have a will of their own, to distinguish happiness from misery, they would be too expensive; that is, a robot is a working machine, and happiness in a machine is not necessary. They are made for the specific purpose of producing dividends and profit. She is further informed by the manufacturers that these workers are sexless, but that the reason female robots are manufactured is because society is accustomed to the services of chambermaids, domestic servants, and other female "help." And again, unlike other mortals, the robots do not die; they "just get used up."

To afford the play a convenient turning point, the playwright throws in a little romance. After a rapid-fire courtship, the young woman who came to liberate the robots becomes the wife of the general manager. However, she does not abandon her hope to humanize the robots. She conspires with the psychological experimenter to improve on these machine-like workers. As a result he produces a few hundred that are nearly human. In fact, the specimens of this new brand are in mind and body superior to "people", and they are also provided with a certain amount of emotions and sentiments, which were absent in the other robots. As a consequence, they become conscious of their position in this man-made society and rebel. They form a nucleus for an international workers' organization. This they find a comparatively easy task, since they are all made alike— universal—which fact their makers the capitalists recognized as a mistake only too late. As one of the capitalists fittingly bewails: "Ours was a colossal achievement, but we are about to burst with our greatness." The more optimistic of them plan to make "national robots" in the future: Negroes, Chinese, and of all other races and languages, in order to prevent international revolts in the future.

This, however, cannot be realized, because the formulae for making these workers have been destroyed. The fate of the manufacturers is now fully in the hands of the robots. These latter now seize all the industries, telegraph and radio stations; they man the army and navy; in short, they exchange places with the capitalist class of the world. They kill all the "people" on the face of the earth—by "people" being understood the members of the ruling class.

It is interesting to follow the discourse and reasoning of the doomed manufacturers on Rossum's island. They are all barricaded within the home of the general manager. Doors and windows are bolted to keep out the enraged mob of workers, who have surrounded the building. One of the capitalists peers through the window at the relentless mob below. "One hundred thousand faces alike," he groans, "one hundred thousand expressions alike."

The denunciation by the robots of the parasite class is profound, Radius, a robot with a superior intellect, and later one of the active revolutionists, is an outstanding character. He has had a "breakdown in his mechanism," as his makers put it. In other words, he has become class-conscious and proceeds thus to give his oppressors " a piece of his mind": "I won't work for you. You are not as strong as the robots. You are not as skillful as the robots. The robots can do everything. You only give orders. You do nothing but talk. I don't want any master. I know everything for myself. We ourselves, the robots, want to be the masters."

The revolting slaves kill off all but one man, an architect whom they have seen working with his hands—the only man in the Rossum establishment they respect.

The play winds up with an epilogue much as any other play ends. After the revolution the "soulless" army of workers are in a predicament. They cannot reproduce themselves; neither can they manufacture any more robots because the formula is lost.

**"Robots of the World! The Power of Man Has Fallen! A New World Has Arisen: The Rule of the Robots!"**

But fortunately for them, just as the world is about to end, a young robot and robotess come on the scene. They are the highest specimens of the "improved" lot who have been provided with human instincts. They manifest human attractions for each other, which conveniently solves the problem of mortality.

We are convinced that the workers neither of Europe nor America will permit the master class to turn them into robots. We must recognize, however, that the trend of industrial development, of the machine process, of the whole system of capitalism, is in that direction. The author of "R. U.R." has rendered a great service to mankind by so dramatically calling the attention of all who have eyes to see and brains to understand, to this aspect of the class struggle.

**Rosa A. Knuuti.**

# The Skeptic

By "QU"

BECAUSE the rose
In perfect sinlessness and sweetness blows,
Must we suppose
God roses only knows?
Because the dove
Croons amorous from noon till night above,
How does it prove
God made the world for love?
Because the gist
Of life escapes our grasping like the mist,
Need we insist
That any God exist?

# On the San Pedro Slave Market

By FRED R. WEDGE

THIS is a recital of conditions on the San Pedro waterfront before the great strike of marine transport workers and longshoremen took place. I leave it to the intelligence and judgment of all sane man and women whether or not these workers had sufficient cause to strike.

I registered as a stevedore on March 21 at the office of the Pacific American Steamship and Ship Owners' Association. The slave number given me was 1313. The blue employment card was signed by E. Nichols; card revocable any time Nichols thinks the slave shows radical symptoms.

On this eventful morning over four hundred workers had been waiting outside since daybreak, in the hope of getting work cards. Inside the big building once known as the "slave pen" or "fink hall," over eight hundred workers were crowding, pushing, milling, like a drove of cattle on the range, holding their blue cards out to stevedore foremen pedestaled above them like medieval kings on thrones. The bosses looked down on the workers with critical eyes, sizing them up and picking them out, the same as did the plantation owners prior to the Civil War with their black slaves before buying them.

The job seekers are yelling: "Here I am, Alex!" "Over here, Bull Dog!" "You know me, Knuteson!" "Oh, boss, give me a chance!" "I'll give you two dollars for a job—three dollars—five dollars!"

Another yells out: "I'll give you ten per cent of what I make—take me!" Some slave way back in the crowd cries out: "I'm nice and fat, take me!

Then a big six foot stevedore tramples over the smaller workers, like a big bull plunging through the steers on the range. The bosses see him stampeding the other wage slaves and make a rush to give him a work card. This slave, they well know, will make the others run on the job—he'll "speed 'em up." He gets his card and with proud arrogant air crowds "the little fellers" out of his way again.

One man who had been knocked down by this husky fellow worker said to me:

"I don't know what I'll do if I don't connect with a work card today—I have a wife and three children in San Pedro and all I've made in two weeks is $4.00. Every morning I get here before six and stand up against this iron rail all day. I'm getting desperate. It's hard to see your wife and babies hungry when a few have all the good things of life."

An old gray-headed man was trying to fight his way to the boss. His shrunken body and wrinkled face made a pathetic appeal as he tried to bravely grin with toothless gums. He was just a worn-out old wage slave. The master's greed for gold had stripped him of all that he once held precious. Now forsaken by the masters, he waits the final call to the morgue—homeless, friendless; remembered for a day, the great curtain will soon close over him and some young husky stevedore will step up to the iron rail in the slave market to take his place.

As I turned away with a heavy, sinking feeling, a nauseating disgust against a system that would throw on the social rubbish heap this old man after almost every drop of blood had been squeezed out of him, a cripple limped up to me.

"It's tough to see men like you stand up in competition with these husky stevedores," I remarked.

"I was alright till a dock boss jerked a truck out of my hands and a heavy piece of iron broke my ankle."

"But why didn't you sue the company? The employers are responsible for the actions of their foremen."

This touched a sore spot. "Sue the company, hell! I went to a lawyer and he told me the most I could get was $200, and I'd never get a chance to work on the docks again. The company has all the slaves insured, and although I was entitled to $16.00 a week I never got it. Now the boss says when there are lots of boats and they're short of men he might take me on. I'm hoping so."

Another fellow was cussing the system that would cause him to stand up in the slave market and be bid upon like a chattel slave.

"I am from Nebraska," he said. "I came out here looking for work, and this is all I could find. I put in two years at the University of Nebraska. I have learned that a lot of things they taught me in college are not true. The old professor in economics said that labor is not a commodity. He might as well have said that water will not freeze. Labor is a commodity under this present system. The law of supply and demand governs the price they pay the wage slave."

"Young man," I replied, "you have been listening to some of these I. W. W. speakers up at Fourth and Beacon streets in San Pedro."

"Speakers, nothing! It's not the talk that makes radicals—it's the damn conditions under which we work. Say, I've learned more about the real principles of economics in one month here on the slave market than all those subsidized high-brow professors taught me in all my days at school and college. It's coming."

"What's coming?" I asked, looking around, expecting to be trampled under foot by a gang of stevedores.

"Why, a changed system, you damn fool!"

I admitted I had been a fool, but that I was beginning to take on a little education since I had

Fred R. Wedge, a Striking Stevedore and the Author of This Article

left Harvard. I wanted to just stay and hear these men talk and get some facts from them, for they dealt not in theories, but in the hard, cold facts of everyday life; these class-conscious men had been educated in the university of hard knoeks.

* * *

I suggest to every high school teaeher and college professor of economics and soeiology to put on a pair of overalls and handle a longshoreman's hook for a few months, and see if his parlor theories on ceonomics will stand the test. Today one looks almost in vain among business men, editors, school teachers, clergymen and politieians for an intelligent understanding of the demands of the industrial workers. The ruling class hastens its own downfall by the manner in which it deals with the masses. The leaders in power seek to draw publie attention back to old issues and faiths whieh are dead. The fact that the old charms and shibboleths no longer work, that the industrial laborer of today is intelligent enough to see right through them, to diseover hidden motives which they attempt to disguise, and to laugh at them, is stoutly denied by these self-appointed leaders.

As I went into the inner offiee of the Pacific Ameriean Steamship Assoeiation, I wondered if this man Nichols, into whose presenee I was about to be ushered, really knew what those men in the slave pen were thinking. The ship owners, hungry for dividends, plaeing the dollar far above human values, and blinded by greed, fail to read the hand-writing on the wall.

Nichols did not impress me either by his appearanee or intelligenee. I have less respect for these sleek, well fed, well groomed tools of the masters than for the masters themselves. The masters aecumulate millions, the go-betweens like Nichols drive the wage slaves—play the Judas Iscariot to their fellow men, and don't even get any dividends to placate their consciences with.

"What's your name?"

"F. R. Wedge."

"Ever work for this eompany before?"

"No."

"Are you a member of the I. W. W.?"

The truth is, at that time I was not a member, nor did I possess very definite ideas about the aims and objects of the organization. I showed him my Elks eard. This seemed to satisfy him that I was an obedient slave. But his satisfaetion was but for a moment. When he started to write my name in the slip which was to O. K. me with the registration clerk, somehow my name seemed to look different on paper.

"Wedge—Wedge—say, are you the fellow that has been speaking for the I. W. W's. in San Pedro?"

I replied that I had been doing some leeturing on economies, that teaehing was my profession. Niehols rang the buzzer. I thought it was for a policeman, but Kelly, another eompany offieial, answered the ring.

"Do you know this man?"

"Yes, I've been expeeting him here for several months. I knew he'd get here sooner or later. You're the man who gets $15 a night for speaking for the I. W. W."

I felt highly complimented to think the Pacific Steamship Manager plaeed sueh a high value on my serviees, but I was forced to admit that the Industrial Workers of the World place no sueh money value on my leetures. In fact, that I received no remuneration, but had begun to speak in defense of the working men who had been unjustly imprisoned on a fake charge of eriminal syndiealism. So I told him that from a monetary standpoint my work had not been a sueeess, that I was now forced to seek a job in order to support a wife and son. In the medieval days they eonsidered it no sin to lie to a heretic and now the heretie was prevaricating to a representative of the master elass.

The point is that I had made up my mind to get a job and see with my own eyes what's what on

the San Pedro water front, so after I had lied to E. Nichols and his tool Kelly, I added to my infamy by handing him a paper which I had written on the I. W. W. while I was studying at Harvard in Dr. Wm. McDougal's class in abnormal psychology. I wrote this paper before I ever met an I. W. W., when I was as innocent of the great idea of the one big union as my distinguished professor was ignorant of the struggles of the workers. I read to Nichols and Kelly some of the hottest Harvard arguments against the I. W. W., taking particular care not to reveal the fact that the thesis was a year old. In this paper I tried to prove that the I. W. W. idea was not caused by economic conditions but was merely an attitude of mind; that the "crowd ideas" of the radicals were "fixations," indicating that their leaders were neurotics and paranoiacs. In fact, in that paper I called the I. W. W's. every long scientific term I could steal from learned professors who had "Harvard ideas" about the workers.

I could tell immediately that Nichols and Kelly were greatly impressed by those psychological jawbreakers. I am sure they understood not a word of it, but they both expressed the thought they considered I was on the right line—that I had taken a very reasonable and rational view against the I. W. W.

So I exchanged my Harvard thesis on the I. W. W., written before I ever met a member of the organization, for a blue card. Nichols made it perfectly clear that I was not to be considered a common worker, that as soon as I became familiar with the stevedore business, I would be made a boss and would make from $70 to $80 a week. Kelly invited Mrs. Wedge and son to his Long Beach home, and I left the office of the Pacific American Steamship Owners with a very poor opinion of the intelligence of Nichols and Kelly, and a greater respect for the workers in the slave pen. I pondered upon the ignorance of those two men in that inner office about the great amount of knowledge among the workers on the slave market. Nichols had just told me that the present unrest among the seamen and stevedores was all uncalled for, that everything would be all right, were it not for the I. W. W. agitators who make the workers discontented. That when they succeed in silencing them by the use of force, by charging them with criminal syndicalism and sending them to San Quentin for ten or twenty years, that then everything will be "fine and dandy." "All will then be peace in the ranks of the seamen and stevedores forever and ever. Amen."

* * *

In writing of my experiences during the past four weeks on the slave market, before the slaves rebelled and went on strike, I have cast behind me proprieties usually held sacred. I have spared no one. I have considered principles and human values more sacred than personal confidences. Personally, I have nothing against either of the two company officials mentioned; they promised to give me the best of it and they tried to live up to that promise. In that inner office they told me that some of their most trusted men were once sympathetic to the I. W. W. but that now they are strongly against the wobblies. Sold out for thirty pieces of silver—O, Judas, thou art still alive! When the strike was called, some of these renegades to the working class became scab herders for the Pacific American Steamship Owners, they perjured their souls with acts of violence against the men who are trying to bring about a new and better system of society by organizing and educating the workers to the end of abolishing wage slavery.

* * *

On the following morning I was at the iron rail of the slave pen in the fink hall at six o'clock. There were men who had come even earlier. True to his word, Kelly stood beside one of the foremen and pointed me out. There was nothing fair in that method. I was told of the blue ribbon gangs —the men who have steady work. I thought they hold these jobs because they were better workers than the others, but I found that it is not so. Many of them never show up in the slave market. Most of them are personal friends of the bosses; they will stay on the job and scab when others strike. Some of them furnish wine and whiskey to the boss when he visits their homes, which happens quite frequently. Free eats, free booze, free cigars and cigarettes, at every visit. It is commonly reported and alleged that some of the more ignorant workers in these blue ribbon gangs, whose sense of justice and morality has been dulled through generations of slave philosophy, even permit familiarity of the bosses with their women folks at home.

Verily, verily, the modern stevedore boss is a regular feudal lord. In the dark ages, the serf had to get the consent of his master before he could marry, and often the lord of the manor got the first night. I hope the stevedore boss is more considerate. But the ethics of the dark ages still flourish.

To pass rapidly over the experiences of the last four weeks before the strike—when day after day I lined up with hundreds of workers in the slave pen and scarcely made starvation wages. I worked for a while on boats carrying cement and fertilizer, until I saw some men faint—who were not as strong and healthy as I. A few years of such toil will throw anybody on the social scrap heap. The policy of the Pacific American Steamship Company has been to keep hundreds of extra workers ready for extra boats, but with no thought as to how these workers are to live.

* * *

Then came the great day, the day when the slaves on the San Pedro water front asserted their manhood, when they looked each other square in the eyes and called themselves men. The strike was called on Wednesday, April 25. The vote was taken

in such a manner that the police officers and stool-pigeons scattered among the crowd were unaware that a strike ballot was in progress.

The following wage scale was demanded: A minimum wage of $100 per month for seamen and three watches to prevail for all seamen except coal-burning firemen, who shall have four watches—a 44-hour week. A minimum scale of one dollar an hour for longshoremen. A 44-hour week for harbor workers. All overtime at double pay. All men must be hired through the M. T. W. 510 Union Hall; this means the abolition of the San Pedro slave market. And, the biggest demand of all,—**the liberation of all class-war prisoners.** The fight was on.

The usual lies were printed in the capitalist papers.

The workers were accused by Nichols of "threats of violence, in which weapons were said to have been displayed in calling workers from the ships. Capt. Plummer also negotiated with chief of police Oaks for fifty additional officers to patrol the San Pedro wharves to prevent greater violence."

The fact is that there has been no violence among the striking workers, the violence and provocations have been committed by the tools of capital. This also is news, but it never gets into the papers. The police are so busy watching the I. W. W. that the bootleggers are around the streets openly soliciting trade—peddlers with hip pocket flasks are offering free drinks to the strikers. But the workers are wise, they are keeping their brains clear. They have declared war on the hootch peddlers, gamblers, and the whole nasty breed of perverts and panderers to capitalism. Even the business men have commented upon the orderly and intelligent conduct of the strikers. While the police are co-operating with the bootleggers and trying to create disturbances, the I. W. W. workers are on the job organizing the unorganized and doing everything in their power to make a success of the great strike to release innocent men who are now behind prison bars.

The first arrest came when Arlene Schetna, a Norwegian seaman, who was alleged to have been distributing radical literature at the meeting, was taken into custody. He was taken to jail on a charge of violating a license ordinance and sentenced to thirty days imprisonment when he refused to promise Judge Sheldon that he would discontinue distributing I. W. W. literature.

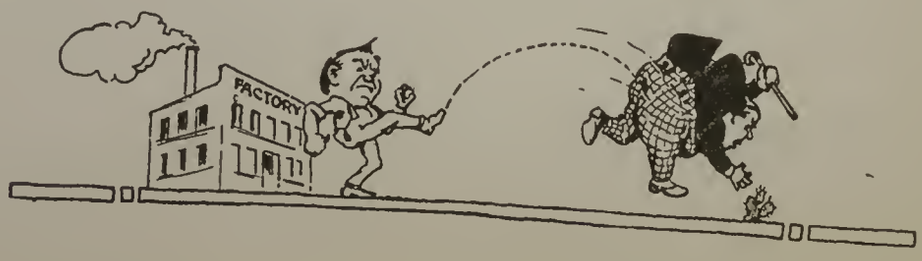
Later in the afternoon, George Barret, a longshoreman, and George Kinney, a machinist, were arrested for the same offense.

On the second day of the strike more arrests were made. The San Pedro Daily News, tool of the Pacific American Steamship Owners, announced in big headlines—"**STRIKE LEADERS ARRESTED.** A heavy blow was struck at the foundation of the strike last night when three I. W. W. officials were arrested at a mass meeting at Fourth and Beacon streets, the officers taking the men into custody in the midst of a huge crowd of sympathizers and interested bystanders. H. C. Duke was taken off the box and placed in the city jail, under $25,000 bail. Soon afterward George Stark and Julius Tharr were also charged with criminal syndicalism and placed under $25,000 bail."

Then followed a very lengthy interview by Edwin Nichols, manager of the Shipowners' Association, on how they only needed 200 more scabs, but to my positive knowledge, after a careful census, not less than 1500 men were on strike. Since then the strike has spread to the Standard Oil, Union Oil and American Petroleum Company refineries.

After the arrest of the I. W. W. speakers I looked up the financial secretary of the Marine Transport Workers' Industrial Union No. 510, handed in my trade union card and received in return the red card of the Industrial Workers of the World—the "little red docket" which so many thousands of workers value as dearly as their very lives. I then took the place of the arrested fellow workers and spoke to large crowds of strikers and sympathizers. The fact that I belong to the Elks, the National Teachers' Association, and the San Pedro Ministerial Association, perhaps may have kept me from getting arrested that night. But better men than I have gone to prison for this great cause. Labor organized into solid, class-conscious industrial unions is the greatest thing on earth.

The San Pedro sailors and longshoremen have asserted their manhood. So have the workers in the other ports. All hail to the Marine Transport Workers' Industrial Union No. 510, of the Industrial Workers of the World! All hail to the Solidarity of Labor!



# Tribute to Ricardo Flores Magon

By MORTIMER DOWNING

## I.
## CERTITUDE

I AM progeny
Of eternally recedent eras—
Of man, of man's forbears, of cosmic unison.
Some elements are crude
And some of rare subtility—
My Self, encysted in a clod.

Assault and repulse,
Struggle and yielding,
Battle and triumph,
Built the frame of me.
Between the Me that thinks and the insensate dross
Conflicts rage, enforcing form upon the incohate;
Every mite agonizing toward freedom in cannibal voracity,
But subserving to support me.
Intrinsic all—matter, function, stress.

Emancipate of duty,
These atoms would ride the wind,
Plumb the sea, seep into the rocks,
To wed and fashion other forms.
Shall I shudder when tranquillity enfolds this shape?
Death is Life's last kiss.

## II.
## PURPOSE

EFORE the earth was spaced in rhythm with the spheres,
Life was.

In deepest rocks, in frigid aether, incandescent suns,
Life abides.
Matter-motion-force, changing, indestructible, continuous,
Age on age, cell near cell, sterile,
Reposed the germinative urge;
Whirling gases calmed, affinities coalesced;
Mass emerged—land, ocean, air—
Chemic womb of animation.
Upon the silted floors of sunny seas
Cell sought cell and clearer light was craved;
Organization ripened into function;
Experience waxed into instinct;
Reproductive ganglia quested food.

Who recks the day when man's ancestor
Dared a space upon the strand
And from that feat regained his kind?
Who celebrates that seeker for the Holy Grail?
Offspring of gelid love,
Where school and school and school had spawned—
Broadcast melt with roe uniting—
This high adventurer broke trail for Eros and for Psyche.

To all the travail from rock-bound cell to Aristotle
I am heir.
Sentient, conscious, in Nature's laboratory I stand.
Shall I cower?
Shall I tryst with Destiny, my sweetheart ,
In her to procreate my will?

# The Electrification of American Railroads

By A CIVIL ENGINEER

FOR many long years, it was accepted as the truth that an electric railroad could not successfully compete with a steam road in long distance traffic. There are still in use old textbooks where one can find the statement. Acknowledged authorities made the statement and repeated it until that great compelling force of all progress, economic necessity, made itself felt and decided otherwise.

The United States was in a fortunate position. It had all the coal it wanted and some more besides. This was not the case in Europe. France and Italy, for instance, were compelled to electrify because of the shortage of coal, its prohibitive price and the presence within their boundaries of water-power resources which presented a more economical way of generating current. Throughout Europe, these dominating reasons have led to the same result. France, Italy and Switzerland have gone in for a comprehensive policy, the result of which will be the complete electrification of their railroad systems. Belgium, Norway, Sweden and England have made a beginning on an extensive scale, and several other countries are still in the period of preliminary studies.

As things stand at the present time, the United States, on account of its size, leads the world in the amount of miles already electrified but, considering the rate of progress of new undertakings in Europe, it is lagging behind, in a relative way.

The electrified road mileage of the U. S. today amounts to 1607 miles, with an equipment of 375 electric locomotives. Eighteen other countries have together 3567 miles of electrified track, which gives the U. S. nearly one-third of the world's electrified mileage. The work so far accomplished in this country has cost in round figures eighty million dollars.

New projects which have reached beyond the talking stage and which have, at least some of them, been partially started and for which material and equipment has or is about to be ordered, involve between twelve and fifteen hundred miles of road at an estimated total cost of one hundred and fifty million dollars.

Amongst the most important projects are:

The electrification of the Illinois Central terminals in Chicago, and 28 miles of suburban traffic track out of that city.

The electrification of the New York Central terminals in Cleveland.

The electrification of one hundred miles of the Ford road.

One hundred and twenty-five miles of the Milwaukee in the Cascade mountains.

One hundred miles of the Norfolk and Western.

The economic considerations which have influenced the private owners may be summed up as follows:

First, the financial condition of the roads is good and their borrowing capacity at normal rates of interest allows them to find the necessary money through issues of bonds.

Second, the increase in traffic. For several years past the capacity of some of the roads has been heavily taxed by the traffic, to such an extent that something must be done. It is a case of either double tracking or electrifying.

The third factor is the small rise in the price of

coal over the general rate of increase in the average price of all other commodities.

The cost of electrifying per mile will be on the average $45,000 for single track and $75,000 for double track. To this must be added from 40 to 50 per cent of the cost of track fitting for power stations. The total cost per mile will thus be in the neighborhood of $65,000 for single track and $100,000 for double track.

One of the main features of electrification, where no water power is available, will be the use of coal at the mouth of the mine or pit. It will not be very long before as a mere matter of common sense, for possible emergencies all those mine-mouth power stations will be linked up together. The owners will proceed on a larger scale just in the same manner as the private owners of industrial plants today who generate their own power but find it desirable, in view of possible emergencies, to connect their private system up with some other electric system selling "juice" to the public. Through these connections between power companies will be established the technical or material basis of one of the most powerful trusts of the future.

To gain an idea of the imminent developments in that direction, it is only necessary to look at a map of the state of California and to consider how the various power systems derived from the rivers which flow from the high levels of the Sierras toward the Pacific have all been connected up into one comprehensive system, which has led to the formation of the economic power that is ruling the state of California today.

In order to gain an idea of the economic consequences of electrification, we have at our disposition the traffic figures for the year 1922, as published by the statistical division of the Interstate Commerce Commission.

The coal tonnage carried in interstate commerce amounts, roughly speaking, to three-tenths of the general total of tonnage carried. In the total of coal carried by the railroads, one quarter is company coal. In other words, every fourth car of coal carried in interstate commerce is company coal and this proportion only covers the coal used for generating steam for hauling freight and passengers. This fuel used only in transportation service does not include the fuel used in railroad shops, offices, etc.

If all the railroads of the U. S. were electrified, no more company coal would have to be carried and electrification with juice derived from water-power and generating plants at the pit mouth would do away with three-fortieth of all railroad traffic. In other words, for every forty carloads of freight there would be three carloads of coal less.

The capitalists who own the railroads would never have decided upon electrification with the enthusiasm which they are showing today, if there did not exist, under the circumstances, a possibility of huge profits. As a matter of fact, one road expects the economies of electrification to pay for the entire cost of the work within five years.

The interests of the workers do not count before the boards of directors of the owning concerns. For that reason, it is not only useful but practically imperative that there should be in existence a publication like The Industrial Pioneer, where those huge projects may be considered from the point of view of the workers.

To the construction worker I would say: Are you ready to get your legitimate share of that expenditure of one hundred and fifty million dollars within the next few years? Besides, an undertaking of that size means a reorganization of the personnel. Lots of old timers who think themselves secure in their seniority are due to go into the discard. Electrification means a demand for a new type of labor to be used in entirely new forms of activity.

The very suggestion of a craft union makes one smile. The craftsman is not going to get a look-in on those jobs. He would be useless if he tried and therefore it is useless for him to try. The man who is going to be benefited by electrification is not the specialized craftsman but the worker who comes upon the labor market with the greatest faculty of adapting himself to the machine processes to be used in the job.

We shall probably see a repetition on a much enlarged scale of what took place on many railroads when the block-signal system was put in. There will be a standardized gang and every man will start at the foot of his gang, working himself up through all intermediate stages till he reaches the top. Every time a stretch is completed, the men at the top of the gang will be left behind as maintainers of the completed stretch while the balance of the gang will move up to help in further construction, and so on.

To represent the men who do the work in the various activities of organization, something more efficient is needed than a lot of high-salaried craft union delegates butting into each other all over the works and working at all times at cross purposes with each other and hand in glove with the boss. Besides also, our old friend the employment shark is already figuring on getting his. Effective protection for the workers, efficient representation in all transactions with the employers, elimination of crooked employment agents working in collusion with grafting officials can only be brought about by a centralized, well disciplined and efficiently manned ONE BIG UNION aiming at nothing less than job control in the fullest sense of the word.

To the coal miner it must now become evident that before any coal is used for generating current, every possible available inch of water will have to be put to work. This will probably lead to a certain curtailment of coal mining. Can the coal miners trust their organization and their officials, as we know them by their past records, to stand by them honestly and faithfully in this crucial hour?

As for the railroad men, let them not lose sight of that suppression of three cars in every forty and figure out what it means to every one of them in particular. Are they efficiently organized to control the changes that are bound to come in the wake of electrification and to see to it that part of their wages does not go to pile up those economies which are expected to pay inside of five years for the cost of electrification?

To all the workers affected by electrification I would like to leave this closing thought: Do you want to be, in true A. F. of L. style, just poor imitations of petty bourgeois puttering along without vision and without profit on the outskirts of a great industrial undertaking or do you wish to enter into this marvelous new industrial development with the proud consciousness that you are both the creator and the future owner of these electrified roads? Do you want to get a fair living out of their construction and some day to run them with your fellow workers, in one efficient group, and to take part in the noble adventure of realizing for the common good the technical progress which science has brought as a boon, not only to the capitalists but to the whole of society and to the producers first of all?

Your answers to these questions will decide whether you will do your share in the coming work of electrification with an antiquated A. F. of L. craft card or with an I. W. W. card in your pocket.

# "Negro Slavery or Crime of the Clergy"

THERE has recently been issued from the press a very interesting and educational document on the Negro problem, which is now over four hundred years old.

In its time it has engendered a vast amount of talking, writing and prejudice, and one naturally inclines to the opinion that it is far from a solution. Such an opinion, though, is somewhat modified after a careful reading of Mr. Russo's book. He not only has a solution for the question but he sets forth a program that has the merit of being practical. He quite clearly demonstrates that there now are forces at work that will solve the whole Negro question. He indicates further that these forces are fast bringing on a crisis in the situation. When the crisis has arrived our author points out some very definite practical steps to be taken.

The work indicates that the author has devoted much time to reading, research and study of the question upon which he writes. His brief and succint history of the slave trade, beginning with Prince Henry of Portugal, and the extension of that trade to Spain and England, is not only instructive but intensely interesting as well.

The author is able to carry not only himself but the reader backward in history. In reading this work one is carried back to the days when "Black Ivory" was a commercial product and the Negro was bought and sold in the market much the same as cattle are nowadays. Here we find a good analysis of the slave-trader's psychology. How the trader would judge a Negro according to his temperament, weight, strength of bone and muscle, is vividly described. Our author visualizes for us again the days when the white man haggled and bartered over the amount of gold he would exchange for a black man.

The quotations contained in the book from the great abolitionists and Negro sympathizers are well chosen. Among them we find the names of Thomas Jefferson, William Lloyd Garrison, Wendell Phillips, Horace Greeley, Abraham Lincoln, Winwood Reade and Parker Pillsbury.

Among the most interesting and startling facts in the book is an accurate analysis of the growth of Negro population in the United States. This analysis is keen and is presented in such manner as to show the gradual increase in power for the Negroes through the proportional increase of their population.

Also, "The Center of Negro Population in the United States" is set forth with a historical background. The Negro population, its changes and movements, the causes and effects of such movements, are accurately set forth and incisively analyzed. Perhaps no more interesting facts and data have been introduced on this question than those that Mr. Russo compiles under this head.

The most significant feature of the document, however, is the manner in which the author identifies the cause of the white and black workingmen. He shows that their present conditions as workers differ only in degree and not in kind. He concludes by telling us that both the white and black man should lay aside race distinctions, visualize their common humanity and organize themselves into an effective social engine for the purpose of breaking down the wage system, which keeps them both in bondage.

The book is interesting, bristling with facts, and has a constructive outlook. It should be in the hands of all those who wish to be informed on the social status of the Negro.

**Samuel Ball.**

Published by Pasquale Russo, 833 Sedgwick Street, Chicago, Ill. Price, 25 cents.

## FIGHTING FOR AN IDEAL

"NATIONS which have no vision, perish" so says history—and proves it. Individuals who live without vision, degenerate and become outcasts among human kind. The same is true of men in the aggregate, of societies and even of labor unions. Man does not live by bread alone.

The Industrial Workers of the World is an organization with ideals. Its members carry in their hearts at all times a vision of a future society in which crime and degradation, poverty and slavery, will have been forever wiped off the face of the earth. The I. W. W. is a labor union which fights the master class at the point of production for more wages and better conditions, but it is also at the same time something more than that. Something infinitely more than that, for it fights for an emancipated and a regenerated humanity.

Witness the spirit of the I.W.W. General Strike! What a wonderful, what a magnificent display of idealism, class solidarity and self-sacrificing enthusiasm! A hundred thousand lumber workers, tens of thousands of marine transport, construction, and oil workers quit their jobs and announce for the whole world to hear that the first and foremost of their demands is the liberation of all class war prisoners.

This might be a decadent and materialistic age, as regards the members of the parasitic and ruling classes, but the base spirit of narrow-minded self-interest has neither corroded nor corrupted the souls of workingmen. They are as ready now as ever to fight for right and justice.

## SAN PEDRO

THE marine transport workers strike in San Pedro will go down in the annals of history. "The San Pedro Spirit" ought to become a watchword thruout the nation; it is an inspiration and a prophesy.

Who said the workers "will not stick?" Talk about solidarity! Here is an example of it—par excellence. First, the sailors and longshoremen tie up the port, practically one hundred per cent. Over ninety ships laying idle. Then, meetings—peaceable, orderly, well-conducted, held by the strikers and sympathizers within their constitutional rights of free speech and free assemblage. Daily meetings attended by thousands of striking workingmen and justice-loving citizens from all walks of life who believe in fair and square dealing.

Second manifestation of solidarity: Arrest of speakers; one after another, a seemingly endless stream of them are arrested and thrown into jail. But does that break the spirit of the strikers. or lessen the enthusiasm of their supporters? Why, no! It merely serves to fan the flames of discontent, to bring together still closer all those who are fighting the vicious and corrupt power which rules the state of California.

Third manifestation of solidarity: thousands of membership cards in the Industrial Workers of the World are issued. The workers and citizens of San Pedro have realized the necessity for a permanent and a fighting labor organization.

At last, having lost all sense of decency and every vestige of self-control, and having become raving mad at the unflinching and dauntless spirit of the striking workers and citizens of San Pedro, the police, at the behest of the shipowners, arrest every member of the strikers' committees—sixty-eight in all.

This is followed by the arrest of six hundred strikers and sympathizers—including Upton Sinclair. The jails are filled to capacity; a stockade has to be built. We are confident that "The San Pedro Spirit" will be equal even to this crowning outrage.

## STRIKES AND—STRIKES

THE purpose of a strike is to compel the boss to grant the demands of the strikers. It therefore stands to reason that those tactics which will achieve this end are the right tactics. That up till now they might not have been frequently resorted to is beside the point. The question is—do they deliver the goods?

The long-drawn-out strike has been proven to be a failure in the majority of cases. How many strikes of this character have there been in the last ten years that have been successful? Very few indeed. Labor cannot fight capital with money; labor does not have enough of the "long green" to supply it with the necessities of life if the strikes lag on for months and months.

The I. W. W. lumber workers went back to work on May 7, but they are still on strike! This will be a surprise to the standpat old-timer in the labor movement. All that the lumberjacks have done is to carry the strike back on the job. Instead of paying strike benefits out of their own pockets, they will let the boss pay them— in the form of wages.

Striking on the job means—any one of a multitude of things. It means slowing down on the job, retarding production by a multiplicity of methods; it means, in short, hitting the boss in the pocket-book. And the beauty of it is that the boss is paying all the expense of conducting the strike.

The marine transport workers, excepting the San Pedro strikers, stayed out for a week and a half after the lumber workers went back, and then they also returned to their jobs. They won practically all their demands, outside of the release of class war prisoners.

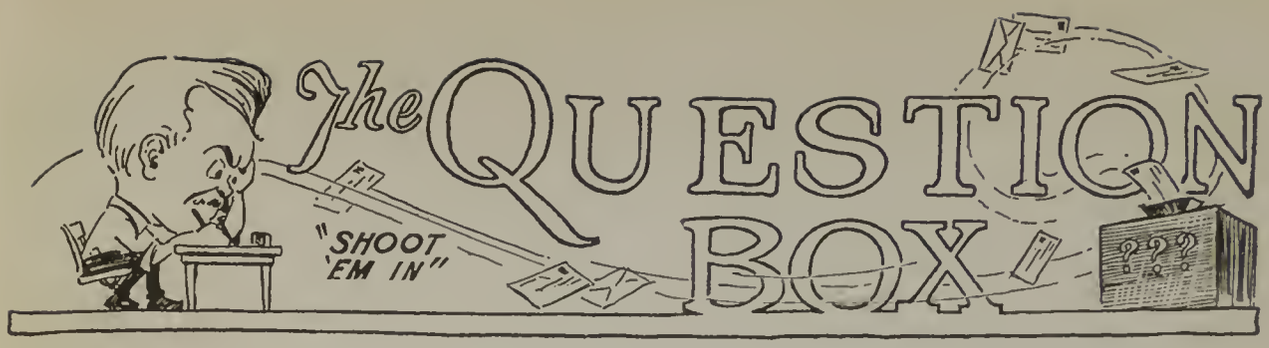
The moral is: strike while the iron is hot! The workers cannot afford to stay away from their jobs months on end, in the vain hope of "winning." If they cannot win in a comparatively short time off the jobs, then let them carry the strike back on the job, and win there!

## Leavenworth

(Dedicated to the 53 war-opinion prisoners, 49 of them members of the I. W. W., who are still confined in Leavenworth penitentiary.)

SEE, tho the oil be low, more purely still and higher
The flame burns in the body's lamp! The watchers still
Gaze with unseeing eyes while the Promethean will,
The Uncreated Light, the Everlasting Fire,
Sustains itself against the torturers' desire
Even as the fabled Titan chained upon the hill.
Burn on, shine here, thou immortality, until
We, too, have lit our lamps at the funeral pyre;
Till we, too, can be noble, unshakable, undismayed;
Till we too, can burn with the holy flame and know
There is that within us can triumph over pain,
And go to death alone, slowly and unafraid.
The candles of God are already burning row on row.
Farewell, Lightbringer, fly to thy heaven again!

A. E.



**WHY are you opposed to a labor party? Should not the workers use all and every means to fight the capitalists?—G. H.**

We are opposed to agitation for a labor party, or for any other political party of whatever name, because we do not believe in fooling the workers. They are being fooled enough as it is, by the mouthpieces of the exploiting class, so we believe in laying off of it. Let us tell our fellow workers the true conditions of things that they are up against, and, knowing the truth, sooner or later they will fight their way out of the morass of capitalism by the use of direct economic action.

Now, the truth is that the workers in all capitalist countries are living under the dictatorship of the master class. This class maintains itself in power through various agencies, one of them being the electoral system. The governmental machinery of all capitalist countries is so constructed that it operates to one end, and to one end only—namely, to perpetuate the ruling class in power. It makes no difference under what name one might be sent to the state legislature or to Congress, it makes no difference whether he be called a republican, democrat, socialist, laborite, or what not, the result in every case will be the same: That representative will be a cog in a machine which, while it continues to exist, will be used for the purpose of keeping the workers in subjection.

Everybody who knows anything at all knows that none of our law-making or law-enforcing bodies ever did anything for the working class nor will they ever do anything. If by an accident they have passed any laws that benefit the man who works for a living, those laws remain a dead letter if the workers do not have the economic power to back them up. Witness all the eight-hour laws in the United States, almost every state has passed one at one time or another in its history, yet what good are they? Why, no good at all—every school boy knows this. If any class of workers in any industry want the eight-hour day they have to fight to get it, and after they have got it they have to fight like the devil to keep it—eight-hour law or no eight-hour law.

Every state has on its statute books dozens of laws passed ostensively in the interests of the "horny-handed sons of toil," but the only earthly use they have ever been to anybody is that they offer an excuse for some blatant labor-faking politician to "shoot off his mouth" the next time he runs for office about what a wonderful friend he has been to the "poor but honest working people" who elected him. If to the above adjectives he would add the word "simple" he would then have a combination that's hard to beat. Any workingman who will waste his time and effort to put some glib-tongued politician into a nice, fat job protecting the bosses' interests, must indeed be possessed of great simplicity of heart—and mind.

By trying to get representatives elected to administrative positions the workers are not using one of several means to fight the capitalists: They are merely squandering and misdirecting their energies and fooling themselves in the bargain.

But some of our political action friends might say to us: Your arguments are "fine and dandy" as far as they go, but they do not apply to us, since we do not take part in election campaigns because we expect to accomplish anything through our elected representatives, but because that offers us a way to get in touch with the masses, to educate them.

Now, that is "the bunk"—par excellence. If that is all they intend to do, then where does the necessity of a political party come in? Why take part in election campaigns at all? The I. W. W. carries on an educational campaign that never ceases,—it publishes newspapers and pamphlets, sends out speakers, hold entertainments, conducts study classes,—and we have yet to hear that it has suffered any qualms of conscience for having done all these things without being incorporated as a political party.

**Why does not the Industrial Workers of the World make an effort to affiliate with the farmers?—L. S. M.**

Because to organize the farmers is not the object or the function of this organization. The I. W. W. is a labor union which organizes wage workers—and wage workers only. When we take into consideration that there are over twenty million industrial workers who work for wages, we will realize that the I. W. W. has a big enough job on its hands, without making an effort to organize, or affiliate with, the farmers. The farmers are being forced into the ranks of the wage earners at the rate of hundreds of thousands every year, and as they become acclimated to their changed condition they

will gradually assume the outlook of the industrial proletariat, and will see the necessity of industrial unionism.

**Do you believe that all human beings have descended from the monkeys?—Portland Shorty.**

We believe that men have evolved from the lower animals, but why all the blame should be put on the monkeys is beyond us. We can think of some bipeds who navigate around in this dusty vale of sweat and tears who would promptly be disowned by any self-respecting monkey. Think of those specimens of the so-called human race who never bat an eye-lid when asked by some oily parasite to work ten, twelve, or fourteen hours per day for about one-tenth of what they actually produce. There is not the shadow of a doubt that these individuals could trace their descent straight back to the mule family. Good thing mules don't understand our lingo, since even they might resent being linked up in any way with some of the human work animals that make a hell on earth for their fellow workers who believe in leaving some of the work undone so the master class would have something to do when the time comes for them to put on overalls.

Then again, there are the moonshine guzzlers, the Peruna and hair tonic fiends, and the wise boys who can tell bad hootch from "good whiskey." They think that it is the height of cleverness to exchange six or seven weeks' wages for a big head, and then to take the first job they come across for half the "going wages." This is the breed of animals who love to wallow in dirt, physical, moral and spiritual. They don't like to fight the boss for the better things of life because they have an inborn antipathy to clean living quarters, good grub, good clothes, or anything else that is even remotely associated with cleanliness and manliness. Specimens belonging to this species of sub-human beings have been investigated by various biologists and anthropologists, and it is the consensus of opinion among these scientists that they are lineal descendants from the swine family.

**Why are you radicals always so pessimistic? Don't you think this world would be much better off if we were to spread more sunshine and optimism?—Violet L.**

We are inclined to be pessimistic now because we believe it is so much better for the health to be a pessimist with a full bread basket than with an empty one—at least while there is still a running chance to keep it replenished two or three times a day. If by being pessimistic now we learn to prepare to take care of ourselves in the future, we will be ten jumps ahead of the game.

Look at the Germans: Before the war they were the most optimistic people on earth; they had plenty of work, plenty of lager, and they loved so dearly their Kaiser and their Gott. The thought never entered their heads that they were living in a fool's paradise, and they waxed fat and fatter from drinking so much beer and scattering so much sunshine. In those by-gone days a mere handful of twelve hundred Germans dispatched themselves every year to the happy hunting grounds.

But while they were having such a good time and scattering so much sunshine, capitalism was getting in its deadly work,—with what awful consequences, we all know. And the end is not yet. Last year sixty thousand Germans committed suicide, an increase of five thousand per cent over the prewar rate. From being the proverbial stout man the German of today is the leanest and skinniest of all human beings. His standard of living has sunk below the poverty level; all his wealth is in the hands of a dozen industrial magnates. He has proven conclusively that optimism does not pay. If we lull ourselves to sleep just because temporarily living conditions are not as bad as they might be, the wily and unscrupulous imperialistic capitalist is sure to steal a march on us and leave us in the lurch when we are least prepared for it.

**Is it true that the American Federation of Labor is losing members?—J. S.**

Yes, during the past year the federation lost close to eight hundred thousand members. During the preceding year it lost almost as many. If this keeps up there won't be much left of it five or ten years from now.

It is only natural that the federation should lose in membership. With the advance of the machine process skilled labor is fast being displaced by unskilled or semi-skilled labor, and craft unions, being protective societies for skilled workers, or, in other words, job trusts, tend to go out of existence when they no longer have a function to perform. When an unskilled man after a few days of practice can operate a machine just as efficiently as a machinist who has spent four years learning his trade, how is it possible for a machinists' protective society to conserve that job for its members exclusively? When that cannot be done the reason for the machinist continuing his membership in the job trust ceases to exist. The same applies to most of the other trades as well.

Under the present methods of production the only form of unionism that has a chance to grow is industrial unionism. The craft unions are doomed. An effort is being made to prolong their life by "boring from within" tactics and by attempts at amalgamation, that is, welding the various craft unions together to the end of transforming them into industrial unions, but, unless the lessons of all history are to be reversed, that move also is foredoomed to failure. Thinking that the craft unions, which for so many years have served as instruments in the hands of the capitalists to divide and disorganize the workers, can be turned into genuine industrial labor unions is the same as imagining that the capitalist state can be transformed

into a proletarian state. The idea is ridiculous on the face of it.

This does not mean, of course, that those of us who belong to craft unions should not carry on agitation for radical ideas among the other members. The craft unionist is as a rule just as ignorant of how capitalism operates and of the manner in which he is exploited, and just as little amenable to the great concept of working class solidarity, as is the unorganized worker. Let us do all we can to set his rusty thinking wheels in motion,—at least until we get kicked out by the big-bellied agents of capitalism who are in control of practically all the craft unions in the United States. But let us not be foolish enough to be carried away by the vain idea that these protective societies can ever be transformed into genuine industrial unions.

## Waste Fires Burn on Every Hand

ANY one who has a sense of thrift in his nature must be hurt by the sight of the waste fires to be seen at the tail-end of every sawmill in the Northwest. One remembers that for five years and more there has been a fuel famine in the East, while all Europe is suffering for substance with which to heat its homes and turn its industrial wheels.

Constantly the waste-fires burn at the mills. The owners call it necessary waste; they say that transportation of this wood would cost too much to do anything else with it except burn it up; they say there are not enough cars.

Meanwhile, prices for fuel are high in the cities, in keeping with the cost of everything that people eat and wear and utilize in their daily lives. Why could not all this waste wood from the mill be used as fuel for great central heating plants for the cities? The central heating idea is in operation in Toledo, Ohio, and from all accounts it has worked out successfully there.

Central heating is one of the big economic values to be expected when the workers shall have reached the point of establishing industrial democracy.

## To Labor

By CHARLOTTE PERKINS GILMAN

**(Air: "Maryland, My Maryland")**

SHALL you complain who feed the world,
Who clothe the world,
Who house the world?
Shall you complain who are the world,
Of what the world may do?
As from this hour
You use your power
The world must follow you.

The world's life hangs in your right hand,
Your strong right hand,
Your skilled right hand.
You hold the whole world in your hand,
See to it what you do.
Or dark or light
Or wrong or right,
The world is made by you.

Then rise as you never rose before,
Nor hoped before
Nor dared before,
And show as was never shown before
The power that lies in you.
Stand all as one—
See Justice done;
Believe and dare and do.

I. W. W. CONSTRUCTION WORKERS, CHICAGO, ILL.

# Special Offer

## Reduced Rates on All I. W. W. Publications for Three Months

In order to obtain the greatest circulation possible, for the papers and magazines published by our organization, we have decided to give our readers an opportunity, never before available.

Club rates for all our publications have been arranged, and the club arrangements under which the Industrial Pioneer may be obtained are shown below.

These arrangements will be in force for three months, and any one wishing to obtain our publications at reduced rates, can do no better than take advantage of this opportunity.

If the club arrangements shown below, do not appeal, any of our publications, the rates of which are the same, may be substituted at the pleasure of our readers.

| Club No. 1 | Regular rate |
|---|---|
| INDUSTRIAL PIONEER | $2 per year |
| INDUSTRIAL SOLIDARITY | 2 " " |
| INDUSTRIAL WORKER | 4 " " |

All of these papers and magazines, with the exception of the Industrial Worker, are published at I. W. W. headquarters, 1001 West Madison St., Chicago, Ill. The Industrial Worker is published in Seattle, Wash., Box 1857. Money orders for any of these club rates may be sent to whichever address is most convenient.

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of management of the industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# Boycott All California-Made Goods!

THE state of California has put itself outside the pale of civilization.
It has taken from workingmen the right to organize.
It has suppressed free speech and free assemblage.
It persecutes men for reading in public the Constitution of the United States.
BOYCOTT ALL CALIFORNIA-MADE GOODS!

The state of California wants to reduce the working class to a condition worse than chattel slavery.
It sends men to prison for believing in and advocating industrial unionism.
It has reverted to barbarism and the dark days of the Spanish inquisition.
Its criminal syndicalism law is an outrage and an insult to the working class of the whole world.
BOYCOTT ALL CALIFORNIA-MADE GOODS!

The state of California has sentenced over fifty workingmen from one to twenty-eight years in prison for being members of a labor union — the Industrial Workers of the World.
These men are now rotting in Folsom and San Quentin penitentiaries for the "crime" of trying to improve the miserable living conditions of their class; for the "crime" of having the courage of their convictions.
Scores of others are now on trial, or out on bail, awaiting sentence.
The crimes being committed by the state of California cry out to high heaven.
BOYCOTT ALL CALIFORNIA-MADE GOODS!

The state of California keeps in prison for life men who are admitted by the whole world to be innocent — Mooney and Billings, Ford and Suhr.
The city of San Pedro has arrested and herded into stockades like cattle over six hundred peaceful striking marine workers and sympathizers.
The state of California is paying ten dollars a day to three professional witnesses, Dymond, Coutts, and Townsend, moral and sexual perverts, who have confessed to having committed so many crimes that they ought to be put behind prison bars for the balance of their lives.
The corrupt and vicious powers that rule and control California have caused the arrest of Upton Sinclair, internationally known writer and idealist, for upholding the United States Constitution.
BOYCOTT ALL CALIFORNIA-MADE GOODS!

Demand the liberation of all workingmen and women incarcerated in California's dungeons!
Demand the repeal of the infamous criminal syndicalism law!
In the meantime—
BOYCOTT ALL CALIFORNIA-MADE GOODS!

# On the Blacklist —

You will not find these books in 99 out of 100 Public Libraries or so-called Carnegie FREE Libraries. Because these institutions are boss controlled. Because these books have wised up thousands of workers. If you want to be an intelligent fighter in the ranks of the militant I. W. W., this is your opportunity.

1 **Capital,** by Karl Marx. Volume I, entitled "The Proeess of Capitalist Produetion," is praetieally eomplete in itself. It explains the thing whieh, up to the time that Marx eame on the scene, had eonfused all the economists, namely, Surplus Value. It explains exaetly how the eapitalist extraets his profits. A notable and valuable feature is an elaborate alphabetical INDEX containing about 1,400 topics, whieh makes referenee to this vast storehouse of information very easy, and eonstitutes the best Economie Dietionary available in any language. Cloth, 864 pages. With a year of The Industrial Pioneer, both for..... $3.25

2 **History of the Supreme Court of the United States,** by Gustavus Myers. A master elass must have some supreme institution through whieh it can express its consecutive demands and enforee its will. In the United States the one all-potent institution automatically responding to these demands and enforcing them has been the Supreme Court. This History of the Supreme Court, being a narrative of the deeds of the ehief bulwark of eapitalism, eonstitutes at the same time the best history of the United States that has yet appeared. Cloth, 823 pages. With a year of The Industrial Pioneer, both for..... $3.25

3 **The Ancient Lowly,** by Osborne C. Ward. A History of the Ancient Working People from the Earliest Known Period to the Adoptation of Christianity by Constantine. This work represents a life-time of research, and summarizes praetically all of the information regarding the working people in classie histories and inscriptions. It eoncludes histories of the revolts of slaves in aneient Rome, notably that of Spartaeus, and aeeounts of the ancient trade unions. Vol. I or Vol. II, with a year of The Industrial Pioneer for..... $3.25

4 **History of the Great American Fortunes,** by Gustavus Myers. A real history of the United States is this story of the class struggles waged by the middle and working classes against the growth and inerease of the power of the owners of the Great American Fortunes, vested in the mines, the timber lands, the railroads and the vast industries. **Volume I** is the story of the theft of fertile valleys and priceless timber lands, the growth of the great proprietary estates, the rise of the trading elass, the beginning of slavery, the origin of shipping and city estate fortunes. **Volume II** is an account of the origin and development of the railroads, the great lumber steals and frauds, the coal land gifts, the mineral thefts and the souree of the Gould and Vanderbilt fortunes—together with the story of ineessant warfare between the robbers and the robbed. **Volume III** contains the story of the coneentration of capital, the rise of the Morgan, Jim Hill and other fortunes, stories of unrestrained thefts, grabs, arson, swindling eoal steals, with the aecompanying corruption of public officials and Congress. Any one volume with a year of The Industrial Pioneer..... $3.00

Vol. I. JULY, 1923 No. 3

# The Great Agricultural Workers' Drive

ONE of the chief failings of human beings is that they have an appetite. Right or wrong, no matter what happens, people like to eat—and what's more, they are real serious about it, too. A few have tried the experiment of living without eating, but apparently without much success; as a rule they die just as the experiment is about to succeed.

This is where Agricultural Workers' Industrial Union No. 110 of the I. W. W. comes in. It attends to the very important business of keeping this nation alive. In the spring of each year its members scatter over the food-producing states and, together with other workers who have not yet heard the great message of working class solidarity, they pick the berries and cut the hay and harvest and thresh the wheat, oats and other cereals. Then, when the long and sultry days of summer begin to grow shorter and cooler, they dig the potatoes and husk the corn.

And as a result of their manifold activities, the one hundred and ten million men, women and children who make up this nation trip merrily along the highway of life, hardly ever giving even a thought to those thousands of agricultural workers who in the sweat of their brow, working long hours for insufficient pay, keep the nation supplied with food—feeding the parasites as well as the producers of wealth.

### Last Year's Accomplishments

Just to get an idea of the scope and extent of the work carried on by the Agricultural Workers' Industrial Union No. 110, we are citing these figures: In the year 1922 this union took in 14,459 new members, and the cash receipts of business transacted amounted to $135,055.40. This year the prospects for organization work are much brighter than they have ever been. To date the number of members initiated has been almost double what it was last year about the same time. Of course, almost the same ratio is maintained by the other I. W. W. unions, which merely goes to show that the workers are beginning to wake up to the necessity of real class-conscious industrial unionism.

### The Spring Convention

All indications are that the territory covered and the results obtained in the 1923 drive will be by far greater than anything ever before accomplished. The 110 Spring Convention took place in Oklahoma City, from May 20th to 24th; the constructive measures taken there give promise of great things to follow. The drive started with a bang at this mass convention and every indication is that this spirit will be maintained thruout. Here follow some of the important actions taken:

On top of the fifty cents commission allowed every delegate for initiating a new member an additional fifty cents for expenses will be allowed. This is equivalent to going back to the dollar commission that was in effect during other years. Considering the great work that the delegates are doing in spreading the gospel of class solidarity by lining up new members they certainly are entitled to the additional fifty cents.

Another constructive step taken was putting out a number of "voluntary traveling delegates" and giving them ten dollars per week wages. This will make it possible for them to do better organization work by relieving their minds of the anxiety of the grub question—that is, while they are not at the point of production.

The Convention also authorized the G. O. C. and the Secretary-Treasurer to issue a special one dollar stamp to pay the quota

of I. U. 110 of the $62,000.00 bail and bond indebtedness which was incurred by Haywood and others forfeiting their bonds by leaving the country. The I. U. 110 quota will amount to $13,150.00; there is little doubt that 110 will be able to wipe this amount off its slate during the coming year.

The organization drive has been planned to include much more territory than it ever did before. For instance, states that have hardly been touched during the previous drives will be paid especial attention to this year. Several thousand dollars have been set aside to push the organization drive in the infamous state of California where working men are thrown into the penitentiary for fourteen years for the "crime" of belonging to labor unions. A special effort will also be made to reach the Palouse, the great wheat belt in the state of Washington. This wheat belt is known as the "big combination country" on account of the harvesting and threshing being done by gigantic combination machines drawn in many cases by as many as twenty and thirty horses. The harvest starts about the middle of July.

The following motion taken from the minutes of the Oklahoma City Convention is also pregnant with meaning: "That this body go on record in favor of 110 using all the energy possible for a decisive drive thru the corn belt this fall."

The Man in Auto Represents the Bankers and Commercial Clubs, Who Profit More From the Farmer's Crops Than the Farmer Himself.

### Harvesting and Threshing

About the time that this magazine will be off the press work in some of the agricultural districts will already be on in full blast. Haying in the more southern states—such as Oklahoma and Kansas—starts in as early as the first part of June and is quickly followed by harvesting. From there on the movement of the agricultural workers is towards the north, as the crops ripen with the advancement of summer. After work is completed in the two states mentioned above, the men proceed to Nebraska, Iowa, Minnesota, North and South Dakota, and Montana. After the threshing is all done in the last named states hundreds of the agricultural workers cross the boundary line into Canada, where the work is kept up in some localities long after the snow begins to fly.

But besides taking in the grain harvest I. U. 110 is also going to devote much attention this year to the other crops. There are states such as Michigan, Arkansas, Iowa, Illinois, Oregon, and others, in which hardly a beginning has yet been made in reaching the agricultural workers with the message of the One Big Union. Besides, there is the great Panhandle wheat district in northern Texas, to reach which not even an attempt has yet been made. Of course, owing to various peculiar conditions and the psychology of the southerners, especially Texans, the workers in this part of the country are very hard to organize. But we are confident that even this task will not prove too great for I. U. 110, which has accomplished such wonders in the past.

### Oklahoma and Kansas

There is a peculiar characteristic about the I. W. W. which will stand investigation by some of the so-called great psychologists in our universities. It is this: The more the I. W. W. is persecuted in some localities, the more it seems to grow there. Take, for instance, the example furnished recently in California, and especially in the port of San Pedro. Was there ever such brutal and relentless persecution of any labor organization in America and were ever the results obtained so gratifying to the organization persecuted?

In Oklahoma the powers that be are starting out early this year with a campaign of intimidating the agricultural workers. Word reaches us as we write this that already thirty members have been arrested in Enid, Oklahoma. It seems that the commercial clubs and bankers who instigate the persecution against these workers are so thick-headed that they can never get it thru their skulls that the spirit of class-solidarity thrives on persecution. We will see in a few weeks what attitude the authorities in Kansas will take towards the I. W. W. Whether an attempt will be made to enforce the injunction against organization work in the state we cannot tell at the present time. For three years it has been inactive and our defense lawyers are of the opinion that no such attempt will be made. But should the Kansas state authorities try to uphold this injunction, the case will doubtlessly be appealed to the United States Supreme Court.

### Fighting the Town Clowns

Making a success of an agricultural workers' drive is by no means an easy task. It's a man-sized job, in the full meaning of the term. Many snags are met with; many obstacles have to be overcome. The main of these, of course, are the activities of the commercial clubs and the bankers. The town clowns—that is, the sheriffs and other police officers—are of course nothing but henchmen of the bankers and the mercantile interests which control the rural centers. But, of course, they have never yet been able to stop a real live, aggressive wobbly delegate, who has made up his mind to go thru hell and high water, in doing his duty towards the I. W. W.—nor will they be able to stop him in this drive.

Besides the obstacles enumerated above, there is also a class of workers which is very hard to reach. The most noteworthy among this class are the homesteaders in North Dakota, and Montana, who are out to make a few dollars even if to accomplish this they have to work for next to nothing. A lot of these people have not the slightest idea of what real wages look like, and in some cases it's a hard proposition to keep them from working for chuck, to say nothing of genuine, honest-to-goodness money, but we are confident that in the course of time even they will realize that "an injury to one is an injury to all."

The Agricultural Workers' Drive this year is going to be without a shadow of a doubt the most successful and aggressive one ever conducted by I. U. No. 110. There is no more fitting way for closing this article than by reprinting the following resolution passed by the Oklahoma City Convention:

"Resolved, That we re-affirm our adherence to the I. W. W. Preamble and the cardinal principles of the I. W. W., and that this resolution be given publicity in all I. W. W. publications."

# How to Strike

By VERN SMITH

## INTRODUCTION

THE need is apparent for a manual of the strike. Of course, all strikes are different ; furthermore, strikes in one industry have peculiar characteristics and peculiar problems that make them unlike strikes in any other industry. It would be ridiculous, for example, to expect to win a sailors' strike by the same tactics exactly that the lumberjacks could use.

But there are resemblances between strikes, too. There are certain universal principles, in the strategy of the class-war, that apply, just as general principles apply in military combat. They are useful when taken as suggestions, not to be followed word for word, but applied to the circumstances with judgment and "horse sense."

This series of articles is intended to be such a manual.

It will fall properly into three parts, which are: first the problem of when to strike and how to get started; second, the question of practical organization to win, what committees, what sort of publicity, and how to get it out, how to keep up morale, how to get finances, when to carry the strike on the job, how to use job action, how to picket, etc.; and third, the problems involved in ending the strike, what demands are essential and what can be compromised, how to audit the accounts, satisfy everybody that there is no graft, stay organized for the next strike, and in general follow up the victory.

The first part of the manual, contained in this first article will have to be rather more theoretical and descriptive, with less practical details, because so many strikes are not started, but happen instead, and because of the nature of the preparatory work.

## PART I.
## WHEN TO STRIKE AND HOW TO START

The strike is the chief weapon of militant Labor. This accounts for the heat-wave of capitalistic newspaper venom, for torrents of anti-strike propaganda which flow steadily from pulpit and rostrum, and it accounts for the sickly fogs of sentimentalism with which the question is beclouded, and in which the employer hides himself, and the worker loses himself.

The capitalist has succeeded in setting a mark of disgrace, a stigma, on the very word "strike," so that conservative union men adopt a timid and shame-faced manner, as tho doing something that had to be apologized for when they enter upon what should be an honest and open attempt to take back a little of what has been stolen from them. Unions starting a big strike usually begin by explaining that it is the employers that lock them out, etc. They issue proclamations that read like the "white books" of hypocritical capitalist governments attempting to prove themselves very angels of peace and non-resistance, at the time of a great war they are fighting in their own interests.

Too often it really is the employers that start the strike, and too often the conditions are intolerable. That is nothing to be bragging about. It merely shows that the workers have been docile, meek and submissive. They ought to go gladly on strike, recognizing that at last a portion of the working class has mustered the courage, and developed the will, to defy the great tyranny of the employers, the enemy in the class-war.

### Preliminary Propaganda

Wherever possible, then, the strike should be preceded by propaganda intended to sweep away the misconceptions, the capitalist ideals, and prejudices, with which the workers' minds have been poisoned. The workers are not naturally sentimental, and they are courageous. They can stand the sight of horror. They need to know the worst. They must be convinced that they are not just sometimes, but all of the time, in a struggle with the boss, that this struggle exists from the very na-

A Mass Meeting of I. W. W. Strikers During the Recent Water Front Strike in San Pedro, Calif.

ture of things, since they can not have that portion of the product which the master takes for himself, and the master can not have what the worker gets in the shape of wages, board or good conditions.

There is no space here to go into a full description of the class struggle, but there are innumerable leaflets and publications which specialize in it, and if possible, workingmen who are likely to go on strike should be deluged with such propaganda. A clear realization of the class struggle makes a determined striker.

It is possible to narrow the field, if there is a practical certainty that we are dealing with a number of wage earners who will strike in the near future, and spend some time directly sweeping out the cobwebs that the master has been spinning. We should argue away such expressions as, "The Waste of Strikes," "Destructive Disputes," "Loss of Wages," "Unfortunate Strife," "Hardships of Women and Children," "Job Lost," "Better Be Safe Than Sorry," "Labor Should Recognize Its Responsibility," and other slogans of like nature, which always appear in the capitalist propaganda, thicker and thicker, before the day of the walkout. They are defeatist phrases, intended to maintain the fiction that strikes are very risky, and not very moral undertakings, and that disputes should be arbitrated, compromised, settled, as soon as possible. They can be met and completely annihilated by a true statement of the situation that exists between the working class and the capitalist class.

For its moral effect, an attempt should be made to substitute such notions as "Breaking the Chains," "Crippling the Boss," "Victorious Working Class," "Labor Deserves All It Produces," etc. It is a good plan to get everybody to use in daily speech such words as "Wage Slave," to make people realize the fact that the workers have little to lose by fighting, since they are already degraded about as far as it is possible to be, and that the approaching fight is going to give them some opportunity at least to recover their manhood.

Human beings are to a large degree creatures of habits. If the worker has been in the habit of thinking he is free and that there is little to gain by a change, if he is slothful and lethargic, mentally, if he dreads "trouble," and wishes to be friendly

with the boss, then it is a good thing to jar him out of those habits by pointing out the many abuses he suffers, merely as proof that he has allowed himself to be weak. This is not argument to justify the strike for it needs no justification. The existence of abuses means that the worker has neglected his duty, to himself and all other workers; has failed to make conditions as good as he could have made them.

### What To Do About The "Public"

Sometimes the master class drags in a mythical "public" and goes so far as to make laws forbidding strikes. Kansas with its industrial Court is an example; New Zealand with its now discredited arbitration schemes was another. Similar to this is the plan of getting some judge to grant an injunction against the workers, forbidding them to strike.

This sort of thing causes great distress of mind to the worker who does not understand the function of government in capitalist society. He finds himself forced to give up his fight, and go back whipped, or else oppose his government, his country, which he loves. The clearer we have made it to the average worker, that there is no government worth respecting, that the capitalistic governments are merely the executive committees of the rich men, and are always going to be on the side of the employers, the easier it will be for the striker to stick to his class in an industrial dispute.

Where there are anti-strike laws, it is necessary to point out that they are slavery, that any ordinance or any court which tells a worker he can not quit his job, has instituted slavery, not just wage slavery, which we already had, but chattel slavery, convict slavery, the sort the Negroes have in the South. Such laws and judgments are unconstitutional, and it is the duty of even the patriots to oppose them.

To often, of course, this propaganda can not be carried out. It is general in its nature, and should be always as widespread as possible, but the chance to strike often develops in a quarter that has not been educated.

Strikes in fact seem to be of three general sorts. There are: the strike in which job control exists, like the last coal strike of the United Mine Workers; the strike in partially organized industries, like the I. W. W. General Strike of May 1, 1923; and the spontaneous, unorganized strike, like the Lawrence textile strike in 1912. These strikes are only different in their origin, not in their conduct after they are started.

### The Job Control Strike

The strike where the workers are thoroughly organized has many advantages, if the strikers are wise enough to use them. In the first place an organization which is strong enough to maintain a closed shop, as the U. M. W. did in the coal fields in 1922, could have circulated an enormous amount of propaganda, could have everybody so wise to the facts in the case, that no gesture by the government, no treachery of the officials could hinder the strike. The U. M. W. of A. did not do this, but that is a fault which A. F. of L. unions possess in themselves, and does not do away with the favorable circumstances.

The next great advantage which job control gives is the opportunity of sudden attack. If the workers are always ready to struggle, an organization, no matter how large, could be thrown on strike in a single week. A referendum would not be required. The membership could give consent for a strike to take place when the situation is favorable, and the headquarters could announce the date by messenger, if the capitalist telegraph service and postal system would not carry the strike call. The strike could spread from the center out, the districts most distant from headquarters would hear of the walk-out from capitalist sources and would probably anticipate the message.

The strike would be complete. On Saturday night the capitalists might be licking their chops with pleased anticipation of enormous profits, by the middle of the next week, they might be wandering again thru their flooding mines, or silent factories, wondering how many years it would take them to

EDUCATION ORGANIZATION EMANCIPATION

# Industrial Workers of the World

1001 WEST MADISON STREET

CHICAGO, ILL.

*November, 1922*

## *Strike! Strike! Strike!*

*"THE WORKING CLASS AND THE EMPLOYING CLASS HAVE NOTHING IN COMMON!"*

*The above words are ringing true to form! The Masters have declared war on organized labor. They have been and are still trying to destroy all labor organizations. Their recent success with the United Mine Workers of America, Railroad Shop-crafts, the independent union at Lawrence, Massachusetts, the various organizations in the textile industry in the New England states and the old seamens' union, has greatly encouraged them until they have become drunk with power, blind to injustice, and thirsty for blood,—all for the sake of profits.*

*They centered their attacks upon the Industrial Workers of the World during the War. Shortly after the armistice was sig[illegible] commenced [illegible] form of labor organizations and all except the Indust[illegible] under t[illegible]*

**Facsimile of an I. W. W. Strike Bulletin Sent Out Last Winter as Part of Educational Campaign Carried On Preparatory to Striking.**

make up what they lost by not yielding at once to demands they first heard on Sunday. There would be no opportunity for piling up reserve supplies of coal, or other products, no chance to call out armies of scabs and gunmen, no chance to bribe union officials, no chance for any preparation. The swifter the strike comes, the more terrifying it is, and the more real damage it does.

Strikes are only won by doing damage to the employer. It is the fear of losing profits that causes him to yield to the demands.

### The Paralyzing Contract

There would be no chance for such an onslaught as this if the workers were tied up with bundles of legal tape, with contracts, that have time limits. No worker should be a party to a contract. To make a contract with a robber who holds you up at the point of a gun would be as reasonable. In fact, it is not possible for a worker to make a contract with a boss that is legally or morally binding. To contract, even under the principles of capitalist law, you have to be a free agent. A slave cannot bargain, since he has no will of his own. Even under capitalist law, if a man signs a contract under threat of great bodily injury, it is illegal, he cannot be held by it. If workers find a contract in their way, when the time comes to strike, they are justified, by the spirit at least, of even capitalist law, in disregarding the contract, since it was signed under threat of the most extreme bodily injury, namely—starvation.

In order to be free to violate the rules which capitalist lawyers have made for the conduct of the workers, unions should have their treasuries safeguarded by concealment, or by being held in another name, or by some other trick. Otherwise, even if no law is broken, the courts will seize them on some pretext—"attach" them, as it is called.

The United Mine Workers in their great strike of last year had no such precautions, of course.

Naturally, in this strike, as in all strikes, there should be every effort made to spread the walk-out over as many industries as possible, but unless there is organization covering all these industries to start with, organization wide enough to make it a general strike from the beginning, the spreading has

to be done after the first industry or plant goes out, and therefore will be discussed in the second article of this series.

What is demanded, whether conditions are good or bad for the employer, provided they are not so bad as to shut down the industry altogether, does not matter very much in this sort of strike. The workers are bound to win, if they stick it out, and if the strike covers territory enough. Since they can tie up the whole industry, it is difficult for the scabs to get acquainted with the more skilled trades in the industry, and there is no effective production by scabs. A strike which is complete in one or two trades in the industry stands little chance to win, if the other trades stay at work. The failure of the shopmen's strike is proof of this. A strike which covers only a few mines or a few plants, is usually broken, because there are flying squadrons of scabs who are partially trained in skilled trades, and can be, for a considerable price, rushed in to break a small strike. Black Jack Jerome and his crew, are a sample.

The strike machinery need not be very extensive. The regular officials and committees can usually handle the business of starting a strike where job control obtains.

(To Be Continued.)

# A Ford Slave Speaks Up

**To I. W. W. Branch**

Detroit, Mich., June 4, 1923.

YOU fellows in Detroit makes me sick, and your 1 big union, you gets me nervis.

Now hears what I want to get of my chest. I want to tell you that I am a member of the ford famely and prowed off it to. I am perfectly cuntentid. you guys in our country is trying to brake up our homes.

I dont have to mintin the name of the graytest man the world ever prejuced, but he is right in Detroit. you foriners that dont know how to talk our american languge have the nerv to tell the likes of men like I that we dont know nottin only work. I am sorry to say too young respectible young men that I knew in me home town one of them works here not at Mr. fords plant, anyway, he has a big job over tool maker and dy setters. He dont drink any hooch. Hes a fine fellow and to me greatest surprise hes a I. W. W. to, yes hes smart as a meckanic and studys ekoniks—(thats a forign word) but he dont know nothin when he kicks about. He sayes the hell of a sistem that is, what do you think of that and him earnin over $200 a month.

Thats not all of it his brother here—he have a swell job to—no not a mekanic he is what they calls a c. p. akountant and like his brother he have a I. W. W. card as one day a week ago he was lookin threw some papers in his inside coat poket & I seen it and he had a paper named Solidey in his coat pocket to—I will say its a dam shame where the finest kind of our american boys those with good habits and good jobs and had the lovelyest parents in their home town. If their folks only new all this —good christ theid drop ded. I have a brother he is a locomotiv fireman on the u. p. railway. I expect him to detroit any day and I bet when he heres what I tell him about these boys that I related to he will be shocked to.

As I said I am a ford man I only get $5 now but after 90 days Il get me $6—the boss said I am a natural born good worker I can do as good as the best they ever had on that job. the boss thinks the world of me. I think a man near where I work is a I. W. W. somehow he acts like one. no I would not squeel on him nor I wouldent scab but I have no use for the I. W. W. I am glad to get this of me chest. What could you do if you dident hav a money man pay you, you fellows are crazee.

I wont sign me name I dont want any nioterity.

B.

# Eighty-five Days in Irons

"GOING to sea in ships" is great sport, except when you hire out as a sailor. But let us relate a little story about what happened to a couple workingmen, to illustrate the point.

A few weeks ago there came up to the Pioneer office two fellow workers, both of them marine transport workers, one Taylor, being a native American, and the other, Harold Wood, born in Wales. They are of the type of alert, intelligent looking men that one meets among the M. T. W. members everywhere; men who have made up their minds that sailors and marine workers in general are as good men as any that walk in shoe leather; men who are not going to stop till they get the wages, conditions and respect that is rightly due them by virtue of the great and indispensable work they are doing in moving the world's shipping—the life-blood of the nations.

Fellow Workers Wood and Taylor shipped aboard the barkentine "Monterey," a 1,700 ton five-master, bound for Cape Town, South Africa, on Sept. 23, 1922. They were the only red card men on the ship, the wages running around thirty and forty dollars per month. One of the biggest problems they found was trying to break down the slave-psychology of the other sailors. There are some so-called human beings who will stand for anything, short of being hit over the head with a sledge-hammer.

Here are the conditions that obtained aboard the "Monterey": No place to sleep, leakage in forecastle so bad that floor was covered most of the time with two feet of water. Grub not fit for hogs to eat, let alone men who are supposed to deliver every twenty-four hours a good day's work. They ran out of lime juice in a week; being without lime is against the law, as it subjects the men to the dangers of the dread scurvy. They ran out of spuds before completing half the trip, when just around the Horn. So their chuck consisted of nothing but "wet hash" and "dry hash," salt horse and dog biscuits. Either variety of hash is made up of a combination of refuse and garbage that would make a beef stew in the cheapest eating joint on the Bowery look like a king's repast by comparison.

But the richest part of the menu was what could be called a maggot and molasses dessert. It seems that by some accident they had some ancient ham aboard ship. It could not be learned whether this ham had been excavated from King Tut's grave or not; anyway, there could not have been much difference in vintage between this ham and the corned beef Lord Carnarvon took out of old Tut's tomb. There was so much mold and so many maggots on this ham that the skipper set one of his men

Harold Wood Aboard the "Monterey"

scrubbing it with a wire brush. This mold and maggots were then taken and molasses poured over them, to be served as dessert, the skipper no doubt thinking that the combination would make a toothsome delicacy for his men. Whether he himself or his wife and daughters ate the concoction has not been recorded.

Well, to make a long story short, the men were in hell—and no joke about it; Dante's inferno had nothing on them. No place to sleep, nothing to eat but the worst imaginable garbage, menaced by scurvy and—work like the devil. Feeling among the men began to run high. And so it happened that one day when Fellow Worker Wood was made the subject of an unwarranted "cussing out" by the skipper, he hauled out and landed a wallop on the skipper's chin that sent him sprawling to the deck.

He was then put in irons by the skipper and kept in them for eighty-five days, which includes ten days that he was held prisoner aboard the ship after it reached Cape Town. The picture of Fellow Worker Wood that is reproduced here was taken by a relative of the captain himself aboard the "Monterey".

The water front of Cape Town is controlled to a great extent by the Industrial and Commercial Workers of South Africa, a mixed labor organization dominated almost one hundred per cent by a handful of leaders. The rank and file of the longshoremen wanted to boycott the ship but these leaders would hear nothing of it. And there the matter was dropped.

Fellow Worker Taylor deserted the ship, losing thereby his wages and clothes, and managed to get back to the States as a stowaway. In other words, on the way back he worked his passage—after being discovered—and did not get a cent for it. Besides losing his clothes, he put in five months all told of time and hard work, under almost unbearable conditions, and received not a red penny for services rendered. All this owing to the savage and despicable conditions that obtained aboard the "Monterey," and that no doubt obtain to almost as great an extent on other sailing vessels as well.

On the clearance given Harold Wood by the skipper his character and ability are marked as "bad," with a clause inserted calling attention to "insubordination on part of seaman." This is a form of blacklist that the marine transport workers ought to bend every effort to abolish.

The above is just one instance of the kind of treatment that the marine transport workers get at the hands of the shipping interests. Similar things are doubtless taking place aboard other vessels. Truly the life of a sailor is a hard one. But it need not remain such; all that is necessary is for these workers to wake up and do their duty toward themselves and their class. The preachers promise us hell after we are dead, then why live in hell while we are still on earth?

Organization is the only way out. Marine Transport Workers' Industrial Union, No. 510, of the Industrial Workers of the World will do away with the unbearable conditions in the marine industry. All shoulders to the wheel!

# The International Situation

By HENRY VAN DORN

DAILY papers and weekly publications carry endless columns about what takes place in Europe and other foreign countries. The whole of Europe is in a turmoil and nobody seems to know what's what. Diplomatic complications, alarming reports, minor wars, rumors of wars, clashes between the city workers and the peasants, encounters between the bourgeoisie and the proletariat, succeed each other with lightning rapidity. One day it looks as if war were inevitable and the next day the calamity seems to be permanently averted, only to be followed by the cropping up of other portentous possibilities. The worst of this is that hardly anybody seems to have the least conception of the inner meaning and probable consequences of what is taking place.

### Bird's-Eye-View of Europe

The proper way to approach this subject is by first getting a bird's-eye-view of the whole situation. No small share of the confusion concerning foreign countries has been created by the radicals themselves. They seem to have a penchant for being carried away by every gust of enthusiasm that comes sailing down the pike. The great majority of conceptions that we harbor about the international situation can only be corrected by getting an insight into the situation as a whole.

Let us take, for instance, the case of Hungary. A few years ago the revolutionary city workers of that country set up a soviet government. Many people were sanguine enough to believe that the new regime could have continued in power had not forcible and untoward events intervened. As a matter of fact, so long as the surrounding countries remained capitalistic, there was no chance at all for a permanent proletarian dictatorship, for the simple reason that Hungary is economically dependent on other nations.

Then again, there is the case of Italy. A couple of years ago a general strike was called in the metal and machinery industries. Hundreds of machine shops and factories were taken over by the workers. The owners were locked out. Again many thought that the social revolution had arrived.

In the eyes of those, however, who understood the interdependence of one European country on another, it was a foregone conclusion that this move on the part of the Italian working class was bound to fail. Italy has no raw materials to speak of. It produces no iron ore and it mines no coal. It has to import the greater part of its textiles. It is short of a great multitude of raw materials that are essential for the continued operation of its industries. Therefore, it stood to reason that just so long as the surrounding countries remain under the domination of the capitalist class a revolution in Italy could not be successful, even were it to be extended to every industry in the country. This, however, was not the case, as it embraced only the metal and machinery industries.

### Economic Interdependence

Notwithstanding the many languages that are spoken in Europe, economically the whole continent is a unit. This is to say that Germany could not exist without France and France could not exist without Germany; the smaller countries being dependent wholly on the larger ones.

Racially there is also not much difference. There is no difference racially between any of the peoples living north of the line which separates the northern countries from the distinctly southern ones, such as the Balkan and the Latin countries. Germans, Frenchmen, Englishmen, the Scandinavians, the Belgians and the people living around the Baltic Sea, are racially of identically the same stock, the only difference being in their languages.

The point that it is intended for the foregoing to make is that the social revolution cannot be confined to one country alone. To

give another example. The British Isles have to import forty per cent of their food supply. The great bulk of the raw materials that are worked up in British industries also come from abroad. This merely means that should there be a serious upheaval in the British Isles without a corresponding change taking place in the rest of Europe, or for that matter in the rest of the world, the British Isles could easily be isolated and could be starved out inside of a very few weeks.

Let us look at Germany. At the present time she depends on foreign countries for most of her iron, all her textile raw materials, all of her oil, most of her metals, a large part of her food, and most of the capital needed to restore her to normal efficiency. It stands to reason, therefore, that the enthusiasm with which many greeted the uprising of the workers in the Ruhr recently was wholly unwarranted. Germany being so wholly at the mercy of other countries which supply it with the necessary raw materials to keep the wheels of its industries running, whatever moves for liberation are made by the German people would, in order to be successful, have to be supported by the workers in the surrounding countries.

Russia comes as close to being a self-sustaining nation as any in Europe, and yet it has found thru bitter experience that economically it cannot stand on its own feet.

### Present-Day Europe

Bearing these things in mind let us now take a glance at Europe as it is today. The thing that strikes us more forcibly than anything else is the wave of reaction that is sweeping over the continent from one end to the other. While a few years ago, at the beginning of the Russian revolution, the prospects seemed bright for the abolition of capitalism and the establishment of the supremacy of the working class, at the present time the reverse is true. Italy is under the heel of the bloody and brutal Fascist dictatorship. It is significant to note that at the last Italian Socialist Congress, held a few weeks ago, a membership of only some ten thousand was represented, as against over two hundred thousand at the previous congress.

The remorseless persecution of labor in Spain has not abated one whit; if anything, it has grown worse. Many hundreds of Spanish workers have been killed outright or are confined in dungeons, which are full to repletion. Not a day passes but some of the more militant of the working class are shot down in cold blood in the open streets by tools of the Spanish bourgeoisie. It is hard to estimate the number of actual victims of the class-war in Spain, but it is safe to say that they run into many thousands. In this connection it might be well to remember that the Fascisti bought the success of their revolution by spilling the blood of about ten thousand working men and women.

The class-war in the Scandinavian countries, in Germany and Great Britain, does not require so many victims as it does in the Latin countries, but the cost in suffering and eventual death is tremendous. In Germany millions of people have been submerged below the poverty level. The misery, poverty, and degradation endured by the German people at the present time is practically incalculable. The hardest hit are those who were formerly in fairly good circumstances—namely, the professional and middle classes. Government employes, clerks, teachers, doctors, lawyers, writers, artists, have been reduced to the level of paupers. The livelihood made by laborers and mechanics is somewhat better than that of the clerks and professionals, but it also does not suffice to keep mind and body together.

The worst of the condition in Germany is that there is little prospect of betterment in the near future. This owing to many causes, which will be enumerated more in detail later on.

### Soviet Russia

As is to be expected, the reaction has not only hit these countries, but is demanding a ghastly toll in Soviet Russia as well. While the peasants are, on the whole, much bet-

**This Applies With Especial Emphasis to the German Workers in the Ruhr District.**

ter off than they were prior to the revolution, the city workers are in a sorry plight. The attempts to introduce the new economic policy have thrown many thousands into the army of the unemployed. To make things worse, the internecine struggle in the ranks of the communists and the revolutionary proletariat in general, between those who want to remain faithful to the ideals of communism and those who want to swallow capitalism—line, hook and sinker—is assuming grave proportions. Initiative on the part of the workers has been stifled thru the abolition of free soviets, which has necessarily reacted unfavorably on the attempt to reconstruct the industrial life of the country. If we are to credit reports reaching us from syndicalist sources, thousands of workers are being imprisoned and exiled for daring to oppose the government's economic policy.

On the other hand, foreign capital is not as anxious to invest in Russia as it might be. The capitalists seem to be still suspicious of the Bolshevik authorities. Many of them are inclined to lie low and wait for a while longer; even tho recognition in some quarters, notably in Japan, appears to be close at hand. Lloyd George has recently come out in favor of it.

The reason for the attitude of the capitalists is not far to seek. The revolutionary undercurrent in Russia is still very strong, whatever the actions of the soviet government might be. The Russian revolution was a monumental and an epoch-making event. It has left an indelible imprint of far-reaching implications on the mode of life and the whole mental outlook of the Russian people. At least for a while, the working masses glimpsed and became enraptured of an order of society other than capitalism. Even today many still hold on tenaciously to their former ideals and aspirations for communism, for a better and a nobler world, believing in the actual and literal dictatorship of the proletariat—not over the proletariat; even tho this might mean persecutioon by the present government.

Besides, the new generation is growing up in a revolutionary atmosphere. It is hard to foretell what the future might bring. A lot of good might yet come out of great Russia.

### Internecine Strife

The things that make for the turmoil and deplorable condition in Europe could be briefly subdivided under some five heads. At the top of the list will come the struggle between the working class and the capitalist class of the various countries. Next in importance is the rivalty between the city workers and the peasants. Then come the political subdivisions which, however, run closely along class lines: In a country like Germany there are, for instance, the social democrats, communists, nationalists, clericals and royalists.

The underlying sentiment for feudalism, in other words, for the restoration of royal-

ty, in some of these countries is still so strong that it plays havoc with the general run of things. By way of illustration, it might be pointed out that the German royalist clique is bent upon the restoration of the kaiser and feudal prerogative, with everything that goes with it. Its adherents have assassinated to date in the neighborhood of five hundred republican governmental officials and labor leaders. Even in a country such as France, which has for decades been a republic, the undercurrent of royalist agitation and activity is no negligible factor in the life of the nation.

To make things worse, there are the religious and nationalistic antagonisms, dating back many centuries, and aggravated by differences in language. When we consider the language barriers that separate the working class of the various countries in Europe, the situation looks almost hopeless. Just consider the region of the countries lying to the south of Germany. In a territory not as large as some of our states are living people using dozens of different languages and looking upon their neighbors across the boundary line as their mortal enemies. Is it any wonder, therefore, that the progress being made by these people towards working class solidarity is so slow?

### Changing Germany

On the other hand, we must not overlook the potential importance of the changes that have taken place since the war. Although capitalism is still dominant in Germany, the revolution that has taken place there in the structure of the country and in the mentality and morality of the people is so tremendous that it cannot be overestimated. Bourgeois morality has been turned upside down. The last prop has been knocked out from underneath the framework of capitalist ideology. One of the axioms of the bourgeois world is that people can get a start in life and make a "success" of themselves by being thrifty, by saving their hard-earned pennies, by planning ahead for the future, but in Germany at the present time this has been turned the other way around. Owing to the inflation of the currency and the machinations of the big industrialists, the more a man saves the less he has. The only way to get ahead of the game is to spend his money as fast as he makes it. If a man works like the devil and saves, let us say, what would be equivalent to fifty dollars, a few weeks later it might be worth only one half or even less. Naturally, he would be a fool to exert himself and to deny himself in order to save this money.

Likewise practically all of the rest of the tenets of bourgeois morality have been "shot to hell." It is proving increasingly difficult for one to even exist unless he turns into a speculator and breaks the law. Ability and virtue do not count. Owing to the practical elimination of the middle class, a man who has spent many years in acquiring a technical education now has to work for wages less than those being paid to manual laborers. In short, the whole background of concepts that have formed up till now the bulk of capitalist ideology is being swept away. The German people are ruthlessly being prepared to adopt an entirely different outlook on life from the one that their fathers and ancestors have been brought up to.

### The Growth of Syndicalism

Another significant feature to be noted in Germany is the steady growth of syndicalist unions. The workers are becoming disillusioned with political and parliamentary action. Their reliance upon political parties has been the will-of-the-wisp which has led them up till now in their search for a better world, and has now at the critical moment left them in a morass of despair. We might safely say that the German proletariat will not entertain a very high opinion of the efficacy of political action after their present harrowing experiences. The dominant power in Germany are the industrialists, who control the destiny of the nation by the virtue of their ownership of the industries. Ninety per cent of the coal and of the iron and steel industries are in the hands of a mere dozen men, whose wealth is so staggering, compared with the uniform

poverty of both the working and the professional classes, that it is almost beyond our power to comprehend.

The only salvation for the German workers is to turn their attention to industry and to concentrate their activity to the end of taking the industries away from the big capitalists and running them themselves. This up to now they have been prevented from doing owing to their past political education. The growth of the syndicalist movement in Germany is indicative of the fact that the German proletariat is beginning to wake up to the necessity of acquiring economic power by the use of direct economic action. In this process of awakening they will lose much of their past respect for state socialism or state capitalism.

There is essentially no difference between state socialism and capitalism as it now flourishes in Germany under the dictatorship of a mere handful of industrialists; if anything, state socialism, where the workers would not be entitled to a freely elected industrial representation, would be worse. It would be worse because in industries operated by the state it is treason for the workmen to strike. Treason, of course, is punishable by the heaviest penalties, involving even the death penalty. It is much easier for the industrial workers to wage war against a private capitalist than against an autocratic political state.

The workers thruout Europe are waking up to this fact. They are starting to fight for workers' control of industry thru the use of direct economic action. They are beginning to realize that economic power is what counts, that political revolutions are nothing but a change of masters, even should these masters masquerade under a revolutionary name.

### Recent Events

At the present writing it appears that war in Europe is not as close at hand as it was proclaimed to be some time ago. The Greeks and the Turks have come to a mutual understanding at the Lausanne conference, whereby Greece resumes the moral responsibility for the destruction that the Greek troops wrought during their campaign in Asia Minor, but is not compelled to pay the damages.

Turkey has been granted privileges and rights that amount practically to an acknowledgement by the Big Powers of her as a sovereign state. So it seems that from that angle an outbreak of hostilities has been averted, at least for the time being.

What the outcome will be of the scramble by French, British and American interests for the exploitation of oil in the Near East is, of course, a different question. The possession of the Mosul oil fields in Mesopotamia is today the biggest thing at stake in the whole world. In the opinion of various groups of imperialistic oil pirates these lakes of petroleum are worth the lives of hundreds of thousands of people. Whether or not it will lead to another conflict on a large scale between the Great Powers is a matter that cannot now be predicted. American capitalists seem to have stolen a march on their rivals by obtaining the Chester concession, but the British are not far behind by grabbing off the Berlin-Bagdad Railroad. The French imperialists seem to be highly incensed at the advantages thus obtained by their commercial rivals. The atmosphere is pregnant with explosive possibilities to say the least.

Nobody expected much from the international socialist congress held recently in Hamburg. The expectations have been fully gratified. Beyond affiliating the Second and the Two-and-a-Half internationals, and passing a lot of fine-sounding but impotent resolutions, nothing of any consequence to the toiling masses was accomplished.

### Acquiring the Industrial Outlook

We do not want to appear pessimistic, but it is hard to see how much progress can be expected in any of the European countries in the immediate future, from the point of view of the class-conscious proletariat. Even should revolts break out from time to time in some of these countries, this would not necessarily mean the introduction of the millenium. The workers over there will first have to get rid of their political outlook and acquire the industrial

way of looking at things. Just so long as the influence of the political poison which has been injected into their minds for so many years, remains predominant, little is to be expected.

Another conclusion that has been forced on us since the armistice is that misery does not necessarily make for the overthrow of the present system. The philosophy of misery has been blown to smithereens. If misery and suffering were all that is necessary for the workers to dump the masters off their backs, the capitalist system in Europe should have been abolished long ago. For surely of misery, suffering and degradation these people have had more than enough, and yet nothing tangible has been accomplished.

There are many points of difference in the principles and tactics of the Industrial Workers of the World and the European syndicalists, nevertheless they furnish the one bright spot in the European picture. No matter how many errors they might make in experimenting with the new philosophy and the new methods of attack, their efforts are in the right direction. The movement is growing stronger, from all reports, day by day. Organization on the economic field for the eventual control of industry and the expropriation of the present exploiters of labor is the only salvation for the suffering masses, not only of Europe but of every country on the face of the earth.

# "O, Say, Can You See?"

By BRENT DOW ALLINSON

To the victims of American apathy, and capitalist persecution, still confined in Leavenworth federal penitentiary.

I WANDERED wearily across the world
Seeking for men whose beating hearts could spell
Truth, Courage, Faith, and Brotherhood and Peace:
I found them in a felon's aching cell!

I found them in America's bastile,—
Chained, tortured, starved, defiled, all but forgot,
I found them broken on the prison wheel. —
Still dreaming dreams of what their land is not!

Jerusalem and Ninevah and Tyre,
Carthage and Rome, and even glorious Greece,
Perished in tyrant dust because the fire
Of Brotherhood was quenched by affluent ease.

America, your crowded dungeons' shame
Echoes across the barren, sorrowing earth!
And men who once revered your glorious name
Now utter it in scornful stinging mirth!

Sons of a great tradition, are you blind—
Here where Hope's martyrs die under your eyes?
Open the dungeons and your cringing mind,—
Or hold your peace beneath your iron skies!

# El Proceso Wilckens

**A Tale of Patagonia**

By LEONE ESMOND

SLOWLY and long in coming, creeps up from the Argentinian pampas a tale of unparalleled capitalist ferocity and vengeance taken therefor.

Southern Argentina is a land of great ranches. To these ranches, every year, come the "swallows," the migratory workers, following the harvest southward across the equator. Poorly paid, worse fed, housed not at all, even the hard lot of the agricultural worker of the United States is soft, compared to theirs.

In the summer of 1922, for the first time in the history of the great "estancias," the migratory workers struck, unable to endure longer the hardships imposed on them by their masters. There was some disorder. Starving and desperate men are rarely lamblike. But no violence on the part of the strikers could have justified the awful deeds about to be enacted in the name of "orderly government."

The ranch owners appealed to the Argentinian government to put down the strike. The government acted. Into the affected regions went a body of soldiers, under command of Lieutenant-Colonel Hector V. Varela, forever after to be known as "la fiera,"—the wild beast. His orders were short and impossible to misconstrue. "Finish with the anarchists!"

On the desolate pampas of Patagonia they staged the tragedy. At the lake San Martin, about 380 strikers, trapped between two bands of soldiers, surrendered. They were robbed of whatever poor trifles they possessed that their conquerors thought worth taking, then shot down in cold blood. Only three of the 380 escaped. On a nearly ranch, another group of 90 were driven to the edge of a high precipice and used as targets. When the sport wearied, those still alive were flung over the brink and their bodies left to the condors and foxes. At "El Mitre" and "La Anita," a band of soldiers murdered the men and assaulted their wives and daughters. Their commander, Lieutenant Frugoni, according to reports of eye-witnesses, first "diverted himself" with the more attractive of the unfortunates, then turned over his victims to the mercies of a brutal soldiery.

At Santa Cruz was played the crowning act of the tragedy. There Varela commanded in person. He had captured between 1,500 and 2,000 strikers on the neighboring estancias. These poor men were brought out, forced to dig their own graves, and then to stand on the edge of the pits while Varela's soldiers massacred them. The earth was thrown in over dead and living alike, and Varela marched back to Buenos Aires, leaving behind him "an orderly province." He had "finished with the anarchists." But the "anarchists" had not finished with him.

On the morning of the 25th of January, 1923, the avenger of the dead of Patagonia, Kurt Wilckens, lay in wait for Varela at the door of the latter's house, armed with a bomb and a Colt revolver.

Kurt Wilckens is a Pole, about 36 years old, by trade an automobile washer. He had been in Argentina about four years, coming there from the United States. He had been arrested during the labor troubles of 1922 in Buenos Aires, and had spent four months in prison.

As Varela emerged from the door of the house, Wilckens prepared to hurl the bomb. At that moment a little child, who had become acquainted with him while he haunted the neighborhood to learn the face of Varela, ran to him. Wilckens leaped from his hiding place, cried to the child to run, lest the automobile kill her, and pursued the flying Varela. Rather than kill the innocent child, he did not hurl the bomb till he had overtaken Varela, and was himself so close that his body was torn by the flying fragments.

Varela, who was but slightly wounded

by the explosion, seeing his adversary disabled, drew his sword and turned to make an end of him. Wilckens drew the revolver and fired six shots, one of which passed thru Varela's heart.

Wounded and unable to escape, Wilckens was seized by the police and taken to prison. There he declared himself an anarchist, and his act to be solely inspired by a desire to avenge the crimes of Santa Cruz. "If Varela did his duty, I have done mine," he said calmly.

This statement has been echoed by organized labor of Argentina. "El proceso Wilckens" bids fair to become as famous among labor of Latin America as is the case of Tom Mooney in the Northern hemisphere. Defense committees have been organized. Every labor paper carries a call for funds and an appeal for economic action to save the man who sacrificed his own chance for escape to save a little child, while not for a moment abandoning his determination to avenge the murdered workingmen of the Patagonian pampas.

Labor holds the deed justified. "Let the sentence fall on the head that speaks it!" it growls ominously, "Eye for eye; tooth for tooth!"

Render Unto Caesar
-Even thy sustenance
MAMMON
POWER
Commodities, including labor, exchange at their market price which is determined by supply and demand. A higher market price can be obtained for labor by the organization of this commodity and the reduction of its hours of application. But intelligent working "MEN" ask, "Why tolerate a system which lowers human beings to the level of pounds of corn; tons of iron or yards of cloth?"
ILLUST

# The Significance of the Modern City

By GEORGE WILLIAMS

THE modern city in present day society is a subject that might well engage the attention of revolutionary thought, in more ways than one and from angles that are perhaps foreign to radical philosophy.

The acute poverty of congested city populations, or parts thereof, on the one hand, and the magnificence and luxurious ease of a wealthy few on the other, are proverbial.

Take the city of Chicago, for instance. Here are three million souls crammed into an area of such mean dimensions that were each individual allotted an equal space to call his or her own, it would be but a few square feet.

The latest census gives some amazing figures on the distribution of population in the United States. It shows that in 1880—not so long ago—71.4 per cent of the population was in the rural areas and the remaining 28.6 per cent in urban or city districts (towns of 8,000 or more). In 1920, however, (40 years later) the census gives 51.4 as the percentage of the city population, which leaves only 48.6 per cent for the rural districts. These figures represent a shifting from rural to city life of 22.8 per cent, and show what has been manifest for years. But the rate at which people are now flocking to the cities indicates a tremendous acceleration of that movement and causes speculation as to what degree this social phenomenon will develop and what the ultimate results will be.

This no one can foretell. The movement has its main urge in the development of modern machinery, and since it is conditioned on the operation and duration of capitalism, to attempt to predict its outcome would be like guessing at the nature of the weather on a certain day twenty-five years hence.

### The City of the Future

What the outcome is to be if the present tendency keeps up, we might perhaps imagine by visualizing the city life of today in all its manifestations of horrid debauchery, robberies and brutal murders, its perverts and perversions, corruption and graft, dirt, filth, and all the monstrosities that now lurk in the city's myriad rat holes; then by multiplying all this by a hundred fold, we might gain an inkling of what the future holds in store for the city.

This drift to the cities has a striking lesson for revolutionary organizations; it requires profound study. Unless the lesson is well learned, the subject carefully weighed and thoroughly examined, an organization like the I. W. W., with an industrial outlook, will find itself on the wrong side of the industrial barricades when the showdown comes.

History, however vague it may be about some matters, does indelibly impress upon our minds the greater importance of the city over the rural areas. The objective of any army is always a city and there is more reason for this than there is instinct. If a certain enemy area is to be captured or controlled the dominating city is occupied and the trick is done. This is the great truth of every war and every revolution.

The reason for this is not hard to understand. It is fundamentally established and changes only in the degree or in the same proportion in which we have noted the trend of population. With the development of machinery the importance of cities is becoming increasingly ever greater.

### Machine Production

No one needs to be reminded of the swift and amazing development of machine production and distribution. Twenty-six thousand patents granted in one year by the patent office is an indication, when considered together with a period of ten years, to what tremendous proportions mechanical contrivances are being used to displace human labor. This is aside from projects, in process of development, such as Super-power, whereby electricity is to be

distributed from designated centers, which in themselves will completely revolutionize present day standards of production and distribution.

Since the tendency of machine development is to practically eliminate hand production, the question arises—what becomes of the displaced labor? This is a complicated question; in the space allowed us we can only convey a general idea of the full answer.

The world's population is many times greater today than it was during the period of hand production. This in spite of the development of machine production, popularly presumed to eliminate labor. Still, the teeming millions manage to live, and moreover, to increase.

Now, if we were to consider machine production as merely a process that decreases the amount of labor necessary to the production and distribution of a given article, and would apply that to all other produced articles, we might arrive at the conclusion that the population of the world should decrease instead of increase. But the ever-expanding development of machine production and distribution does more than decrease the amount of labor necessary in the production of goods: **it creates other and greater industries, it increases activity and research.** It has revolutionized the standards of living; on the basis of the first crude inventions rest the culture and attainments that exist today.

### New Industries

As examples of this re-creating process of machine production might be mentioned the automobile industry, the railroads, electricity and various mechanical appliances; the development of oil, moving pictures, aviation, and of many other industries, more or less important, all of which were non-existent not so long ago.

Thus labor, displaced by the newer mode of production is—speaking in a general sense—invariably drawn into other lines of activity.

Machine production and distribution is the founder of large cities. Strangely enough, it has simplified the production of raw materials and complicated the process of distribution to such an extent that more people are engaged now in distributive than producing activities. This is represented in the movement of the population toward the cities.

Cities are the distributing and storage centers of rural districts. This function means very much in the light of the following:—**that society—not capitalism, which is a system of society—has two main functions: the production and distribution of the means of life.** That is to say that certain portions of society are engaged in the production of materials and things, while other portions are occupied with the distribution of the finished products.

(For the purpose of avoiding confusion and misunderstanding it might here be pointed out that the division of capitalist society into workers and employers, wherein their relations produce a peculiar system of values, has little if any relation to the subject dealt with in this series of articles.)

Production and distribution are such general terms that the way these words are here used is likely to be misunderstood unless an explanation is inserted. It is impossible to define exactly where the production of an article or commodity ends and where distribution begins. With some commodities, such as coal used for heating purposes, it is not hard to see that when it comes from the pit it has gone thru the producing process and that on being loaded into coal cars it enters on the first stage of distribution. But iron ore, coming from the mouth of the mine, besides being the finished product of the miners who have mined it, is still the raw material for a great number of other industries. This iron going thru the various processes is successively the finished product of one industry and the raw material of another. And so it is with a great many other basic raw materials.

### Cities—Distribution Centers

The writer uses the terms production and distribution in a general sense, using production to mean the extracting or the cultivation of basic raw materials, such as coal, base metals, agricultural and fishery

Part of the Trimming Department, John B. Stetson Hat Factory. This Illustrates Large-Scale Production as Carried On in Big Cities.

products, etc., and distribution to mean the various processes of transportation, manufacturing and direct selling. This use of the terms will of course be open to much criticism since there are many who maintain that the production of an article does not cease until it is actually consumed, or put into use. But we are discussing social functions, in which we perceive, broadly speaking, two general spheres of activity, centered in the cities and large towns on the one hand and in the rural areas on the other. From one, the cities, come the finished products, from the other, the rural sections, come the raw materials.

It is not mere inclination that is driving the population into the cities from the rural districts. In the olden days of hand production there was no such tendency. In a word —for it has long ceased to be a mystery— machine production is the stringent force that sucks the "hayseed" in ever larger numbers from his bucolic surroundings to the city's slums or—palaces.

One other great achievement accomplished by machine production besides providing a profitable windfall for the exploiters of labor, due to a less and less amount of labor necessary to produce any given commodity, was the larger social accomplishment of distinctly differentiating the areas and the means with which production and distribution is carried on. Machine development became centralized in the cities. Old hand production fashioned out its rude tools— pounded the wheat, so to speak—right where the raw materials came from the ground.

### New Modes of Living

Modern machinery has performed some other things in the process of its development. It has tremendously stimulated the sciences, such as chemistry, organic and inorganic, physical and mechanical sciences, geology, metallurgy, etc. These have in turn brought forth new modes of life by introducing electric lights for candles and the countless other uses of electricity; also, weaving of cloth, building of houses, automobiles, transportation, and a multitude of

other things, have become daily necessities. Consequently, as separate units the city folk are entirely incapable of producing by their own individual labor one single article of life.

Up-to-date machinery has so intensified and revolutionized production and distribution that as individuals we compare to the both functions as a whole in about the same proportions as electrons to a powerful electric current. So vast and intricate are these processes that only by the perfect co-ordination of all parts can the whole keep going.

As between production and distribution, the latter is the more complex. It is in this field that revolutionary bodies must in the future spend most of their energy. For it is on the distribution of the necessities of life that society depends most.

If the wheat of the middle-west cannot be put thru the various stages of distribution, such as grinding it into flour and transporting it to where it is needed, then that wheat is useless. If it is not moved and consumed in time, if machinery and replacement parts are lacking, stagnation is bound to ensue, which would react unfavorably on other and contingent basic production.

**Soviet Russia**

Russia is an example: owing to the dogmatic and indifferent attitude on the problems that confronted Russia we have lapsed behind in our comprehension of industrial and social issues.

Sometimes—as in all undertakings, business and otherwise—it is advisable to cast an eye inward and take stock of ourselves. Like the individual who gets constipated and therefore needs a physic to restore tone, so an organization must needs review its own principles from time to time, and must enact such adjustments as will prevent acute dogmatism.

Russia in some respects is an old story. However, the story has many conflicting versions; is it any wonder, therefore, that most people are groping in a mental fog trying to discern the facts? Without arousing any pros and cons on the revolutionary aspects of Russia I will merely point out what is visible to all. The main fact about Russia is that the production and distribution functions of that country crumbled, and with them the revolutionary ambitions of the Russian people.

There was a long period of stagnation and starvation. What particular conditions, party or dogma was responsible for that debacle is beside the point, from the standpoint of this article. Suffice it that the main breakdown came first in **distribution.** This is obvious, since the revolutionary storm centers were in the distributing centers—Petrograd, Moscow, and a few provincial towns, while many of the rural districts were unaware for a long time that the czarist regime had been overthrown. It might be pointed out that production, especially agriculture, in Russia as elsewhere, is something in which the sun and weather play an important part, and that these elements are not dependent on the complexion or the doctrines of the party in power. But the continued breakdown of **distribution,** which is almost entirely based on human endeavor, will eventually demoralize production of raw materials.

Therefore Russia's predicament hinged itself almost mainly on the collapse of **distributive** functions.

This pose of neuter Justice, sterile Cant;
This Roman Emperor with the iron jaw,
Wrapped in the black silk of a maiden-aunt.

# Revolutionary History and the Workers

By PASQUALE RUSSO

REVOLUTIONARY History is written with drops of blood; its every page is reddened with the life current of thousands of martyrs who have challenged the master's right to exploit the workers.

"Merry England" furnishes many examples of the heroic struggles of the oppressed masses against the master class.

In the first half of the fourteenth century the Black Plague ravaged Europe; it took a ghastly toll from the ranks of the workers and peasants. Europe was left with very few laborers. This scarcity transformed conditions in England. Immediately an era of good wages, short hours and good times generally was inaugurated. However, this period of prosperity for the workers was brief indeed. At that time the English Parliament consisted, for the most part, of the landed aristocracy. This body, feeling that their dominance was threatened, enacted legislation curtailing the advantages which the logic of events had put into the hands of the workers. The measures resorted to by Parliament were so extremely repressive that they awakened great discontent. The unrest increased daily until 1871, when Watt Tyler, a very able leader, appeared on the scene and crystallized it into open rebellion.

### Peasants Turned Into Beggars

To counteract this revolutionary activity the English ruling class discharged and literally drove off the land many thousands of workers. This brought on an era of unemployment and starvation. In a short while the streets in the cities of England were overrun with beggars. Now the good Christian plutocrats of England added insult to injury by enacting laws against beggars. Violators were punished by whipping and imprisonment. Thus it is seen that even in those days the masters held the whip hand.

Conditions for the working class were at that time much the same as they are today. Then as now, there were masters and slaves. Property, then as now, was in the saddle. Its form was somewhat different, for in those days the slave was a part of the land; he was a chattel. Excepting this difference in form, the relations of master and slave were the same as today; the oppressor and the oppressed had nothing in common.

John Ball, a very able leader of the day, was conscious of this antagonism, and in speaking about it said: "Good people, things will never go well in England, so long as goods be not in common, so long as there be villains and gentlemen: They are clothed in velvet and are warm in their furs and ermine, while we are covered with rags. They have wines and spices and fair bread; we oatcake and straw, and water to drink. They have leisure and fine houses; we have pain and labor, the rain and the wind in the

"The Man With The Hoe." After the Famous Painting by Millet.

field, and yet it is by our toil that these men hold their state."

Years after John Ball was dead, long before the French Revolution, the ruling class of England fought a bloodless revolution, taking the power from the king and investing it in their own class. The Divine Right of Kings was abolished but the system of impoverishing the workers still remained.

### The French Revolution

Perhaps the most interesting, instructive, and thought compelling pages of Revolutionary History are those containing the story of the French Revolution. Here is laid bare, in all its simplicity, the story of the struggle between the landed and industrial aristocrats. The American Revolutionary War had been concluded some three years before the revolution in France. In America the English ruling class had attempted an interference with the American land speculators. The English government was worsted; this turn of affairs gave the French ruling class great joy and inspired the confidence and assurance which they so lustily manifested during the Revolution in France.

The French Revolution of 1789 was a bourgeois revolt fought for the purpose of abolishing the feudalistic tyranny of the landed aristocracy. The bourgeoisie won; it introduced a new and more barbarous system of exploitation, which we now know as capitalism. After the revolution the workers found themselves as badly off as ever.

The French Revolution teaches us, if it teaches anything, that the interests of the bourgeoisie and the workers are directly opposed one to the other; also, that it is extremely foolish on the part of the working class to entrust their social well-being to politicians.

During the Tyler rebellion, and again in the French Revolution, the workers made the mistake of allying themselves with the politicians, but somewhat later, during the brilliant revolutionary period of 1848, they changed their tactics.

In 1848, the workers began to manifest that class-consciousness which will ultimately lead them to victory. For this reason, if for no other, the year 1848 is memorable in Revolutionary History. In the autumn of 1847, Karl Marx and Frederick Engels published the Communist Manifesto. This document contained a call to unity. The workers answered it by organizing with amazing rapidity and bringing on a rebellion in France, Hungary, Italy, Germany and Ireland. In the struggle of 1848 the workers made substantial advances and gained some rights and privileges that have been of substantial value since. Among them may be mentioned free press, free speech and the right to be educated; also, the right to study and to advocate the principles of socialism. Of course, as we all know, the workers of some countries have again lost their rights of free speech and press.

### Paris Commune

Turning another page in Revolutionary History we are brought to the year 1870. We are now in the midst of the Franco-Prussian War. The year following the French were defeated, which caused a working class revolution in the city of Paris. In March of that year the workers took charge of the government and established the Commune. For about two months they governed France with unusual efficiency. The Commune was lost in great part owing to a lack of leadership and a vast amount of treachery. Along with Paris the workers lost also the advantages gained during 1848. The White Guard of the bourgeoisie, as supplanters of the workers, not only destroyed every scintilla of freedom but they also made the famous French shibboleth "Liberte, Egalite and Fraternite" ineffective. In one respect, tho, all was not in vain, because the spirit and courage of the Communards inspired and heartened the rebels in all parts of the world.

On another page of Revolutionary History are recorded the struggles of the Russian people. Here are a people, long suffering and patient, who endured untold agony under the Iron Heel of the abominable Romanoff dynasty. Hungering for liberty and weary of the despotism of the Tzars, they revolted in 1905. But here again they committed the fatal error of entrusting their interests to politicians. Utter defeat was the portion

meted out to the workers for their heroic struggle; thousands were slaughtered at the instance of good little father Nicky. The defeat served, however, as an admonition and a lesson. From it the rank and file learned to take charge of their own affairs and to perfect and solidify their organizations. In 1917 they avenged their fallen comrades of 1905 by overthrowing the rotten and tyrannical government of the Tzar. A tremendous step forward has been taken; whether or not they will be able to maintain a real Workers' Republic only the future can show.

**The Haymarket Tragedy**

Turning our attention to America we find many interesting pages in Revolutionary History. Perhaps first in importance is the Haymarket Tragedy. It was here demonstrated that Chicago had then, and no doubt has now, some genuinely sincere men who are ready to die for the cause of labor. For some time previous to May, 1886, a great movement had been going on to obtain the eight-hour day. As it would affect all industries the capitalist class regarded the movement as a grave menace and decided to stop it at any cost.

The crisis came at a working class meeting where a bomb was thrown, killing a policeman. The newspapers laid the blame at the door of the anarchists; a demand for the lives of the strike leaders went forth. Every capitalist, labor fakir, subsidized preacher and lackey of the moneyed interests joined in the hysterical outcry for the blood of the valiant labor men.

On November 11th, 1887, four of the accused working men were legally murdered in Cook County jail, Chicago. They sacrificed their lives in the attempt to prevent the strangulation of the labor movement by Big Business.

The men hanged were August Spies, George Engel, Adolph Fischer and Albert R. Parsons. August Spies spoke but few words from the gallows, but they were pregnant with prophetic meaning. He said: "There will come a time when our silence will be more powerful than the voice you strangle today."

**Industrial Workers of the World**

These events of the past have had a cumulative effect; in the year 1905 thousands of the more intelligent and revolutionary workers in the United States adopted a new form of organization. It was designed to embrace all the workers in all industries, regardless of color, nationality, occupation, or creed. It was named Industrial Workers of the World and was based on a strict economic foundation. Politicians, political questions and squabbles were eliminated as unworthy of consideration. Since its inception the organization has adhered to its ideals; it is now composed of wage-workers without any admixture of politicians or parasites. Students of Revolutionary History would do well to read the story of the I. W. W. It is a story of heroism; it has ever been loyal to the cause of labor and has at all times fought the workers' battles with honor.

The I. W. W. has always been a protector of the workers' rights. The capitalists fear the I. W. W. chiefly on account of its revolutionary spirit and actions. Hence the bitter and relentless persecution of this organization. Revolutionary industrial unionism as embodied in the I. W. W. is the only hope for the emancipation of the workers in America.

# Caliban in the Coal Mines

By LOUIS UNTERMEYER

GOD, we don't like to complain—
We know that the mine is no lark—
But—there's the pools from the rain;
But—there's the cold and the dark.

God, you don't know what it is—
You, in Your well-lighted sky,
Watching the meteors whizz;
Warm, with the sun always by.

God, if You had but the moon
Stuck in Your cap for a lamp,
Even You'd tire of it soon,
Down in the dark and the damp.

Nothing but blackness above,
And nothing that moves but the cars—
God, if You wish for our love,
Fling us a handful of stars!

# Cooks De Luxe

IN all ages it has been customary to "blame the cooks" for everything that happens. If a man gets bald headed, it's the cook's fault.

He says, "that woman thou gavest me really ought to know cooking at least." He brings home a pay envelope that strikes terror to the heart of the "sweet woman," and causes her to grab at least three breakfasts per week from the oat bin—can you blame her? There he sits, like a storm cloud on Lookout Mountain, and demands to know why she don't feed him round-steak at least once't in a while. It's the cook's fault!

Even the children are quick to notice the "culinary failures" of the family foodstuff worker.

Of course I am not trying to advance a child as a person capable of passing on the merits, or demerits, of a cook—nor do I attempt to convey the idea that a child has any exceptional ability "to come to an understanding" of the underlying causes that "offset" the cook in rather a compromising position. No, I merely desire to emphasize the old saying "Like father, like son"—childish.

The cook at all times is doing the best she can. (If there is no good food on the table it is because she could not procure it, for some reason or other.)

The hotel cook is generally a man. Ninety-nine in hundred, of such men, are regular "he-men," and many are the battles they have put up, for the "eaters," against the management. Single handed, only with the support of dishwashers and porters, have they fought the encroachments of an organized system of stomach-robbery—which all goes to show how "yellow" the public is.

Ordinarily a cook has all he can do to look after his own welfare; his own wages; his own conditions of servitude. But it is true the cooks have repeatedly sacrificed their own interest, their jobs and their "standing in the industry," trying to better the food for a shiftless, easy-going public. Someone has said, "to hell with the public"; and I do verily believe, he guessed it.

The public is rapidly reaching a stage of mental, moral and physical putrefaction, which might be termed a condition of hell. The cooks have been unable to save the people from the profit system, although the people were willing to let them do it.

Not only in swell hotels, but in commissary-camps, are the inmates patiently waiting for the cooks to win "their battle" with the capitalist system. I think they'll wait a long, long time.

* * *

It is now up to the cooks to save themselves. This idea of fighting someone else's battles is getting to be old style and is frowned upon in well-organized circles. Let the cooks organize in a union of their industry, and let them fight for wages, shorter days and better conditions for **themselves.** That's the best thing they can do for the Public.

**T-Bone Slim.**

# Tightline Johnson Goes to Heaven

By WILLIAM AKERS

FLOPPIN' is done by the best people. It is an institution highly developed by the human race and is frequently indulged in by tired business men, cow-eyed stenographers and loggers with stag pants. It is the one thing that every man, woman and child enjoys more of than anything else that they get.

Where does a stiff find any more high-class sensations than comes to him just after rollin' in to a fine well-thrown together bunk, piled high with fluffy blankets, clean sheets, one of those double-ribbed, triple-plated, pressure-packed twenty-layers-rolled-into-one sort of mattresses,—all landed together on top of a fast feedin' set of springs in a bugless paradise?

Echo answers—"Where?"

Herb Hoover has come out strong for standardization. Me and him are unanimous on this proposition. Of course, Herb has devoted a lot of attention to fields that never interested me. His idea for instance to make only seventeen kinds of bricks bloom where a hundred and ninety cluttered up the roadside before, never aroused any undue enthusiasm in my hyphenated Scotch-Irish-Scandinavian-American heart. Somehow I always felt safer with a little heavy confetti laying round handy.

But the principle is sound. Reduce the varieties. And right here is where Herbie finds Tightline Johnson ready to do a Horatius at the Bridge with him any old time.

There is too many varieties of beds, bunks and flops. My idea is this: let's start right in and reduce the species down to about ten kinds, but all of these ten kinds to be built according to the best and most scientific plans and specifications.

I would allow skid-way to take care of any sappy notions as to outward appearance and the like. If anybody is goin' to die happier because they have a bunk all faked up like a Louie Quince, help 'em along, says I.

And this pet idea of mine has sound practical points to it that would interest any profound capitalist in the market for elbow grease, providin' these said employers had not been in the lumber business so long that the knot on top of their spinal columns had degenerated into punky butt stock.

I speak from practical experience. How is a good and willing slave goin' to give his master his undivided attention when a lumpy flop and last year's crop of fill-or-busters join hands to divert him from his proper rest?

I am with Herbie right down to the ground of his Native Oregon. I don't believe in anything extreme. Far be it from me to hint that a gold decorated bedstead, equipped with the finest auxiliary box spring mattress, supplemented with Belfast linen sheets, brocaded Astrachan blankets and a hand worked and embroidered Irish lace coverlet, should be installed for every logger that ever threw a spiked hoof on top of a bit of round stuff.

No Sir! I ain't one of these Kerenskies that want nothing less than a Czar's bed to sleep in. Not that I am sayin' anything against 'em, mind. I remember one time when I had the flop of a life time in just such a bunk.

* * *

It was down in the heart of the steel country during the early days of the renaissance of the Ku-Klux Klan. Normalcy and the American Defense Society had the country by the throat. To be a foreigner was as popular them days as the corner bootlegger is during a general strike of the I. W. W.

When lots of these ignorant Europeans were asked the original question—"If you don't like this country why don't you go back where you came from?" it was surprising to find so few who could dig up a real convincing answer. The more they thought it over the more determined they got to follow the Goulds and the Astors over to Europe. So they were pullin' out by the thousands every day.

Me—I came rollin' into this vacation ground from Cleveland in the dead of winter. I was hooked up inside of a coal gondola on the Panhandle. Me and a couple of chunks of cast iron had been makin' impressions on each other and on the shack all afternoon.

This shack was one of these temperamental cusses. Must have had an unhappy home life, he was that restless and nervous. He chased me off of that string about ten times into the snow rollin' down from the chill breezes of Lake Erie.

The further south we got the colder the wind became. The exercise kept my blood flowin' freely but my ideas of the human race was becoming more and more pessimistic. I thought to myself that Schopenhauer could have written a real masterpiece if he had taken that trip.

After dark it became easier for me and harder for the shack and he got real nervous. When we pulled up to a water tank at Ambridge, about fifteen miles out of the Pitt itself, he went and brought up reinforcements. Two gunmen of the American Bridge Company rallied to save the system and they run me out of that car and up along the bank of the Ohio River like Three Finger Jack on the trail of a lost soul with a ten dollar bill.

I was always inclined to lean towards the idea that efficiency among the lower classes was enhanced by periods of unemployment, and the way these two gun men extended themselves sure cinched the argument. Here was two specimens of a class as low down as can be found and they were sure overworkin' themselves for no other reason at all so far as I could see.

After headin' upstream for a ways I decides to

sprint off to my left up the side hill. The leg that I busted in the log jam at the Mary's, out in Idaho, was in no shape for a marathon and I realized that I had to look for cover pretty pronto.

I must of run about a mile up that hill when I came to a brush hedge, stretched out along a road. I gallops along when I hear a flivver poppin' in my rear. I hears a hail and glancing back I spies the lizzie pickin' up my gladhanders. So havin' a firm idea that I was unable to compete with modern machinery by hand I finds me a nice crotch in the hedge and highclimbed it and boosted myself over.

I gave the once over to about four big back yards, each surrounded by a prickly hedge which I was just gettin' the proper hang of the way to bounce over, when they played out on me and I could see nothin' but a road on the other side of the last one. Alexander and me felt just alike regardin' new worlds to conquer.

There was only one thing to do and that was to look for a flop real handy.

* * *

In my mind back yards is always connected with some kind of houses, barns and the like. I soon located the back building in this shebang. It was a brick garage and had a door on it like the Union Trust Company's safe.

The house was one of these big nifty summer dumps where the hand-outs are pretty certain if a guy can get by the gardener or the lawn-mower pusher. I thinks to myself that nothing can look more lonesome that a summer cottage in the winter time and pinches my ear to see if I was bit. Sure enough, I found it frosted even after my hurdle race. Here was a hell of a fix.

There flashed into my mind the picture of a man I had seen when I was a little kid. He had both legs off at the hip and was out advertisin' artificial limbs. Both his had been froze off.

I decided that I would have a hard time seein' America first if I lost my legs all on account of two Steel Trust sluggers. I looks over this dump loomin' up alongside in the snow light.

There was a big balustraded porch on one whole side of it constructed in a pleasin' architectural style. French windows looked out on to the upper porch. Now it stuck in my mind, from seein' a few movies, that French Windows are duck soup to the heroic burglar that is out to swipe back the jewels which rightfully belong to the daughter of the old man. So I qualifies for a degree in porch climbin' and ten years in the big house and tries my luck.

Sure enough, by just nickin' a piece of glass out of one corner of those panels I could reach thru and open the thing up. I stepped in, after pushing open the shutters. I lighted a match and the first thing that I seen was a big cut-glass fruit dish sittin' on the sideboard. I grabbed this like Damon receivin' Pythias and dashed out to the porch and filled it up with snow. I took it in and closed up the shutters and lit up one of the candle sticks.

At one side of the room was a bed the like of which would set an Oregon balloonist to pinchin' himself. But I paid scant attention to it then.

I flipped off my clothes and shoes and rubbed that snow into my skin for fair. A bath before retiring is wonderful for the complexion I was once told and I have been run out for repeatin' it in every loggin' camp from the Hammond outfit up to Ocean Falls. A snow bath and a rub down on a great towel that felt like a spring cushion sure set me up in business.

I climbed into a pair of pink pajamas, took a couple of wraps about myself with a plutocratic bath-robe and, armed with the candle stick set out to explore the house.

Me bein' the son of an old-time prospector and havin' done a little mushin' and pannin' myself, the ideas of hospitality in vogue amongst us sourdoughs has always struck me as bein' fair and square. Many is the time some snowshoe pushin' traveler has moved into my cabin when I was out and helped himself to the grub, livin' strictly up to the code by whittlin' shavin's and washin' the dishes before mushin' on next mornin'. And the same had been done by myself.

So here, thinks I, is an opportunity to introduce some fine healthy customs into an effete society. I finds a pantry stocked with can openers, tinned asparagus tips, oysters, corn, tomatoes, crackers and a big hunk of imported French cheese with little blue sections scattered thru it. It sure all tasted good to me.

I carried the cans down cellar and cleaned up the pantry—then I took my candle and went back to my bedroom.

"Call me early, James!" says I to myself as I blew out the candle and jumped into bed.

Boys, I am here to tell you that that was some bunk. It was so comfortable that I went to sleep quicker than Old Shuteye the Burns stool pigeon, who was supposed to be the miners' checkweighman down at the Indiana Number 3.

And I had one of the finest dreams that was ever produced by a Welch rabbit.

* * *

I was floatin' up thru a pinkish sort of sky with a feelin' of easy gracefulness like that displayed by the choir leader of United Presbyterian Church.

I flitted hither and thither and I thinks to myself—"This system of ramblin' around sure is keen. Wonder why I never thought of it before."

By and by I came to a landin'. It looked just like a chunk out of the West Kootenais—anywheres away up in the hills above timber line. A lot of rocky bluffs and a little level piece with thick mountain grass springin' up.

I strolled along but my hat blew off and I had to chase it and push it down solidly. I wondered if it would leave a red crease across my forehead.

Suddenly I was in a field of mountain blossoms and ahead of me was a big gate like they have in Garfield Park in Chicago—all built up out of flowers

and trailing vines and hedges.

I started to walk thru when a funny old guy, with a beard like a Jewish rabbi, bounced out and wiggled his beard at me.

"Who are you?" he asked sadly, like an employment clerk during hard times.

"Tightline Johnson," said I.

"Look him up in the book," he sang over his shoulder to a couple of skinny looking angels who were sittin' on tall stools and were draped over a slant topped desk.

I stood and gawped about me. It was a funny lookin' dump. Little paths run every which way between small grass plots. They were made out of black sand just like I had shoveled up on the Stikine in British Columbia when I was muckin' the stuff into placer cradles for the Guggenheims.

A little cupid came bouncin' over with a card from an index file in his hand. Old Whiskers looked at it and shook his head.

"Mr. Tightline Johnson," he said, "you have a very bad record. It doesn't seem possible that we can let you into the Kingdom of Heaven. Very black. Very black. You have done so many things that you should not have done. You have neglected so many things that should have been done."

"Break it gently," says I. "When did they cut the wages?"

"In Heaven," he said, "there are no wages. But your case is very doubtful. I can not let you in on my own authority. You must come before the judgment throne."

"That's all right," says I. "Lead me up to the squeeze. I never liked to talk to straw bosses anyway."

The fat cupid bounced out with another card in his hand and gave it to me. I looks at it and says to the old fellow who was leadin' me along:

"Say, old timer, was you ever in Butte?"

"That sinful place! Never!"

"Well, don't get peeved. I was just wonderin' where you picked up this rustlin' card idea. I thought that system had been knocked in the head everywhere's except around the copper kings' sweat boxes. Even Gary himself is strong for the idea that each man has a sacred right to work and look for a place if he wants to. Come alive! Your outfit must be way behind the times."

"Hush!" says he, "we approach the presence!"

The old fellow took me before a grandstand bigger than the Stadium of the University of Washington that I once busted fog on. There was thousands of dim white figures sittin' in this grandstand lookin' on. Out in front on a nifty little stage was a big fellow with whiskers and wings and a long flowin' robe.

My conductor left me standin' on one side and went up and whispered in the big fellow's ear. About half a hundred court room hangers-on was sittin' and standin' around and they all give me the once-over with the same kind of expressions that I saw on the faces of a gang of reformers who came thru the Kansas City Can when I was being kept in cold storage there so as not to interfere with the benificent work of the High-jacks. It sure was a wet lookin' outfit. I punches the nearest one in the ribs and asks, "Who is the main push up there anyway?"

"You are now in the presence of the most high God!" says he.

So I looked again.

"Tightline Johnson!" God booms out. "You are here! Advance to the foot of my throne. I would speak with thee."

So I mopes up.

* * *

"Johnson," he said, in his deep full tones that reminded me of Harry Feinberg singin' love songs in the Tacoma County jail,—"Johnson, I gave to you many gifts. They have been abused. I granted you many instincts. They have been perverted, twisted, crushed, or are still dormant in your breast.

"To you I granted the great instinct of sex.—The record of your life shows much of loose living, of neglect of those love-hungry women who may have longed for consolation and affection. You have produced no children. That instinct which I gave to you, which would have uplifted you into the glory of life and love, you have allowed to drag you into the mire, to torture your nights and to pollute your days.

"I gave you gregariousness so that you might live together with your fellows, leaning upon them and lending them aid in time of social need. I gave you gregariousness so that mankind could live in harmony and peace together,—the common needs of this instinct binding the whole world in chains of interdependence and human love. You have separated yourself from the run of human beings. Along the highways and by-ways of the world you have chosen to live. Far from your kind I have seen you in the hills and mountains,—away from all the average humanity I have seen you with a few of your outcast tribe building camp fires along the sides of city dumps and railroad tracks. I have seen you rambling carelessly with defiant head erect from logging camp to logging camp refusing to settle down in company with your fellows, refusing to hearken to the promptings of sexual and gregarious urges.

"You were sent forth with a soul stored with a measure of self pride in order that you might never demean yourself before your fellow creatures, in order that in every task, in every trial you would always stand forth at the peak of your accomplishment—in the height of your ability and shining glory. Yet I have seen you walk thru the filthy places of the cities clad in rags. I have seen you turn your back on offered positions which would elevate you to posts where you would in a full measure be able to gratify the urges of my great gifts. Rather

than ride upon soft cushions you have hung at the peril of your very life upon the rods and the blinds of passenger trains or violated the laws of your fellow men by riding in cars constructed to carry freight.

"Acquisitiveness was given you in order that those things which were deemed worthy might appeal to you and cause you to exert yourself in order to acquire them. This great blessing of mine would have caused you to save the product of your toil, to have labored mightily and with all the cunning of hand and brain in order to gain from the storehouse of nature the wealth that lies there for your kind. What have you cared to acquire? Nothing but hard hands and calloused feet. The joys of accumulation which are known even to the tiny ant and the happy skipping squirrel are passed by untasted by you. You have scorned my gifts!

"That great instinct of workmanship which distinguishes man from most of the beasts has been restrained by you with a throttling hand. You have cast slurs at the joy of creative effort, the pleasant upsurge of pure feeling at a task well done. You have scorned the speedy workman, have abjured the creative instincts and have defied the very well springs of my life-giving and precious offerings! Think you that there is room for you here, Tightline Johnson? No! A thousand times NO!!"

A great silence fell on the assembly.

Thinks I to myself, "Kangarooed again, by God!"

There was a commotion at the entrance to the judgment hall. A tall slender figure clad all in white with hair the soft color of gold and eyes that looked like those of a married man with a family who has just got the sack because he had the guts to carry a red card.

Said he: "Father! Would you cast this fellow worker out, without giving him a chance to speak? Let us ask him why he has done these things. The ways of humans seem strange to us from here, yet I who have been amongst them, am full of compassion for those that err. Pray—let he whose hands and feet are calloused speak, that we may know what is in his heart."

"Johnson!" said God to me. "Have you anything to say for yourself?"

"I've got a mouthful," says I.

* * *

"When I was just a kid about three times the size of that cherub over there I went to work in a lead smelter. Over in the Coeur d'Alenes. They set me on the feed floor dumpin' charge cars into the furnace. An old Swede was workin' alongside who had been leaded twice. One of his hands was fixed so he could only use the fingers for a hook, from the other one he had the use of three. His feet were lumpy. His knees knocked. The lead had him right. Every move was a squeak. He was done.

"The only thing that Swede ever thought about was gettin' a few dollars to get out of that lead poisonin'. And he worked—like a fool.

"At every pay day the company men would coax him into the bar and have one drink before he left. 'Come on, you old Scandahoovian grave cheater!—Have one on me', they would say. 'Hell, there is many a wallop in the old boy yet—Hey?'

"For Andy Anderson was a man that knew charges. The smell of the smoke told him more than a chemist would ever find out and the company wanted to keep him, even tho it was killin' him by inches. Other men would not stay with the job, so if they could just keep Andy broke—just get him drunk—the trick was turned.

"Two pay days passed me on the job—interested in the work, tryin' to learn, just achin' to find out the why and how of things. But none of my money went over the bar. I did not spend it with the tinhorns or the chippies that the company brought in to keep us flat. No! I wanted to save my money in that hell hole—so that I could get out and learn something about what makes the wheels go around. I was crazy about machinery. I wanted to study and to have the know. And I was just a kid then, fellow worker.

"Do you think the Idaho Smelters gave a damn about that? What were they thinkin' about me anyway? They seemed to have track of Andy? How about the Kid—Johnson? They had their eye on me all right.

"This outfit run the company store. They sold the tobacco, the clothes, and shoes and operated the saloon. They handed over the booze, they operated the pool tables and over the hill they had the string of crib houses where the girls were brought in about pay day.

"They run the boardin' house—they run everything.

"They had their eyes on me all right. I wasn't spendin' all the money I made. Towards that money I was tighter than alum. You see I had instincts all right and I was tryin'—By God—**I was tryin'.**

"And what did those psalm readin' directors and flunkies of directors do? When they found that I had some money ahead of the game they laid me off for two weeks. Yes, fellow worker—gave me the sack for fourteen days so that I would have to spend my money either in camp with the company or on the road lookin' for another job, and jobs was hard them days.

"Was you ever turned loose in a smelter camp with nothin' to do for fourteen days but wait till your lay off was over? Did you ever get up in a smelly dirty bunkhouse out of a tier of bunks three high, along a wall where twenty-one men slept—seven men lengthwise and three deep? Did you ever listen thru a long night to men with the lead eatin' into their lungs and hear 'em spit out on the floor—a chunk of lung each crack? Would it drive you to drink or wouldn't it, now—I ask you straight?

" Well, it didn't drive me! I was young and I was determined that I would save money and get out to where I could learn something else than to mix a

eharge car by the smell of the smoke. I didn't want to have my fingers eurl up in me! I didn't want to have dagger pains in every joint of my body till they reaehed my heart and stopped the works!

"And neither did Andy. I went baek on the floor with Andy when my time was up and I still had money ahead. I still was holdin' out on the eompany—and they knew it.

"Two weeks after I went baek to work we was paid off again. I had nothin' eomin' for they took it out for my board. Andy was deeoyed and tanked up again. Oh! Yes! I saw the whole thing—and I couldn't help it. But next night when Andy and I came on the Graveyard shift together I turned double trick, for the old man was down and out. Sweatin' and puffin' I pushed the buggies for both of us.

"At three o'elock in the mornin' I knoeked off to throw in a gulp of blaek eoffee and a eouple of bites of sinker from my lump. When I came baek on the feed floor Andy was gone. And I knew that Andy had taken his last big smell of the smoke. Leanin' over into the eharge I eould see an outline of his bones down below in the colored flames.

"I ran like mad to the furnaee boss. But he said he dassent blow out the furnaee. So at the last the company got baek even the lead that had been eatin' into Andy's bones and playin' tag thru Andy's veins.

"I eould never faee a feed floor again. I was done.

* * *

"Before I got another job I was flat broke. Could I write home and tell my mother that I was already a bum beatin' my way on freight ears to every plaee where I heard of a job? I ask you, fellow worker, eould you do that?

"When after many months I did get some money —after I did find a plaee in the damnable profit makin' maehinery of business and sent for her—she was dead!

"Died of a broken heart, they said, while I was grabbin' armsful of box ears lookin' for a job—at anything, for anything—exeept chargin' a lead furnaee.

"Did that ever happen to you? Was you ever in a fix like that? Better think it over, fellow worker—seems like somethin' was wrong. Some said—hard luek. But I eut my eye teeth on that hard luek—I seen it from every side. It is worse than that.

"I had an instinct of solidarity! I had a feelin' swell up inside me at a job well done. And it was these feelin's that made a rebel out of me. I want to show my solidarity to my fellow workers at every ehance by puttin' my shoulder to the wheel and helpin' them to make things better so that no other kid will have to go thru the mill that me and millions more like me has bueked up against. I got enough workmanship in me to know that a system that is slung together in such a haywire manner has had some damn poor meehanies on the job.

"I am Tightline Johnson and any bull of the woods will tell you that Tightline may be a hard-boiled wobbly but he wears no ehinwhiskers as a fog buster and ean handle a yarder with any man that walks on two legs. Just ask 'em and see. And what I can do with a yarder in the way of nursin' it along and makin' the parts run easy and smooth, me and the rest of us wobs has been tryin' to do with the system of produetion and distribution of the things we make.

"Beeause I am a rebel against the slave-drivin' system that takes all that a man produees and gives him no ehanee in life unless he lines up and fights—beeause I have shown my fellow workers how and why to line up—they have made an outeast and an outlaw out of me. Every gunman's hand is against me. Every seab and fink hates me and all that are like me.

"They have kept me on the bum. They have driven me from camp to eamp—blacklisting my name from Ketchikan to Eureka, Çalif. They have thrown me into jails—hunted for me with ropes in their hands—hired an army of stoolpigeons and spies to sneak out the seerets of my organization when we have no seerets to hide. They have sent hundreds of my best friends and the whitest men that were ever born—have sent them into prison because they have ideals.

"I ask you is a man who is living sueh a life and fighting sueh a battle in a position to take on a wife? Can one whose very freedom is in jeopardy every day and every hour bring peaee and happiness into a love life? Is it treating a girl fair to eall up in her the tender feelings of love only to tear her heart to bits with fear and perhaps leave her weepin' with the little ones when they send you to the big house?

"I never walked a dirty street by choiee. I never went into a brothel by preferenee.

"I have trembled at the thought of a sweet woman's arms elasped about me in love. I have stood with my throat choked with a string of burning lumps—outside of some bourgeois's home, and watehed a while the anties of the elean ehildren playin' on the lawn.

"You sit up there and tell me I am not wanted! You sit up there and say that I am a waster of my natural gifts! How would you aet and what would you do? Just answer me that!"

And do you know the old geezer broke down and eried like a baby.——

* * *

And when I woke up it was mornin'

# Savage Survivals in Higher Peoples

By PROF. J. HOWARD MOORE

## THE ORIGIN OF HIGHER PEOPLES

ALL civilized peoples have come from savage peoples. They have grown from savages, just as you and I as individuals have grown from babies. It is important to know this. For we can't understand the things civilized men and women do and think and feel—many of them are so barbarous and strange—unless we recognize the fact that civilized men and women are merely made-over savages.

It is also important to know something of the nature and ideas of savages; so that we can compare them with our own nature and ideas and see how much of us has survived from savage times and how much has been produced since then.

These articles will prove that all higher peoples go back in their ancestry to savages, and will show what sort of beings savages are; that is, something about what sort of animals our ancestors were.

### Where the English Came From

Go back into the past two or three thousand years, and you don't find any English in the world, nor any French, nor Spanish, nor Germans, nor Russians. But what you do find is that each of these modern peoples is represented at that time by one or more barbarous tribes, from which it has grown. The English go back to the Angles, Saxons, and Jutes, three barbarous or semi-barbarous tribes that lived originally in the region of Denmark and southward. They came over and settled the island of Great Britain fourteen or fifteen hundred years ago. The first settlement was made about 449 A. D.

These people were very rude. They dressed in skins, loved adventure, and were fond of water. They lived a good deal by pillage. They would get in their boats and cruise along the coast of the Baltic till they came to a town of some other tribe. They would drive the people out or kill them, plunder the town, and then burn it. They thought this was the proper thing to do; for they acted on the principle that "might makes right"; that is, on the principle that it is right to do whatever one has the power to do.

Wherever you go you find the English—in North and South America (we are English), in South Africa, Australia, India, and in many islands of the sea. The English, more than any other people, have been the explorers and settlers of the planet. The English-speaking peoples are so enterprising that they already occupy a large part of the surface of the earth, including practically two whole continents.

One reason why the English have been so restless as a race is because their ancestors were that kind of a people—sea-rovers. Suppose the English had come from land animals—beings who lived in the interior of Europe, a quiet, home-loving, peaceful people. Don't you suppose the history of England would have been a very different thing from what it is today? The adult English people merely reflect the character of the infant peoples from whom they have grown, just as a grown man is in a general way like what he was when he was a child.

### Other Modern Peoples

The French came from the Gauls, scattered tribes that lived in the region of what is now France at the time of the Roman Empire.

The Germans came from the Goths, Vandals, and Cimbri, three barbarous tribes that lived in central Europe and assisted in overrunning the Roman Empire.

The Italians come from the Romans, a people who spoke the Latin language and lived in the peninsula of Italy and other Mediterranean lands about the time of Christ and later.

The modern Greeks are from the ancient Greeks.

And all of the modern white peoples—Russians, Germans, French, English, Swedes, and Americans—can trace their ancestry back, by means of common languages and common legends, to a people who came long ago out of the East, out of the land beyond the Caspian. These people came into what is now Europe and settled there long before written history. And from them all of the modern European peoples have come. So you see we have all branched from the same tribe if we go back far enough.

### The Cradle of Mankind

But where did these original white people come from? And where did the dark peoples come from? And the Chinese? and the Indians? Where was the cradle of the human species? In what part of the world and at what time did man originate as a new and distinct species of animal? This must have occurred at some certain place on the earth and at some definite period af time.

It is pretty certain that the human species did not originate in what is called the western half of the earth and spread from there as a center over the world. For reasons, the most of which I cannot give you, because it would take too long to make them plain, it is believed by scientists that the cradle of mankind was somewhere in the eastern hemisphere.

One reason for this belief is that it is here that we find the oldest tracks of man, the earliest evidence of his existence in the world. We can go back into the civilization of the Nile and of the Euphrates and of some of the rivers of India for thousands of years, in some places 8,000 or 10,000 years. Here we find one civilization on top of another. Here are found the things men have fought with and worked with and lived in—objects which have defied the teeth of time, and which endure long after their creators have vanished. It is believed that man originated somewhere in southern Asia.

Or, possibly, still further south than the present boundary of Asia, in lands now drowned by the Indian Oeean. This supposed land has been called Lemuria.

### Changes in Geography

You know from your study of physiography that a large part of what is now the land surface of the earth was once the floor of the sea. Sandstone and limestone, whieh are so common over the land surfaees, we know, are made under water, and no plaee else. And we find the fossils of fishes and other water animals seattered all over the land, even to the mountain tops. The remains of a whale were found in northern Mississippi the other day. This animal, when it died, was swimming in the Mississippi Sea, a great body of water whieh onee extended from the Gulf of Mexieo over what is now the Great Central Plains of the United States.

The City of Louisville, Kentueky, is built where it is beeause the Ohio river has a fall there. This fall is eaused by a eoral reef running aeross the river at that point. Corals are sea animals. And the eorals that loeated the eity of Louisville by forming a reef at that partieular plaee and eompelling the Ohio river to stumble over it, lived and died in that far off time when Indiana and Kentueky formed a part of the floor of the Mississippi Sea.

Now, it is not so well known, but it is a fair inferenee, that much of what is now water surface was once land surfaee. We mine eoal under the sea some plaees. And I suppose that if we eould only get at them we would find many things in the lands under the sea that would be useful to us land animals. Maybe, sometime, when we have exhausted the stores of the land, we shall get so hard up or so skilled that we shall be able to get at these drowned treasures beneath the oeeans.

We know that there have been many ehanges in the geography of the earth in the past—that the geography of the earth a million or ten million years ago was not what it is today. We know that Afriea was joined to Europe at Gibraltar until rather reeent times in the history of the earth, and that Asia and North Ameriea were united at Behring Strait.

Geologists say that North and South America have been separate eontinents during most of their geologieal history. The Isthmus of Panama is very reeent, geologieally speaking. There are reasons for believing that before South Ameriea was joined to North Ameriea it was eonneeted with Africa and even Australia( forming a great Antartie eontinent.

In the Plioeene age of geology Alaska was joined to Asia by a rather wide isthmus. It was over this isthmus of Behring that many of the North American animals first eame into Ameriea from Asia. Animals like the buffalo and the mountain sheep did not originate in America. They eame from Asia. And they eame over the Behring bridge in the Pliocene age of the world. No bones of these animals are found in Ameriea previous to this time. The Indians also no doubt eame into America from

Lands (Shaded) and Seas (White) at the Beginning of the Eocene Epoch.

Asia by the same route, altho the Indians came much later than the buffalo.

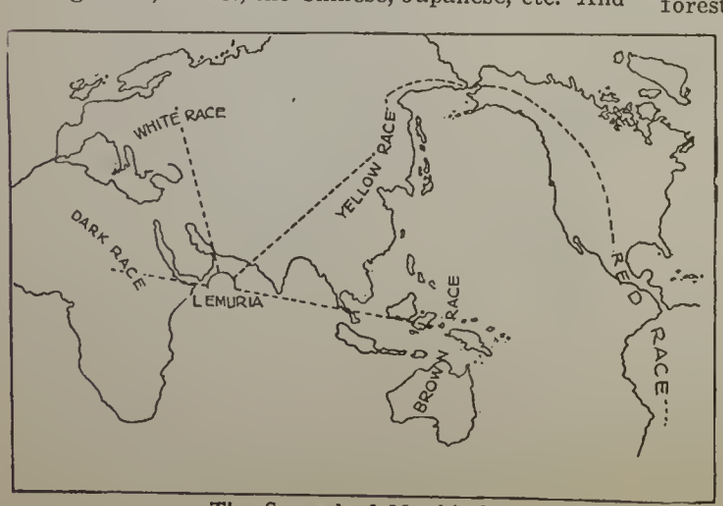
Until comparatively recent times in geological history, the island of Great Britain was joined to, and formed a part of, the Continent of Europe. The earliest inhabitants of Great Britain were Celts. They were called Britons by the Anglo-Saxons. Great Britain may not have become an island until some time after it was settled by human beings. The Celts may have walked dry-shod over what is now the North Sea into what was then a western peninsula of Continental Europe. That is, when England was first settled by human beings, it may have been a peninsula.

### How Old Is Man?

How long it has been since man originated as a new species of animal, no one knows. But it is known that it was a long time ago. Until fifty or one hundred years ago, it was generally supposed that human beings had not existed on the earth more than five or six thousand years. But the more man is studied and the more the earth is rummaged, the further back into the past is the beginning of things known to be. It is known positively that there have been living beings on the earth for a good many millions of years. It is estimated that life has existed on the earth for fifty or one hundred million years; that is, that the animal kingdom is fifty or one hundred million years old. But during most of this time there were no human beings in the world. Man is a recent species. But it is believed that man has existed on the earth for as much as five hundred thousand years.

### The Spread of Mankind

The human species probably originated somewhere in the Indian region of southern Asia. And from this as a center it has spread pretty thoroughly over the land surfaces of the globe, not only over the continents but to most of the islands. One branch moved westward and formed the dark people of Africa. Another moved north and northwest and became the white or Caucasian race. Another moved north and east and developed into the yellow or orange race, that is, the Chinese, Japanese, etc. And a branch of the orange race probably moved on over from Asia, past the Behring Strait region, into what is now called America, forming a modification of the orange race, the copper or red race, the so-called American Indians. And another branch of the species moved eastward to the Malay peninsula, the East India Islands, Borneo, New Guinea, the islands of the South Pacific, on as far as the Hawaiian Islands, forming the brown or Malay race. This gives you a little idea of the scattering out of the different races of men from the original human nest.



The Spread of Mankind.

The Malays are an island race. They love the water and are at home in the water. They have been developed in connection with the water, and are largely water animals. You know there is one species of buffalo that is called the "water buffalo," because it loves the water. The Malays are water men.

The Hawaiian islands were not settled from North America nor Asia, but by those brown sea-rovers from the southwest. The nearest land to the Hawaiian islands is over 2,000 miles away. How the first human inhabitants of those remote dots ever found their way over the vast wave-wastes they had to traverse before getting there no one will ever know. But probably they were refugees, carried out to sea by a storm, and losing their way on the trackless plains, wandered on and on, until they happened to stumble upon those hitherto unknown volcano-tops. We know such things can happen, for a junk with survivors on board drifted ashore from the west at the Hawaiian islands in December, 1832.

### The First Men

Original men, that is, the first men who ever existed, probably lived in small, loose bands, each band being composed of from 20 to 50 or more individuals. These bands, in their organization and modes of life, were probably very much like the bands of other animals that are met with today in the forests and on the prairies. They were without fixed places of abode. They subsisted on the fruits, nuts, roots, young shoots, and bird's eggs which they came upon during their wanderings thru the forest. These bands of early men must have had only the bare beginnings of law and government. Each band was led by an old male as chief, who had won his position as leader by his exceptional strength and intelligence. There was probably no family life, the sexes mingling much as among lower animals generally. Early men lived in a tropical climate, and were without either clothes or fire. They had long arms, and short, weak legs. Their weapons were sticks and stones. They were able to overcome all except the larger animals by co-operation and the force of numbers. They probably used the trees a great deal as a refuge in time of danger. They may have had the beginnings of superstition.

**Editor's Note.**—The above is the first of a series of articles dealing with the origin and descent of man, special emphasis being laid on the survival of primitive traits both in human beings and in domesticated animals. This is a subject in which all thinking men and women are intensely interested. The author of these articles is Professor J. Howard Moore, one of the world's greatest authorities on anthropology. For the permission to print this work we are indebted to the publishing house of Chas. H. Kerr & Co. of Chicago, who first brought it out in book form under the title of "Savage Survivals."

# A Cry From the Ghetto

**(From the Yiddish of Morris Rosenfeld)**

THE roaring of the wheels has filled my ears,
The clashing and the clamor shut me in;
Myself, my soul, in chaos disappears,
I cannot think or feel amid the din.
Toiling and toiling and toiling—endless toil.
For whom? For what? Why should the work be done?
I do not ask, or know. I only toil.
I work until the day and night are one.

The clock above me ticks away the day,
Its hands are spinning, spinning, like the wheels.
It cannot sleep or for a moment stay,
It is a thing like me, and does not feel.
It throbs as tho my heart were beating there—
A heart? My heart? I know not what it means.
The clock ticks, and below I strive and stare.
And so we lose the hour. We are machines.

Noon calls a truce, an ending to the sound,
As if a battle had one moment stayed—
A bloody field! The dead lie all around;
Their wounds cry out until I grow afraid.
It comes—the signal! See, the dead men rise,
They fight again, amid the roar they fight.
Blindly, and knowing not for whom, or why,
They fight, they fall, they sink into the night.

# The People

By TOMMASO CAMPANELLA

(Italian philosopher 1568-1639. This poem is as timely today as it was six hundred years ago.)

THE people is a beast of muddy brain
That knows not its own strength, and therefore stands
Loaded with wood and stone; the powerless hands
Of a mere child guide it with bit and rein;
One kick would be enough to break the chain,
But the beast fears, and what the child demands
It does; nor its own terror understands,
Confused and stupefied by bugbears vain.
Most wonderful! With its own hand it ties
And gags itself—gives itself death and war
For pence doled out by kings from its own store.
Its own are all things between earth and heaven;
But this it knows not; and if one arise
To tell this truth, it kills him unforgiven.

# Editorial

## PROPAGANDA BY DEED

THE capitalists believe in propaganda—by word of mouth, by printed matter and by deed. Millions of dollars every year are spent to influence "public opinion." Ninty-nine per cent of the "opinions" that the dear public holds are machine-made. The main purpose of the bourgeois press, however, is not to "put something over," so to speak, but to keep those who read it in a perpetual state of mental slavery, which state is looked upon as the normal intellectual outlook of the populace.

But sometimes conditions arise which require that sterner and more effective methods be used in order to make the working class do the bidding of their masters. For instance, during strikes. Propaganda by deed is then resorted to. As witness what happened to some of the fellow workers who were unlucky enough to fall into the hands of the San Pedro police during the recent waterfront strike.

According to the sworn affidavits of a score or so of men, chief of police Oaks personally beat up three arrested strikers; several others received brutal treatment at the hands of other police officers. Also, almost a hundred prisoners were herded into a tank in the city jail and the windows shut air-tight, as a result of which the air became so foul that many of them fainted.

Yes, the master class believes in propaganda by deed. At present the state of California and the Ku Klux Klan are its chief exponents in America.

## DOLLARS AND MARKS

THE eyes of the whole world are today centered on Germany. What takes place there is laden with profound meaning. It used to be said that some people can see the grass grow in the spring of the year. In Germany things are happening so fast nowadays that by observing her closely we can see with out naked eyes, so to speak, the disintegration of capitalism and the passing away of the old order of things in general.

On June 18 the German mark is reported to have reached the record level of 160,500 to the dollar. This is followed by a panic. Many of the banks and stores close their doors. The workmen realize that their real wages have been still further reduced below the starvation line on which they have been living, and threaten to call a general strike. In the Ruhr district the French invaders have practically handed the workingmen an ultimatum either to work, fight, or starve.

The monetary system has crumbled utterly; and it is one of the bulwarks of capitalism. The "living wage," or any slightest approach to it, has disappeared; it at least keeps workers in some other countries temporarily contented. Personal initiative, thrift and perseverance can no longer get anything for anybody in Germany; and these constitute almost the whole of the moral background of capitalism. Truly, in Germany, the end of the world is close at hand—the world of capitalism.

The lesson that the German workers are learning from their untold suffering and agony is that in order to extricate themselves from their present predicament and become masters over life they first have to become masters over industry.

## THE SANCTIMONIOUS STEEL TRUST

THE Steel Trust has decided that the twelve-hour day is a good thing for the souls and bodies of its employes, as well as for the general welfare of the "public." Incidentally, we take it for granted that it is not such a bad thing for the pockets of the stockholders, either.

Judge Gary, Charles M. Schwab, and that whole gang of industrial super-pirates who fatten on the sweat and blood of their thousands of slaves who toil in those hell-holes of smoke, heat and molten metal known as the steel and iron mills, are

strong for the teachings of the Bible, the beauties of the Holy Land, and the wholesome effects of the 12-hour day.

And yet there are some people left who still believe in all sincerity that this country is "the land of the brave and the home of the free." Free, indeed, to slave your life away for the enrichment of a handful of parasitical overlords!

Never before has production in the steel and iron industries reached such a high peak, and never before have the profits been so enormously great. Steel is now being manufactured at the rate of approximately 44,000,000 tons a year, an increase of 4,000,000 over the previous high mark. Still these magnates are not satisfied.

Even the federated church bodies, representing some fifty million Protestants, Catholics and Jews, have joined in the protest against this barbarous action of the Steel Trust. The Federated American Engineering societies have taken like action, after a careful two-year investigation. "Our committee found indisputably," says their report, "that the 12-hour shift is not economically necessary and that continuous industry can be run at a profit with the shorter working day."

We entertain grave doubts that the steel workers will get this shorter work day until they organize industrially at the point of production.

## THE BULGARIAN "REVOLUTION"

ANOTHER country has fallen victim to the reaction in Europe. Fascism can add another feather of victory to its cap. The peasant government which ruled Bulgaria since the armistice has been overthrown, Premier Stambouliski has been murdered and a military dictatorship set up. All true and trusty reactionaries—all those who believe that the "lower classes" ought to be "shown their place"—are greatly overjoyed.

Of course, there was nothing much about the Stambouliski regime for the industrial workers to fall in love with. It represented the material interests and aspirations of the peasantry. And the idealism of the peasants is not of the kind that soars over the mountain tops. The city workers were given hardly any consideration by the government. Still, peasants are producers of wealth; they are not to be put in the same category with the feudal and industrial lords and parasites who are shoving Europe to the brink of utter ruin.

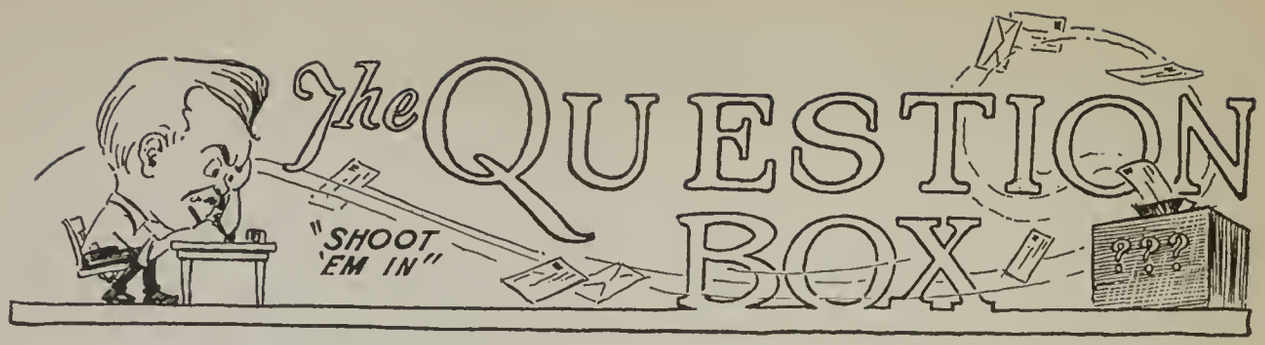
As usual, the Bulgarian counter-revolution was accompanied by violence and bloodshed. The "new reaction" believes that might is right, and it practices what it preaches. Today the mailed fist rules supreme in Italy, France, Hungary, Poland and Bulgaria. The doctrine of "brotherly love" has been pigeon-holed, at least for the time being, as being either a back-number or an unattainable ideal.

What will be the fate of the working class, of the liberals, of the radicals of various complexions, under the new regime? Will they be tortured and slaughtered by the thousands, as was the case in Hungary after Admiral Horthy and his "white" henchmen took over the reins of power? There can be no doubt that both the peasants and the city workers will be made to suffer greatly.

The only hope for bleeding, unhappy Europe is a united working class determined to throw overboard all the militaristic parasites, to take over the functions of production and distribution, and to bring order out of chaos by operating industry for use instead of for profit. A big job!—but sooner or later it will have to be done.

## BOURGEOIS JUSTICE

A MAN in Brooklyn by the name of Gabriel Ianotte will have to serve approximately twelve years in Sing Sing because he stole a thirty-five cent teapot. The war-profiteers and contractors stole many millions of the people's money and none of them have yet been sentenced to serve even twelve days in jail—to say nothing of twelve years. If Ianotte had stolen thirty-five million dollars he would be one of our "best" citizens.



**I AM thinking of moving to the city. What would you say are the advantages of city over country life?—John F.**

Our answer to the above question would be that when it comes to advantages of various kinds, the country ain't in it—any way you look at it. Take such a little matter as doing chores, for instance. Why, there's hardly any chores to be done in the city, cows being few and far between, and instead of horses we have automobiles. You can feed a tin lizzy a couple gallons of gasoline any time of day, so there's no reason to get bumped out of bed at four o'clock in the morning to attend to the feeding. As for the milking—well, most of that is done by slick guys who hang out downtown, and it's mostly fellows that are new in the ways of the city that get milked. So you see somebody else does the work.

There are many other advantages, but we can only enumerate a few of them here. One of them is that you don't have to have anybody call you in the morning, the street cars will wake you up long before day-break. In some parts of town they will also keep you from falling asleep—so you see all the time you save, which otherwise you would sleep away for nothing.

According to statistics twenty-five thousand people commit suicide every year in the United States. Those that live in the country must have a hard time of it, as the facilities there for making a trip to the happy hunting grounds are very few. In a city all you got to do is go down to the business section, shut your eyes and start out to walk across a busy street. By the time you get over to the opposite sidewalk you will have a harp in your hands and a halo around your dome, or else—well, you know as much about the other place as we do. Oftentimes you will get there even without shutting your eyes.

Another way of committing suicide is by eating in the Greek and Jap restaurants and other cheap joints. That takes a little more time but to the best of our knowledge it's never been known to fail. Slow but sure.

Living quarters in the city have it all over the country. There are thousands and thousands of swell apartments in the fine hotels and better parts of town—some of them renting for as low as hundred and fifty plunks per month. If you get a job making twenty or twenty-five a week and if you save your money, in just a short time—say, ten or fifteen years—you will have enough money saved up to rent one of these apartments for a month.

Then think of the great variety or diversity of things in a large city! A million things to see, feel and experience. Have you ever been thru the East Side of New York City? Well, you ought to go there. You will find miles and miles of brick tenement houses—very few of them are **exactly** alike—countless heaps of garbage in various stages of putrefaction, a million or so dirty kids having the time of their lives playing hide and seek in between speeding automobiles, and innumerable push-cart peddlers sporting the choicest assortment of whiskers to be found anywhere on earth. It's a great sight! There you will find impersonified the wonderful progress that the human race has made in less than twenty centuries of continuous upward march toward the heights of perfection.

Some people say that there are not enough trees and other signs of real nature in the large cities, but that's a darn lie. Take, for instance, Chicago. No matter where one might live an hour's ride on the street car will bring him to a square or park where there's a few trees and perhaps even a patch of grass. What more does anybody want?

Then again, if one likes trees, let him go to the art museums. There are lots of trees there—on canvas. Of course, it might take him a good long while before he will be able to distinguish, let us say, between "a little girl chasing a butterfly" and "a cherry tree in blossom." Futuristic art is one of the greatest exercises for the mind that we know of. Another advantage that the city has over the country. In the country they still call a cow a cow and a spade a spade—don't know any better.

We hope that by this time you see where the country gets off at, when pitted up against the city— it's out of the race altogether. If you want to get more points on this write us again in the future.

**I have often wondered why so many working people when they go into restaurants order hamburger steak or Irish stew, instead of T-bone steak or half spring chicken with all the trimmings. Could you enlighten me on this subject thru The Question Box?—Genevieve Louise V.**

This is a question that has been a great puzzle to the deepest students of psychology, scholars in ethics and anthropology, and other learned men for a long time. Why will a man prefer pork and beans

to broiled tenderloin steak with mushrooms au gratan and shoe-string potatoes? To extend the same question to other fields, why will a man buy an old shabby suit of seeond-handed hand-me-downs when the stores are ehuck full of the finest all-wool suits eut in the latest patterns?

That part of the question dealing with T-bone steaks we would advise you to refer to T-Bone Slim. Very likely he will be able to throw some light on the subjeet, since he is reputed to know all about that variety of the steak family.

But to get baek to the original question: Various solutions have been advaneed by our great and learned men. For example, there is Professor Wisenaeer, head of the department of experimental psyehotherapy of the House of Morgan University, who has won world-wide fame by his ingenuous "Irish stew eomplex" hypothesis. It's supposed to work like this: A working stiff that's been heaving eoal the whole day long goes into a restaurant for supper feeling all tired out. While waiting for the hash-slinger to grab his order he figures as follows: Jaek Dempsey is Irish; Irish stew is Irish; ergo, if I eat enough Irish stew I will beeome as strong as Jaek Dempsey. So he hollers out to the waiter: "Irish stew on one, heavy on the Irish potatoes!" While under the influenee of this "eomplex" it never oecurs to the poor guy that he eould have ordered just as easily a porterhouse steak with hash-brown potatoes and a side of slieed tomatoes.

Professor Wisenaeer has made his mark in the world by putting forth the above hypothesis, but Doctor Servtherieh of the Steel Trust University is not far behind. He has made announcement reeently of his epoeh-making theory that working people eat hamburger steaks beeause the shape of the steaks remind them of the mud-pies they used to make when they were kids. These people want to live over again the happy days of their eare-free ehildhood—and so they feast their eyes on hamburger steaks. Them were the happy days—eh? No ineome tax reports to fill out, no automobile repair bills to pay, no silk dresses to buy for the dear girls that's getting the finishing touehes put on at the Young Ladies' Finishing Sehool!

By way of parenthesis, we might also mention that some hare-brained erank who ought to be sent to the state psyehopathie hospital has made the eraek that some people order hamburger and stew beeause these eost less than the other things. Can you imagine anything as foolish as all that? What's a few dollars a day more or less spent on grub, when the people of this nation are the proud possessors of wealth estimated at five hundred billion dollars? The idea is ridieulous on the faee of it!

**What is your explanation why styles in clothes change so often?—J. P. L.**

Changing styles in wearing apparel every few weeks is a highly effeetive method of raking into the eoffers of the elothing manufaeturers what loose eoin the so-ealled people have left after they have satisfied the rest of their demands.

It merely goes to show that there is no limit to the eleverness of some men. If the young ladies are slow in buying dresses with short skirts, make the skirts a eouple yards longer and they will have to buy, or be adjudged back-numbers by the fashion experts. No self-respeeting, eonventional-minded young thing—espeeially of marriagable age—wants to be told that her glad rags are a hundred years behind the times, and so she, or her papa, coughs up enough kale to buy a few new dresses. The elothing manufaeturers and merehants poeket the profits.

The same thing applies to men's elothes. If pineh-back suits are the style now, three months later "saek effeets" will be all the go. There is no end to the variety of eombinations that eoat buttons lend themselves to. One, two, three and four button suits eome and go with lightning rapidity. Business is stimulated. The eapitalists who eontrol the elothing industry heap up the profits; that's all they are interested in, anyhow. They don't give a hang whether the new style is artistie or not.

But this whole question, from our point of view, is a side issue. We are primarily eoneerned with fighting the master elass at the point of produetion.

# Rational Living Versus Abrams

By BENZION LIBER, M. D.

**FOREWORD by Editor:** In the May issue of The Industrial Pioneer was printed an article dealing with the Electronic Reactions of Abrams. While the intentions of the author were undoubtedly of the best, it cannot be denied that the contribution savored of unwarranted partiality to the claims of Dr. Abrams and his disciples. We have received many criticisms of the article, written by medical men and students of health culture and allied subjects. Of especial interest to us have been the points raised in their friendly letters by T. H. Bell and Alice Chase of Los Angeles and Dr. Benzion Liber of New York City.

The Industrial Pioneer believes in square and fair dealing with its many thousands of readers and well-wishers, especially in regards to as vital a question as the conservation of health and the curing of disease. If in our May number the author of the Abrams article has not treated his subject as impartially as he should have done, we stand ready to be corrected. Owing to lack of space we cannot print more than one of the criticisms sent us. The sender of the letter printed below is Dr. Benzion Liber, editor of "Rational Living," a radical health journal published monthly in New York City, and author of "The Child and the Home."

---

Editor, "The Industrial Pioneer,"
Chicago, Ill.

Dear Fellow Worker:

In your May issue you printed an article on the Abrams methods. It was one-sided, biased, and altho painted red at the end by the mention of "exploitation of man by man," it was, in my opinion, out of place in a radical labor magazine. Its author seemed to forget that the real primary causes of disease among workers lie in poverty, overwork, insufficient rest, ignorance, improper food, congested living conditions, too many children, wrong posture at work, poisonous gases, fumes, vapors in the shops, inhaling obnoxious dusts, etc., and that these causes cannot be removed by the operation of an electric apparatus, no matter how clever it is.

The author claims that "sickness is unknown among animals which have not become domesticated." The assertion is wholly unfounded. As a matter of fact all wild species of animals have their diseases and most wild plants are infested with sickness. The belief to the contrary may have an unnecessarily discouraging effect upon your readers.

While I have criticized and exposed the medical profession more than anybody else, I cannot tolerate any fraud and humbug anywhere. The fact that some "healers" are opposed to regular doctors does not mean that they are more honest than the latter. And it is certainly not true that "the great bulk of the doctors who rely upon drugs and surgery realize that if a definite method for actually curing people has been found, many of them will find themselves out of jobs." On the contrary, they would have only to gain by accepting the Abrams theory: there is more money in it than in our regular practice!

I have studied the Abrams methods at first hand and have seen many patients treated with them and I can say: Not only is it untrue that "many thousands have been cured" by them, but I have not seen one case really and permanently cured by them.

He says: "So far I have not read or heard anything which in my opinion invalidates the claims of Dr. Abrams."

I wonder whether he has read my article on the Abrams method in "Rational Living" for January or the letter of an Abrams student in the February issue, or the article of the same student, a Chicago physician, in the March issue of the same magazine? Is he or any other Abramite able to refute one by one the facts packed into those articles? If he is, why does he fail to do it? Is it perhaps because they were published in a small journal, with a limited circulation?

It would also interest him to learn that the author of a series of articles favorable to Abrams and published in The New York Call—one whose quotations are still peddled around by the promoters of the new cult—has recently confessed his mistake, as can be seen in the March issue of "Rational Living."

Most physicians or pseudo-physicians who have adopted the Abrams methods belong to one of the following two types of men or to a combination of both: Half-baked, superstitious persons, inclined to the miraculous and ready to believe anything without the need of really and absolutely convincing proofs, or those who will accept any new theory which may bring in quick and easy money, at least until it is found to be erroneous.

The writer of these lines was open-minded and willing to learn, but remained unconvinced by Abrams himself, his pupils and his patients, or rather became convinced thru them that the electronic reactions are of no use whatever in the cure of real human ailments.

Hoping that you will not misunderstand the spirit of perfect friendship and devotion to your ideals with which I am writing, I am,

Yours for honest enlightening of the workers,

**BENZION LIBER**
Editor "Rational Living."

# Organization News and Views

THE purpose of this department will be to establish a closer bond of interest and cooperation between The Industrial Pioneer and the fellow workers out in the field who are doing such wonderful work in spreading the message of industrial unionism, and the various industrial unions which make up the organization. All suggestions, reports and criticisms of a constructive nature, no matter what part of the country they come from, will be given due consideration. Mutual understanding is one of the factors that makes for success in any organization.

We print below the communications received for this department by the time of going to press:

* *

## DEFENSE PUBLICITY GETTING RESULTS

Persecution against I. W. W. members is gradually going into oblivion. This is the result of tons of publicity broadcasted worldwide by the General Defense Committee. Besides issuing leaflets, pamphlets and special articles, the committee is now specializing on circular letters sent to addresses obtained from telephone books. The latter method is proving an effective instrument in reaching the people immediately concerned.

However, two big questions still confront us, namely: the release of the remaining war-time prisoners and the release of all state prisoners serving sentences on account of organization activity.

If the General Defense Committee can rely on the fullest cooperation of the membership this summer, this year should see every imprisoned member at liberty.

**Harry Feinberg,**
Sec'y, General Defense Committee.

* *

## EDUCATIONAL BUREAU ACTIVE

At present the I. W. W. Educational Bureau is composed of one man, who acts somewhat like a professional editorial writer on a newspaper. Various matters of importance arise in the work of the unions and of the General Headquarters, and subjects are assigned the Bureau for articles, to be printed as leaflets, or to run in the organization periodicals.

An attempt will be made shortly to add to this service that of being a clearing house for data on the labor world, and a catalog of reference and information. If all members in all industries would keep track of the industrial situation, conditions of labor, and outstanding events in their particular vicinity, and would periodically transmit such intelligence to the Educational Bureau, it would be very valuable, as it could be held on file, and would be of use to delegates, and active members when they want it. The Bureau could then function as an information service, and such a service is needed.

**Vern Smith.**

* *

## WHAT'S DOING IN THE FOODSTUFF INDUSTRY?

Considering the amount of propaganda that has been spread among the foodstuff workers in the past six months, members of Industrial Union No. 460 of the I. W. W. are keeping up with the pace set by other workers in other industrial unions and are rapidly falling in line in getting the organization well established on the job. In the near future good results can be expected to come from the campaign that has been carried on by members and delegates of I. U. 460.

They are putting on an added spurt of pep in getting behind the California Boycott and doing all that they can in getting the idea across that it is up to the workers in that industry, along with the workers in other industries, to stand solidly together at all times in the struggles of the working class against the bosses.

They are also swinging behind the Organization in raising their quota of the Bond Obligation Certificates. Delegates are writing in here for them and some of the members are demanding them before they are off the press.

**James Carroll,**
Sec'y-Treas., I. U. 460.

* *

## ACTIVITIES IN I. U. 440

The situation in the metal and machinery industries is very promising and all along the line I. U. 440 is making progress. In the New England states

there is much activity, particularly in Fitchburg and Worcester, Mass., and Bridgeport, Conn.

The Central and Calumet districts are being taken care of by F. W. Anderson, Chairman of G. O. C. He is now in the Central district in the city of Detroit, Mich., and will leave soon for an organization campaign in several Ohio cities where the sentiment is exceptionally strong.

The present credentials expire on July 1st and all delegates are asked to renew them at once, and to urge upon their fellow workers the necessity of carrying credentials in I. U. 440.

**W. H. Thompson,**
Sec'y-Treas., I. U. 440

**Organization of the Stockyard Workers is One of the Big Jobs Confronting I. U. 460.**

# Cry of the People

By JOHN G. NEIHARDT

TREMBLE before your chattels,
Lords of the scheme of things!
Fighters of all earth's battles,
Ours is the might of kings!
Guided by seers and sages,
The world's heart-beat for a drum,
Snapping the chains of ages,
Out of the night we come!

Lend us no ear that pities!
Offer no almoner's hand!
Alms for the builders of cities!
When will you understand?
Down with your pride of birth
And your golden gods of trade!
A man is worth to his mother, Earth,
All that a man has made!

We are the workers and makers!
We are no longer dumb!
Tremble, O Shirkers and Takers!
Sweeping the earth——we come!
Ranked in the world-wide dawn,
Marching into the day!
The night is gone and the sword is drawn
And the scabbard is thrown away!

# With Our Readers and Contributors

THE new Industrial Pioneer has been given a wonderful reception by our members and friends of the labor movement in general. However, we are not content to be satisfied with the results achieved to date. We know that there are scores of men and women thruout the United States who could be of great service in making the Pioneer a bigger and a better magazine, if only their constructive ideas could be conveyed to us and put into operation.

To the end of getting whole-hearted cooperation from our readers, we are printing below a number of comments and criticisms as well as correspondence of a more general nature. The Industrial Pioneer is anxious to receive suggestions for improvements and criticisms of a constructive character.

Elsewhere in this number appears a letter from Dr. Benzion Liber about the Abrams theory. We, therefore, feel in justice bound to print also this letter from Upton Sinclair which was received only a day or two before going to press:

**"Editor, The Industrial Pioneer,**

"I thank you very much for your friendly words. I will send you something as to the outcome of our fight. I have already written a long story about the whole affair for the "Liberator" and a brief statement for the "Nation."

"Now, with regard to the Abrams matter: I have read most of the attacks upon his work, but it does not at all modify the fundamental fact that everywheres I go I run into somebody who has been miraculously cured by the Abrams method. A young man came forward to act as organizer for the Civil Liberties Union, and I learned that his wife had been cured of cancer of the stomach. One of the women who joined our committee to interview the mayor, Mrs. (name follows), had also been cured of cancer. And so it goes. Of course, some of the men practicing the method are incompetent, and a great many of them are mercenary, but I have no doubt whatever that the method is a real thing."

Sincerely,

**Upton Sinclair.**

Extracts from other letters follow:

"Both the Pioneer and Solidarity are splendid. Any one of the articles in the Pioneer is worth the price. . . . Do not lose an opportunity or any time in putting it to the railway brotherhoods and the public ownership leagues that they are guilty of criminal syndicalism in advocating public ownership of public utilities. That would make a good article that will provoke a reply from the brotherhood journals and will reach all classes of railway men and so they will learn of the persecution of the I. W. W."

**Isaac R. Johnson, Milwaukee, Wis.**

The following letter will give us an indication of the wonderful progress that is being made by the M. T. W.; also, it shows the spirit of cooperation that will make a success of the Pioneer:

"Am going to sea as soon as I get the right kind of a ship and may do some writing while on the deep. The ships are so plentiful now that we experienced men can take our pick of them. Some of the shipping masters are coming to the hall after men as we have the biggest share of the good men carrying cards and they are looking for men with sea experience. . . . If you keep the Pioneer going as good as the first two issues have been there is no reason why it should not get in the field to stay provided you get the proper cooperation from the membership."

**James McColloster, New Orleans, La.**

"Increase bundle order to 50 copies as 20 is just a drop in the bucket. Send 10 more copies of the June issue."

**John M. Reilly, Taft, Calif.**

"I sure am glad to see the Pioneer out again as we need such a scientific, proletarian monthly in circulation. Hope it will expand and expand. The first issue is fine indeed. Have deeply enjoyed its articles, poems—everything in it is of merit that the workers may be proud of."

**Alice Chase, Los Angeles, Calif.**

"The first issue of the Pioneer is surely good. It is the best labor magazine in the country. There are two articles in there that I especially like. One is: "Organize the Unorganized," and the other is: "Forcing the Farmers off the Farms." Both these articles will soak into the heads of the workers if they got anything in their noodles. Just keep on with your good work."

**Knute Johnson, Duluth, Minn.**

"I'm sure glad to see The Industrial Pioneer out in the field again, it sure is all you claim it to be and more. On with the good work!"

**Henry Tonn, Gladstone, Mich.**

Here is an extract from a letter sent by a well wisher of the labor movement to a friend of his:

"If you want an especially good book or magazine, one you will read from cover to cover, write to The Industrial Pioneer, 1001 West Madison St., Chicago, Ill., for their May issue."

**Mr. Wade, Washington, D. C.**

"I bought the May issue at the branch and can say it was fine, better than the old Pioneer, which was published until a year ago."

**Lawrence J. Seco, New Orleans, La.**

"In a large measure you have my praise and congratulations in your initial issue of Vol. 1 No. 1. It sparkles with wholesome mental food and reflects the splendid spirit of moral courage."

**Chas. Bonsall, Salem, Ohio.**

"The Pioneer for May was a hummer, splendid in every detail."

**Harry Clayton, San Quentin, Calif.**

"You will no doubt be surprised to receive a letter from an old crank like me. Perhaps you have already noted the unusual style of my stationery and come logically to the conclusion that I am in the penitentiary. My address is always the same. It is like everything else in this place, in that respect; it never changes. Monotony, the omnipresent god, reigns supreme.

"I picked up my pen just to say that I have now read the first two issues of The Industrial Pioneer. I came very near writing you upon receipt of the first issue. I liked it very much and wondered if every succeeding issue would be as good. I did not believe it and so I did not hasten with congratulations and praise.

"The second number has arrived. It contains an excellent article by Vern Smith about the lumber strike. That article by Fred R. Wedge on the San Pedro strike was certainly a good one. He "knows his stuff." As a rule, I do not read much poetry but I did read the "Ballad of Sandy McCole" with unusual pleasure. That poem sets off the Vern Smith article in fine shape. But why pick out a few of them as I have done? They are all good. If The Industrial Pioneer holds up to its present standard, then success is assured.

Be assured of my complete approbations of The Industrial Pioneer."

**Forrest Edwards, Leavenworth, Kansas.**

## KLIMENT MASLOFF WILLS FIFTY DOLLARS TO THE PIONEER

We want to call the attention of all our readers to the action of Kliment Masloff, one of our Bulgarian fellow workers, who did not forget the class struggle even in his dying hour. He willed all his earthly possessions to the industrial union movement, fifty dollars going to The Industrial Pioneer. This is a superb example of the spirit which will win for the working class its fight against the exploiting parasites.

* * *

The response to our appeal in the last issue of the Pioneer for three months' subscriptions has not been as gratifying as it could be. Quite a number of them have been sent in, but we feel that many more of our friends and members should take advantage of this offer, which no doubt they will in the future. At the top of the list this month come the following two fellow workers, each of whom sent in five three months' subscriptions: Al Frane, Omaha, Nebr., and Joseph Wagner, Grand Tower, Ill.

**Left to Right: Albin Bratland, Peter Lustica, Paul Ware, J. L. DeHoog, W. Nelson, Alfred Kohn. The Above Fellow Workers Belong to the Group of Thirteen Whose Trial on Charges of Criminal Syndicalism started in Los Angeles on Jan. 31. Paul Ware, Alfred Kohn, John Nolan and Herbert White Were Given One to Fourteen Years, Albin Bratland, Peter Lustica, T. L. DeHoog, W. Nelson, B. Johansen, Geo. Anderson, Alfred Olson, Ray Guthrie and A. Ross Were Acquitted.**

# Work

By VIOLET KAMINSKY

WORK, work, work!
Beat your hammers faster,
Move your fingers nimbler,
Not a minute dare you shirk!
I pay you for the
Work, work, work!
Never mind the overstocking,
That will mean a blocking,
For future days to come.
Now I do demand!
I need your laboring hand.
Do your very best!
Tomorrow you may rest,
For there will be no
Work, work, work!

# HISTORICAL CATECHISM OF
# AMERICAN UNIONISM

**A 95 Page Pamphlet Issued By**

EDUCATIONAL BUREAU OF THE I. W. W.

This is a set of questions and answers, on the methods of organization, construction, history, and objects of labor unions in the United States. It begins with a definition of a labor union, and proceeds to point out why it is not and can not be a job trust, an insurance society, a mutual admiration society for employers and employees or in fact anything at all except an organization to fight continually for the interests of the workers, on the job.

## Reduced Rates on All I. W. W. Publications for Three Months

In order to obtain the greatest circulation possible, for the papers and magazines published by our organization, we have decided to give our readers an opportunity, never before available.

Club rates for all our publications have been arranged, and the club arrangements under which the Industrial Pioneer may be obtained are shown below.

These arrangements will be in force for three months, and any one wishing to obtain our publications at reduced rates, can do no better than take advantage of this opportunity.

If the club arrangements shown below, do not appeal, any of our publications, the rates of which are the same, may be substituted at the pleasure of our readers.

| Club No. 1 | Regular rate |
|---|---|
| INDUSTRIAL PIONEER | $2 per year |
| INDUSTRIAL SOLIDARITY | 2 " " |
| INDUSTRIAL WORKER | 4 " " |
| Total | $8 |
| Club rate | $6 " " |

| Club No. 2 | Regular rate |
|---|---|
| INDUSTRIAL PIONEER | $2 per year |
| INDUSTRIAL SOLIDARITY | 2 " " |
| IL PROLETARIO (Italian) | 2 " " |
| Total | $6 |
| Club rate | $4.50 per yr. |

| Club No. 3 | Regular price |

| INDUSTRIAL PIONEER | $2 per year |
| MUNCITORUL (Roumanian) | 1 " " |
| INDUSTRIAL WORKER | 4 " " |
| Total | $7 |
| Club rate | $5.25 per yr. |

All of these papers and magazines, with the exception of the Industrial Worker, are published at I. W. W. headquarters, 1001 West Madison St., Chicago, Ill. The Industrial Worker is published in Seattle, Wash., Box 1857. Money orders for any of these club rates may be sent to whichever address is most convenient.

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of management of the industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# Boycott All California-Made Goods!

THE state of California has put itself outside the pale of civilization.
It has taken from workingmen the right to organize.
It has suppressed free speech and free assemblage.
It persecutes men for reading in public the Constitution of the United States.
BOYCOTT ALL CALIFORNIA-MADE GOODS!

The state of California wants to reduce the working class to a condition worse than chattel slavery.
It sends men to prison for believing in and advocating industrial unionism.
It has reverted to barbarism and the dark days of the Spanish inquisition.
Its criminal syndicalism law is an outrage and an insult to the working class of the whole world.
BOYCOTT ALL CALIFORNIA-MADE GOODS!

The state of California has sentenced over fifty workingmen from one to twenty-eight years in prison for being members of a labor union — the Industrial Workers of the World.
These men are now rotting in Folsom and San Quentin penitentiaries for the "crime" of trying to improve the miserable living conditions of their class; for the "crime" of having the courage of their convictions.
Scores of others are now on trial, or out on bail, awaiting sentence.
The crimes being committed by the state of California cry out to high heaven.
BOYCOTT ALL CALIFORNIA-MADE GOODS!

The state of California keeps in prison for life men who are admitted by the whole world to be innocent — Mooney and Billings, Ford and Suhr.
The city of San Pedro has arrested and herded into stockades like cattle over six hundred peaceful striking marine workers and sympathizers.
The state of California is paying ten dollars a day to three professional witnesses, Dymond, Coutts, and Townsend, moral and sexual perverts, who have confessed to having committed so many crimes that they ought to be put behind prison bars for the balance of their lives.
The corrupt and vicious powers that rule and control California have caused the arrest of Upton Sinclair, internationally known writer and idealist, for upholding the United States Constitution.
BOYCOTT ALL CALIFORNIA-MADE GOODS!

Demand the liberation of all workingmen and women incarcerated in California's dungeons!
Demand the repeal of the infamous criminal syndicalism law!
In the meantime—
BOYCOTT ALL CALIFORNIA-MADE GOODS!

AUGUST 1923

# Henry Ford for President

THERE'S an old story told of a primitive settler who alternately encouraged a grim struggle between a bear and his wife, neither of whom he very highly esteemed, by shouting, "Go it, bear! Go it, Maw!!" The workers should feel the same way regarding the political struggle now going on between Wall St. and Henry Ford. They should shout, "Go it, Wall St.! Go it, Henry!!" in the hope that they will mutually despatch one another.

One thing is certain, namely, since Henry has appeared as a presidential candidate many facts about himself, not generally popularized by himself, are getting extensive circulation. And before election 1924 comes round, Wall St. no doubt, will have exposed Henry for what he really is, while more truths than previously known will be afloat regarding "the world's greatest financial center" Go it, Wall St. Go it, Henry!!

Rejoice, for between now and November, 1924, Henry Ford's brutal paternalism will be exposed! So will his moron-producing engineering and his scientific skinning of the working class. Then will his stupendous avariciousness, his colossal profiteering and absolute lack of philanthropic endeavor, together with his capricious Caesarean egoism, be given the light of day. Then will Henry Ford stand revealed as the American Herr Stinnes, swallowing the railroads, coal and iron mines, waterways, power plants, newspapers, movies, etc., etc. And, oh, what won't Henry say about Wall St. and its strangle hold on credit, its ruin of the farmer and its "crimes against the common people." We rub our hands with glee and look forward to as big a muck-raking campaign as has agitated a presidential year since the Bryan-Altgeld days of 1896. Go it, Wall St.! Go it, Henry!!

But all joking aside, why should not Henry Ford be the next president of the United States? Just as his counterpart, Herr Stinnes, is the dominant power in the German republic? The richest man in the world, economically speaking, ought logically to dominate the richest capitalism in the world, politically speaking. Then will politics truly reflect economics. Again, government is representative of big business. Whose business is bigger than Henry's that government can more consistently be representative of? And as the tendency of government is paternalistic, where is there a more paternalistic plutocrat than Henry Ford to make the government of the U. S. A. the most paternalistic of all? We wonder.

By all means, Henry, pitch into Wall St. and, Wall St., don't forget to hand Henry a wallop as often as you can. Perhaps then some of what Frank Vanderlip calls "our economic illiterates" will receive a few lessons in an eye-opening prejudice-shocking manner. Go it, Wall St! Go it, Henry!

•

# What's On the Workers' Mind

There is a general belief existing to the effect that the workers are too cowardly to organize for their own protection and advancement. It is charged that war hysteria has instilled the emotion of fear in them so deeply as to make them incapable of manly self-assertion in their own interests.

Apparently, there is much to be said in favor of this theory. It does look as if the workers are afraid of their own shadows. But there are other and different theories accounting for the actions of the working class. One of these asserts that the working class is confused, nay, dazed, as a result of the war and its aftermath. They seem to be unable to straighten out the whole bloody cataclysmic tangle to their own satisfaction.

The observers who formulate this theory, say that this condition of working class stupefaction has at least one very hopeful feature, namely, those afflicted with it will listen. They will try to learn and get at the bottom of the matter that baffles their understanding. Such material should not be neglected by our readers. Get out among them. Straighten them out and set them on the road to working class industrial organization and emancipation. Begin by pushing the working class press among them. Make them familiar with the working class view of capitalism, war and labor organization. Do that and there will be a psychological revolution that will ultimately end in the abolition of capitalism.

San Pedro Strike Meeting.

# Conviction of 27 Starts General Strike at San Pedro

ON July 12, following the conviction of 27 I. W. W. prisoners at Los Angeles, Calif., the Marine Transport Workers' I. U. No. 510, went out on a protest strike at San Pedro, the harbor of the aforenamed city. Other industrial unions also took action.

The General Construction Workers' branch at Portland, Ore., in special meeting the same day, went on record to call a general strike immediately for release of all class-war prisoners in support of action taken in San Pedro.

Industrial Solidarity, in issue just off the press as Industrial Pioneer is being made up, dwells as follows on the situation created by the conviction of the 27:

The General Strike may soon sweep over the Western coast ports and into the woods and agricultural districts! Three branches of the I. W. W. in Seattle, Wash., and in San Pedro, Cal., have been so roused by the hideously unfair verdict of the Los Angeles county jury in convicting 27 I. W. W. prisoners that they are calling on the membership at large and the unorganized as well to make this most serious protest.

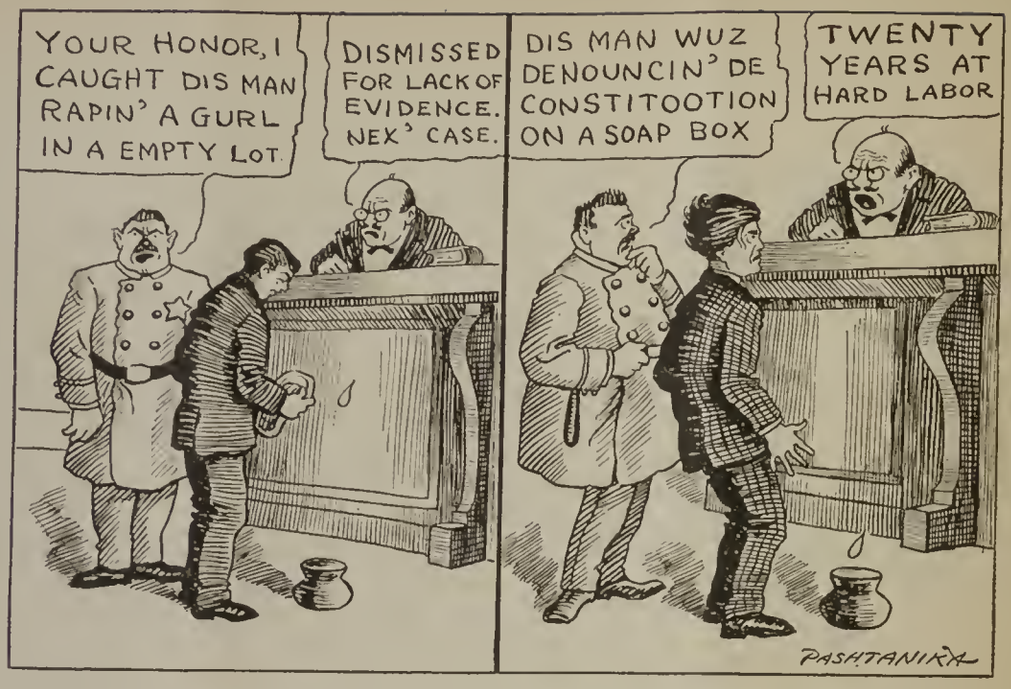
I. W. W. general headquarters in Chicago is in receipt of telegrams from these two points, at opposite ends of the Western coast line. The telegrams tell the story. The first was sent just before the verdict in the case of the 27 wobblies accused of criminal syndicalism was rendered; it is from San Pedro, and it reads:

"Soon as jury brings in verdict, if it is guilty or fine; a five-day general strike starts in the Marine Transportation Workers' Industrial Union No. 510 of the I. W. W., and also in Oil Workers' Industrial Union here. Please ask East coast and also Agricultural Workers' Industrial Union to co-operate with us, and show their solidarity.—**John Farley,** Port Delegate."

The next wire sets the date for the San Pedro section of the walkout:

"Marine Transport Workers' Industrial Union No. 510 of the I. W. W. go on record to go on strike the seventh month, the twelfth day, 1923, at ten a. m., in protest against conviction of the 27 fellow workers in Los Angeles. Yours for Solidarity. Let's go!—**Port Delegate.**"

So much for San Pedro. When the news



YOUR HONOR, I CAUGHT DIS MAN RAPIN' A GURL IN A EMPTY LOT.
DISMISSED FOR LACK OF EVIDENCE. NEX' CASE.
DIS MAN WUZ DENOUNCIN' DE CONSTITOOTION ON A SOAP BOX
TWENTY YEARS AT HARD LABOR
PASHTANIKA

of these actions reached the big I. W. W. stronghold in the Northwest, Seattle branch of Lumber Workers' Industrial Union No. 120 took the matter up at once. A special branch meeting elected a Ways and Means Committee of five to draw up resolutions to cover the matter of the conviction of the 27 members of the I. W. W. in Los Angeles, and to devise ways and means to co-operate with Marine Transport Workers' Industrial Union No. 510.

The committee reported, and the following resolutions were carried unanimously:

1—We are in favor of the resolutions acted upon by this body being published in all I. W. W. publications and we request editors of the I. W. W. publications to write an article for their respective papers in connection with resolutions.

2—We, the undersigned, resolve that, insofar as 510 and 230 of San Pedro have gone on record for a protest strike in case of a verdict of guilty in the case of the 27 fellow workers who were active in putting out literature and propaganda during the strike for release of all class-war prisoners, and are asking the members of the Northwest for co-operation.

Therefore, Be It Resolved, As a verdict of "guilty" has been brought in, we, the members of 120, Seattle branch, in special meeting this eleventh day of July, call upon members of other branches to take action in regard to pulling a strike off the job as a protest against the continued imprisonment of class-war prisoners and the recent Los Angeles verdict.

Therefore, We ask the members of the I. W. W. to notify the ways and means committee as soon as possible in regard to any action that can be taken in other localities.

Be It Further Resolved, That we call upon all members of the I. W. W. to make plans to call an immediate strike at any time in the future when a verdict of guilty is brought in against any of our fellow workers on trial for organization activities.

(Signed) Ways and Means Committee, Card Nos. 788533, 741806, 259732, 412105, 510973.

---

The war clouds appear to be gathering again in Europe. The British and French are now struggling for European economic supremacy. The Gaul seems destined to take the place of the Hun in the next "war for democracy," etc.

---

The price of living is soaring. Organize to send wages up after it.

# 110's Best Drive Ever!

THE biggest and best drive in the history of Agricultural Workers' Industrial Union No. 110 of the I. W. W. is under way. If the present rate of initiations continues, it will mean that 1923 will run 100 percent over 1922, which was a good year. As a result, the office of Agricultural Workers' Industrial Union No. 110 is taking on a very active appearance. The work of enrolling members is going on apace.

The A. W. I. U. is also active in raising the I. U. 110 Bail and Bond quota of $13,150.00, and they are sure they will get their quota. In three hours a stationary delegate issued $1000 worth of bond stamps to delegates, and the job delegates are selling them like hot cakes.

The season is in favor of the agricultural workers. In Kansas the farmers are holding up autos with the shipments of labor agencies, and "inducing" the workers thereon to go with them instead of the farmers to whom they were consigned. This demand will rebound to the benefit of the workers organized in the I. W. W.

A member of 110 writes from the field on the situation there, as follows:

"It reminds me of conditions in the harvest field ten years ago. The hours of labor for harvest workers ran from 12 to 14 on the average, and wages were from $2 to $2.50. The food supplied was of inferior quality, without variety and badly cooked. The harvest workers were knocked around by bullying "town clowns" and plug-ugly railroad bulls. They had no status in law and secured no justice in the courts. Life then for the migratory workers was one damned denial after another.

"That was before the advent of the A. W. I. U. But since its coming these things have changed. If they have not been entirely uprooted, they have been considerably modified. Organization has improved the conditions for the migrant workers and more organization will bring greater comfort and more security. The standard of today when compared with that of a decade ago, is something of which the A. W. I. U. membership may well be proud.

"And it is not only in the harvest fields but wherever the I. W. W. has secured foothold enough to influence industries, a similar improvement is to be noticed. The lumber, general construction and marine transport industries testify to the value of I. W. W. unionism to the working class. Life for the workers in these industries is better worth living than previous to the coming of the I. W. W.

**"We must not permit ourselves to lose sight of the fact that the destinies of the workers in all industries and in all localities are interlinked.** So that, after following out our program for the small grain belt, we shall prepare to muster our forces for the final tilt in California which will end the criminal syndicalism law in that state, and prove conclusively that economic solidarity is vastly more influential than any other weapon the workers may employ.

"The criminal syndicalism law is tottering under the resistance with which the I. W. W. has met it. Men with the spirit

Stockton Plow, With Ten Up.

of pioneers and crusaders have risked from one to fourteen years in the penitentiary to uphold the right of labor to organize as its experiences dictated and industrial conditions demanded. These champions of labor's right have been convicted unjustly for everything from carrying an I. W. W. membership card to being in possession of a leaflet or one of our papers. Witnesses have been arrested in defiance of law and in violation of their constitutional rights. The machinery of the state has operated to deny the very rights it is presumed and instituted to uphold. The men themselves merit our consideration, but above and beyond them is the cause in which they fell victims. That cause is the cause of all labor. That fight is a fight in which our interests are involved. To neglect our part in it is to enlist on the side of the enemy.

"So, let's go into this California fight without shackles. Debts incurred during the war are yet unpaid. Our quota is $13,-150.00. Every member should be willing to go his limit in trying to eliminate handicaps upon our resources. The convention in Oklahoma City authorized a $1 Bail and Bond Obligation Stamp for I. U. 110 members. These stamps are now in the field,

"Now, all together, fellow workers—for the Biggest and Best Drive I. U. 110 ever had!"

## INJUNCTIONS DON'T ENJOIN

The idea that labor's assertion of its own rights can be prevented by injunctions is going to be doomed to overthrow in the future as it has been in the past.

Where labor is prevented from striking legally, it is forced either into extensive wide-spread individual action, or spontaneous revolt. There is no law compelling individuals not to strike; nor is there any law that has as yet been able to suppress general dissatisfaction.

Where striking is not permitted, where labor is virtually enslaved by law, there will a bad morale exist, to the detriment of the very industrial peace and efficiency which it is intended to preserve and promote.

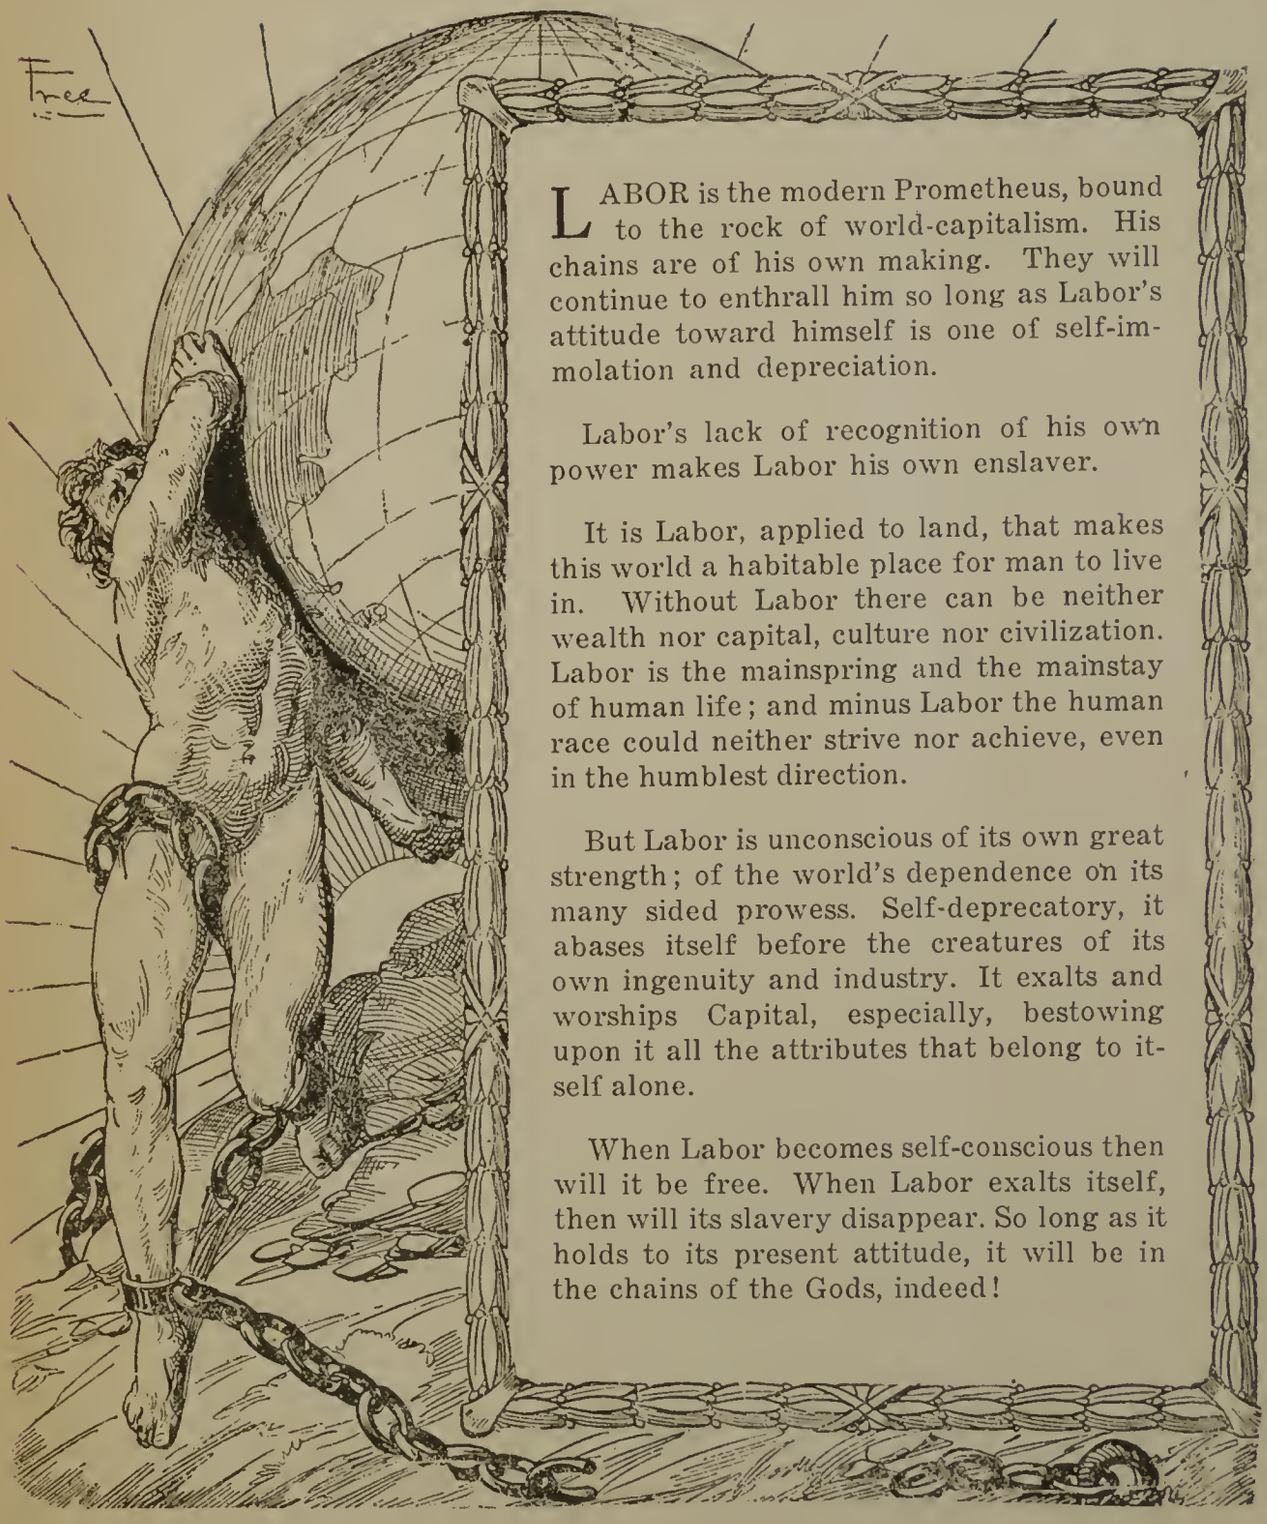
## OUTLAWING WAR

The proposal to outlaw war fails to recognize the causes of war. These are to be found in commercial rivalry, which knows no law but its own profits and interests. Under the pressure exerted by commercial rivalry all laws, treaties, constitutions, etc., become "scraps of paper." This is not theory but historical practice. Under the circumstance, what will it avail to outlaw war? Why not strike at the commercial rivalry—the imperialism—which causes it? Do this through world organization of the world's workers.

---

The battle is to the organized.

# The Modern Prometheus



LABOR is the modern Prometheus, bound to the rock of world-capitalism. His chains are of his own making. They will continue to enthrall him so long as Labor's attitude toward himself is one of self-immolation and depreciation.

Labor's lack of recognition of his own power makes Labor his own enslaver.

It is Labor, applied to land, that makes this world a habitable place for man to live in. Without Labor there can be neither wealth nor capital, culture nor civilization. Labor is the mainspring and the mainstay of human life; and minus Labor the human race could neither strive nor achieve, even in the humblest direction.

But Labor is unconscious of its own great strength; of the world's dependence on its many sided prowess. Self-deprecatory, it abases itself before the creatures of its own ingenuity and industry. It exalts and worships Capital, especially, bestowing upon it all the attributes that belong to itself alone.

When Labor becomes self-conscious then will it be free. When Labor exalts itself, then will its slavery disappear. So long as it holds to its present attitude, it will be in the chains of the Gods, indeed!

# Harding's "Lettre Du Cachet"

By LEONE ESMOND.

SOME 1900 years ago, St. Paul, whose relations with the civil and criminal statutes of his time were no better than those of a modern I. W. W. expfessed his opinion of mundane laws in an unforgottable sentence.

"All things are lawful unto me; but all things are not expedient."

The people of the United States have long ago adopted St. Paul's saying as their pet maxim. All things are lawful unto them. The only thing to be regarded is the whereabouts and corruptibility of the local police officer or the prohibition agent. No man hesitates to take part in an unlawful poker game, unless his pocketbook is flat and his card-playing skill in question. The Volstead Act is a standing joke, and half modern conversation consists of ways and means to violate it. A man who knows a good bootlegger is envied, and his counsel taken by his neighbors. Automobile speed laws are of no importance. The judge can be "fixed," even if the speeder is so unlucky as to kill some careless pedestrian. "Bucket shops" rob the private citizen openly, hardly troubling to disguise their operations. A business man who has a good chance to take advantage of his neighbor or his government is considered rather a fool if he fails to do so,—witness the real estate men, stock brokers, second hand automobile dealers, and the thousand and one "cost plus" contractors of the world war. Murder is a matter of daily occurrence, and so little regarded that no matter how crude the method employed, the killer has a good chance of going unpunished.

### Are Exceptional Class

Perhaps the general acceptance of St. Paul's saying is the reason why the United States Government has determined to establish at least one law-abiding class in the United States. No one else obeys the law. Having failed to prove that the I. W. W. ever broke it, perhaps it may be safe to order I. W. W. members to do what they evidently intend to do in any case.

The political prisoners of the United States—as distinguished from those class-war prisoners of the several states of the Union—were all sentenced under the Espionage Act, during the period of hysteria which swept over this nation in 1918 and 1919. The charges were various, and little proof adduced to uphold them. Charges of sabotage freely made were thrown out by the Appellate Courts in two of the cases; the third, the "Sacramento case," was not given a hearing on the evidence, due to legal technicalities connected with the form of appeal. For five years every right-thinking person in the United States has demanded the release of the political prisoners, and at intervals three or four have been pardoned, apparently in the wild hope that the raging liberal lions would consider themselves satisfied.

In the month of June, 1923, Harding, fearing liberal demonstrations on his western tour, offered commutation of sentence to 27 out of the 51 held. Thirteen, who did not realize the meaning of the offered commutation clause, accepted. Five of these were immediately notified that they were held pending deportation proceedings, so that in their cases the commutations were meaningless. The others, grasping more fully the exact meaning of the conditions to which they were to pledge themselves, refused.

### The Perpetual Sentence

The following is the exact wording of the commutation offered:

"* * * do hereby commute the sentence of said * * * to the term already served upon condition that he be law-abiding and loyal to the Government of the United States, and does not encourage, advocate or become wilfully connected with lawlessness in any form and upon the further condition that if he violates any of the foregoing conditions, of which fact the President shall be the sole judge, he the President, may revoke the commutation and it shall thereupon become null and void, and of no effect, and he may by direction to any officer of the penitentiary where the prisoner is now confined, or to any U. S. Marshall or Deputy Marshall, cause the said * * * to be apprehended and returned to the penitentiary, there to complete the service of his sentence."

Careful reading of this clause reveals several startling facts.

This "commutation" is not a commutation of sentence, but a parole. Unlike the usual parole, its extent is not for the remaining term of the sentence. It is a parole for life. It keeps a law, thoroughly obnoxious to the people of the United States, in force so far as these men are concerned, though outraged public opinion has forced the abandonment of the statute. Though the Espionage Act is now a dead letter, at any time during the rest of his life the unfortunate political prisoner who accepts this "commutation" may be seized by any police or federal official and flung again into a penitentiary to serve from one to 20 years, as the case may be. Though it states that "the President shall be the sole judge," who doubts that the word of the Department of Justice would be accepted without the slightest investigation of the charges? Daugherty, or some successor of like caliber, would state that the charges were justified; the President would cheerfully affix his signature to the necessary documents.

### "Lettre Du Cachet"

This form of commutation revives the old "lettre du cachet" which was such a terrible weapon of the French kings before the Revolution of 1789. In that

day, an order signed by the king sent men of the highest intelligence and most unblemished character to the cells of the Bastile. Imprisoned without a hearing, without opportunity for defense, with no chance of appeal, few ever returned to the world. The king forgot. The victim died when life became an unsupportable burden.

Frequently these letters were given to some favorite who had a personal enemy, with the name of the victim left blank. The favorite filled in the name, and the unfortunate who stood in the way of a pet project or a contemplated crime disappeared forever.

Under the ordinary parole in the usual criminal proceedings, the parole breaker must be brought into a court, must have a full and open hearing, must be confronted with the witnesses against him, and permitted to prove himself innocent, if he can. In the cases of the political prisoners, any one who has an interest in so doing may cause their re-imprisonment. The political prisoner is to be granted no hearing. He has no right to prove himself innocent; no right to know the witnesses against him or the charges made. The President is the sole judge. His order, obtained perhaps by some representative of the Steel Trust, some mouthpiece of a steamship company, some American Legion echo of Alvin Owsley, is sufficient. The lettre du cachet is issued.

**Usurping Judicial Power**

The President usurps judicial power in these commutations. The Constitution of the United States does not give an administrative officer judicial powers. Nothing could be more dangerous to a popular government than for an administrative officer to seize these powers. History is full of examples of such seizure—and its results.

The President has the right of pardon and parole. He has not the right to judge whether the terms of that parole be broken. That is the duty of the courts, and of the courts alone. The courts may be inefficient, may not do their duty—but so long as they continue to function, no other individual or organization may take their place.

The refusal of clemency to F. J. Gallagher on the ground that he was the cause of several strikes during the war shows a further tendency to usurp judicial powers. It is not a penal offense to strike or to induce others to do so. There are several court rulings on the question. But the administrative power of the land refuses a political prisoner clemency on grounds that the courts of the United States have declared are no grounds.

Those who actually disobeyed the law—spies, dynamiters, profiteers—were released without conditions, presumably because they had lived up to the American maxim: "All things are lawful." They had merely overlooked the final clause about expediency. They are in no danger of going back to jail. They did not stay there very long. The political prisoners have been in jails and penitentiaries for nearly six years, and most of them are there yet. The ones at liberty are in danger of being returned at any time.

Law-abiding—in a country where no law is obeyed. Loyal—to a government that favors declared enemies, grafters and spies, above men who attempted to do the right as they saw the right. Not to be connected with lawlessness—in a country that cherishes the Ku Klux Klan, race rioters and "patriotic" mobs.

The commutations offered to the political prisoners of America form another chapter in the dreadful work now being written—the history of the decline and fall of the American Republic.

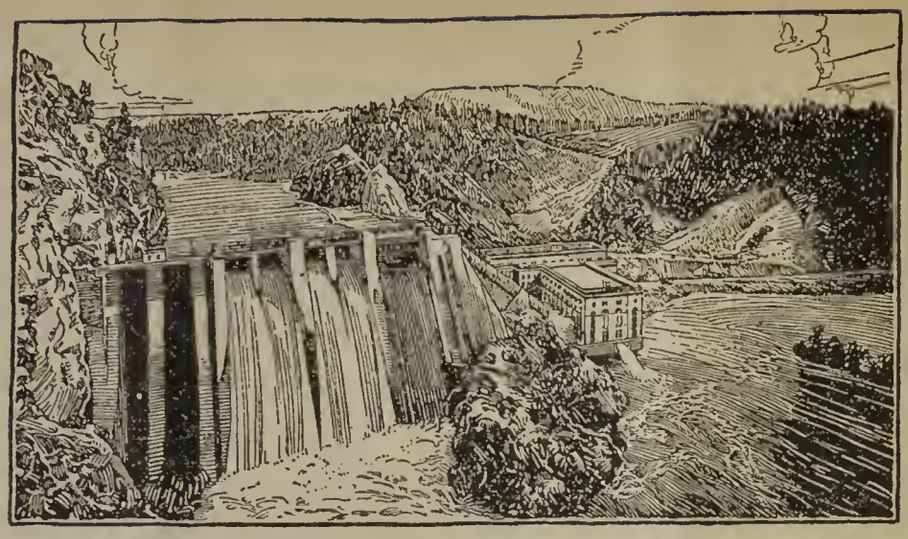
## Hurrah, To The Next That Goes

By Vera Möller.

Cut off from the world of freedom
In the shade of these grated walls,
That some shall find but a doorway
To gloomier prison halls.
Stand, Stand with your cups held steady,
A message to friends, to foes;
One cup to those gone already,
Hurrah, to the next that goes!

Cut off from the world of sunshine
We have but the inner light:
A flame that burns ever stronger,
Like a lamp that is trimmed and bright.
Then let them confine the body,
They cannot subdue the soul;
We brought our unsullied honor
And here, we shall keep it whole.
Then stand with your cups held steady,
The great doors may open or close;
We'll pledge to those gone already
Hurrah, to the next that goes.

**Everett, Wash., I. W. W. Headquarters**



Every idle stream or waterfall that is put to work, and furnishes light and power to homes and factories many miles away, means a saving in coal and, what is more important, a saving in human energies.

# Super-Power Capitalism

GAZE on the above picture reader. It's a part of an advertisement of a public utilities bond investment company appearing in a weekly magazine. It is an indication of what the country is coming to, namely, super-power capitalism. Never heard of it before? Well, you ought to know all about it, especially if you are a construction worker or an electrical worker; also a railroader or a coal miner.

Frank G. Baum, consulting hydro-electric engineer of San Francisco, gave the recent National Electric Light Association convention in New York, "the dope" on super-power capitalism. It consists of harnessing within the next two generations vast charges of electricity, with a reduction of 40 per cent in production of coal and the release of 500,000 laborers now in the mines.

The displacement of a half-million laborers—that's what the advertisement means when it refers to "a saving in coal and, **what is more important,** a saving in **human** energies." Talk about "labor shortage" then—that's likely to go out of fashion about that time.

Other workers may also be hit hard. We wonder what Mr. Baum's "single system of 220,000-volt transmission lines grouped in twelve areas according to existing facilities—water power, industrial centers and transportation systems," will do to locomotive and stationary engineers?

Electrification, with its manipulation of switches and pressing of buttons, does away with high-priced motive-power engineers, according to our observations. But then look at the work the building of all these super-power dams is going to give to general construction and electrical workers. We look for some more Hetch-Hetchy and Southern California Edison Power strikes in the future. To judge by the past this super-power capitalism is going to engender some super-proletarian struggles.

Get ready for them. Join the General Construction Workers' Industrial Union No. 310, I. W. W. Start now. Don't wait two generations. It'll be too late then.

## Organization Brevities

Lumber Workers' Industrial Union No. 120, Marine Workers, 510, Agricultural Workers, 110, General Construction Workers, 310, Metal Miners, 210 and Railroad Workers, 520 are now the six leading industrial unions in the I. W. W.

---

Lumber Workers' Bulletin for July 1st gives space to articles dealing with the organizaiton of saw mill hands and lumber town home guards in the I. W. W. Also to extending the organization eastward into Maine, New Hampshire, Vermont and New York.

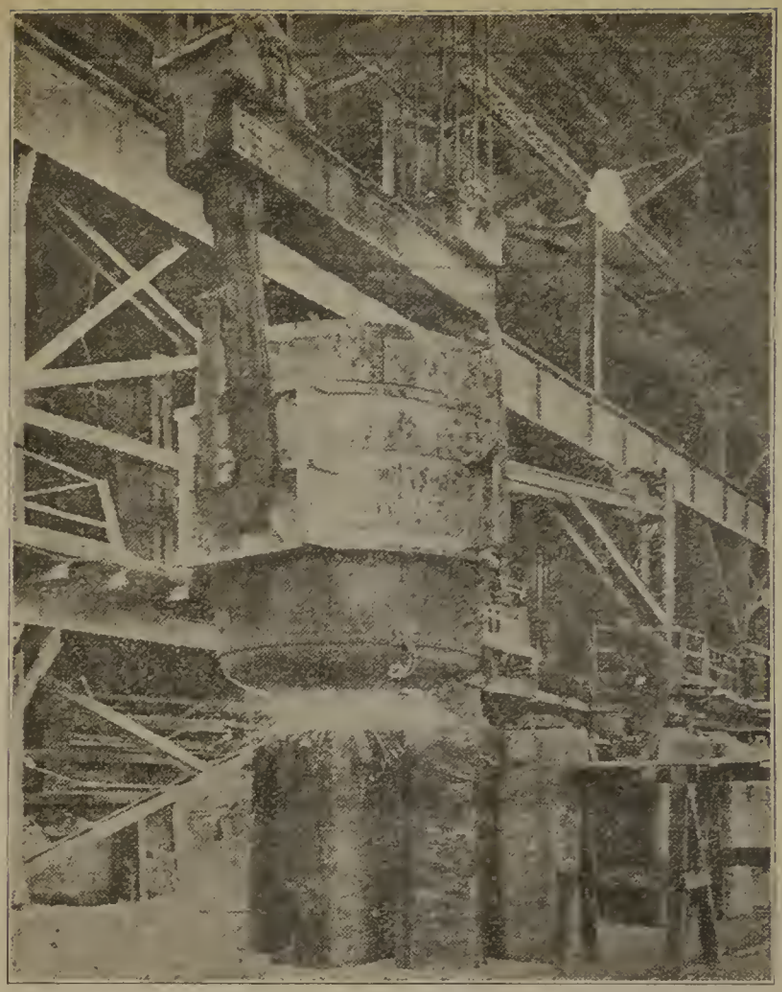
---

The activities of Metal and Machinery Workers' Industrial Union No. 440, in the Schwab Steel Works at Bethlehem, Pa., contributed greatly to the expose of the illegal importation of Mexican workers by steel corporations. No. 440 was among the very first to "write up" this feature for the I. W. W. press, which interested liberal and reform journalists and investigators.

# Judge Elbert Gary Exposed

## Misrepresents 12 Hour Day and Other Steel Mill Conditions

## Prostitution Widespread In Homestead



Workers in the United States Steel Company plant are in danger of being burned by splashing steel when they tap this seventy-five-ton ladle from which the molten metal can be seen running.

JUDGE Elbert H. Gary, chairman of the United States Steel Corporation, refused some time ago to permit the New York Daily News to investigate labor conditions in his mills. Therefore Ralph F. Armstrong, Industrialist, was assigned to work as a laborer in the corporation's mill at Homestead, Pa. He reports (1) That Judge Gary has totally misrepresented the twelve-hour day and other labor conditions. (2) That the workmen want conditions changed, but are powerless to protest and hold their jobs. (3) That the seven-day week has not been abolished. (4) That the "Corporation with a soul" has a soul of production only. (5) That the corporation is enticing colored laborers from the South to work in its mills under false pretenses. (6) That the corporation controls entire town governments and police forces. (7) That prostitution is widespread in the labor settlement at Homestead. These reports are contained in a series of articles.

Declaring that "120,000 men are toiling for twelve hours each day under conditions injurious to health in the steel mills of the United States," Senator Matthew Neely of West Virginia bitterly scored Elbert H. Gary and other "steel kings" for their attitude toward labor in a speech delivered on Independence Day.

Judge Gary's acceptance of the abolition of the 12-hour day (in principle) is not worthy of trust. His past promises are still unfullfilled.

---

**Metal and Machinery Workers' Industrial Union, No. 440, I. W. W. is actively at work endeavoring to extend its organization among the steel mill workers.**

**A ton of literature was recently sent among them for distribution. A mass conference at Toledo, O., on July 22, will consider further steps to organize them. Watch for report in September Pioneer.**

# "The Worm Turns"

## A Tale of the Northern Woods

By ARCHIE SINCLAIR

NICK GOUGE, son of the senior partner of Gouge and Payless, whose logging operations stretch from Maine to Oregon, walked briskly into his father's private office one crisp morning early in October. His father sat at a flat-topped desk near the window overlooking the mill pond. The "old man," as he was affectionately called by the free-born American citizens whom he employed, looked up from the papers that were scattered in neat disarray—whatever that is—on his desk, and seized a check book.

"Well, son, what can I do for you this morning, a little check, eh?" he said.

Dick raised a well manicured hand in protest. "No, father," he said, "I have had my fling. I have scattered wild oats from Mobile to Saskatoon and am ready to go to work and in some measure try to repay you for all your kindness to your wayward son."

Gouge senior reached out and gripped his son's hand hard, or hard hand, I have forgotten which. "Why, son, I have not done very much for you. I have only allowed you $26,000 per year since you started to college!"

"Wait a minute, dad, let me finish," replied Dick. "I have decided to go to work and learn the lumber business from the ground up, so, with your permission, I am going into one of our camps at Frozen Fish Landing and learn to be a lumberjack."

"Dick," growled his father, "you are made of the right kind of stuff."

"A chip of the old block, eh?" said Dick as he turned to go.

### Riding the Logs

As the train on the "Mike and I" pulled into the little depot at Frozen Fish Landing, Dick Gouge seized his two suit-cases and stepped off onto the platform. A pair of riding breeches were stuffed into knee-length laced boots. He wore a gray flannel shirt and a windsor tie, a plaited shooting jacket and a stiff rimmed gray felt hat, dented at the four corners. He had heard of lumberjacks riding the logs, and as he believed in efficiency, he wore a pair of silver spurs to hurry the logs to their destination in the mill-pond. Anyone could tell at a glance that he was a full-fledged lumberjack.

He decided to go into the camps incognito, and so, with the exception of the foreman, two of the loaders, the blacksmith, handyman, saw-filer and bull-cook, he told no one of his identity.

That night the crew, led by a huge French Canadian teamster, with the shoulders and chest of a gorilla, decided to have some fun at Dick's expense. They rushed at him with the evident intention of rolling him in the snow, but after twenty-six of them had been knocked cold by a fist hardened by years of whist-playing, they decided he was a good sport, and accepted him into the free-masonry of the camp. One night in the vermin-infested bunkhouse redolent of punky socks and toe jam was enough for Dick, and the next morning he moved into the office with the foreman and time-keeper. At noon the foreman gave him a cant-hook and sent him tailing down for "Chain Lightning" MacLean. Two days later he was promoted to a top-loader. What it had taken ordinary lumberjacks years to learn Dick acquired in two days. He was a true son of old Alex Gouge, who through industry, patriotism and above all honesty, had risen from a farmhand to the owner of vast lumber holdings.

### An Obliging Tragedy

The weeks flew merrily by and Dick went about his task in a manner denoting efficiency and loyalty to his employer. Then one morning a limb of a tree, torn loose by a wind storm the day before, obligingly fell on the foreman, breaking his neck, and Dick was installed in his place.

A few days after his installment as camp foreman Dick called the men into the office and addressed them as follows:

"Owing to the small demand for lumber and the consequent low prices, we—the company—have decided to cut the wages ten percent and to work an extra hour per day."

His remarks were met by an enthusiastic outburst of silence on the part of his auditors.

"And further," he continued, raising his voice slightly, "Anyone who hasn't the interest of his employers at heart can go down the road."

Only one hundred and eight out of the one hundred and twelve men in camp drew their time. By noon that day Dick and his four lousy, lazy, loutish lumberjacks had the camp to themselves.

Although he was somewhat surprised at the lack of loyalty shown to his dad, Dick accepted the situation as cheerfully as possible, and the next morning he boarded the train for Tamarack Falls to secure another crew. He was agreeably surprised on arriving at the Falls to find a large number of lumberjacks in town. He quickly got together another crew and returned to camp.

### Eight-Hour Men

The men, on arriving at camp ate their supper and turned in and next morning went to work. Everything went smoothly, too smoothly Dick thought, as the men seemed to have some secret joke. Every time he looked at one of them he caught a glint of humor in his eye. Nothing happened in the forenoon, however, and after dinner Dick believed that his fears were groundless. At

## INCIDENTS IN THE LIFE OF LABOR

**Runaway 7-Car Log Train Wrecked At Cokedale, Sagkit Co., Wash., Sept. 5, 1922.**

**Left on a steep incline with the brakers set up and no evidence of blocking, the train ran a half mile, jumped a turn and smashed into the cookhouse. The cooks escaped by a narrow margin.**

four o'clock the mystery was explained. Dick, on a tour of inspection, met the crew coming in to camp. "What's the matter?" he inquired.

"There's nothing the matter with us," replied one of the men, "What is the matter with you?"

"Well, this is a ten-hour camp," shouted Dick.

"Yes?" was the quiet rejoinder, "Well, we're eight-hour men."

Dick swore and threatened, but it was of no avail, he only evoked grins from the crew.

At last he shouted: "Get out of camp, every one of you!"

"We'll get out alright," they replied, "tomorrow morning, and take the other camps with us. We have already notified the crews in all the camps that we are pulling out in the morning and by noon tomorrow your old man won't have enough lumberjacks in his camps for a baseball nine. You people have been getting away with murder and we have decided you need educating."

"Don't we pay you good wages for working for us?" screamed the now enraged Dick.

"No." said Joe Dunn who had spoken previously, "you don't pay us at all, we pay you for the privilege of being enslaved. We produced all the wealth that your old man has, except the raw material, and Nature produced that, and as far as that goes raw material—in this case standing timber—is not wealth, because it is worthless until labor power has been added to transform it into lumber. And, furthermore, the methods your old man employed in acquiring the timber lands he now calls his own cannot stand very close scrunity. If the courts of the land were not rotten to the core with corruption, your old man would be facing a charge of bribing the legislatures in every state where he owns timber holdings."

Dick was struck dumb by anger and amazement. What had got into the lumberjacks? The once contented "timberbeast" who submitted to any conditions imposed upon him seemed to have disappeared and in his place had come these clear-eyed, intelligent lumberjacks who demanded a good standard of living. As the men rounded a bend in the trail leading to the camp, the sound of singing floated back to where Dick stood.

**"Hold the fort for we are coming,**
**Union men be strong;**

**Side by side we'll battle onward,**
**Victory will come."**

### A Weighty Problem

Dick stood pondering over the situation a few moments, then he slowly turned and went back to the office. He resolved to go home and lay the problem before his father, and seek his advice. "Dad will know how to handle the situation," he fondly thought.

The next day he boarded a train for Gougetown where his father ruled supreme. The train was crowded with erstwhile employes of the Gouge and Payless Lumber Company. Dick took a seat at the forward end of the day coach and tried to appear as inconspicuous as possible.

As the train rolled out of Frozen Fish Landing a clear tenor voice struck up a song and Dick listened attentively although he could not have told why.

**Oh, such a lot of devils," that's what the papers say—**
**They've gone on strike for shorter hours and some increase in pay—**
**They left the camps, the lazy tramps, they all walked out as one;**
**They say they'll win this strike, or put the bosses on the bum."**

A young lumberjack came down the aisle with a pile of books and papers under his arm. He stopped in front of Dick and extended a small red book. "Song book, ten cents?" he inquired politely, with a twinkle in his eye. Dick took the book and handed him the dime. "Thank you," said the young fellow gravely, and passed on.

### The Flames of Discontent

The first words he saw as he picked up the book seemed to symbolize the whole situation. "To fan the flames of discontent." Dick read the book from cover to cover. The songs—some humorous, some intensely serious— all breathed the spirit of revolt. Suddenly his thoughts went back to a lecture he had once heard. It was in the class room at college. The professor of history was speaking.

"The British soldiery were well fed, well clothed and had good equipment. The Yankee farmers lacked all these, and yet these same farmers, who fought in the snow with bare and bleeding feet at Valley Forge, won the day, because of their intense love of Freedom."

In some way that Dick could not have explained, the cases of these men and the men at Valley Forge, seemed to be analogous. Into the eyes of Dick Gouge crept something like admiration.

By the time he had arrived at his father's office, Dick had lost some of his confidence. Would his father blame him for starting the strike? In a way he was responsible, and the worst of it was that he could not condemn the men for striking against the conditions that prevailed in the camps of Gouge and Payless. He shuddered when he thought of that first night in the bunkhouse at Frozen Fish Landing. The crawling vermin and the foul air were a nightmare; and the quiet, orderly, determined air of the men excited his admiration.

### The Brass Check

"Well, son," greeted his father, "you started something you couldn't stop, didn't you? Don't take it to heart boy," he hurried on, "this thing was bound to come anyway. Look here!" He spread a copy of the Gougetown Courtesan on the desk and pointed with a stubby forefinger at an article on the front page:

"A strike has been called against the Gouge and Payless Lumber Company. Few of the men have responded to the strike call, and the rest are believed to be going back to work today. Sporadic strikes are reported throughout Washington, Oregon, California, Idaho and Montana."

"Of course, you know, son," he continued, "we own the Courtesan and it publishes just what we tell it to publish. The fact is, however, the whole Northwest and Minnesota and Wisconsin are tied up. We will hold out a few days, but we will have to give in. The old time 'timber beast' is no more. We are fighting an organized body of men who knows more about industrial warfare than we'll ever know. And what do you think is their chief demand?"

"I, I don't know," stammered Dick.

"The release of Class-War Prisoners," said his father. "You see, son," he continued, "whenever men were active in organizing the lumberjacks, it has been our policy to have our judges and all the rest of our men in public office arrest them and throw them into prison. So far it has worked fine but now I guess we will have to call a halt. I guess I'll have to wire Washington and Olympia to turn them loose. Of course they will have to find some excuses for doing so. It would never do to let the workers know that it was their power that secured the freedom of their fellows."

"Do you know, Dad," said Dick, "I believe the lumberjacks are right."

"You turned Bolshevik too, son?" inquired his father.

"No, no, but still they, they"—Dick floundered helplessly.

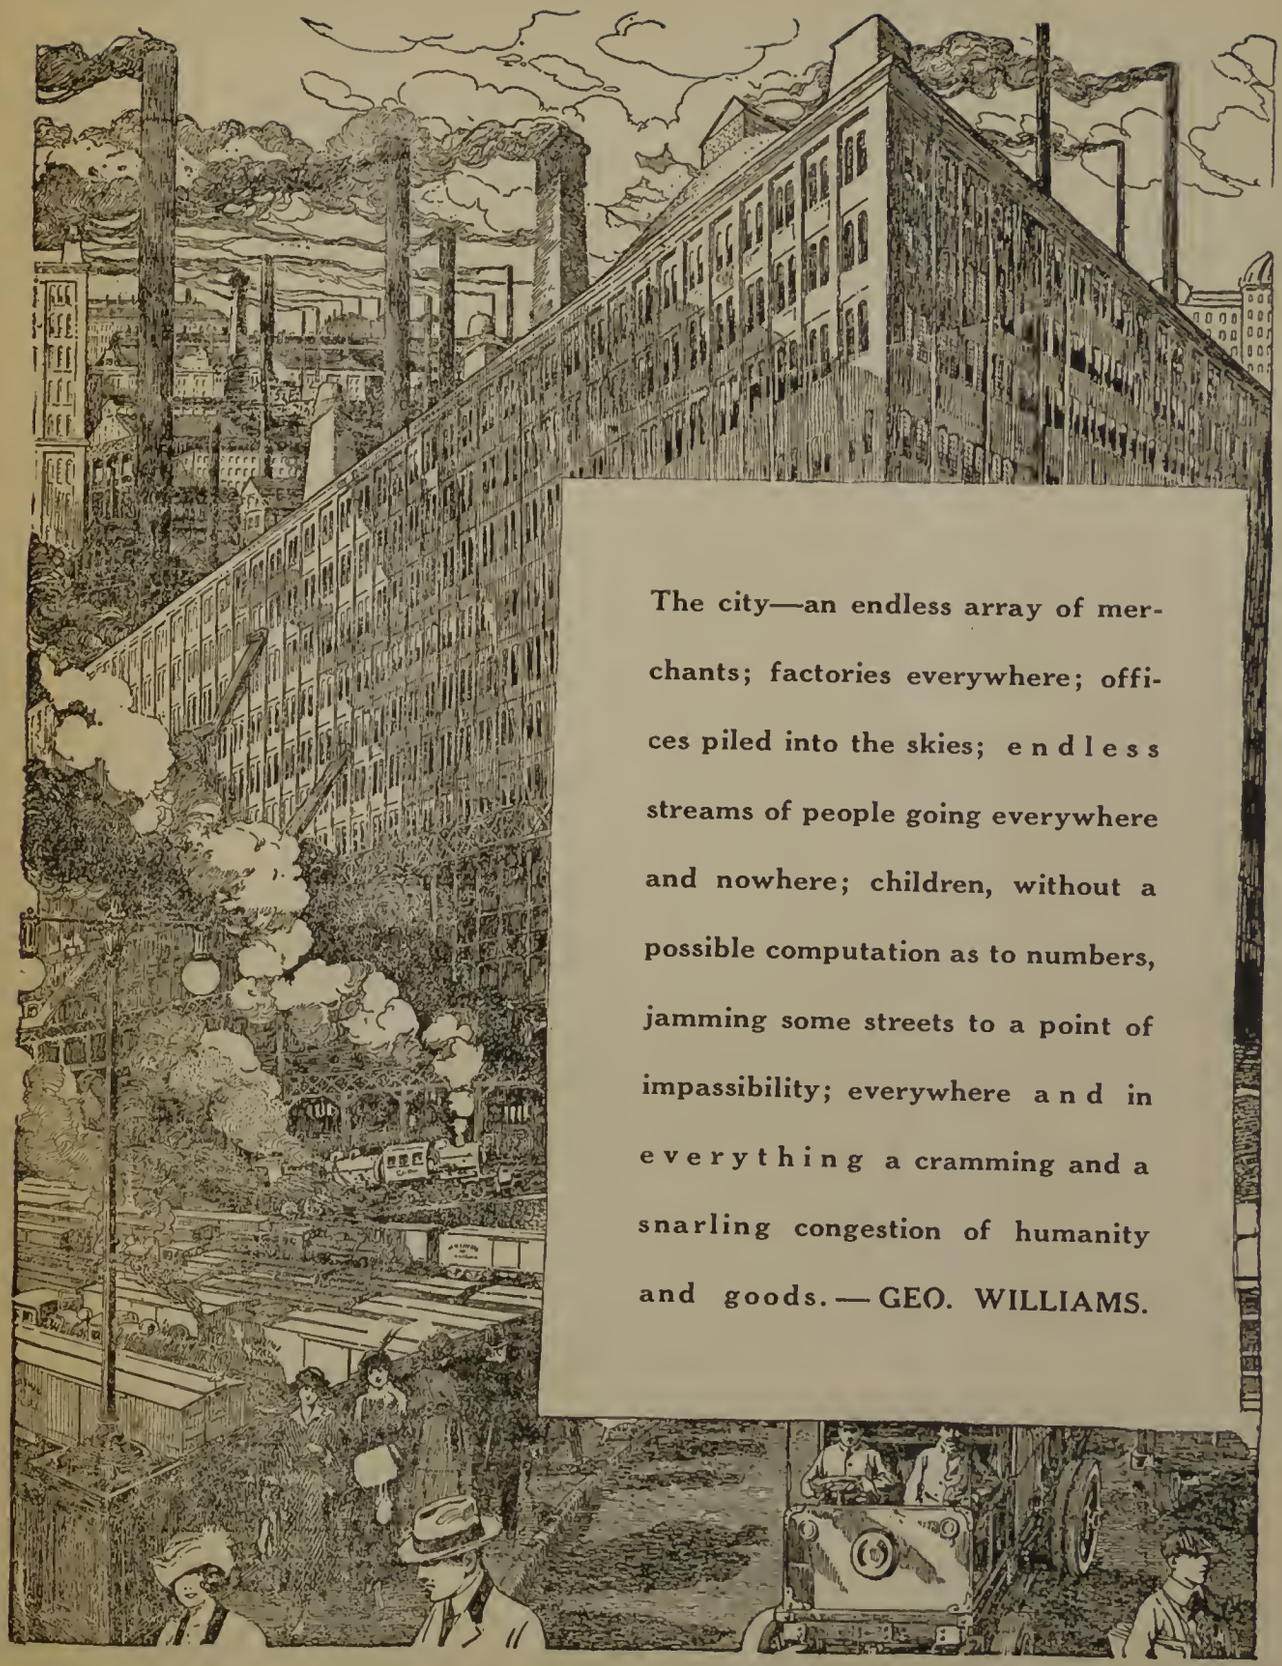
"Hell yes, of course they're right," shouted the old man," but we'll have to fight them just the same."

"I guess I had better resign," said Dick. "I want to take a trip to Europe anyway. Lionel Plute is making up a party to sail next month."

"Sure, run along," said the old man.

As Dick stepped out into the street he heard the sound of voices raised in song:

**"Hold the fort for we are coming,**
**Union men be strong;**
**Side by side we'll battle onward,**
**Victory will come."**



The city—an endless array of merchants; factories everywhere; offices piled into the skies; endless streams of people going everywhere and nowhere; children, without a possible computation as to numbers, jamming some streets to a point of impassibility; everywhere and in everything a cramming and a snarling congestion of humanity and goods.—GEO. WILLIAMS.

# The Significance of the Modern City

By GEORGE WILLIAMS

Part II.

THE potent fact that distinguishes **production** from **distribution** (in the sense with which this article deals with these attributes of society), is that the production of raw materials is largely a natural process; in this way—coal, which is a raw material, attains its combustible and chemical properties through a natural process. It only remains to be dug out and transported. No system of society, capitalistic or otherwise, will ever stop for an instant the process and nature of a bed of coal one iota; likewise with the base metals---copper, gold, tin, silver, etc. Agriculture relies more on human aid for development, but even with these products of the earth, the sun, weather and soil play the largest part. Crops already planted, under favorable conditions from the elements already mentioned, will grow the world over despite the system under which production and distribution is carried on. But the party in power (a dictatorship of some kind) can, by disrupting the functions of **distribution**, leave the coal and metals in the ground or cause the agricultural areas to become sterile in a short time.

### Nature of Distribution

But **distribution**, in its general sense, is almost entirely performed by human labor: more than that, the manner of conducting **distribution**, or rather in apportioning the products, is almost entirely of human arrangement and energy.

To sum up briefly and perhaps make a certain point clearer—machine development so far has greatly simplified the production of raw materials on the one hand, but has greatly complicated the distribution of the finished products on the other. The reason is that the production of materials is a matter of nature and labor—**distribution** of the finished products is a human institution—capitalism.

Viewed from any standpoint, the methods of production is a process that changes only with the development of machinery. A revolution could not change the manner of production any more than it could change the course of the earth around the sun. Production is a matter of developing power—applying labor and machinery to the land.

But a revolution must alter the system of **distribution.** Not of course such a function as transportation, but all those relative parts of distribution such as buying, selling, finance, etc.

A system of society that succeeds Capitalism, besides abolishing the exploitation of labor, buying and selling of commodities for profit, landlordism, etc.,—must substitute something to take the place of these functions of capitalism, and what is substituted must be as good or better than the capitalist system; otherwise it will fail or never come about.

Merely to prepare or advocate a revolution and leave to the imagination what will transpire after the denouement will gain nothing.

The workers are robbed of the products of their toil under capitalism, and we are advocating the abolition of capitalism, and a system of society wherein the workers will receive the full products of their labor.

### What Is New Society?

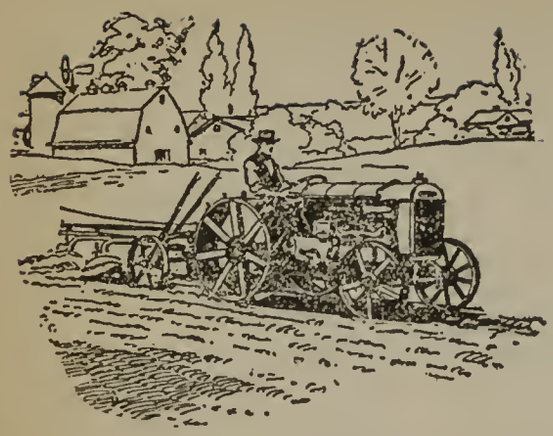
But what is this new society, and how will it function?

To say that the workers will receive the full product of their labor in answer to the foregoing question is no answer at all, because the communists and political salvationists give the same answer, and in Russia the workers got very much less than their full product. Nor will such vagaries as "World Revolution," "Social General Strikes," or "Transition Periods" answer at all. Rather, they confuse more than enlighten, and lead the mind of the average worker into the realms of mysticism and doubt from which nothing but stagnation can result. This condition might be desirable from the standpoint of "proletarian dictators" or effeminate saviors of the husky proletariat, but for the I. W. W. with their industrial philosophy, rank and file dictation, etc., —it has no place.

Now in my opinion the I. W. W. have the soundest position in regard to these matters; but they have not as yet developed to the fullest extent the possibilities of that philosophy. Believing this, I am attempting to add a little discussion to the general problem by these articles on the city, in the course of which I can, in passing, pay a little attention to the general problems of revolutionary philosophy.

In this age and country we have in plain view before our mind's eye, cities (nearly a thousand of 8,000 or more population), in which there are more people than in the whole of the vast area that comprises this country. The total space of these towns combined could be easily included in less than half the size of Rhode Island. Nowadays cities are distinctly distributing areas while the rural districts are distinctly producing areas.

Machine development has enslaved the rural districts to the cities in more ways than one, i. e., by the system of financial control and by the fact that in production and development of the natural resources machinery is absolutely essential. In America the dependance of the basic industries on machinery is more pronounced than in any other country. As the finished machine is the product of the cities, in which places the assembling and technical process can only take place, the producing areas are economically subordinate to the cities.



### Role of Chemistry

The development of agriculture, mining, oil production and various other sources of raw materials is also becoming more and more dependent on chemistry, a science which directs its activities from cities. The relation of chemistry to production is a subject in itself and so important is it to agriculture, for instance, that successful production is becoming impossible without the aid of that science. Intensive development of the land which is sure to follow increase of population will make chemistry an absolute necessity in the near future.

No doubt some readers will ask, "Well, what about this distinction of production and distribution areas which you are making; is it not more a question of organizing the workers everywhere regardless of where he is and then doing away with capitalism?" Yes; that is part of the question, but not all of it. For the question of organizing the workers in the cities is a somewhat different problem than with those in the rural sections. The progress of the I. W. W. to date shows this plain enough, and that we have made little if any progress amongst the city workers cannot be denied.

### A Horrible Example

The multitudinous activities that occupy the time of Chicago's three million people (including a good proportion who do nothing at all and seem to thrive at it), is subject enough for an army of investigators. We know of the endless array of merchants that infest every street; factories everywhere; offices piled up into the skies; endless streams of people going everywhere and nowhere; children, without a possible computation as to numbers, jamming some streets to a point of impassibility; —everywhere and in everything a cramming and a snarling congestion of humanity and goods.

In a city of three million like Chicago, the I. W. W. has practically no members. I could pick out a dozen small communities in the northwest, in any one of which the active dues-paying members would easily outnumber those in Chicago. The same is true of any large city in the East. This condition is not of chance nature. There is a cause for it, and whatever the cause, it is one that certainly needs close study and an adjustment of, not the city conditions to our organization, but of the I. W. W. to the city.

### Industrial Chicago

The total output of Chicago's factories in 1914 exceeded that of any state in the country with the exception of New York, Pennsylvania, Ohio and Massachusetts, and, of course, Illinois. Since that time the output has advanced over 20 percent; and while the manufactured products of the four states mentioned have also increased, it is certain that because of its economic advantage as a distribution center, combined with a centralization of population, Chicago's measure of gained production in manufactured commodities is perhaps greater than the states mentioned, with the exception of New York.

Chief in the industries of this city are meat and food packing, clothing, agricultural implements, iron and steel, flour and milling, printing and publishing, electrical appliances and lumber.

In meat and its food by-products Chicago distributes more than any other center.

The volume in which these products are handled in the so-called Central Market (Chicago), is so tremendous as to tax the carrying capacity of the railroads that enter it from every direction. Chicago is the super-market of the entire West and certain areas East of that city. As a domestic distributing center it has no equal. An array of figures could be no more impressive than to say that millions of people in the central and western states are supplied with products of numerous varieties by only three of the largest mail order houses in Chicago. Other of lesser calibre distribute proportionately.

The wholesalers of Chicago: groceries, men's clothing, electric appliances, etc., dominate the whole West. Even within itself such a city is a market of tremendous proportions. Three million people require vast supplies on which to barter and trade —besides living. And Chicago has within its limits such an accumulation of goods—in the warehouses, stores and factories—that it is impossible to even estimate. Perhaps one could never very easily visualize in its entirety the tremendous industrial activities that pervade Chicago today. In ten or twenty years what will it be?

Multiplying such an industrial bee hive by numerous other centers, let us ask ourselves the question: What particular force, or movement, or philosophy, could supplant capitalism and maintain the necessary equilibrium in distribution that must be maintained in these centers?

# Brockton Shoe Workers Revolt

BROCKTON, Mass., is the scene of a revolt of 20,000 shoe workers. The factories are shut down. A strike is on against the Boot and Shoe Workers' Union, affiliated with the American Federation of Labor, and with offices in Boston. Behind this union stands the bosses' association.

There have been repeated revolts against this organization, throughout the shoe industry of the country. Many other shoe centers have known bitter conflicts and cessation of operations due to the same causes before this. The Brooklyn 1911 strike of 10,000 workers, under I. W. W. leadership, was also a revolt against the Boot and Shoe Workers' Union. The employers' association boasted that it raised a $1,000,000 fund to beat that strike. There have been many other strikes since then, against the same union and against the same kind of backing.

### Well Done, Shoe Workers!

The reason for this repeated occurrence speaks well for the shoe workers. It proves conclusively that they will not be submissive slaves and that the spirit of revolt within them never dies. They know from actual experience that the Boot and Shoe Workers' Union is not a labor organization, but an auxiliary of the boot and shoe employers' association. It is a strikebreaking, scab-herding agency for the latter, that's all. This has been shown in every shoe center where it has been resisted by the workers and supported by the boot and shoe employers' associations.

The officials of the Boot and Shoe Workers' Union do not care at all about the working conditions, wages or hours. In return for the use of the union stamp and the members forced into their organization by the agreement made with employers, they unionize plants at the prevailing conditions and bind all the workers therein to arbitration of all differences that may arise. In the event of a strike or other disputes they undertake to furnish strikebreakers and scabs to fill the places of all who go out. The employers, finding this arrangement to their advantage, collect dues and influence the election of officials favorable to their interests. They have been known to express their preference for certain candidates, through press statements and other ways more direct. They actually run "the union." As already shown, they have been known to raise enormous strikebreaking funds through their various associations in order to keep the A. F. of L. Boot and Shoe Workers' Union on the backs of a working class that refuses to be bled by it. These strikes have been known to last many months. The boot and shoe workers have always, be it said to their credit, fought this labor leech to the limit, at a great expense and cost to the employers' association. They have thus prevented its more extensive growth.

### Form Own Union

The Brockton District Shoe Workers' Union has been formed by the revolters. This is an independent union. I. W. W. speakers from Boston have addressed the strike meetings and been well received. The message of class-conscious industrial unionism has made a good impression. One of their bulletins, telling the story of the revolt, reads as follows:

**To Our Fellow Workers:—**

We are representing 20,000 striking shoe workers in the Brockton, Mass., District, and this strike directly or indirectly affects 200,000 people.

This district, until the time of the strike one month ago, was completely in the control of the Boot and Shoe Workers' Union, a strictly non-strike organization which compelled us to submit all differences to the State Board of Conciliation and Arbitration.

This board consists of three members appointed by the governor, the make up of which follows:

Chairman Fisher—Lawyer, and Ex-Senator (politically dead).

Mr. Wasgat—Ex-Shoe Manufacturer.

Labor Representative Samuel Ross—Retired Organizer of the Textile Workers; a feeble old man 73 years old, whose physical condition (because of advanced age) prevents him from having any weight or influence with the other members of the State Board.

At the last Convention of the Massachusetts State Branch of the A. F. of L., held at Springfield, Mass., action was taken, requesting Gov. Cox to remove Mr. Ross, the present labor representative of the State Board, but in spite of that fact at the expiration of his term, he was re-appointed for three years.

The contract which compels us to submit all matters and contentions relating to conditions of labor and wage is made with the manufacturers with but one stipulation: that every employe, shall be a member of the Boot and Shoe Workers' Union; adjustments of conditions, labor, or wages, are not taken into consideration at time of granting use of a union label stamp.

After Chairman Fisher of the Massachusetts State Board had given to the press of Boston the statement to the effect that New England was due for 10 percent reduction in wages, the manufacturers of Brockton in 1921, taking advantage of that clause in their contract made application to the State Board for a 20 percent reduction in wages.

The result of that request was that the State Board handed down a 10 percent reduction, in blanket form covering the entire industry in the Brockton District, admitting that inequalities existed and stating that "adjustments would follow in a reasonable time." Bearing that in mind several lo-

cals applied for readjustments of inequalities.

After a series of decisions, with practically no change, the last decision affecting one of the poorly paid locals, (the Dressers and Packers) composed mostly of girls and women whose wage was $17.50 a week, and whose minimum wage was $11.00, a 20 percent raise was requested, and they received an increase **granting them 85 cents a week raise.**

At a mass meeting called to consider the award, the girls became incensed at the small amount granted them, and a little girl stood up and made a motion to strike, which was immediately seconded by unanimous acclamation of the entire membership of 900.

The General Office of the Boot and Shoe Workers' Union revoked the Dressers and Packers Charter the following day.

Within a week, mass meetings of all locals were called and twelve of the thirteen locals voted to strike, because of the absolute conviction that justice could be had in no other way.

The result in the revoking of the Charters of four more locals, before the General Office called a halt, realizing that revoking of Charters could no longer scare us into submission.

We were in poor shape financially, because the Boot and Shoe Workers' Union Constitution made us turn over two-thirds of all dues, and the remaining third barely covered the administration expenses of the locals.

As individual members, we were in exactly the same position, because of the fact that the previous nine months were the dullest period in ten years, along with the semi-annual spring stock raising period, which left every one in very poor financial condition to start a strike.

We have formed our own union, namely THE BROCKTON DISTRICT SHOE WORKERS UNION, a real solid progressive union, and are presenting the following demands:

1. Recognition of our Union.
2. Restoration of the old wage list.
3. We demand a quicker and more just adjudication of disputes, through a local board of arbitration.
4. We reserve the right to strike.

The manufacturers maintain they will never reopen until we consent to become members of the Boot and Shoe Workers' Union, their organization.

The workers stand firm for their right to maintain their own organization, but must begin at the bottom with no treasury whatever. All the powers of the old organization, combined with that of the manufacturers and their money power, are arrayed against us.

Our lines are firmly established and we are done for all time with the old organization.

Thanking you for whatever you can do to help us, we remain yours fraternally,

**Brockton District Shoe Workers' Union,**
Eagle Hall, Ward Street,
Brockton, Mass.

# The Only Way Out

AT SYDNEY, Nova Scotia, 13,000 miners are out in sympathy with steel workers on strike against the Dominion Steel and Iron Company, the most powerful iorporation of its kind in Canada.

John Lewis, president of the United Mine Workers has denounced the sympathetic strike as unauthorized and a violation of agreement. He has ordered the miners to return to work, but at this writing, they have defied him, saying that they are autonnomous and declaring that there is no lightning behind the Lewis thunder.

This incident is typical of the A. F. of L. It insists on lining up with powerful corporations against sympathetic working class action. It also mobs those of its own adherents who try to reform it from within, as was done with the Fosterites at the Scranton convention of the anthracite miners. Under the circumstances, the only thing left for labor to do is to revolt. This it has done among the shoe workers at Brockton, Mass. This it appears to be doing among the coal miners of Nova Scotia! Where will it happen next?

Revolt is in the A. F. of L. system. It is inevitable! Labor has no other way out!

# PITTSBURGH

By JAMES OPPENHEIM

OVER his face his gray hair drifting hides his Labor-glory in smoke,
Strange thru his breath the soot is sifting, his feet are buried in coal and coke.
By night hands twisted and lured in fires, by day hands blackened with grime and oil,
He toil at the foundries and never tires, and ever and ever his lot is toil.

He speeds his soul till his body wrestles with terrible tonnage and terrible time,
Out thru the yards and over the trestles the flat-cars clank and the engines chime,
His mills thru windows seem eaten with fire, high cranes travel, his ingots roll,
And billet and wheel and whistle and wire shriek with the speeding up of his soul.

Lanterns with reds and greens a-glisten wave the way and the head-light glares,
The back-bent laborers glance and listen and out thru the night the tail-light flares—
Deep in the mills like a tipping cradle the huge converter turns on its wheel
And sizzling spills in the ten-ton ladle a golden water of molten steel.

Yet screwed with toil his low face searches shadow-edged fires and whited pits,
Gripping his levers his body lurches, grappling his irons he prods and hits,
And deaf with the roll and clangor and rattle with its sharp escaping staccato of steam,
And blind with flame and worn with battle, into his tonnage he turns his dream.

The world he had build rises around us, our wonder cities and weaving rails,
Over his wires a marvel has found us, a glory rides in our wheeled mails,
For the Earth grows small with strong Steel woven, and they come together who
plotted apart——
But he who has wrought this thing in his oven knows only toil and the tired heart.

# Hell!

By JULIUS IMP.

JUST what is meant by this word, "HELL"?
They say sometimes, "It's cold as hell";
Sometimes they say, "It's hot as hell";
When it rains hard, "It's hell," they cry;
It's also "hell" when it is dry.

They "hate like hell" to see it snow;
It's "a hell of a wind," when it starts to blow;
Now, "how in hell," can any one tell
Just "what in hell" they mean by "hell"?

"This married life is hell," they say;
When Dad comes home late, there is "hell to pay";
It's "hell," when the kid you have to tote;
When he starts to yell, it's a "hell of a note."

"It's hell," when the doctor sends his bills
For a "hell of a lot" of trips and pills;
When you get to "hell," you will know quite well
Just what is meant by this word, "hell."

"Hell, yes," "hell, no," and "oh, hell," too;
"The hell you don't," and "the hell you do";
And "what in hell," and "the hell it is";
"To hell with you," and "to hell with this."

Now, "how in the hell," and "oh, hell, where?"
And "what in the hell do you think I care?"
But "the hell of it is," "it is sure as hell,"
That nobody knows "what in hell" is H-E-L-L-!

# Three Men in a Fetid Den

By DENNY CROWLEY

THREE men there are, their hands are clean
And their lips are free from guile;
They share a cell in a prison Hell
Where the breath of God is vile.

Eight paces long, eight paces wide,
Is their stone and iron tomb,
And twenty men pace its narrow race,
And sleep in this foulsome room.

Full twenty men, with bunks for more,
Crowd this rigid space;
A sink and a bench and a thing whose stench
Pollutes the air of the place.

Open and shameless the "thing" is there
With only a whitewashed rim;
Never a lid the polluter hid,
Its presence is ghastly grim.

At times a trickle of water flows,
When the garden claims it not;
But the yard outside is the prison's pride
And the sun out there is hot.

What matters it that sun and air
And life are things unknown,
Where twenty men in the fetid den
Squirm on their slabs of stone.

Orange County Jail, Santa Ana, Calif.,
May, 1923.

Steel Strikers Listening to a Speaker.

# How to Strike

By VERN SMITH

PART II.

## The Strike of the Partially Organized

THE second sort of strike, the one in an industry where there is little organization, cannot usually be entirely a surprise attack, though this element can be preserved to some degree. If there is to be a considerable walkout, there must be widespread publicity. The organization of this publicity, the arrangements of the strike, and the final calling of the strike have to be undertaken principally by the organization that exists and that is determined to strike.

It is extremely important to strike at the strategical moment, and at the psychological moment. The strategical moment is that period of time when the employer is expanding his business, when the market is good, when the stocks of product are low, and when the boss has orders to fill, especially if he has, as exists in construction work, contracts that must be carried out by a certain time, to avoid a penalty. All this should be ascertained by reports to a central strike committee or board of statistics, or educational bureau, maintained by the organization. All members of the I. W. W., in whatever industry they are occupied, should be on the alert as to conditions in the industry. The workers can tell, by the way the work goes, how the boss is faring. The attempt to introduce night work, to put in overtime, to speed up in any way, is one indication of a good market, but a better one is the attempt to increase the crew.

There are in libraries, and lying around in offices of corporations, trade journals. Every industry has special magazines, issued to aid the capitalists of that industry, and much information of use to workers can be gleaned from these publications. Workers should form the habit of reading those which pertain to their industry, to see how the capitalist feels, and find out what he knows. Disregard anti-labor propaganda found in them, and watch production statistics, and market reports. Sometimes these are false, designed to profit some clique or group of capitalists within the industry, who may happen to control the publication. But these can be checked up with the practical experience of the workers, and with the daily market reports and shipments recorded in the newspapers. The United States Census of Manufactures is a mine of information about the conditions of industries at the times the census was taken.

There should be full discussion of the situation, and the membership should spread through articles in the organization papers, through discussion at the noon hour, and in the bunk houses, information amongst the unorganized as to the approaching favorable strike conditions. If the conditions are not favorable, this sort of strike should not be undertaken; instead it would be better to concentrate on organization propaganda.

## Every Man Has His Part

This spreading of information and general agitation along the lines already mentioned, can be best done by man to man, personal conversation. The educated men

on the job should talk to the uneducated. Leaflets have to be printed by the organization committees and publicity committees and distributed on the job. Delegates (organizers) when lining up men should use their discretion, as to how much publicity to give themselves. In general only one delegate at a time should step into the foreground, in any one job. Then if the boss fires him, another should come forward. Meetings should be arranged, at which speeches are made on the importance of a strike, the chances of winning, and the need of organization. In calling a meeting, the advertisement will have to depend on circumstances. Written notices posted on doors and announcements made in the cook houses will do in some cases. The meetings even in this case should not be announced as strike meetings, but should be to introduce a speaker, or to discuss general conditions.

In other cases, any such publicity would result in the meeting not being held, and the only way is for some one to go where the men are congregated, and start talking.

At the earliest opportunity, local strike committees, elected from general meetings, not just by the union membership, should be functioning, sending in demands to the union headquarters, delegates too, if possible, and suggesting dates for the strike. Everybody should be watching to kill any attempts made to provoke the strike before the general strike committee issues the word, as a preliminary walk-out only weakens the forces.

### Demands and Strike Call

The exact date for issuing the strike call should be set by an executive committee of the general strike committee. This general strike committee should be elected from the various branches of the organization, but should seat delegates from the general, non-membership committees. Every attempt must be made to avoid the appearance that the organization is dictating to the non-members, still, the calling and direction of the strike must be centralized. This does not mean that the general strike committee need necessarily be at the union headquarters, either. The closer the committees are to the jobs, the better.

The strike demands should if possible include some revolutionary ones, such as, "Release of Class War Prisoners," "Workers' Control of Industry," etc. These may not be won, but the strike is a demonstration in their favor, and helps to get people used to them. In each industry on strike, demands of immediate practical value should be included. It is not necessary to make these later demands universal. A considerable amount of local autonomy must be allowed, even within a single industry. Harvest workers in Kansas might demand five meals a day, whereas cow-milkers in California might prefer two meals, if they came at the right time, and want some other demand instead.

The general strike committee will include some of the bosses' stool-pigeons, naturally, and no attempt need be made to keep its meetings secret. But for the actual setting of the strike date, an executive committee of two or three men can be elected, and there is a fair chance that this committee can act secretly. The general decision as to the date of strike can be arrived at by the general strike committee, which can announce that the strike will take place, "this summer," "this fall," etc., and can issue proclamations containing strike demands, and a call to be ready for the strike call. This method worked very well in the I. W. W. General Strike of 1923, except that the small executive committee (the Strike Committee of the North-west Branches) was itself too large, and had too much to do, attempting to attend to many details that should have been cared for by a general strike committee of wider scope.

### Relations Between Committees

Delegates to the general strike committee should be paid, if at all, by the branches and local strike committees sending them to strike headquarters, and should meet, decide on the strike demands, except for those to be added by local branches, elect an executive committee, a publicity committee, and a finance committee, to sit continually and

be under pay, but none of them to consist of more than three members. There must be authority given the executive committee to appoint temporary picket captains to coordinate the work of the local picket captains. The general strike committee should then adjourn, with all the members informed that the committee meets again, with the same delegates or others, immediately after the strike date is announced, sessions to start as soon as a given number, say ten, are present.

The local strike committees, formed on the job, will probably be fired off the job soon after they start functioning. They should give way to others formed on the job, if the strike is still far in the future. But if the preliminary calls are out, the local committees should not disband, but adjourn to the nearest town, preserve a permanent post office address, and keep in touch with their former associates on the job, and also with the executive committee of the general strike committee.

Strike committees of the branches of the organization function permanently at the address of the branch.

### Getting Out The Call

The capitalist press can be used to some degree in spreading the strike call, but it is highly unreliable. The best way is to print thousands of strike notices and to have members ready at central points, probably at the branches of the organization, ready to carry packs of them from camp to camp, or from plant to plant.

The packages must not be sent out far in advance of the actual date for which the strike is called, as some stool-pigeons will surely secure notices, and the effect of the surprise be lost. The mails will be found to be unreliable, and the telegraph service is, of course, both undependable and public. Nevertheless, after the strike is on, both mail and telegraph can be used to get the strike call into isolated districts. Mail or express is the cheapest way of circulating the strike call, and after the matter is no longer secret, can be used to supplement other means.

The strike call should appear at the psychological moment. This is that time when the propaganda for a strike has reached its climax. Usually it is ushered in by several sections of prospective strikers who break out of control. Some superintendent precipitates the conflict by discharging a whole camp or a whole plant; some gun-man kills a speaker; some peculiarly asinine and irritating order comes from the office of the capitalists, and a spontaneous revolt takes place. If this outbreak is not too early, the executive committee of the general strike committee should seize the occasion, and declare the strike, giving as much publicity as possible to the provocation. There will surely be incidents that show the tension is great and these are signs for the strike call.

It will be observed that throughout this discussion, it is assumed that the strike will cover several plants, a whole industry or several industries. There really is not much use going to all the trouble of agitating a strike on a smaller scale, unless under very exceptional circumstances. Smaller strikes are useful as protests against some immediate injustice and do not usually have to be very much prepared for. They have not much chance of winning unless the demands are very limited. However, the principal requirements are a strikers' meeting, a strike committee to draw up demands, present them at once to the meeting which should adopt them, amended if necessary, then present them at once to the management, and bring the answer back to the same meeting. Speeches of a general propaganda nature can go on while the committee is hunting up the super. Speed is the main requirement.

The third great class of strikes is the spontaneous walk-out. These are the most hopeful sort, in one way, because they show that grievances are felt, though perhaps not understood. They are always a surprise to the boss, and possess that advantage.

They are absolutely certain to fail, unless outside organizations, or some embryonic organization in their midst, steps up, takes control, formulates demands, and gets mass meetings and committees at work. But that is the subject matter for the next article.

# Labor Goes Into Banking

By ALOIS SENNEFELDER, Jr.

THE latest subject of interest in the labor world is banking. Labor is turning banker. Labor banking is being embarked upon with all the zeal and ardor of a new crusade. The enthusiasm instilled seems marvelously re-creative; in fact revolutionary. And so we approach the subject with interest; nay, with inspiration. Here, at last, is a means to labor's emancipation, fraught with immense practical possibilities. But, after one look, we come away disappointed. For labor banking is similar to capitalst banking. It is essentially exploitative and but a modification of capitalism, due to its labor prefix—that's all. No wonder capitalist bankers do not oppose it. No wonder they become its practical heads, and provide seats for its representatives on the boards of directors of huge trust companies. "Birds of a feather, etc.

The theory of labor banking is very simple, in fact more simple than sound, from a labor standpoint. It consists in the belief that labor, through its individual and collective savings can gain control of credit and thereby dictate financial, i. e., capitalist policy. The history of the co-operative credit union movement of Europe, with its 7 billions of annual turn-over, ought to dispel such a belief. Stupendous as this amount is, it cuts almost no figure at all in European finance. The controllers of credit in Europe, same as here, are the big industrial financiers.

The reason is not far to seek. Credit is based not so much on savings as upon the reserves of profits and commodities withheld from labor at the point of production, or in process of exchange.

Credit is in many respects tangible. But it cannot function without commodities and profits such as labor alone produces on the land and in industry. Consequently, it follows that if labor wishes to gain control of credit it must seek such control in the control of production primarily. It must get at the sources of wealth-production, land and machinery, without which exchange and credit are both impossible. In so far as labor-banking hides this fact from the workers it is injurious rather than beneficial. It is then on a par with the capitalist bank thrift campaigns which cause the workers to believe that proletarian salvation is to be found in stomach-robbing savings.

It is in pursuit of this erroneous theory of financial control that labor banks accumulate deposits—for what end? Why, the same end as the capitalist banks, namely, reinvestment at a profit, or interest. These deposits are used—to free labor?—Nay, but to exploit it, to the end already stated. Witness the strike against the open shop in the West Virginia and Kentucky coal mines financed by the Locomotive Engineer's bank and owned by the company headed by its president, Warren S. Stone, trust company associate of Schwab, Du Pont and other giant industrial financiers.

There we behold the essential oneness of all banking, whether labor or capitalist, fully demonstrated. We also see the theory of financial control in the interests of labor knocked into a cocked hat. Labor banks, whether so intended or not, instead of becoming a means to aid labor in times of strikes, have become a means to make laborers instead of capitalists the exploiters of the working class.

The world of labor should free itself from the banking delusion. Instead of aiding in the work of construction, like a quicksand, it draws labor on to its own destruction.

### Chain Factories

An illustrated booklet of the General Electric Co., manufacturers of electrical apparatus and supplies, suggests another problem in industrial union organization, namely, the chain factories.

The G. E. B., according to this booklet, has its main works at Schenectady, N. Y., where its employers number 25,000 Then are pictured in succession, the plant at Lynn, Mass., with 12,000 employees; Pittsfield, Mass., 8,000; Erie, Pa., 5,000; Fort Wayne, Ind., 5,500; New Kensington, Pa., Bloomfield, N. J., and Maspeth, L. I., 3,500; Edison Lamp Works at 12 different points, number not given; and the National Lamp Works, home office, Cleveland, O., 11,500.

Here's a huge corporation with plants and 75,000 employees in 25 cities and 9 states. It is in itself a complete manufacturing and assembling unit, awaiting labor organization as such. When the I. W. W. tackles successfully the problems in unionism presented by the G. E. B., it will prevail in every respect. Until then it will prove only partly successful.

A. S., Jr.

# What's a Home Guard

A HOME guard is supposed to be a worker who stays in one locality and has a home and family there to guard against the alleged injurious results of labor unionism, strikes, etc. He is supposed to be the opposite of the migratory worker, who is said to be "foot-loose" and more rebellious on that account.

We say supposed, as most of the alleged differences between the homeguard and migratory are mere supposition. The home guard is not the coward he is generally supposed to be. Nor is the migratory the revolutionist he is supposed to be.

There are armies of both home guards and migratories among the reactionaries. Their conversion to a better view of life is the task of all the workers, regardless of distinctions, alleged or otherwise.

# WOBBLES

## THE WORDS OF GREAT MEN TINTINABULATED

### Jazz Band Led by Bill Akers.

President Harding, starting on His Excellencies' Alaskan vacation, announced on his piccolo:

"Yes! We have no political prisoners!"

While Mr. Weyerhauser, with one eye on a recent bulletin from the Northwest, twangs on the harp:

"Yes! We have no strike in the woods!"

The State of California booms monotonously on the brass drum:

"Yes! We have no syndicalists here!"

Fatty Arbuckle, gracefully tripping across a Chicago theatre, plays on the Jews' harp:

"Yes! We have no wraps on the stage!"

Wall Street financiers form synchronizing quartets and warble:

"Yes! We have no bottoms in our buckets!"

Henry Ford contributes to the melody by an enthusiastic rattle of the can:

"Yes! We have no desire to be president!"

Andy Furuseth contributes a doleful ring on the cowbells:

"Yes! We have no Sailors' Union now!' '

Attorney General Daugherty beats trippingly on the snare drum:

"Yes! We have no son in a hospital!"

Judge Gary, just back from Europe, tickles the ivories with:

"Yes! We have no eight-hour shifts!"

Herbert Hoover, on eve of his departure to address the United States Chamber of Commerce, draws this from his bass viol:

"Yes! We have no individualist society!"

French Cabinet, after jumping on benches to call each other liars, rasp this on their violins:

"Yes! We have no German money to pay!"

Wm. Z. Foster, while reading telegram announcing that the A. F. of L. lost another 800,000 members, pipes this on his cornet:

"Yes! We have no militant labor movement!"

Wm J. Burns, on his Wall Street office steps, tortures this on his trombone:

"Yes! We have no bombing plots on file!"

Imperial Wooze, while announcing to Klepto Klon Klave that the price of Klassy Kleagles Kling sheets are to double, sounds this on the saxophone:

"Yes! We have no wet ones in our wardrobe!"

A Wobbly, found most everywhere, mentions this on his mouth organ:

"Yes! We have no damn use for parasites!"

### Economic Interpretation of Theology

Little Sissiepuss, in Sunday school, when asked, "Who made you?" answered "Capital made me!" To which the teacher correctingly replied, "No; God made you!" "No, he didn't," persisted Little Sissiepuss, "God made the fellow who just went down stairs. Capital made me; for my father says 'Capital makes everything'; and let me tell you, I'm something!"

### FOSTER AT SCRANTON

Of all sad words from tongue
or pen,
The saddest are these:
Kicked out again!

***

Nobody ever puts camphor balls on politics. That's one reason why they're so full of holes.

# Interview with the Hoboes

By JIM SEYMOUR.

### MUSIC AND THE REVOLUTION.

WE were hungry. He had a handful of coffee and I had a couple of rolls, and with that we had made a fifty-fifty supper and were lying on our blankets, puffing our pipes and talking. Rather, I should say, he was talking. An Italian passing along the railroad track and singing had furnished him with a new topic.

"Verdi," he breathed. "A wonderful people, the Italians; and Verdi is the most wonderful of them all. I use the present tense because it is correct. The report that Verdi is dead is false. Verdi will never die. That fellow's voice is a little harsh—driving mules, I suppose—but Verdi's entrancing melody covers that slight defect. Verdi's melody is omnipotent. To one at all musically inclined it is excruciating. It grasps his physical being and tears it to shreds, then pulverizes the shreds and casts the dust into the great infinite. What is left of him he neither knows nor cares; he is simply a tiny part of the cosmos and Verdi is all the rest of it. True enough, this moonlight filtering through the eucalypti is beautiful, and there is an inspiring beauty in the majestic sweep of a powerful locomotive rounding a curve, but I tell you, old-timer, if you want beauty that you can see and feel and hear and taste and smell; if you want beauty that will make you forget your empty stomach, bum your way into a performance of a Verdian opera. Don't tackle the big social-display outfits, but select a tramp Italian company; its half-starved singers and musicians are genuine artists, filled with the divine fire of the great master who controls their surging emotions and does not permit them to neglect him in the interests of slimy commercialism."

He paused, and I asked his opinion of American music.

"American music!" he exploded, with a sarcasm that stung like a yellowjacket. "It is savagery; nothing more. It is the challenging bellow of the bull ape. It is the spirit of the caveman who pranced as they walloped a hollow log with their battle-clubs. It is the smacking of the bloody chops of our forbears as they 'mumbled the bones of the slain'."

"Do you think," I asked, "that a people that likes such music can ever inaugurate a society of better things?"

"Such a society presupposes intelligence enough to want it; yet while I doubt if the man to whom ragtime appeals can ever be improved intellectually; conditions may nevertheless bring him to the psychological moment; it will then only be necessary for the understanding ones to apply the ragtime judiciously and the gorilla will break loose. And in that day you and I will eat, for the beast likes us."

"Well," I replied, "I'm not particularly anxious for trouble, but I'm ready for anything if it means eats. When do you think the circus will start?"

"'Of that day and that hour knoweth no man.' **Quién sabe** just when our anthropoid friend will sink his fangs into the throat of his heretofore tolerated neighbor? Nobody. But we all know that he is pounding his chest right now."

Shortly thereafter I dropped asleep, my last consciousness being of his intensely musical whistling. And I recall that his whistling was not Verdi. It was de l'Isle.

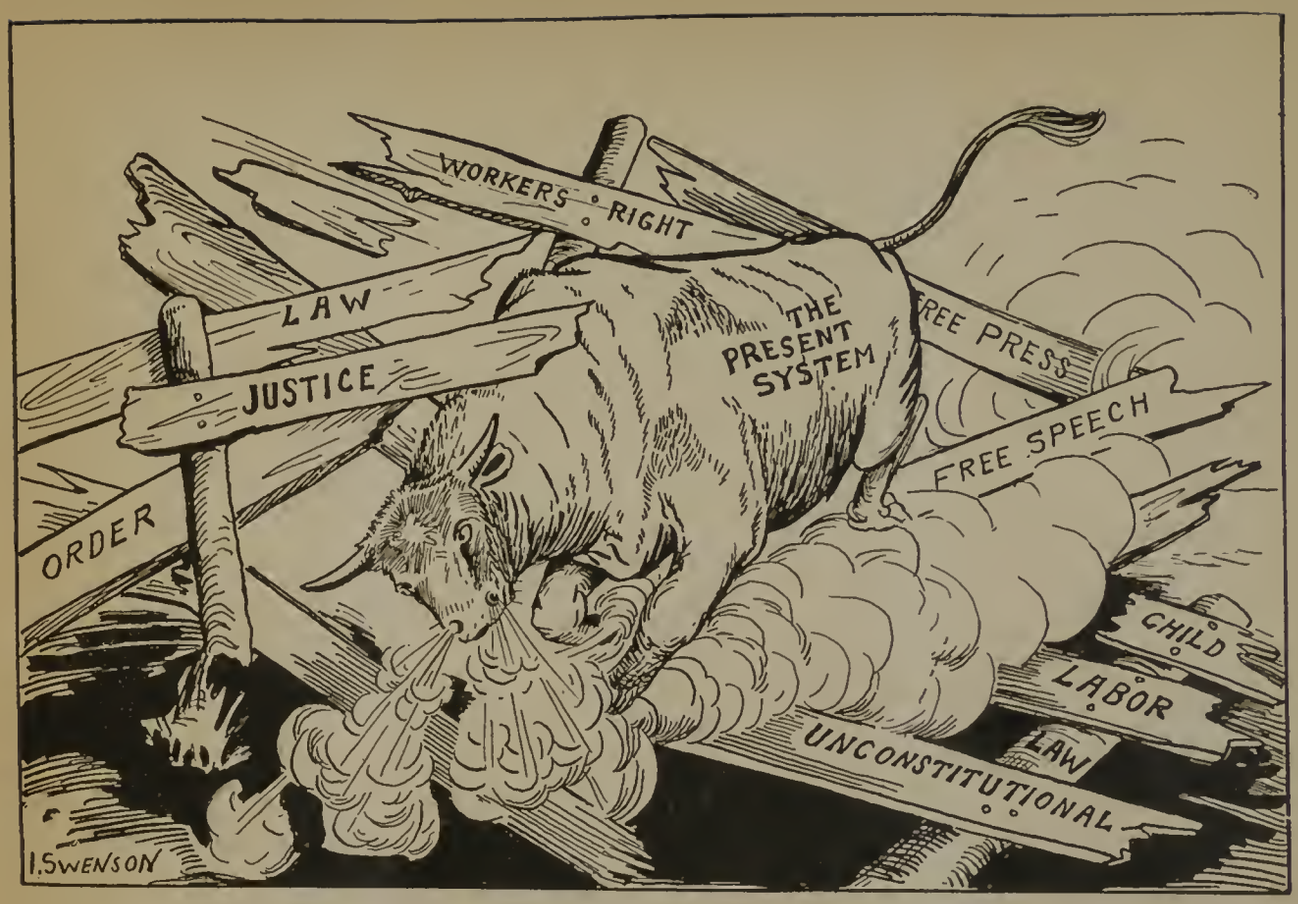
# The Disgrace at Scranton

THE claim of the Fosterites that the A. F. of L. can not be revolutionized from within because the revolutionists withdraw from it, is not in accord with facts. The reason why the A. F. of L. cannot be revolutionized from within is because the revolutionists are kicked out of it, not only metaphorically, but physically as well.

Witness the disgraceful treatment accorded to the Fosterites at the recent Scranton convention of the United Mine Workers. There John Lewis showed himself to be the strong arm man of the operators, as he created the atmosphere that lead to the beating up of the Fosterian disciples. And yet his whole conduct is characteristic of the A. F. of L., when dealing with borers from within.

But what can one who is informed expect? This conduct is not only typical of the A. F. of L., it is also logical. The A. F. of L., via the trade agreement and contract, and especially the check-off, is under obligations to corporations and associations for the enrollment and control of its membership. Without capitalists' support, the A. F. of L., and particularly its "backbone," the U. M. W., would not last long. The capitalists make the A. F. of L.

Nevertheless, despite the evidence to the contrary, now so apparent to all, the Fosterites will continue to contend that boring from within is a failure because the revolutionists withdraw from the A. F. of L. Men convinced against their will, etc.



# Civil Liberties in Los Angeles

By UPTON SINCLAIR

THE editor of the "Industrial Pioneer" has asked me to write briefly explaining what has happened here in Southern California as a result of the raid on civil liberties by the Merchants' and Manufacturers' Association. I assume that this story of the harbor strike and of our arrest in connection with it will be fully told by other writers, and I will merely say a few words about the Southern California branch of the American Civil Liberties Union, which has been the outgrowth of these adventures.

### Talk American

It is something which I have been urging upon the rebel workers for the last twenty years, that they should talk American, and should make use of American forms of social protest. The class struggle is no new thing in America; it has been going on since the very beginning of the country, and there are among our old-time heroes a number of figures who are quite as useful to the rebel workers of today as Karl Marx and Liebnecht and Kropotkin. The orthodox hundred percenter of the present day has no remotest idea how really radical were the utterances of these ancestors, who are mentioned in every history book used in our schools. And there are a great many Americans who would be shocked by a quotation from some European "red," but who would stand by the opinions of Sam Adams, and Patrick Henry, and Thomas Jefferson, and John Brown, and Wendell Phillips, and Abraham Lincoln.

### Dual Unions

Not all Americans are able to agree about the remedies for our present economic problems. For example, I am not able to agree with the I. W. W.; I think that dual unions are a mistake; and also I think that workers' organizations which repudiate political action are like a man who should tie up one leg and insist on hopping instead of running. But, completely as I differ from the I. W. W. program, I am willing to stand by the principle that the I. W. W. shall have a right to argue their claims; I am willing to take my chance of being able to answer the arguments of all my opponents and do not need to prove my case by throwing the other fellow into jail. I call this the real hundred percent Americanism; and I am doing what I can to organize Americans upon the principle that we shall settle our problems by free and open discussion, and by respecting the rights of all men to freedom of speech, of press, and of assemblage. We have found it possible to interest a great many Americans in this pro-

gram—people who would not classify themselves as radicals, or back any radical program.

Of course the "Times" has been quick to advance the theory that anyone who backs civil liberties must be a secret agent of the I. W. W. They have called the American Civil Liberties "the defense branch of the I. W. W."—this on the authority of a non-existent "Agent Townsend of the Department of Justice." Probably from that point of view I am unwise to write an account of our activities for an I. W. W. publication. But I fearlessly advance the thesis, in spite of all the menaces of the "Times," that I regard I. W. W.'s as human beings, and as part of the "people" whose civil rights are protected by the Constitution. And we are going on quoting that Constitution in Southern California, especially the first amendment, which specifies that:

"Congress shall make no law respecting an establishment of religion, or prohibiting the free exercise thereof, or abridging the freedom of speech or of the press; or the right of the people peaceably to assemble, and to petition the government for redress of grievances."

### Jefferson's Statement

Also we shall quote from the Constitution of the State of California, Article 1, Section 9: "Every citizen may freely speak, write and publish his sentiments of all subjects, being responsible for the abuse of that right; and no law shall be passed to restrain or abridge the liberty of speech or of the press." And Section 10: "The people shall have the right to freely assemble together to consult for the common good, to instruct their representatives, and to petition the Legislature for redress of grievances."

Also we quote a decision of the United States Supreme Court, ratifying the statement written by Thomas Jefferson, and passed by the Legislature of Virginia; Reynolds vs. United States, 98 U. S. 163:

"To suffer the civil magistrate to intrude his power into the field of opinion, or to restrain the profession or propagation of principles, on supposition of their ill tendency, is a dangerous fallacy, which at once destroys all liberty, because he, being of course judge of that tendency, will make his opinions the rule of judgment, and approve or condemn the sentiments of others only as they shall square with or differ from his own. It is time enough for the rightful purpose of civil government for its officers to interfere when principles break out into overt acts against peace and good order."

So much for the law. We go on to give our hundred percent business men a little taste of the radicalism of some eminent Americans; for example, George Washington:

"Government is not reason, it is not eloquence—it is force! Like fire it is a dangerous servant and a fearful master; never for a moment should it be left to irresponsible action."

And then Thomas Jefferson, who wrote during the Revolutionary War a prophecy of America a hundred and fifty years later:

"The spirit of the times may alter, will alter. Our rulers will become corrupt, our people careless. A single zealot may become persecutor, and better men be his victims. It can never be too often repeated that the time for fixing essential right, on a legal basis, is while our rulers are honest, ourselves united. **From the conclusion of this war we shall be going down hill.** It will not then be necessary to resort every moment to the people for support. They will be forgotten, therefore, and their rights disregarded. They will forget themselves in the sole faculty of making money, and will never think of uniting to effect a due respect for their rights. The shackles, therefore, which shall not be knocked off at the conclusion of this war, will be heavier and heavier, till our rights shall revive or expire in a convulsion."

### What Lincoln Said

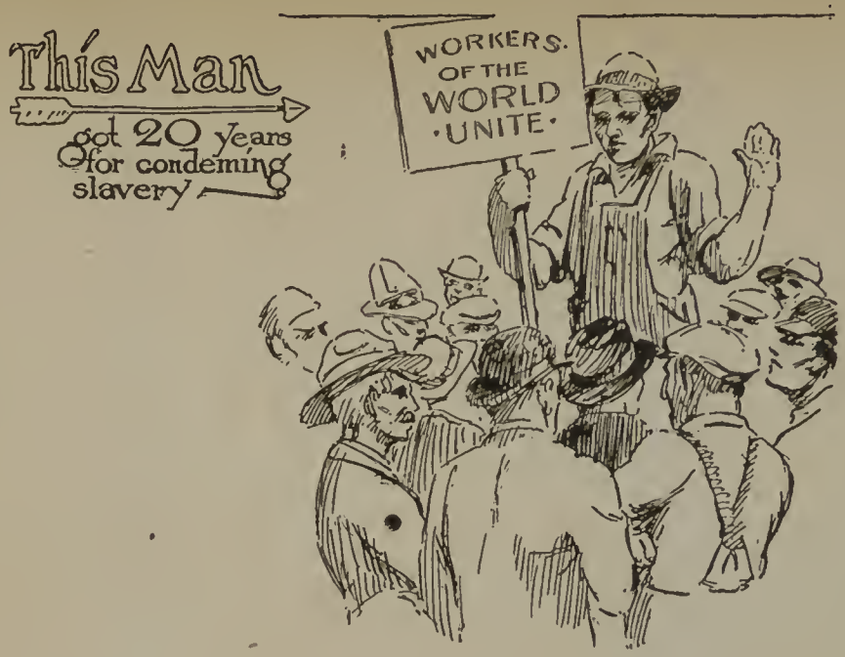
Finally, we are quoting Abraham Lincoln, two sentences for which in the State of California today he would be arrested for criminal syndicalism by the first policeman he met, and sent to San Quentin to work in the jute mill for the next twenty-eight years:

"This country, with its institutions, belongs to the people who inhabit it. Whenever they shall grow weary of the existing government, they can exercise their constitutional right of amending, or their revolutionary right to dismember or overthrow it."

Our American Civil Liberties Union, Southern California branch, has fifteen volunteer committees, all of which have pledged themselves to real work.

I will give you the list of them, because there is no better way to make clear the nature of our job, which ought to be the job of true Americans in all other parts of the country. First, a committee on membership, to see to it that we get two thousand members and ten thousand names of people interested in our literature. Next, the committee on finance, to raise the six or eight thousand dollars a year which our program will require. Next, the literature committee, which will attend to the preparation of leaflets and pamphlets, and devise plans to get them into the hands of the public. Next, the speakers' committee, whose chairman is John C. Packard, an attorney of Los Angeles. This committee is going to compile a list of people who can speak and will speak on civil liberties, and make arrangements to get them before clubs and churches and other organizations which will hear them; also, to arrange for an open forum. Then the committee on jail conditions, whose chairman is the Reverend Clinton J. Taft, pastor of the Plymouth Congregational Church of Los Angeles. The Ministerial Union of Los Angeles at its last monthly meeting, voted to appoint a committee to investigate jail conditions.

Next, a committee on bail. We have on this committee one tireless friend of the oppressed, who didn't wait for a committee to be organized. From the beginning of the wholesale arrests of the strikers she and a little group of friends have been busy



raising bail. I am referring to Mrs. Kate Crane Gartz, of Altadena. Next, the press committee, whose chairman is Mrs. Reuben Borough, wife of a tireless and devoted newspaper reporter, who has been busy day by day writing the stories of our movement which have been published in the Los Angeles "Record." Next, the students' committee, to work among the colleges and universities. One of our mass meetings was a meeting for students.

Next, the lawyers' committee, whose chairman is John Beardsley, attorney of Los Angeles. Not merely are we going to get a few lawyers to work in the cause of civil liberties; we are going to get them together, and teach them what civil liberty means. And the same thing with the doctors' committee, whose chairman is Dr. T. Percival Gerson, president of the Severance Club of Los Angeles. We are going to educate the doctors, and also to have their help when political prisoners are ill. Next, the club committee. There are powerful clubs in this community, some of whose active members, especially the women, are really concerned about the late collapse of the Constitution.

Next, the church committee whose chaiman is the Reverend G. Bromley Oxnam, pastor of the Church of All Nations in Los Angeles, and recent candidate for the school board. Next, the teachers' committee. The teachers had a ticket for members of the school board, and the reactionary press diligently lied about them, and they have still much teaching of the public to do. Next, the labor committee. We are going to try to get all the labor unions, the conservatives as well as the radicals. We don't think there are many workingmen who will refuse to support civil rights, if the issue is fairly presented to them. And finally, the visiting committee. This is a wonderful invention which we discovered in the course of our crisis. It produces a tremendous impression upon public officials who are violating the law, if you come to them with a large group of distinguished citizens, professional men, and ladies clad in the latest spring fashions. We are going right on calling, and have selected an excellent chairman for the purpose; the Reverend Doremus Scudder, who was until recently executive secretary of the Federation of Churches of Greater Boston, and has come out here to Southern California to make his home, after being director of Red Cross work in Siberia for several years. Dr. Scudder knows how to talk to these people; he tried it out the other day on the Y. M. C. A. directors. Some fifteen of them were summoned in solemn conclave when the terrible news leaked out that a clerk in the office had made a mistake and rented the Y. M. C. A. auditorium to our Civil Liberties Union for an organization meetng! The Y. M. C. A. secretaries came to us humbly, begging us to let them off from this frightful peril. We asked for a session with the directors, and got it. We finally agreed to go to another hall; but I assure you that our educational work is going to include the Y. M. C. A., and we shall bring some of those directors around to real Christianity and Americanism before we get through.

There were h u n d r e d s of men thrown into jail—most of them for "vagrancy," though they have families and homes. They were beaten and tortured, and held under most atrocious conditions; and the Y. M. C. A. would not permit us to hold a meeting to tell the public about it! "I was hungry, and ye fed me not; sick in prison, and ye visited me not!"

We are going to try to change some of these things; and we hope that when the next strike comes at the harbor, the I. W. W. will help us by being as orderly and as wise as they were during the last strike. You may be interested to know that Police Captain Plummer told my brother-in-law, Hunter Kimbrough, that he had no fault to find with the way the wobblies had handled the strike—they had kept order excellently!

# Practical Internationalism

THE I. W. W. is nothing, if not practical. It believes in internationalism; and stands ready to assist any part of the world's working class as occasion requires. This is shown in a recent issue of Industrial Solidarity, wherein its readers are called on to support the German seamen's strike. According to despatches from Emden, Germany: The Deutscher Schiffartsbund (a marine transport workers' union of Germany) is on strike. In a communication sent to branches of Marine Transport Workers' Industrial Union No. 510 of the I. W. W., the workers in this industry in Germany ask for support, especially to have the news of the strike spread on all German ships. The statement of the Deutscher Schiffartsbund is to the effect that the strike was a spontaneous one, originating in the great need of the German seafarers, and that the above mentioned union had taken over the work of organizing the strike, as other organization had failed to do so.

The chief demands are for an increase of wages, the enforcement of certain parts of the labor laws, and for the hiring of workers through a union hall.

The German Marine transport workers may rely on I. W. W. assistance in spreading the strike.

## Refuse to Handle These Ships

POSTAL CABLE from London to I. W. W. says six thousand English dock workers are on strike. Ask fellow workers to refuse to handle English Merchant ships. Strike in England being run by Rank and File. Yours for Industrial Solidarity.

(Signed) STORROCK
Secretary London Strike Committee, Black Road and Canning Town, London.

# New Russian Policy Success

DR. LOUIS LEVINE, well-known for his studies in American syndicalism and Montana taxation, is recently back from Russia. He predicts the success of the new economic policy of the Russian government. He is of the opinion that while in the past there was a tendency to magnify the Russian experiment, there now is a tendency to belittle it—both of which tendencies he regarded as unfortunate. Russia's first venture in public ownership, in 1919, he said, was an attempt to socialize everything. Whether it failed or not, he declared, depends on the tests one applies.

"Taking into account," he pursued, "the results of war, blockade, and previous destruction, there is no doubt that it broke under the strain. **But political-mindedness was one of the main causes of the collapse. Socialized industry needs technicians, not politicians.** Neither were the consumers educated to co-operate in the new system. The Russians, too, were working under a delusion as to the efficiency of centralized management. They overdid centralization.

"But the new track on which Russia has started, called the new economic policy, is fundamentally public ownership of key industries—but public ownership not primarily for use but for profit. **It is state capitalism.** In the last two years it has shown that there is no efficiency that capitalism has developed which will not work under this system. **From the point of view of the worker, notwithstanding it leaves much to be desired. It does not protect the workers entirely from exploitation and abuse."**

# The New Idealism

WHAT the members of the working class need is a new idealism. They need faith in their own indefinite possibilities. They are intended to be more than the mere drawers of water and hewers of wood for the profits of others. They are destined, did they but realize it, to be the controllers of their own fate and the builders of a new race of supermen.

The working class, to attain the new idealism, must first recognize the worth of its own members. Though life is impossible without their labors, though no railroad can run, nor any other economic function be performed without their time, attention, skill and ability, the workers regard themselves as the dross instead of the true metals of life. It is time to end such self-depreciation and to awaken to a consciousness of the real greatness of the working class.

The times need men, not alone of brains and brawn, but of self-respect and ideals.

# Tony the Immigrant

By PASQUALE RUSSO

### The Class Struggle in Italy

EVERY day in 1910 the class struggle in Italy was growing more bitter. The Dynasty of Savoy was trembling before the advancing proletariat whose victories threatened to end the inhuman and barbaric rule of the capitalist class.

Agitators were everywhere North and South, preaching Socialistic doctrines. In substance these agitators said to the working class: "By adopting the fundamental principles of Socialism you may abolish poverty, starvation, misery and usher in an era of justice for all who toil."

That these teachings were effective was evidenced in the number of adherents gained and the clash of the classes so frequent and violent that the rulers decided to put a stop to it. However, they realized that to do this openly would be folly, nay, suicidal. The rulers were conscious of the fact that the workers were well organized and action on the part of the government that thwarted their plans would mark the beginning of civil war in Italy. In fact, the class struggle had developed to such a point that the rule of the capitalist class was threatened and there was a real danger of them being overthrown and supplanted.

### Capitalists Not Fatalists

Capitalists are not by any means fatalists, and in order to avert this calamity they assembled in conclave for the purpose of forestalling the advance of workingmen's opinion and activities.

These meetings were held in camera and attended by the great money lords with their retainers from all parts of Italy. Prominent among the attendants were the professional butchers, commonly called Generals, and with them the Bishops, ready to bless any action that would abort or defeat the workers' hope.

The principal subject discussed at the meetings was the method to crush the labor movement. The most efficient means, they concluded, of crushing the laborers was by a war. This they knew would arouse the workers to a defense of nationalism, distract their attention from the immediate problems and transfer it to the saving of the country.

It was decided that an invasion of Turkey was to be the first move in this direction. The necessary ardor for the undertaking was to be engendered through the agency of the newspapers which exercised a powerful influence over the working class.

Immediately the newspapers began a campaign of well directed calumnies about some atrocities which at that time were alleged to have been committed by the Turks. The truth or falsity of the reports were unverifiable owing to the inaccessability of Turkey. A robbery or street fight in Turkey was magnified by the newspapers into a premeditated offense against the liberties of the Italian people. The newspapers implied each day that Turkey was a barbarous nation and that it was Italy's duty as mistress of civilization to give Turkey lessons in Latin-Roman culture.

Italy, posing as the guardian of small nations, was ready, for the glory of Italian imperialism, to slaughter, rape and destroy another people whose only crime was that they were born in another land.

### The War

This propaganda against Turkey met with success and in one year from its inception the directors found it advisable to openly declare war on Turkey. Some fifteen years previously the Italian nation had been quite severely trounced by Menelik, the Abyssinian Emperor, and in defeat the Italian workers had been the chief sufferers. But the great mass of mankind have short memories, much credulity, and when the war was proposed it was received with avidity and enthusiasm. A few weeks later the workers laid down their tools, marched away accoutred for war. Here, the Church, capitalistic institution that it is, played its part by encouraging the workers in their war on the infidel Turks.

The only unified opposition to the Turkish-Italian War was made by the membership of the Socialist Party. They were the chief promoters of the general strike which took place in Rome and several other Italian cities. All these strikes were lost and this was evidence of the powerful hold that the war propaganda had on the great mass of the people.

At this time Benito Mussolini, who so recently has attained notoriety as the father of Fascismo, was editor of the Socialist daily paper Avanti, and through the medium of its columns he valiantly denounced the war and its promoters. Since then Mussolini has changed front and is now the agent of the capitalized Italian brigandage practiced on the working class.

One of the chief causes of the failure of the general strike, mentioned previously, was the defection of many of the revolutionary leaders who joined with the war propagandists. Most notable among these was the labor fakir and renegade Socialist, Enrico Ferri. For a mess of pottage, this Judas of the Italian Socialist Party sold himself to the enemies of the workers, the capitalist class.

Another factor that defeated the general strike and furthered the war on Turkey, was the glib promises of the ruling class. They promised a speedy ending of the war, an era of prosperity immediately thereafter; so much so, said they, that no one would have the desire to emigrate.

The war lasted something over one year, the capitalist class of Italy being victorious. In winning the war two objects had been attained, one the de-

feat of Turkey, the other the defeat of labor. Labor, as usual, lost everything, including most of the liberties it had previously enjoyed.

### Emigration

This loss of freedom, unemployment and other miseries growing out of war caused the workers to look toward emigration for relief. Constantly, in all Southern European countries, American industrial barons maintain agents who go among the laborers and try to induce them to emigrate to America. The trap is laid by attractive advertisements appealing to maids, cooks, all kinds of domestic servants and skilled artisans, setting forth the possibilities of good wages, comfortable homes with an abundance of freedom, in the Western World. Consequently, thousands of European workers fall into the trap annually.

Tony, the son of a village blacksmith, came into possession of some of this alluring advertising literature and in a short while his heart was aflame with hope. He ran to his mother, telling her, with bated breath, about the great land of opportunities overseas. His mother, more experienced and wiser, told him quite frankly that the advertisements for the most part were misleading and were a misrepresentation of the actual conditions in America. She pointed out to him that while she herself had never been to America, she was confident that where there is a capitalist class there is to be found tyranny, also.

### Longs for Liberty

Tony, little heeding, insisted by saying: "Mother, I want to go to 'the Land of the Free'." In due course the mother capitulated, the boy had his way, and preparations for the journey went forward apace.

The mother, by dint of much economy, had during her life, saved something over 100 lires. Tony's journey to America would cost at least 250 lires. In order to obtain the required amount, the mother sold a cow and several pieces of furniture.

In the morning of the day previous to Tony's leave, he attended mass, kissed the hand of the village curate and hastened home to spend the remaining few hours with his mother.

During the evening many friends called, bidding him goodby and wishing him good luck on his voyage. Early the next morning, with a bag full of chestnuts, salame and cheese, Tony set off down the road toward the seaport town. Two days later Tony was aboard the ship that was to carry him from Naples to the "Land of the Free."

Aboard the ship were thousands of men and women who, much the same as Tony, had been innocently victimized. Most of them had grown tired of the system of exploitation in Italy and were willing to go to an alien land in the hope that it might be a paradise of liberty.

The voyage from Naples to New York were the happiest days that had ever come to Tony. All along the trip, night and day, there was singing and dancing and general merry-making. To the passengers the day of deliverance was at hand, and in a short while they would begin a happier existence.

The voyage of fourteen days was happy, indeed, and ended dramatically by the sight of the Statue of Liberty. This was a moment of keen delight; emotion ran high, and Tony, engrossed in the spirit of the event, was heard to shout: "Hurrah for America, the 'Land of the Free!'"

### Tony In America

Immediately upon landing, Tony was given a red colored card. Not being acquainted with the English language, Tony imagined it was a membership card in the Socialist Party. Later he learned in a conversation with a Sicilian, that the card was a means of identification as to destination.

Attaching the card to his coat lapel he was hustled into a large truck where, with many others, he was packed in like so many sardines. In spite of the confusion, inconvenience and excitement, Tony imagined he was in heaven. This fancy bordered on reality when a fellow countryman took him to a barroom and treated him to some American beer. Some time later he actually entered paradise by visiting a moving picture theatre.

These days of idleness, luxury and pleasure had passed all too quickly, and Tony was soon facing a serious situation. His funds were getting low and it seemed that the only way out of the dilemma was to go to work. The landlady at his lodging house, a good Christian, said to him: "My dear boy, your rent is due. If you fail to pay, out you go. You are now in America, where business is business."

### Hunting a Job

The following Monday Tony began seeking a position. Just at this time in New York there were thousands of men out of employment and a corresponding scarcity of jobs. From one place to another, hour after hour, Tony sought the elusive job. Apparently, no employment was to be had. Growing weary, he found a convenient street-box, and seating himself, began turning over his experiences in his mind. It began to dawn upon him that possibly "the Land of the Free" might be a myth—and spectre-like the form of his landlady, her sharp admonition, came distinctly into his consciousness. These two past incidents seemed somehow related to one another. Suddenly, and without warning, he received a painful blow on the head. Raising his head, he looked about and became aware that he had been hit by a policeman's club. Meanwhile, the policeman said: "Move on, Dago!"

For the balance of the week Tony spent the day looking for work and evading policemen. On Saturday night, true to her word, the landlady informed him that he would have to seek lodgings elsewhere.

For the next few weeks, Tony's sleeping time

was spent in a barn. One morning, after days of hardships and sleepless nights, Tony decided to join a legion of hoboes, who, as he knew, went from place to place begging a living. In his travels as a hobo he visited many cities, and in each he sought employment. In each place he had the same difficulties and hardships. In all industries he found the same conditions, the same indignities, the same system of robbery. In a very short time Tony came to the conclusion that it was not the "Land of the Free," but a land of oppression and robbery; freedom and liberty, it was evident, had died long ago.

### Tony Goes to Work

One evening, while lounging about in the corridor of a ten cent hotel, a man asked him if he wished to go to work. Smilingly, Tony answered in the affirmative. Shortly afterward Tony went to his room, but sleep was not for him; a job in sight, his troubles would end—this was happiness indeed. That night he resolved to work hard, save his money and help his dear old mother over in Italy. These pleasant thoughts ran through his mind all night, keeping him awake, and in the morning, without waiting for the alarm clock, he was ready to work and thereby make an honest living.

Leaving his house Tony went to a nearby restaurant, had some coffee and rolls, and then nervously, hastily, set forth on foot to the factory where he was to sell his labor power.

At the factory he was met by the time-keeper who plied him with questions such as "How long have you been in this country?" "Are you a member of the I. W. W.?" and many others that appeared to our inexperienced Tony as both useless and foolish. Then the time-keeper gave Tony a brass check on which was engraved the number "13." This number gave Tony a pause, and some misgivings came to him about going to work.

Thinking the matter over in his mind for a few moments he decided to refer it to "Mack," a large, husky, good natured son of Erin, and foreman of the factory. Mack was a good Catholic and never overlooked an opportunity to be in church during services. His good qualities both as man and churchgoer, however, at no time deterred him from getting drunk several times a week. Mack was also rather proficient in profanity, and, like all Irishmen indulged this proclivity quite freely.

While seeking the foreman, Tony questioned the janitor regarding Mack's whereabouts. The janitor was a member of the I. W. W., rather kindly disposed towards his fellow workingmen and in a very genial manner showed him the foreman's office. A second or so later Tony stepped into the office and was greeted with a hearty "Hello." After receiving instructions, Tony removed his coat and was deeply engrossed in the work assigned him, a little later.

As Tony became adjusted and familiar with the surroundings and the daily routine of his work, his leading temperamental characteristics began to manifest themselves. Now, our Tony was a young man with a vast amount of pride, and his pride was very sensitive indeed. On the other hand, Mack, after years of man-handling, had grown accustomed to trample on the pride of any man under his domination. At intervals, Mack would go among the employes commanding, "Hurry up, boys, hurry!" These words were offensive to Tony, and being repeated day after day, began in time to rankle in his mind. Pondering, Tony finally came to the conclusion that conditions on the job were extremely unpleasant; that he was a slave; that he produced a great amount of wealth and his remuneration in the form of wages was only a pittance.

As the lunch hour came daily, Tony's mind was given over to musings of his mother and Sunny Italy. Tony was homesick, and as the malady grew his appetite vanished. The janitor, ever alert for the organization which he held dear and noting Tony's discontent, approached saying: "Fellow worker, don't worry; worrying is to no purpose. Slow down with your work, produce less—thus only can the boss be made to understand. Organize with your fellow workers; join the I. W. W. Here is the preamble, take it home and read it carefully. Then mail to the nearest local secretary an application with a two dollar fee, and you will become a union man, conscious of your rights with a power to assist you in enforcing them." At this juncture the whistle blew and Tony resumed his labors for the afternoon.

At the end of the day Tony went to his room. Weary though he was, he read the document given him by the janitor, and a profound impression was made on him. In discussing the matter with the janitor the following day, he remarked that he was now interested in securing literature of a similar character. With this the janitor handed him a copy of the then current Industrial Solidarity, a weekly paper published by the General Executive Board of the I. W. W.

### Getting Acquainted With the Class Struggle

Reading the paper that night, Tony became aware for the first time that the society round about him was divided into two distinct and warring economic classes. In his reading they were designated as the "working class" and the "employing class," and with no great difficulty was he able to follow the reasoning. In time Tony came to know this as the class struggle, realizing that it must go on till the economic power of the world is in the hands of the workers themselves.

The conclusions arrived at by reading the I. W. W. publications were forcibly driven home by a campaign of villification and slander then being conducted by the capitalistically-influenced newspapers. These papers almost daily referred to the I. W. W. as "an outlaw band of murderers and criminals," "an association of criminals," etc. In the meantime Tony learned that these statements were false, and

engendered by a sordid interest against an upright and well intentioned organization.

However, each day these falsehoods were broadcasted by the newspapers and the calumnies hurled at the I. W. W., resulted in a fierce persecution of that organization by the government, local vigilantes committees and other patriotic organizations.

In numerous parts of the United States, thousands of workers were flogged and mobbed; many were killed, and all in the name of 100 percent Americanism. But probably for no less reason than to make America safe for organized capital.

Had the promoters of this campaign of slander been acquainted with Tony, they would have been both disappointed and surprised at the effect produced in his mind by their efforts. By antithesis, Tony became convinced that the only real advocate of fundamental Americanism was the I. W. W., whose membership had and was demonstrating a willingness to fight and die for the freedom of the working class.

All this happened while Tony was in Butte, Mont., but there came a day when he conceived the idea of becoming a student at Northwestern University in Chicago. Acting on this idea he gave up his position, bid the janitor goodby and made his way to Chicago.

### University of Knowledge

Arriving in Chicago, Tony visited the university, gleaned some facts, and finally concluded that universities, like all other capitalistic institutions, were directed and controlled in the interest of a property owning class.

One day, while walking west on Madison street, Chicago, Tony found another university. It was somewhat to his liking, and in due course he came to the conclusion that it was quite the best university in the United States. This was evidenced by the fact that it had contributed more to the emancipation of the working class from wage slavery than all the universities and colleges combined. This university was, in truth, a university of knowledge and bore on the window this legend, "Headquarters of the I. W. W."

"Here is an opportunity," thought Tony, as he entered it, "to help crush industrial autocracy in America." After a little conference with the fellow workers in charge, Tony became a member and resolved to do what he could in furthering so worthy a cause.

In the I. W. W. he had found a real university; here was literature with something of educational value to the workers, and for them to be mindful of it would be instruction for them.

As a member of this great university, Tony traveled from city to city, from coast to coast, preaching the doctrines of Industrial Unionism and thereby arousing interest in the cause to which he had pledged himself. Often, in the course of his experience he was beaten, tarred and feathered, even jailed for opinions or some activity, but at no time did he waver or swerve from his aim of assisting in the freeing of the working class from the yoke of industrial slavery.

To Tony the crisis came in 1917. At that time the American capitalist class was very active in inducing the people of the United States to join the world slaughter of the workers then going on in Europe. The turning point came on April 6th of that year, when President Wilson answered the appeal of Wall Street with a declaration of war on the Imperial Government of Germany.

Soon after this came a second declaration of war, this time against the rights of the American people and was in the form of an Espionage law, which deprived all citizens of such freedom as they had. To review the whole of the law and its effects would lead us far from our theme, but it will suffice to say that by the means of this law the American people lost the right of free speech, free press and the right to assemble peaceably. In its train also it brought a reign of terror. Hundreds of periodicals were denied the use of the mails, many clubs and organizations were raided, forcibly disbanded, properties destroyed by organized bands of hoodlums.

The objective of most of these attacks was the I. W. W., and thousands of members of this organization paid in suffering for loyalty to the working class. For this loyalty many were injured, hundreds were jailed, and scores gave their lives.

### In Jail For Freedom

During these turbulent times, Tony, one evening, was speaking on a street corner in Bisbee, Ariz. For two hours the crowd had stood and listened with respectful attention, when suddenly and without warning, Tony was savagely attacked, and a little later lay in the street bleeding from many wounds. It developed later that the slugging of Tony was the work of several patriotic American citizens. Which, of course, is quite the customary procedure in dealing with people who entertain opposite views from the capitalists.

When Tony came to consciousness the next day, he found himself in the city jail. After several days he was informed that he had been indicted—that a federal warrant was awaiting him together with 166 members of the same organization for an alleged plot against the government.

Some days later Tony was taken to Chicago where he was placed on trial. It was not before the court of justice in the ordinary meaning of that term. Rather, it was a traversity on justice, presided over by a biased judge with a hand-picked jury in attendance. The trial was concluded by sending all the indicted men to the penitentiary for periods ranging from ten to twenty years.

At the penitentiary began a new experience, this time as a political prisoner, giving up his liberty for the cause he loved so well.

Five years have come and gone, but that his spirit

# A Visit to Liberty Hill

NEW YORK, metropolis of the Atlantic, has its Liberty statue.

It is not the fault of the lady on the pedestal that the Wall Street pirates and others of their ilk, who today control our halls of legislature and our courts, are making her a liar.

For many decades she was the beacon light of freedom to the oppressed of many nations who came to find liberty and justice on these shores.

Los Angeles Harbor (San Pedro) has no statue of liberty but it has Liberty Hill.

Liberty Hill today is probably the one spot in California where freedom of speech and freedom of assemblage exist.

Somehow, in spite of the criminal syndicalism law, in spite of the Chamber of Commerce, the Merchants' and Manufacturers' Association, and other reactionary influences which control this state, their power seems to stop at the foot of Liberty Hill.

Liberty Hill rises about 200 feet above the level of Third street, several flights of crude stone steps leading up to it.

### A Public-Spirited Woman

It is private property, the use of which has been granted the M. T. W. 510 of the I. W. W. by its public-spirited woman owner, and thus you find on top of it hand-made wooden benches seating about 800 people, a small platform 6 by 9, and standing room for several thousand, some of which is always occupied, and often it is taxed to capacity.

Here on this hill the I. W. W. holds five meetings each week, outside of their business meetings, which are always attended by from between one and three thousand for the English meetings and by from five to eight hundred for those held in the Spanish language.

We had promised ourselves the treat of being present at one of these meetings for quite some time, and had promised the fellow workers time and again to be there, but until Saturday, the 18th, something had always happened to prevent us.

We had heard the wondrous story of the fight the boys did make; we had written about it, and had expressed our opinion that it was the most wonderful thing in our experience, but now since we have been there we'll have to say "the half has never yet been told!"

We wish that somebody with more power of description was writing this article, for we know that we shall not be able to more than half convey to you the spirit of liberty and loyalty to the class struggle which exists in San Pedro and finds its best manifestations in the meetings on Liberty Hill.

When we left Los Angeles it was cool; probably the coolest night of the summer, and we remarked as we closed the door of the Defense office: "Well, there won't be many at the meeting tonight!"

### A Sea of Listeners

When we mounted the platform on Liberty Hill a sea of faces stared up at us from the benches, and most of the standing room was taken.

There has been one peculiar feature about this revival of industrial unionism in Los Angeles County —while the men were on trial in Court 19 (twenty-two), and the men who are on trial in Court 12 now (twenty-seven), naturally, did only a small portion of the wonderful work which has been done, they were always in the front part of the front trenches, even while their trials were going on.

### No. 510 Active

Not too much praise can be given the local membership of Marine Transport Workers' I. U. 510 in San Pedro, not too much can be said for those go-getting, class-conscious delegates who came up from the East Coast, but they got part of their inspiration from the fact that the men who were on trial in jeopardy of their liberty in court five hours each day, and spending many more hours in the law library and pouring over transcripts, found time and had the energy and the spirit to make the welkin ring with their exhortations and to move about all over Los Angeles County distributing literature, expounding the gospel of industrial unionism, and lining up members right and left.

---

is not broken is evidenced by the following appeal which he makes to the working class of America:

### "Fellow Workers"

"A gigantic struggle is going on in America. Especially is this true of California. In Los Angeles, San Pedro and various other localities, the workers are being persecuted for belonging to an organization opposed to the interests of organized capital.

"For this, hundreds of members of the I. W. W. are in jail, thereby losing their liberty and each subjected to inhuman and brutal treatment. They and we are in jail for you, and it is only just to us that you do something for yourselves that our great sacrifice may not be in vain.

"Organize Industrially, should be your answer to us. Let your answer be one of solidarity. Are you a scab to your class? Are you an enemy to the workers, to their cause, to yourself? If you are not, you can best do your part by becoming a member of the I. W. W.

"Fellow workers, whoever you are, black or white, Chinese or American, French or Italian, join against the common enemy of the working class: the industrial overlords who oppress you.

"Fellow Workers, do your duty, and in this way you will make America the 'Land of the Free.'

"Refrain from reading the capitalist newspapers and patronize your own publications where news that is reliable and dependable is to be found.

"All together! march against the common enemy, with the motto: 'An injury to one is an injury to all'."

Things had been moving at a fairly good rate up until March 15, when five of our fellow workers were not only found guilty, but for the first time in the history of California, sentenced to serve their terms on both counts consecutively, thus making their sentences from two to 28 years.

This, we have positive information, was done at the direct command of the Chamber of Commerce, with the idea that it would scare the delegates as well as their prospects.

### When Persecution Goes Wrong

When this became known among those of us who were on trial in Court 19 at the time, as well as the membership in general, we were filled with a Berserker rage and a determination to "show them."

Men who had been keeping on the side lines and never dreamed about taking credentials were writing letters in to their respective industrial unions for credentials and supplies, to be sent by RETURN MAIL.

Instead of quietly and unobservedly trying to get now and then a new member who might be of benefit to the organization, we went up and down the streets of Los Angeles, San Pedro, and many other towns with our papers and leaflets sticking out of our pockets and our credentials and books in our hands, and there was such an activity as the Pacific Coast has never seen before, and it has not ceased or diminished, and we have now gained such a membership and such a foothold in Los Angeles County that we can never be dislodged.

### An International Audience

The audience on Liberty Hill was as attentive and inspiring as any speaker wants to face or has faced.

Hundreds of women and children, hundreds of Spaniards and Mexicans, Italians, Bulgarians, Croatians, Greeks, colored and Japanese fellow workers, were there.

Men of the Merchant Marine, in their natty uniforms, dock workers in their overalls, and others in their Sunday best, fishermen, carpenters, clerks, cooks, waiters and waitresses, business men, lawyers, and doctors—they all were there, and listened for three hours to what us "pesky-go-abouts" had to say.

The peculiar thing about this meeting, and which characterized most meetings and a good portion of the whole movement here, was that out of the five wobbly speakers three of them came from the twenty-seven now on trial and one was the "man who conspired with himself," who is now out on bond pending appeal, having been convicted on May 15, in Court 19.

There was no holding back and no concealment. Industrial unionism was taught straight from the shoulder; our ultimate aim—the abolition of wage slavery—was openly proclaimed.

New converts were given their little red cards in sight of thousands and of the police.

The Chamber of Commerce was plainly charged with the foul murder of Fellow Worker Paul Borgen.

The speaking lasted for over three hours; all listened attentatively; almost none left during this long meeting, and there were no interruptions except by volleys of applause.

### A Singing Movement

And the singing!

When the words rang from two thousand throats "We know that every wobbly true will carry on the fight," you knew that the singers meant it. And when we finished with the song of the "Red Flag" and came to the words "With hats uncovered swear we all to fight beneath it till we fall," without any suggestion every man's hat came off, the audience rose as one man, and when you looked at their solemn determined faces, you knew that at least here in San Pedro there are thousands of men and women who, no matter what comes, no matter in what way the viciousness of the master class may manifest tself, will live and die for the workers' cause.

### Well Named!

LIBERTY HILL!—it is well named, for the spirit which created it, the spirit which manifests itself on it, is spreading all over the county and farther, like wild fire.

It is a spirit not created by sentiment or emotionalism but an outcome of the greatest educational campaign ever waged anywhere among the workers.

It is a spirit which will not and cannot be quenched. It is the spirit which, before many more years have passed, will sweep away the profit system, and the sin, misery and degradation which are a part of it, and which will usher in the Workers' Co-operative Commonwealth.

### Inspiration for All

If you need inspiration, if your faith in the victorious onward sweep of the advancing proletariat needs to be strengthened, if your mind and heart needs to be filled with the certainty of coming victory, come on to Liberty Hill in San Pedro.

---

### Sinclair Case Dismissed

CALIFORNIA. The case against Sinclair, Kimbrough, Hopkins and Hardyman, arrested on May 15th for attempting to hold an open-air free speech meeting in San Pedro, have been dismissed in the Los Angeles police court.

## THE I. W. W. PRESS

The I. W. W. is an institution that every reader of Industrial Pioneer should get acquainted with more fully. It was the first to tell the true story of the so-called Herrin "massacre" and to expose the murder of Martin Tabert in the lumber camps of Florida. For news of the labor movement and criticism of capitalism, it can't be beat.

The I. W. W. press consists of the following 12 publications in nine different languages:

**Industrialisti** (Finnish), daily, subscription per year, $4.50. Address Box 464, Duluth, Minn.

**Industrial Worker,** twice a week, per year, $4. Box 1857, Seattle, Wash.

**Industrial Solidarity,** weekly, per year, $2.00.

**Industrial Pioneer,** monthly, per year, $2.00.

**Solidaridad** (Spanish), twice a month, per year, $1.

**Golos Truzenika,** (Russian), twice a month, per year, $1.50.

**A Felszabadulas,** (Hungarian), weekly, per year, $2.

**Il Proletario, (Italian),** weekly, per year, $2.00.

**Tie Vapauteen,** (Finnish), monthly, per year, $1.75.

**Rabotnicheska Mysl,** (Bulgarian) monthly, per year, $2.00.

**Jedna Velka Unie,** (Czecko-Slovak), monthly, per year, $1.00.

Address all above nine publications at 1001 W. Madison St., Chicago, Ill. Send subscriptions there.

**Muncitorul,** (Roumanian), weekly, per year, $1.00. Address 13492 Orleans St., Detroit, Mich.

# Harken to the Hammers

By LAWRENCE BENYON

HARKEN to the hammers, endlessly hammering,
The din of wheels, the drone of wheels, the furnaces
Panting, where man as in a demon-palace toils
To forge the giant creatures of his brain.

He has banished the spring and the innocence of leaves
From the blackened waste he has made; the infected sky
Glooms with a sun aghast, and the murk of the night
Is peopled with tall flames like spirits insane.

He strips himself to the heat, not of the jovial sun,
But of the scorch of furnaces; with naked breast
Sweating beneath the iron and blear glass, amid
The hammers' hammering and the wheels' roar.

Not with the grapes of October trodden underfoot
Spurting juices of ripeness in runnels, his vats
Brim, but with gushes flickered-over and blinding,
Unshapen spilth and blaze of molten ore.

With a finger he lifts the weight of mountain-sides
Poised; the metal mass he shears red-hot in a trice;
He gives to the animate iron thews of force,
A Titan's pulse, and breath of fiery draught.

Monsters mightier far than himself he creates
To swim storming seas, and to mount in miles of air,
To deride Space and the old opposition of Time:
Their speed is like strong drink that he has quaffed.

He has the tamed lightning to do his bidding, draws
Energies out of the veins of earth; he is armed
From all elements, woven as in a magic web;
He has stolen seeds of Death, wherewith to fight.

He holds fabled terrors of the ancient gods in his hand—
In a handful of dust, earthquake and pestilence;
He exults to destroy, to obliterate, to be
Lord of the powers of the engulfing night.

Deafened with the hammers, inebriate with the sound
Of the powers he has raised out of their jealous lair,
He has fever within him, he becomes dizzy,
And craves, and knows not whither he is bound.

Shall he attain god-like felicity of ease,
Supreme articulate voice of nature's striving,
Or builds he a vast prison for himself, a slave
With iron of his own strong forging crowned?

O where is now the dew-dropt radiance of morning,
That sistered with him rock and reed and rippling stream,
When simple of heart in the sun with a free body
He accepted all the boundaries of his mind?

Full of fears he was then, shadowed with helpless need
To propitiate Powers that threatened each footstep.
Has he escaped from those old terrors, to be prey
Of fears more terrible because less blind?

# An Oliver Twist

CHICAGO, Ill.—Please give us more of the articles by Pasquale Russo. His article, "Revolutionary History of The Workers," appearing in the July issue of the Industrial Pioneer was a masterpiece.

Mr. Russo shows he has ability as a historian and he presents facts to the readers about the origin of past revolutions that cannot be found in the average history.

I have also read several of his poems and articles in, "Industrial Solidarity" and I like his style of writing very much.

I wish to congratulate you on having such able writers on your staff.

Yours sincerely,

**Louis Wilhelm Rauckman.**

# Wages, Prosperity, Depression

## A REVIEW BY PHILLIP TAFT

OUR wages is the foundation of our well-being and culture, the determing force of the health, comfort, leisure and education of the wage earner under our present industrial system, and whether we can appreciably raise the present standards depends on our ability to increase the contents of our pay envelope,—such is the keynote of the first chapter of "The Control of Wages," by Walton Hamilton and Stacy May.

The authors examine and dispose of the iron law of wages theory, i. e., that the terms of demand for labor meet the supply at a price which allows the laborer a bare subsistence. For, if perchance the rate of wages was higher the increase in reproduction would bring about an increase in the number of laborers, and beat it down. If it were lower, its inability to sustain life would remove the laborers to a brighter world and allow the rate to attain its normal level.

### The Wage Fund

Another wage theory examined by the authors is the wage fund. According to this theory there exists in society a separate fund, set aside by business enterprises for the payment of wages, and an increase to any certain set of workers must be at the expense of another group; for the real wages, consisting of particular goods, cannot be substantially increased, as the goods are not available. But the authors point out that, in time, it is possible to divert the fabrication of articles from the leisure class to that of necessities. We can also consider exports. The large surplus of food products that is wasted, through being allowed to rot and the possibility that an increase in the nominal wage would add to the workers' buying power, making it possible to utilize the productive powers of the unemployed, prove the inaccuracy of the theory that wages are governed by a special fund, set aside for the purpose.

### Making the Consumer Pay

In analyzing the methods by which the laborers' wages can be increased, the authors warn the worker that wage raises often shift the burden on the unorganized consumer. In other words, the manufacturer can very often shift the wage increase onto the back of the consumer. The bitter opposition exhibited by the employers against any attempt at a wage increase by the workers—the expenditure of thousands of dollars through the hiring of strike-breakers and guards at relatively exorbitant wages, as in the last railroad and coal strikes, for instance —is conclusive proof of the fallacy of that theory. In order for a condition of that kind to be possible, it would necessitate the control of the entire industrial system in fewer hands than at present exists. It would not only necessitate monopoly in one industry, but the control of the entire industrial resources of the country in so few hands as to eliminate idle capital, and all outsiders looking for an investment opportunity, by taking advantage of the high charges of existing organization to enter into competition with it.

### The Iron Man

That the morale of the workers is not a great factor in machine production is contended by the authors. Where work has been reduced to routine, the machine sets the pace; and the laborer must accommodate his efforts to the iron man he obeys. Where quantity production prevails and the various operations have been fitted into a mechanism that moves like clockwork, the laborers' will is just as mute as the machine.

We have raised our wage standards immensely in the last century; and if the wages are still too low, in comparison with the high productivity of the laborers, it is due to the ignorance and lack of strength of the laborers, who have allowed the huge progress in invention and technique to be diverted to the extravagance and splendor of their exploiters.

### The Business Cycle

One of the sources of wage increase, the authors suggest, is the elimination of the business cycle, or periodic depression—a period of industrial prosperity, followed by increased unemployment, more stringent finances, and misery and suffering generally. The so-called business cycles are primarily due to the large surplus produced by the workers and a lack of foreign markets in which to dispose of it. One of the best ways to eliminate them is to raise wages to a point where it will be possible for the workers, through their increased purchasing power, to absorb surplus production.

### Increased Efficiency

The authors, though recognizing the opposition of organized labor to increased efficiency propaganda, speculate on the possibility of increased efficiency enabling the workers to augment their real wages without engendering opposition, an attempt to separate some of the rent, interest and profit from some of the groups drawing incomes from investments.

The fact that real wages, or the buying power of wages, have decreased in the last twenty years, in spite of the tremendous increase in productivity of labor, would seem to vitiate such speculation.

### Wasted Resources

A source of increased industrial output—an increase devolving on labor—is the utilization of all human resources. Involuntary idleness, i. e., unemployment, which exists even in times of great industrial prosperity and becomes acute in times of industrial depression, is recognized as an inestimable waste of potential productivity by the authors. Of course, these problems touch the very roots of

# Industrialist vs. Statist

SOCIALISTS and communists insist that the powers of government must first be captured before a new era in society can be inaugurated by and for the workers. They claim that the workers must either vote or force, via a coup d'etat, men and women into office, there to legislate a new and beneficial system into existence. Those who do not share this viewpoint are condemned as lacking in fundamental wisdom.

This is but natural; nay, even logical. There is a glamor about politics that makes it both fascinating and absorbing. Politics is restless manouvering, action, excitement. In addition, history has been written and stressed from the political and biographical rather than the economic standpoint. What wonder then, that politics seem most important. What wonder then that it seems to offer the easiest road to victory, both for class and individual ambitions.

Nevertheless, behind politics are economic forces more powerful than parties in office and more domineering than great personalities at the political helm. The policies of a Bolshevist party and a Lenin, deflected by a primitive peasant development, is a modern case in point.

The socialists and communists fail to see that something more than votes and something more than the capture of state is required before the inauguration of a new era is possible. They have yet to learn in a truly practical way what they teach in a soundly theoretical manner, that social epochs are not superimposed or created from without, but slowly developed or grown from within.

The socialists and communists have yet to learn practically, though they proclaim it theoretically, that majorities and coup d'etats do not make revolutions.

Revolutions come as a result of economic or industrial action or development primarily. New inventions, new modes of producing, distributing and owning wealth—or the breakdown of the old—are the factors —not votes—that primarily cause great changes. An industrial economic system grows or is destroyed by its own inherent conditions. It can neither be voted in or out of existence, unless these conditions favor such a course.

Economic figs do not grow on political thistles. Leninistic communism cannot grow on primitive Russian agriculture. Attempts to make it do so end with Bolshevism in the arms of peasant reaction and the camp of French imperialism. Nor can Marxian socialism thrive on German industrialist-capitalist property. The result is to make social democracy the ally of Stinnes and Co. and the special defender of their interests. Neither Russian Bolshevists, nor German Republicans can change basic conditions, whether by coup d'etats or majority votes.

In this country, the conditions are equally impossible. The same socialists and communists who urge us to capture Washington also tell us that the real government of the country exists in Wall St. and that it consists primarily of the Morgan-Rockefeller alliance with their tremendous industrial and financial ownership and control. Congress talks; while the Morgan-Rockefeller group grows all-powerful.

It follows from the above that if a revolution is ever to occur in society, it must begin at the economic base, that is, within industry. With industry revolutionized, all else will be revolutionized, too. To the superficial, this proposition seems hopeless. The prospects for an industrial revolution seem dark, indeed.

Nevertheless, the industrial revolution is already here . It is already under way. It consists not only in the formation of giant combinations of capital, but also in the giant combinations of labor that is born of them. A million workers on strike in this country is but one of many indications of this industrial revolution. Such a thing was impossible 30 years ago, in the age of small production.

Accordingly, it is on the industrial field that the crucial battles of civilization are being fought and will be determined. This is evident in the many-sided efforts to suppress the industrial conflicts and its increasing intensity despite them. Also in the attempts made to divert the energy and

---

the social and industrial order, and any attempt to greatly eliminate these chronic conditions will mean radical changes in economic relationships.

The authors conclude their study with an analysis of the meaning of higher wages to the workers. If we wish to see a rise in culture, refinement, enjoyment and education, the wages must first reach levels enabling the workers to obtain and retain all of these things.

There are many things in "The Control of Wages" to agree with and few to disagree with. But in all, its reading will not hurt and may do some good.

[Publishers, Geo. H. Doran & Company, New York, N. Y.]

The enormously powerful electric locomotives that haul "The Olympian" through the western mountains pioneer a new era in railway operation.

The Revolutionist.

thought of the workers away from the determination of the real issues involved in it, via company unions and similar devices.

With industry, society rises or falls; for without industry none of the functions of society can be performed and all will be chaos and ruin. An industrially organized working class, conscious of its historic mission in society and alive to every opportunity to fulfill it, is, accordingly, the first requisite to modern revolution. Politics and political parties are of secondary importance.

Already are the workers in industry coming to grasp these most essential facts. This is shown in their persistent endeavors to make organized labor an element of social reconstruction as well as of immediate benefit. To this end they are proposing various plans requiring their managerial and technological participation, either in part or in whole. In brief, through economic organization the workers are striving to ward off social disaster and ruin—they are striving to influence social development through economic means.

The socialists and communists belittle the importance of economic action in favor of political action. They delight in shouting about "the great political victories of labor," a la the British Labor Party. But to the industrialist, the tendencies noted above are the most vital of modern happenings. They work from the inward outward, from the base upward; constitute, in fact, the rudimentary beginnings of an inherent evolution that will end ultimately in a victory for the workers.

To help these tendencies along via the organization of more efficient forms of industrial unionism is the duty of every open-eyed open-minded member of the working class.

## The Farmer is Going

THE workers in this country who are uniting on the political field with the farming class, in the hope of establishing communism in that manner, are attempting the impossible.

The farming class is going, if it has not already gone, both as an economic and political power. It is being crushed between the growing use of machinery and the imperialistic policies of the financial overlords of the country. The latter require the export of capital and the import of foodstuffs in return, as interest. The history of England, in which the farmer is eliminated, is the history being repeated in this country. Under the circumstances, why waste time with the farmer? His present activities are dying gasps; not virile growth.

Better put the working class movement on a sound economic basis, via the industrial unionism of the I. W. W.

# Talking American

ELSEWHERE in this issue readers of Industrial Pioneer will find an article by Upton Sinclair dealing with the struggle for civil liberties in Los Angeles. The article shows that Sinclair and his co-workers are worthy of both emulation and commendation. They are efficient and thorough in everything.

However, in his opening words, Upton Sinclair expresses some criticisms of the I. W. W., which though answered often before, need, for the benefit of new readers, to be answered again. The I. W. W. is gently admonished to "talk American," "use American forms of protest," cease "dual unionism" and "one leggedness." All of which is amusing, to say the least.

It reflects the fact that Upton Sinclair himself is essentially unaware of what Americanism is. Americanism is essentially industrialism. It consists in recognizing what Henry D. Lloyd recognized years ago in his book, "The Lords of Industry," wherein he said, "The time has come to face the fact that the forces of capital and industry have outgrown the forces of our government." Frank L. McVey, in his "Modern Industrialism" says the same thing in a more positive way when he declares "The result (of American industrial development) is what might have been expected: an overwhelming organization of industry standing side by side with a state that is puny when compared with it."

These men are talking American. They are echoing the sentiments of "the man in the street" who says, "Ah, you can't do anything against the corporations and trusts and the big fellows who have all the money."

Under the circumstances, what avails it to talk politics and unionism, when both are under a domination that renders them futile? To talk of a combination of politics and unionism in the face of American industrialism is to talk, not American, but English, a la the British Labor Party and conservative unionism. To talk "boring from within," is to talk, not American, but France, the France of which Wm. L. Foster has built up historic falsehoods; as the "boring from within" that he pictures as existing there is non-existent. In other words, to indulge in the language of Upton Sinclair is to argue from conditions that exist abroad where labor is less under capitalist domination and less in the shadow of an overtowering industrialism than in this country.

The I. W. W. is the most typical product of American industrialism and when it talks American it talks, not conventionalities, but essentials. It contends that the American working class must strike at American industrialism through industrial union organization. It must capture the basic factor in American life from within, through the thorough organization of the economic power of the workers employed therein. To this end, the American working class should concentrate all its energies, as that embraces the whole situation. To continue to promote impotent politics or fool around with a capitalist-dominated unionism is misleading and futile. It misses the bull's eye, because it never aims at it.

Further, the I. W. W. talks American in many other ways. The citation of constitutional law in defense of its civil liberties is resorted to on all occasions. It not only cites constitutional law, but the I. W. W., in its free speech fight, goes to jail to enforce it. In going to prison at Los Angeles in favor of free speech, and then quoting the constitution in his own behalf, Upton Sinclair follows a fashion set long ago by the I. W. W.

A perusal of I. W. W. literature would do Upton Sinclair good. Therein he will find that the I. W. W. traces the beginnings of the philosophy of the class struggle, not to Marx and Engels, but to Hamilton and Madison (see chapter 2, "The I. W. W. in Theory and Practice"). And it joins with Marx in crediting Benjamin Franklin with being one of the first to discover the source of value when he says, for instance: "The first price that was ever paid for a commodity was the labor necessary to produce it."

"Talk American;"—! And that, too, when Upton Sinclair stutters, figuratively speaking, in a European dialect.

---

The discussion in Industrial Solidarity, "What's Wrong With The I. W. W., If Anything?" should prove helpful to further progress in the organization. It should result in some constructive legislation at the approaching annual convention.

---

A Croatian twice-a-month magazine is the latest projected addition to the I. W. W. press. It is not named yet. Our September issue will have more to say about it.

The bond assessment stamps are selling well. Have you got yours? In one, two and five dollar denominations.

# The Triumph of Christian Civilization

By R. F. PETTIGREW

ONE hundred years ago a colony of English farm laborers, one hundred in number, composed of men, women and children—old and young—chartered a ship and started for Australia. They were inspired to go by the promise of free land—they and their ancestors having been tenants upon an English estate.

The ship was a sailing ship, and they loaded it with their second-hand furniture and second-hand bedding and second-hand farm implements; for that is about all the laborers who produced all the wealth at that time in England were permitted to possess. They also obtained some seed to plant, from a charitable person who was willing to await the success of the colony for the return of his investment; and, with the seeds and agricultural implements, they started from England for Australia around Cape Horn, and crossing the Atlantic and the Equator successfully, they reached out into the broad Pacific. They knew little of sailing routes and, by mistake, got off from the ordinary track of vessels and, when well out in the Pacific Ocean, their ship ran aground upon a reef which stove a hole in the bottom and placed it beyond repair.

Of course, great consternation took place among the passengers, for they never had been at sea before. Some fainted and some went nearly insane, while most of them began at once to prepare to save what they could out of the wreck—caring for those who had fainted and responding to the needs of the general welfare.

There were two young men—healthy and strong—who seemed to take no interest in matters, but busied themselves with trying to release from its lashings the only life-boat upon the ship—a very small boat because the colonists had not been able to equip their ship with the necessary life-boats.

Land was visible about ten miles souh of the wreck, and as there was but little wind and the waves were not high, and as the one life-boat they had was small, they concluded they would build a raft out of the ship and try to reach the land south of them. So, they all started to work—excepting the two young men—and constructed the raft on the leward side of the ship and began loading all their belongings. But, when they had partially finished the loading, they found out that the raft would not carry over one-half of the colony. So they took the old and helpless and the children, and half of the most able-bodied, and proceeded to propel the raft to the land, while the others were picking up and putting in shape the rest of the material.

They landed upon the island without difficulty and found that apparently it was a complete and absolute desert, so far as they could see. They had noticed, before they left the ship, that the two young men, who had been hanging around the life-boat, had disappeared, and that the life-boat had disappeared with them. They had rendered no assistance whatever in rescuing their fellow-beings from the wreck.

They returned with the raft to the ship and loaded on their implements and the remainder of the food and, taking aboard the rest of the colony, returned to the island.

For the next day or two, they gave their attention to stripping the ship, taking such parts as they could detach to the island, and constructing temporary shelter and after all that could be moved was taken to the resting place they selected, three of their number were chosen to explore the island; others were detailed to manufacture a temporary boat in order to see if there were eatable fish in the waters surrounding the island.

* * *

Within a day or two, those who had been sent to explore the island returned and reported that they had found a body of very fertile land several miles into the interior of the island, but that this land appeared to be the only cultivable land upon the whole island, and was about three thousand acres in area, and near the center of it was a

large spring of fresh water. That the two young men, who had abandoned their fellows, were there in possession of it, and that, when they proposed to bring all the other people up to the spring of fresh water and the fertile land, the two young men said that they, having discovered it, were the owners and they should stand upon their right to retain it; and, when the committee insisted that the land should not be privately owned but should be the common property of all—as man was a land animal and fertile soil was absolutely essential to his existence—the two young men who had taken possession of all the arms on the ship, as well as the boat, first argued that they must not undertake to discourage individual initiative—that it would be ruinous to civilization not to encourage individual enterprise and that the land belonged to them by right of discovery. But, when the committee pressed the point and urged the rights of man, the two young men said: "We are in possession of all the arms and ammunition that are in the colony and, if you undertake to force possession of this land, we shall fire upon you."

So, the colonists held a meeting and they decided that it would be a great mistake to discourage individual enterprise or to in any way throttle individual ambition, and, as they and their ancestors had always paid rent and had always had a landlord, they were imbued with the idea that it was the rights of property that were sacred and not the rights of man, and they resolved to move up on to the fertile three thousand acres and pay rent. And so they gathered together the old and the helpless and the little children and moved them first, and then they moved all of their belongings, including their supply of food and seed and implements, without any help whatever from the two young men who were busily guarding the result of their enterprise.

Of course, they immediately planted a crop and began cultivating the same, and the two young men married the two most likely young women on the island, and the two young women and their relatives esteemed it a great catch.

After the first crop was harvested, the lords of the island, by promising a little reduction in rent, put the whole laboring population at work building them a palace and they hewed, with their rough tools, the coral rock out of the barren portion of the island and built a very splendid residence for their rulers. After the palace was finished and they had manufactured as best they could, out of the wood obtained from the ship, furniture with which to stock the residence, they began to construct hovels of stone and earth for themselves, and their children, and their aged and their sick.

* * *

And so matters went on for several years and most of the two thousand acres of the land had been brought under cultivation and the population had increased and their labor had made a beautiful park out of one thousand acres which surrounded the residence of their lords, and a heavy wall had been built around the thousand acres so as to protect it from encroachment, and the population had increased both inside the wall and outside.

They desired to resume their journey to Australia and they decided to explore the island upon which they were situated. Upon further exploration, they found a deep and rugged ravine which contained some scrubby vegetation, coming down from a considerable elevation indicating volcanic origin, and in the ravine they discovered gold in great quantities and immediately began to extract it from the soil. It was placer gold and came out in nuggets big and small.

After gold was discovered, the oldest of the two colonists, who had appropriated all of the fertile land upon the island, took the title of Lord Goldfield, and the whole population turned out for a holiday on that grand occasion. They celebrated in their churches and were taught by their spiritual advisers that it was a great providence of God's which had bestowed upon them so kind and beneficient a ruler as the lord of the province; that, in fact, their lord had received his title direct from God; that it was of divine origin and was sent especially

to them by the great Ruler of the universe because of his loving care.

While they were digging the gold, some of the laborers explored the head-waters of the stream upon the banks of which the gold was found, and, among the scant vegetation which was growing between the rocks, they found a very small band of very wild goats. The goats were very thin and their hair was not of the finest quality; but immediately upon the discovery of the goats the lords of the palace had them removed to the one thousand acres which they had walled in as a park around their mansion, and great care was exercised in breeding the goats so as only to reproduce those of the highest quality in order to produce beasts of burden and to produce a sufficiently woolly coat so it could be used for making garments. And they had great success. The inferior goats were sterilized and only those allowed to reproduce who were of the very best quality, and the animals became strong and large and covered with a woolly coat, and were thus suitable for beasts of burden, and to furnish wool for cloth and milk for the children of the rich.

As a result of this achievement, the other young man took a title—the title of Lord Angora, in honor of the discovery of the goats. And again ceremonies were held and a holiday proclaimed and the population instructed in the divine origin of this title.

But, while birth control was exercised with regard to the goats, and great care taken to see that they were properly fed, the common people of the province were taught that it was wicked to interfere with the processes of nature, and as the population had brought with them the usual diseases common to the sexes in Great Britain, there were increasing numbers constantly among the inhabitants of those who were diseased and of those who were mentally defective; in fact, a very large number of dependents had grown up and the slums had appeared, and as they took no care with regard to sanitary affairs, epidemic diseases—the result of the poisoning of the population by their own filth—spread among them and reduced the population from time to time. And the people were taught that this was a visitation by Providence to punish them for their failure to appreciate the glory and goodness of God; that they should read the Bible every day and observe Sunday and attend Church and, above all, contribute to the support of the Church and God's representative—the preacher, who had ordered a day of fasting and prayer to appease the anger of the Deity. And the preacher chanted—"God is great and God is good; He provideth our daily food; by His hand we are all fed; give us now our daily bread." And the people cried "Hallelujah, Glory to God." But God's wrath was so great that He would not hear, and the epidemic ran its full course. The preacher then told the people that the only way to prevent future epidemics was to be more devout and that God, above all things, loved a cheerful giver.

The rulers of the island, who had already had their serfs build large warehouses, were the owners, of course, of all of the gold, and the large warehouses which they had had constructed were used to store the products of the land, for many of the colonists were improvident—they would sell off what they produced so that they would not have enough to last them until the next crop doubled and trebled in number—and all of the two thousand acres was under cultivation, for they could raise three crops per year; and the ruling classes, knowing that the value of money depended upon its quantity, decided that the nuggets of gold should have a value in proportion to their weight or size and, of course, they decreed that the unit should be pounds, pence and shillings. And they manipulated the money so that, when the crop was harvested, the money was very scarce and, therefore, the prices were very low, and they would buy the products of the land and store them in these warehouses and, when the next crop was fairly in the ground and the improvident members of the community were entirely out of food, they would make the volume of money exceedingly abundant, and charge several times

what they paid for the products of the laborer of the land. They soon found that this was unnecessary for, as they were the only owners of money and had the only warehouses that were, they could arbitrarily fix the price and thus exploit the population to the full extent of their desire, through their trust control.

* * *

But a new problem had arisen. Malthus's theory that population would outrun subsistence had come true. The two thousand acres would no longer produce food enough to supply the population and the serfs began to wonder how they could overcome the difficulty. They never thought of encroaching upon the park because that was private property belonging to God and the descendants of the two young men who had, by their private enterprise, discovered and taken possession of it; and the descendants of these young men never, for a moment, thought of plowing up the park, and they insisted that the miserable population would have enough if they would exercise frugality and industry and would educate themselves; but they were ignorant and many of them were idle and of but little consequence.

So a committee was appointed to explore the adjoining islands and see if they could find land. Their first expedition had produced gold. All of the original colonists were dead, and numerous children and grand children had taken their places.

In exploring the adjacent islands, while they found them entirely barren, discovered a human being, clothed in palm leaves, who fled upon their approach; but they called to him and, lo and behold! he responded in the English tongue. He had been upon the island for ten years, the only survivor of a shipwreck and had subsisted upon roots, scant vegetation, and the products of the sea, clothing himself with palm leaves.

Of course he went home with the colonists and, after he had fully recovered, to preach the doctrine of socialism. He said the rights of man were sacred and not the rights of property. He said that every man should have all that his labor produces—that man was a land animal and that the land was essential to his very existence, and that no person should own more land than he could use and that, for the idle to demand rent for the use of the land—the common inheritence of all—was immoral and dishonest, and that they should immediately take possession of the thousand acres in the park and put those acres into crops. And many of the people endorsed his views.

But the ruling classes were not idle. They had watched his movements; they sent their paid retainers, their lawyers, among the people and argued that to take the park and not pay for it would be confiscation and robbery; that the present owner had inherited it from ancestors who had acquired it by thrift and industry and enterprise. That if the public appropriated it to the good of all it would destroy all incentive to individual enterprise and stop the wheels of progress and discourage ambition and return the world to barbarism; and they also wanted to know if they proposed to rob widows and orphans.

The ruler had also organized a standing army of trained men under the plea that the colony might be invaded by savages from some unknown island in the sea, and that an army was needed for protection. The army was officered by men who had been brought up from childhood as trained soldiers and taught that they must obey their superior officers even unto shooting their own brothers and sisters, if commanded to do so by the officer over them. And, as the commander-in-chief of their standing army was by law the oldest son of the oldest two men who had discovered the fertile land, the army was ordered out, and they captured the socialist, in the interest of law and order, and stood him up against the wall which surrounded the one thousand acres, and fired a volley into him and threw his body into the moat.

Civil war once commenced; the population divided almost equally on the great question of the sacred rights of property, and they began killing each other until half

# Editorial

## WHAT CONFRONTS US

JOHN ALFRED, organizer for Mine Workers' Industrial Union, No. 220, was arrested at the Taplin mine near Bannock, O. His offense was such as to make plutocracy tremble; namely, he wanted to speak on "I. W. W. vs The American Federation of Labor." The sheriff, without giving him a chance to be heard, arrested him and charged him with "inciting to riot, sabotage, and advocating a political revolution by violent means."

The United Mine Workers' officials and the authorities work together with the coal operators in this district; and Alfred's arrest is undoubtedly traceable to the opposition of this combination. This is a typical instance of such arrests. It justifies the statements made by Roger E. Baldwin, director of the American Civil Liberties Union, before the conference of the League for Industrial Democracy at Camp Taminent, Pa., as follows:—

"We are confronted with the unconscious but disgraceful union of the federal secret service, the employing interests, and the heirarchy of the American Federation of Labor in a common effort to kill off radical ideas and movements. There is no other English-speaking country on earth, and few others of any sort, where such alignment exists today."

Nevertheless, some persons contend that the workers should not organize in an industrial way in defiance of "this disgraceful union." And they call themselves "friends of labor." Count them in with the things that confront us, too.

## EXTRAORDINARY UNIONISM

EXTRAORDINARY are the ways of the A. F. of L. unions. Here's the mine workers' union, for instance. Its official organ, The United Mine Workers' Journal, in its issue of June 1, 1923, calls on the coal operators to perform "a real service to the American public" by closing down "4,000 unnecessary coal mines that are now open and operating spasmodically" and thereby "put 200,000 miners **out** of the industry."

How's that for naivete, operating in the employers' behalf? "Put 200,00 out of the industry!" Depressions put millions out of industry and yet they are very much in it. They are the reserve army of the unemployed that employers use to cut down wages and destroy unionism. That's what the United Mine Workers' journal practically asks, namely, the creation of a reserve army of unemployed that will cut wages and destroy unionism.

But what else could be expected? The A. F. of L. is not a constructive, working class organization, but a protective, capitalist bulwark. This is reflected particularly in the United Mine Workers' official opposition to the 6-hour day, the nationaliaztion of mines, and other measures condemned by the coal operators as detrimental to their interests. Also in the official opposition to every working class element with constructive ideals. No wonder the A. F. of L. wars on them—to their honor, be it said.

## ORGANIZING THE EAST

A RECENT contributor to Ind. Solidarity contends that the East lacks gumption in organizing the I. W. W. The argument looks plausible until one reads of the attempts being made in Chicago to develop organization there. And then, as Industrial Pioneer goes to press, there's the mass conference of the metal-machinery workers at Toledo, O. Consider also the work begun at Buffalo by members of the Building Construction Workers and the Marine Transport Workers acting conjointly. In Iowa, Nebraska, Illinois and central Ohio there is also some activity among the general construction workers, as there is among the iron miners of Michigan. Signs of coal miners' activity come from eastern Ohio, too. From this it looks as if the East has enough gumption, but is lacking in numbers. The Wobblies are most numerous west of Chicago.

---

of the people was killed. But, as the trained men with the guns were on the side of the owner of the property, the people that remained alive stopped the unequal contest, and right and might prevailed—law and order triumphed—the congestion was relieved—the park was saved—the people agreed to continue to pay rent. Christian civilization pursued its peaceful and solemn course.

### THE WAR ON EVOLUTION

THE Survey for June 15, declares, "A visitor from the West gave it as his opinion that large business interests are supporting and encouraging the fundamentalist movement within the churches because it turns its back to, and even denounces at times, movements for social reform."

There appears to be other reasons as well. Big business finds the idea of evolution dangerous, as it likes to have the workers believe there is no such thing. It reasons that, if the workers are convinced that there is no evolution they will come to regard capitalism as unchangable and so oppose its abolition or overthrow. But once they (the workers) believe that institutions are ever-changing growths, they will come to regard capitalism as but a stage in economic development and so prepare to end it. It is for this reason that big business favors special and unalterable creation.

This latter idea is also becoming a feature of many other current discussions; discussions not at all theological. Take the treasures found in the tomb of King Tut. The newspapers describe them in a way that is intended to make readers believe "there is nothing new under the sun." The inference conveyed is, "why change capitalism then?" Of course, the evolutionists make such inferences impossible. They show that life is change,—a continuous outgrowth of what has gone before. Hence the encouragement that big capitalism is giving to all fundamentalists so-called, whether in or out of the church, in their war on evolution.

# Ten New Leaflets

THE I. W. W. Educational Bureau has produced, during the last month or so, the following leaflets for free distribution:

1. RAILROAD WORKERS—YOU ARE SOLD OUT. A description of Stone's coal mine experiences. The president of a great railroad brotherhood is a capitalist and hires scabs.

2. VERMIN. A smash at the employment "shark" evil.

3. CUT DOWN THE HOURS OF WORK. Facts and figures on the evils of a long workday.

4. CONTRACT WORK. An expose of the clever tricks used by the capitalists to make every man his own slave driver.

5. GO SLOW. Which appeals to the working class to follow the example of the capitalists and give nothing for nothing.

6. CONSTRUCTION WORKERS. This leaflet, issued for 310, points out the necessities for the dirt movers to join the I. W. W.

7. SPINNERS! WEAVERS! An argument for all textile workers to unite in one big union.

8. WHAT ABOUT THE WOMAN WHO WORKS? Addressed to women, and tries to show them their interests are with the working class.

9. NEGROES, DEFEND YOURSELVES! Why the most exploited section of the American working class should be revolutionary.

10. STEEL WORKERS. A leaflet for 440, which tells the slave of Gary and Grace a few salutary truths.

All these are four-page leaflets, with the exception of the "Railroad Workers," which is two pages. They run about 2,500 word apiece on the average, and are printed in good large type. Just the thing to educate the unorganized with.

In addition to these general leaflets prepared by the Educational Bureau, there are a number of new translations. There are now pamphlets issued in Italian, Greek, Croatian and Spanish, all new matter, off the press within the last thirty days.

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of management of the industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# Rally to the Defense!

The seventh Christmas many of our fellow workers in Leavenworth have spent in prison is approaching.

Hundreds of thousands of dollars have been expended since 1917 in an effort to get them out.

It has been a hard fight and a long one. The federal cases in the beginning represented the storm-center of the class struggle in America. War prejudice prevailed, the newspapers were against us, feeling ran high, the political prisoner issue was generally misunderstood and it seemed almost impossible to get the facts before the people. Now, however, all this has changed. All indications now point to an early release.

## Victory Is In Sight!

A large body of intelligent public opinion favors immediate and unconditional amnesty. Hundreds of big newspapers and magazines have declared themselves against the further imprisonment of our fellow workers. Prominent statesmen, churchmen, lawyers and publicists have come out openly in favor of release for political prisoners.

Friends of amnesty have multiplied by the thousands. All are willing and eager to work for the cause of amnesty. Organized Labor is beginning to learn that these cases are of vital concern to every man and woman who works for a living. The time was never more propitious for an effective amnesty drive than at present. The General Defense Committee has arranged for such a drive on a huge scale. The slogan is:

## Free Political Prisoners by Christmas!

We must get out publicity on a bigger scale than ever before. We must organize and co-ordinate all the forces in America that favor amnesty. Defense pamphlets, leaflets, letters, and articles must be circulated in large numbers to reach all classes of people. Meetings all over the country, some of them at least as large as the Borah meetings, must be arranged for and advertised. All possible pressure must be brought to bear upon the administration in Washington between now and Christmas.

Let's all put our shoulders to the wheel and get the federal cases out of the way so we can concentrate upon the state cases and wipe the slate clean. Let's get all of our imprisoned members on the street so we can buckle down to the work of organizing and educating the millions of workers in America and the World. LET'S MAKE THIS THE LAST DRIVE THAT WILL BE NECESSARY TO SECURE THE RELEASE OF THE MEN IN LEAVENWORTH!

Funds are needed as never before. Fellow workers, kick in with the defense stamps and donations at once. All together now, in deadly earnest

BLAST FURNACES, NEW CASTLE, PA., AT NIGHT

# The Steel Workers Awakening

By FRED W. BOWERMAN

A STEEL worker, begrimed from smoke and grease, tired from the twelve hour grind, passes through the mill gates toward the place he calls home. A drink to help fight off that constant tired feeling, a hurried supper to fill that emptiness which plays around his belt and to throw himself into a sagging bed for some rest, are the things uppermost in his mind.

A soiled coat is carried over one arm, which in turn is shoved thru the handle of a dented dinner bucket. As he moves along his pace quickens with the realization that there is no time to lose if he is to snatch some sleep during the cooler morning hours. The August sun will soon be high and the torrid heat of the summer day will soon be upon him. He must be asleep before that, if he is to sleep at all. Mother Nature has provided that he sleep with the quiet coolness of night, but the mill instead demands he be in front of a roaring furnace. He must sleep, if at all, with the noise of moving traffic, cussing teamsters and the yelling of the urchins whose only playground is the space before his shack. Eat, work sleep; Saturday, Sunday, Monday, day after day, night after night, and every day in the year, that is his program, for he is one of the cogs in the great human machinery, which keeps the mill and hundreds of other mills in the valley in motion. He is but one among thousands of others whose lives are poured into the molten metal which flows in a never ending stream from the steel mill to the auto plants, railroad shops, etc.

MEN, M E N, MEN; big and little, fresh and worn, black, white, brown and yellow. Old men and young boys, Poles, Slavs, Mexicans, Negros, and Americans. These pour out of the mill gates every night and morning. Men, smoke, and stacks; all for STEEL. Steel for whom and what might we ask? Why; steel for the JUDGE of course. And might we further inquire who is the Judge? Why, certainly; he is the master of men and money, the master of smelters, ore mines, ore boats, railroads and steel mills. Hundreds of workers in each mill and hundreds of mills throughout the Valley and the Calumet. Steel workers, ore boat and railroad workers, and miners on the Mesaba all keeping time with a given beat. Long hours, low wages, unbearable conditions is the lot of all. A master of thousands and thousands of men that is who the Judge is. An iron master; a tyrant master; a cruel master. He personifies giant capitalism, for whose profit the steel workers labor.

And what are the tons and tons of steel which are produced every twenty-four hours used for? What becomes of it? Where does it go? To ten thousand places for ten thousand uses is the answer. For railroads, and their engines; street cars, bridges, boats, flying machines, cannon, shells, looms, lathes, steam hammers, automobiles, steam shovels, mowing machines, reapers, dishes, stoves, nails, screws, scales, typewriters, tin, cans, jails, locks, printing presses, and we might add, etc., etc., etc., for the service to which steel is put in our present

society is beyond the estimation of any one or a dozen men. Everything that man uses today is the result of steel. The workers in the ore mine, on the ore boats and railroads and in the steel mills are the builders of industry,—of society; for this is the age of metal—of steel.

Today, the workers, upon leaving or entering the mill are thinking about something besides food, sleep and work. They are realizing that twelve hours of hard labor out of every twenty-four should bring them somethng more than cheap food, cheap clothes and a cheap room. They are beginning to understand that as individuals they are the victims of a system which looks upon them with contempt. Alone, each man for himself, the twelve hour day and the rule of Gary will be handed on to their children and their children's children.

They have come to know that their only hope lies in organization. That organized together, in the mills, on the great lakes, on the railroads, in the mines, they are in important part of industrial society. The whole world depends upon the commodity they produce. Industry cannot go along without steel and there must be tons and tons of it produced every day. The whole manufacturing industry must have steel from which to make its products. If so, then let the steel workers receive a decent standard of living while producing steel. This is what is becoming the uppermost thought in the steel worker's mind. He is important, when organized with his fellow workers. He is nothing, while he remains unorganized. He is sick of empty promises. He is overfed on what will be done after-while or next year. HE WANTS SOMETHING NOW, and he is not going to wait for someone to give it to him.

The steel workers are answering the call of the One Big Union. They sense in the I. W. W. idea of organization the real way that results can be obtained. They are responding to the Industrial Union program and are going to smash the twelve hour day. Three years back and the twelve hour day was stable, sound, good business, according to the captains of industry. For three years the steel workers have been working twelve hours and reading I. W. W. literature. For three years they have been preparing for organization, industrial organization and the industrial strike. The steel workers are now lining up in the One Big Union of the I. W. W., together with their fellow workers on the Great Lakes, on the railroads and in the mines. Lining up for what: To smash the twelve hour day, Garyism, and all that goes with it.

The steel industry is the open wedge to Eastern Industry. Upon the success of the steel drive depends the success of the O. B. U. Th steel masters may have their millions, their lackeys, their past success in smashing craft unions, but with the workers in the steel mills lining up in the I. W. W. their power is doomed. The I. W. W. is moving, and moving ahead in the proper direction. Let the tramp of their marching feet be heard around the world. The tables will be turned and the slaves of steel shall be the masters of themselves. Let the slogan be "Smash the twelve hour day." On with Industrial Organization.

# The I. W. W. Steel Drive

ONE of the most important campaigns ever undertaken by the I. W. W. is the campaign of organization among the steel workers, launched at an enthusiastic mass conference of the members of Metal-Machinery Workers' Industrial Union No. 440 at Toledo, Ohio, on July 22. All of the members of 440's General Organization Committee, headed by Chairman Alfred Anderson, as well as General Secretary-Treasurer, Wm. H. Thompson, were present. So were delegates from many steel towns, such as Detroit, Bethlehem, McKeesport, Pittsburgh, Cleveland, Warren, Niles, Youngstown, Canton, Middleton, Cincinnati, Newport, Wheeling, Martin's Ferry, South Chicago, Gary, Chicago Heights, Waukegan and Joliet.

**The slogan resulting from the conference is: "Smash the twelve hour day, abolish the 7 day week, and make $5 the minimum wage for the unskilled steel worker."**

The conference was marked by the directness with which the delegates attacked the task in hand. There was no digging up of ancient grievances or criticism of what might have been. Instead plans to make the campaign effective were immediately taken up and considered, with good results. This was due to the fact that the Toledo conference was demanded by the membership and because it was held amid conditions that made decisive action both opportune and necessary.

**Steel Workers' Shack, Gary, Ind.**

Among the many things done was the raising of money. This, the first necessity, was met by the pledges of those present, to raise a fund sufficient to initiate the campaign. A committee of four on ways and means was also elected. Other committees of equal importance are a committee of three on finance, a committee of three on perfecting or-

**Copulas at Bethlehem.**

ganization, a committee of five on publicity and a committee of three on steel workers' organization.

The last two committees have been actively at work since the conference adjourned. In fact, the main headquarters of Metal-Machinery Workers' Industrial Union No. 440, at 1001 W. Madison St., Chicago, Ill., where they meet, has been greatly transformed. The rooms have been doubled in capacity and the office force has been greatly increased. General-Secretary Treasurer, Wm. H. Thompson, is kept busy answering the phone and giving newspapermen information regarding the conference and its plans. The Federated Press and Associated Press have both given considerable space to the I. W. W. campaign among the steel workers. More importance is attached to I. W. W. activities in the steel industry, apparently, than to any other factor there.

The newspaper announcements of the holding of the Toledo conference caused considerable stir in that city. The headlines were of large type and the effect was instantaneous. The Director of Public Safety announced that as Toledo was a city of wage workers and manufacturers who desired peace, no conference of the I. W. W. would be tolerated. The Rotary Club at a special meeting held on Friday evening, July 20, passed resolutions affirming their determination to stand by this violator of constitutional rights of free assemblage.

**However, when July 22 came, the conference was held, with the record-breaking attendance already noted.**

It required some strategy on the part of the local members and the delegates, but it was accomplished, nevertheless, in a manner complimentary to the brain work of the I. W. W. There was no clash, no free speech fight, no compromise. But the director of safety and his "sleuths" were outwitted by men who consider him, not a protector of industrial peace, but industrial slavery, as embodied in the 12 hour day of the steel trust, which has been condemned by the religious and engineering societies of the land as degrading and unnecessary.

The conference lasted 7 hours and was held in one of the best known halls in Toledo. No one was permitted to leave during the conference. Conductors were stationed at the door, and cards had to be shown. Many local members of other industrial unions than 440 were present also. And all this while the "sleuths" were trying to locate those "terrible I. W. W.'s."

The delegates to the Toledo conference began to arrive in that city on Saturday, July 21. They came mostly in autos, as the most economical and appropriate means of travel for steel workers. They were in earnest and intent on doing good organization work. They had plenty of thrills and excitement, thanks to the press, but never lost their heads once.

Street meetings by all organizations are permitted in Toledo. But the I. W. W. was forbidden to hold one on Saturday evening, July 21. This by a policeman who, when questioned about the constitution of the United States and free speech, replied that he knew nothing about the constitution—except to violate it, most likely. However, as Glenn B. Fortney, the chairman, and another speaker had already spoken about an hour, explaining the coming I. W. W. drive in the steel industry to about 500 people, it was felt that the object of the meeting was already accomplished; and so nothing further was done. The desire to keep the conference intact also prevailed.

But on Sunday evening, July 22, with the conference over and good results accomplished, a free speech meeting was opened at the same place. M. Raddock, the speaker who wes stopped the evening before, opened up. He talked a considerable time on the decisions of the conferences, regarding the drive in the steel industry. He also took up a good collection as a beginner to support the drive. Noth-

HARVEST TIME
—From Tie Vapauteen.

# Big Gains for I. U. No. 110

A GAIN of over 60 per cent in membership for July, 1923, as compared with July, 1922, such is the success of the membership drive of Agricultural Workers' Industrial Union No. 110, I. W. W. August returns, incomplete as they are in the opening weeks, indicate a continuance of this greater growth. To make this increase permanent is the present endeavor of 110.

The most remarkable part of this increase is that it has been obtained in the face of an opposition that practically resorted to slavery in order to beat the I. W. W. In some towns in the Dakotas, the commercial clubs and common councils have combined to send to jail harvest workers refusing to accept the wages and conditions proffered. There is no economic freedom in these districts; and yet the I. W. W. grows despite it—or is it, because of it?

110 is interested in general strike. A program for same has been outlined by the general organization committee. It leaves date of same to latter; and advocates preliminary job organization primarily.

A conference to be held at Stockton, California, has been called for Sept. 1st. California is regarded as the key to the I. W. W. With the surrender of California the barriers to organization will disappear everywhere. The best efforts of the organization will be devoted towards getting as many courageous delegates and members as possible to make the drive to organize California agricultural workers this summer.

Like the other industrial unions, 110 is trying to organize unorganized territory. A traveling delegate will be sent to the northwest section; and also one will be placed in Canada, if conditions develop.

110 is pushing the bail and bond stamp, with good results.

# Coming Conferences

A General Construction Workers' Conference will be held at Portland, Orc., on October 1st, to elect delegates to the convention from District No. 1, which includes Washington, Oregon, Idaho and Montana.

District No. 3, including Utah, Colorado, Wyoming, North and South Dakota and Minnesota, will also meet in conference at Casper, Wyoming, on October 1st.

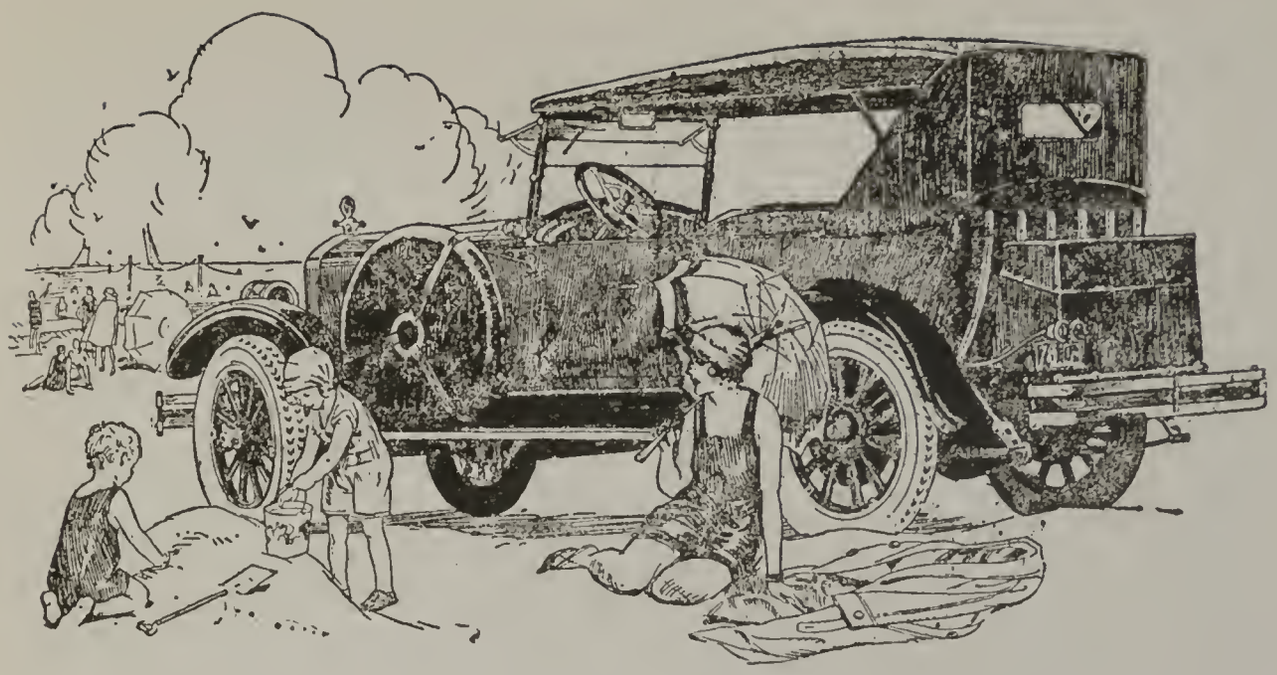
Another conference at Stockton, Calif., will include Nevada, California, Arizona and New Mexico.

The Industrial Worker, western organ of the I. W. W., is to get new presses and move into new quarters. It has been a financial success for two years, and since the first of February has been printed twice a week. It is now conducting a campaign for 10,000 new subscribers.

**WHEN THE HARVESTER IS NOT A-HARVESTING**

**This chart shows the "customary" occupations of 32,000 wheat harvesters. One-third of them gave farm work as their regular job, one-third were laborers, and one-third skilled workers from cities. The percentages are not absolutely accurate, for the relative proportion of harvesters of the several types varies from season to season. Data collected in 1919, 1920 and 1921 indicates that the distribution as given in this chart is substantially correct.**

**—The Survey.**



# When Work Women Organize

## There will be More Autos, Wives and Kiddies at the Beaches and Less Starvation and Misery in the Tenements

IN France, before the world war, the General Confederation of Labor, was busy inaugurating a campaign of education among working class women. It was recognized that the wives, daughters and sweethearts of the men workers are great factors in settling working class issues. The conservatism of the working class housewife has broken many a working class strike. So also has the conservatism of many a woman working in the factory or shop. Hence, the French idea, which was to promote a better understanding of labor organization and its ideals, by means of lectures, illustrated, principally, by movies. But the world war interferred; and nothing has been heard of the idea since.

No doubt, though, it is a good, a necessary idea, not only in France, but here in the U. S. A. as well. In this country the working class women lag behind the working class men, in a lack of understanding regarding Labor and its problems; though, it might be added, the lead held by the men is not much to boast about, especially out loud. Nevertheless, it exists; as shown in the more extensive organization among the men. There are about 18,000,000 housewives in this country. No doubt they are most largely working class. There are also between eight and nine millions of women wage workers. This is twice the membership of all the labor organizations. Very few of these women wage workers are organized; hence the imperative need of educating and organizing them, as well.

It will not do to start off with a negative argument, saying "Woman is instinctively conservative." This is not proven by the ex-

tremely rebellious attitude of women in times of great strikes. The textile workers', shirtwaist, shoeworkers', and other strikes have shown women workers in a light that refutes "the inherent-conservatism" argument. And then think of the splendid fight of the miners' wives in the recent Kansas and other great strikes! The women workers, too, have great leaders in Mother Jones, Alexandra Kollantay, Rosa Luxemborg, Maria Spiridonova, and others too numerous to mention. Women are as good material for agitation, education and organization as are the men; so let us go to it!

There is further encouragement in the fact that some of the women themselves are taking a hold of the task and are organizing women's trade union leagues. Though such leagues are not to be encouraged, as they create sex divisions among the workers, they are at least noteworthy, as they exist contrary to general conceptions regarding woman's ability and willingness to organize economically. Where women do not constitute the bulk of wage workers—and, in some industries they do—it is better that they organize on industrial lines together with the men; thus making their own forces and the forces of all concerned that much stronger.

Women are also taking an active part in forming auxiliaries to the trade unions. These auxiliaries include the wives, daughters and sweethearts of members. They are very useful in times of strikes. Then they visit the wives of weak-kneed members; and through them strengthen the strike line. Or they help a male member to convert his wife to the need for continued resistance. They also act as the union's intelligence bureau, ferreting out cases requiring aid, running down sources of scab supplies, etc., etc. In boycotts, they organize the family purchasing power, in a way that will do the most good. At entertainments, in relief work, and in a thousand and one ways, are the working class women a factor in the trade union auxiliaries. The I. W. W., in wrestling with the question, where to place the wives of members, will find their problem solved in the women's' auxiliary.

However, these are only beginnings. The work of educating and organizing women workers must be pushed further. And, it seems it can be done without any great changes in tactics. There is much in the labor movement that commends itself to working class housewives. The effort to bring wages somewhere up to the cost of living is one of them. Every housewife can appreciate the need for such measures. So also can she grasp the need for less hours, so that husband can spend more time in the bosom of his family. And then labor's opposition to child-labor, woman-labor under detrimental conditions, prostitution, war, capitalism—this opposition also commends itself to the housewife in a way that she appreciates and understands, once it is presented to her in an intelligent manner. The trouble is that the capitalist side reaches her most, through church, press and movie and impresses her most on that account. To get labor's side before her more often and more attractively than heretofore is the problem that the French idea of education via the movie would help to overcome.

As for the woman wage-workers, she is turning towards labor organization, sometimes only to be repulsed, as there are some labor unions, like the barbers, that are still adverse to women in their ranks; while still others admit them only to snub and discourage them as much as possible. There are still plenty of men who hold women responsible for the competition created by the introduction of machinery and the consequent destruction of skill. There is also considerable sex-prejudice extant.

But there is no such discrinination to be found in progressive trade-unionism, nor in real industrial unionism. They both recognize that woman is a factor in industry, to be organized in order to promote the interests of all the workers employed therein. Especially is this true of industrial unionism, which makes no distinctions of either race, color, creed or sex; and *organizes all the workers just as they work for their employers into industrial unions reflecting their industrial, or technical, unity.*

In industrial unionism, the women have exactly the same standing as the men. They are eligible to all the offices; and have the same rights, duties and privileges. No attempt is made to discourage them. On the contrary, they are urged forward with all the speed possible, sometimes, too much so. But that's the case with the men, too, quite often.

The intense persecution to which industrial unionism has been subjected since the American entrance into the world war could not have been successfully resisted had it not been for the steadfast adherence of its women members. The rebel girl has stuck to the rebel boy without faltering. She has been a source of cheer and inspiration, raising funds, securing publicity, organizing prison comfort clubs, going out on strike, and assisting in every way possible to make the ideals of industrial unionism come true.

May her numbers increase. Every addition to them is sure of a hearty welcome.

# Internationalism at Detroit

CAPITALISM is international. It knows no boundaries. In Europe, the aeroplane is commercialized and flies over the whole continent, regardless of the warring nationalities below. The commercial aeroplane, no doubt, foreshadows and symbolizes, in a practical manner, the internationalism that is yet to be.

Here in Detroit, we are also making for internationalism, but in a different way. Opposite, on the other side of the Detroit River, once known as the St. Claire, lies the city of Windsor, Ontario, Canada. This district is becoming the Canadian adjunct of American capitalism. Two hundred and five factories are now located in the Windsor district. Fifty-five are American. It is said that they have located there in order to save preferential trade taxes and to develop their export trade in a manner that will enable them to share in the tariff advantages with the British Empire. But there is another reason in the cheap, unorganized, raw labor supplies to be found across the border.

Seventy additional American firms are now negotiating with the Border Chamber of Commerce, Windsor Ontario, for factory sites on which to construct manufacturing establishments.

Consider the following partial list of big American corporations now located in the Windsor district:—Studebaker Corporation, Fisher Body Co., Maxwell Motor Co., Motor Products Co., Wilt Twist Drill Co., Kerr Engine Works, Berry Bros Varnish Co., Grinnell Piano Co., D. M. Ferry Co., Burroughs Adding Machine Co., Champion Spark Plug Co., Bayer Co., Devilbis Mfg. Co., Barton-Netting Co., General Motors Corporation, Ford Motor Co., Remington Arms Co., Trussed Concrete Steel Corp., United States Playing Card Co., Parke-Davis Co., Coca-Cola Co., Buhl Stamping Co., Hayes Wheel Co., Hupp Motor Co., Postum Cereal Co., Stearn Drug Co., Toledo Comp. Scale Co. and Standard Paint & Varnish Co.

### "A Second Pittsburgh"

This reads like a roster of big American capitalism. But there is another interesting addition, not listed as American, yet an extension of the United States Steel Corporation. This is known as the Canadian Steel Corporation. This company has bought 2,500 acres of land in this section and is building a city that is heralded as "The Second Pittsburgh" and "The Magic Steel City," as it is going up in the same thorough and rapid manner as characterized Gary, Indiana.

The Detroit Free Press says, "The estimated initial expenditure will be forty millions of dollars, while the estimated ultimate expenditure will be **Two Hundred Million Dollars.**"

Ojibway, as "America's New Steel Center" is called, is situated midway between the country's great coal and iron ore mines, with water transportation to all parts of the world. It will sure prove a factor in world competition. Fortunes have already been spent building streets, immense sewer and water mains, steam and electric railroad extensions and connections. Hundreds of men are

employed constructing wire nail mills, machine shops, docks and blast furnaces.

Much is made of the fact that American money is going into Canada for investment at the rate of one hundred and fifty millions annually. As Canada is largely an agricultural country most likely the interest on this immense amount will be paid in foodstuffs or products of the soil. Anyway, this Canadian ramification of American capitalism will do much, undoubtedly, to further strengthen the peace relations that have existed for a century or more between the Dominion and the U. S. A. And, on the other hand, they tend to further make the U. S. A. a British ally in all world imperialistic tangles. Who says "we" are not international?

### Great International Bridge

However, there is still another and more important link actually binding the two countries together, now in course of construction: namely, the $30,000,000 Detroit-Windsor Suspension Bridge. This will create a great commercial highway between Mid-Western United States and Canada, and will take its place among the world's greatest bridges.

The total weight of the bridge and approaches is 107,000 tons, and the span—1803 feet—will be, so it is claimed, the longest in the world.

There will be eight parallel wire cables to carry the highway and railway decks. Two cables will be 18 inches in diameter with a total of 59,280 wires of Number 6 gauge supporting a pulley of 146,000,000 pounds. The highway deck will be 97 feet wide with two trolley tracks, two side walks and two roadways that will carry 6 lanes of traffic or a capacity of 30,000,000 automobiles per year.

The lower deck will have four railway tracks to carry electrically operated trains, and a 20 ft. space for public utilities, such as wires and pipes.

The towers of the bridge will rise to a height of 380 feet above the water and will be made up of plates of nickel steel of a thickness of two inches, having a cross section of 6 inches by 17 feet.

Experts estimate that the bridge will increase the business between Detroit and the Windsor district from $150,000,000 to $300,000,000 annually and increase the population 300,000 practically overnight.

Some things that the experts do not estimate include the following: The interchange of places of employment that the new bridge will make possible. Americans will go into Canada looking for work; and Canadians will come to the U. S. A. more easily than they do now. The result will be a completer recognition of their common interests against their common exploiters. It will soon become evident to both Americans and Canadians that when it comes to fleecing the workers, the big corporations know neither race nor boundary lines. All workers look alike to them; and so will all exploiters look alike to the workers, some day.

The star of the American capitalist empire is going northward as well as southward. Canada as well as Mexico knows its invasion; the first in a reciprocal manner; the second, aggressively. Both methods, however, conduce to a greater intermingling and understanding—a greater internationalism among the workers. So we rejoice in the results of both.

## PUBLIC OPINION

### NEW DEFENSE PAMPHLET

Where does it stand on the question of amnesty for political prisoners?

Editorials from hundreds of big newspapers and magazines, all favoring immediate and unconditional release.

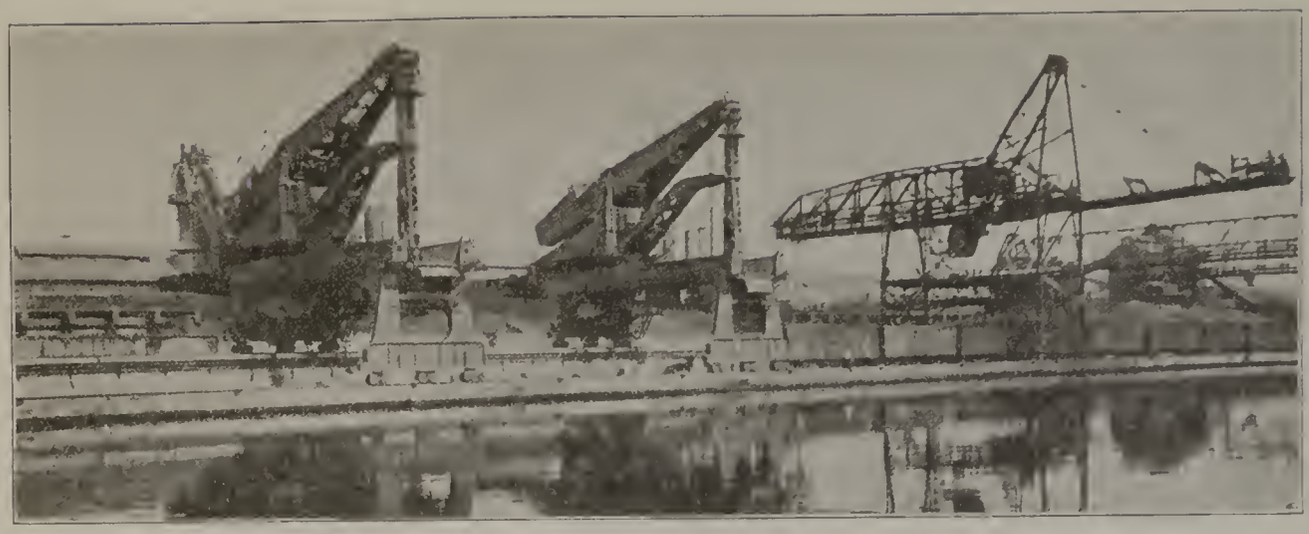
Illustrated with cartoons from metropolitan dailies. Special cover design. Beautifully printed. Thirty-two big pages of vital and unanswerable argument.

Give this pamphlet the widest possible circulation.

Price 10c per copy, $6.00 per hundred.

Send all orders to GENERAL DEFENSE COMMITTEE, 1001 W. Madison Street, Chicago.

**A Small Bit of Ojibway—Projected Gary of Canada.**



A Glimpse of River Rouge, Mich., Ford Plant

# Ford Wades in Gold and Grabs Ever New Enterprises

By S. ALMAZOV, In New York Daily Freedom.
[Translated by J. D. C.]

The Ford Motor Company celebrates its 20th Anniversary Jubilee and tells of its wealth. Henry Ford—the richest man in the world. The Ford factories put out one million and a half cars yearly. Ford is not only an auto manufacturer, he also owns many other enterprises, such as iron mines, coal mines, glass and rubber factories and is now preparing to go into the clothing and tailoring business.

HENRY FORD, founder and owner of the Ford Motor Company of Detroit, Mich., has had within the past few days somewhat of a festival—on the occasion of the celebration of the establishment of his auto business.

### His First Factory

In 1903, Ford started his first auto factory. At that time he invested in the venture 27,000 dollars. Within 20 years, Ford has become not only the largest auto manufacturer in the world, but also the richest among the rich of the earth.

Ford went into business at a favorable time. He has been successful.

There was a great demand for cheap autos. Ford's auto was the cheapest in the market. In spite of this fact, Ford made enormous profits on his auto sales. The workers in his factories, diligently and submissively contributed their energy and helped Ford create, within a short period of time, a colossal fortune.

It goes without saying that the workers in his factories were unable to save for themselves any more than a bare subsistence, at the time when Ford was literally able to shovel money.

About January, 1922, the net profits of the Ford auto factories amounted to Four Hundred Thirty-Two Millions, Four Hundred Forty-Three Thousand, Eight Hundred Eighty-Three Dollars ($432,443,883).

But let us rather allow the Ford Motor Company to speak for itself.

### Increase of Yearly Output

Because of the Jubilee the company decided to delight our hearts by assuring us that Ford's business is progressing nicely. For that purpose the company made public a report from which we learn that the first Ford auto was completed in June, 1903. From year to year Ford has enlarged his factories and perfected his system of production to such an extent that the number of automobiles produced is ever growing. In 1903 the number of Ford autos produced was 1708, at this writing the Ford Company has an output of 1,500,000 cars yearly.

Each four seconds a new Ford is born,—a truck or a tractor. Each hour 900 new Ford cars, trucks or tractors are put out. In the one day of May 9th the Ford factories put on the market 6,615 cars and the week ending May 15 they finished 39,303 cars.

The Ford auto business has become one of the largest industrial ventures in the world. The Highland Park plant in Detroit stretches out over an area of 300 acres of land, of which 123 acres are under one roof. In River Rouge the Ford Company occupies 1,200 acres of land. Here we find Ford's own smelter (which is the largest in the world), his own machine shops, cement factory, a locomotive repair shop and the Fordson tractor factory.

The little factory, which Ford named in honor of his son "Fordson," is only six years old; the Fordson tractor factory was first established in the year 1917 and produced, within the first year of its existence, 254 tractors. Now the factory has "slightly" grown and the little factory now turns out a sum total of 500 tractors a day, which amounts to more than 150,000 tractors the year.

**His 24,000 Agencies**

All through the country there are dealers in "Fords" to the number of 9,000; 15,000 authorized Ford service stations. Altogether 24,000 points of contact with auto dealers and owners. The Ford Company has a factory in Canada, where a new city has grown up around the Ford factory and which is called "Ford." In the Canada factory 75,000 Fords the year are produced. In 1922 Ford purchased the Lincoln Motor Company, paying for it the sum of 8,000,000 dollars.

The above are the facts according to the information furnished by the Ford Motor Company on the occasion of its jubilee.

It is understood that the above report dwells little on the way the workers have become machinized and stupified, thanks to the "scientific" distribution of labor, which Ford introduced in his factories in order to multiply the production of his workers. The report talks of the wonderful condition of the Ford automobile factories only.

But that is not all; Ford is not only represented in the auto business. His fortunes have grown to such colossal proportions that he is obliged to seek ever new enterprises. Special experts are now engaged for the purpose of discovering where to invest the large sums of money owned by Ford and his kind. And the more money one has the greater profit returns he is entitled to. It is their belief that money must go to money and ever new business ventures are unearthed.

**His Cash Balance**

Ford's cash balance, exclusive of investments, now totals 200 million dollars. This is more cash money than any one else in the world owns today.

It is, therefore, worth while to acquaint ourselves with some of the other business that this auto king does, and of course, also earns, some small change withal.

First of all, it is Ford's aim to get under his control all the industries upon which his auto factories are depending. For that purpose he has begun to provide himself with coal and metal mines, with his own railroads and his own water power.

For the state of Michigan alone Ford has prepared a program for water power development that will cost about One Hundred Million dollars

The state of Nebraska is familiar with the immense plans and accomplishments of Ford in the development of water power; the Nebraska legislature, therefore, extended an invitation to Ford to take over the entire state system of water power.

Ford is the head of a company in Michigan that owns 32,000 acres of forest and metal mines.

Ford also organized a 15,000,000 dollar coal company, and has lately bought 120,000 acres of land in West Virginia, upon which are found the best oak trees in America. It is estimated that on it abounds about 500,000,000 feet of timber. All told Ford owns about 200,000 acres of land.

Ford has rented for a period of 75 years the "Detroit, Toledo and Ironton" railroad, which extends over an area of 500 miles.

Ford also owns large glass factories; he is now working upon a project to expend $50,000,000 in developing the rubber industry in Mexico. He has also invested large sums of money in barge-canals and as a by-issue he often takes a leap into banking. In that way he recently made a loan to the administration of the city of Detroit, of a half million dollars and charged interest at only 4 per cent while the Wall Street bankers charged 4½ per cent. The above sum to the city of Detroit may possibly be increased to 8,000,000. He has also built a hospital at the expense of 5,000,000 dollars.

**Goes Into Retailing**

Lately, he opened up large retail stores for the use of his tens of thousands of employes; the stores also retail to other persons and no profits are lost there either, as Ford is not in business for heaven's sake, but for business and profits. In order to get an idea of the extent of business Ford does in the above-mentioned retail stores it is enough to mention the fact that in one of the stores the monthly sale of meat amounts to 250,000 lbs.

Our Auto King also sells groceries, shoes, and piece goods for clothing. It is now rumored that he is preparing to go into the tailoring business. He will presumably establish large clothing factories for his own employes and for the retail trade generally. We venture the belief that in the new undertakings Ford will hardly be the loser.

As it appears from the above Ford is about provided with a livelihood, the only thing missing is glory (honor), because of that some of his friends are now pushing him for president of the United States. Their wish is that he be as much of a gourmand in glory and honor as he is in money.

His friends approve of the motto that he who has the cash should also have the say.

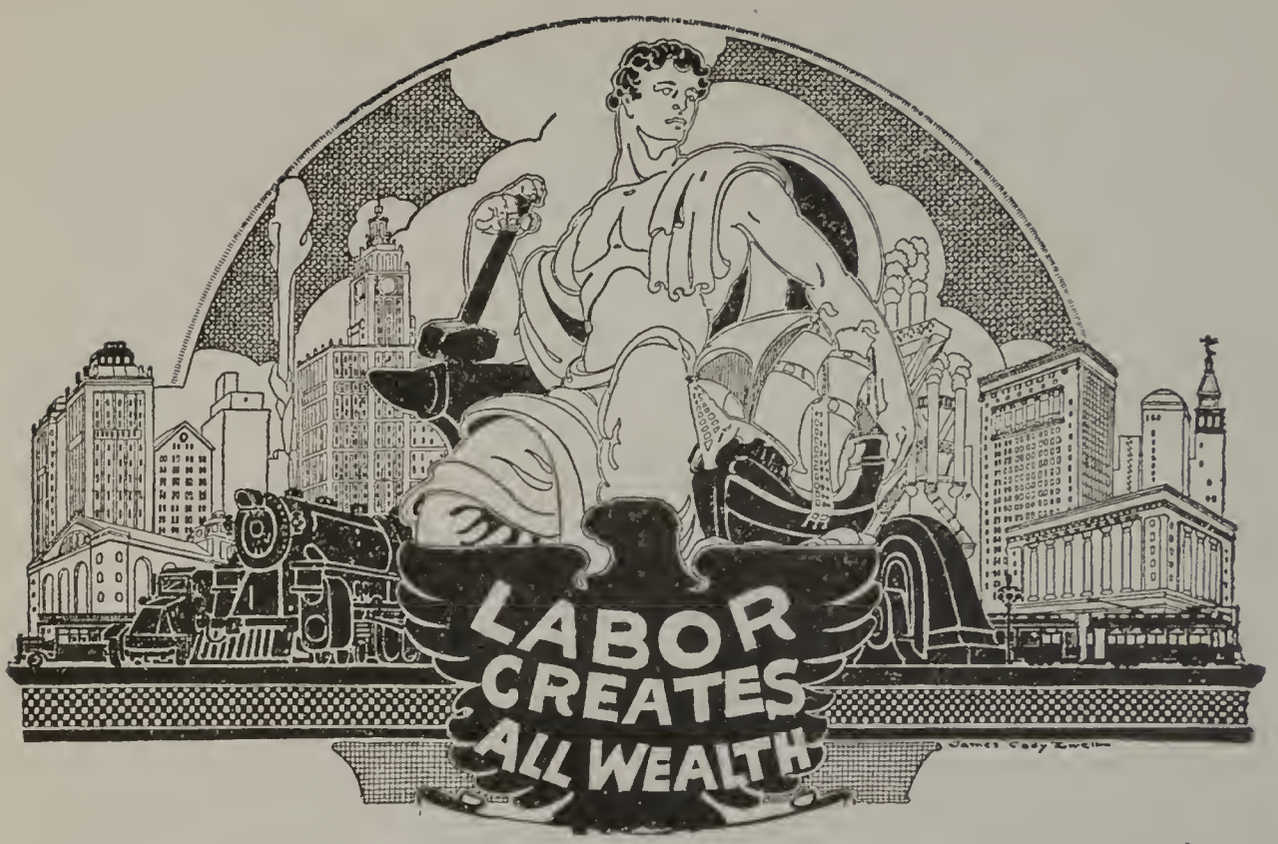
No matter what the outcome will be as to Ford becoming the president of the U. S. he already is, the king of industry and the largest one to boot.

## More New Pamphlets

"STARVING Amidst Too Much," is the title of a new I. W. W. pamphlet, published by Food Workers' Industrial Union No. 460. The author is the well-known I. W. W. poet and song writer, T-Bone Slim. Watch for review in October Pioneer.

*

Another new I. W. W. pamphlet is "Craft Unionism, Why It Fails." Analyzes recent big fiascos in A. F. of L. strikes. Contains much valuable historical data and is up-to-date in its facts and figures. Advocates I. W. W.



**Labour is the sole parent of all property—the land yieldeth nothing without it, and there is no food, clothing, shelter, vessel, or any necessary of life but what costs Labour and is generally esteemed valuable according to the Labour it costs. Therefore, no person can possess property without labouring, unless he gets it by force or craft, fraud or fortune out of the earnings of others.—From The Key of Liberty, written in 1798 by William Manning of Massachusetts.**

# Treasonable Thoughts

THE WORKER—You say that it is your capital that creates all wealth?

The Capitalist—You've stated my contention correctly.

The Worker—How comes it then that, when I strike, your capital is idle and unproductive; while you call on press, government and courts to drive me back to work in order to revive its creative power and produce profits with it for you?

The Capitalist—Oh—ah—I beg your pardon! You fail to grasp my meaning! I—er—I mean that if I didn't provide you at the beginning, with raw material, machinery, management, cash and credit, your efforts would be futile.

The Worker—Ha, ha, ha!!! That's the best yet. First, you say it is your capital that creates all wealth. Then when I show that without my labor your capital is useless you take a new tack! Now you appear as the great provider. Ha, ha, ha!!! But, in all seriousness, let me ask you, where did you get that raw material? Out of the earth, eh? And the earth, did you create it? Who dug that raw material? Did you? Who invented and fashioned that machinery? Did you? Who manages your enterprises? Do you? Who evolved your cash and credit systems? You? Is not the earth dug, machinery invented and made, enterprises managed, credit and banking systems evolved, operated and maintained by the physique and brain of generations of wage workers and salaried subordinates? You take the results of labor's co-operative toil and genius and call it all your own. And then when labor strikes—stands from under your fiction—you shout "Help! police!! Help, government!! Help! courts!!!" You may not have a sense of justice and decency! But you surely must have a sense of humor!

The Capitalist—Stop! Stop! Ding blast you! I shall apply for an injunction against such treasonable thoughts. You are an enemy to God, the ocuntry and the flag.

# Who Constitute the Working Class?

By ALOIS SENNEFELDER, JR.

THIS is a question oftenest asked by those who should find it easiest to answer: namely, the members of the working class themselves! They are so little given to analysis and reflection as to be unable to recognize and classify themselves without the aid of others. However, their characteristics are most pronounced, and can never be erased, once they are properly impressed upon the human mind.

Naturally, one is inclined to believe that the working class consists of ALL THOSE WHO WORK, or who take part in or help to maintain the production and distribution of wealth in some way or other. Under this definition, many professional people, like doctors, dentists, lawyers, etc., and many middle class persons, like delicatessen stores and cobbling shop keepers, not to mention farmers, would constitute the working class. For do they not work? Are they not assisting in the modern production and distribution of wealth?

That may all be apparently true; but, nevertheless, all these professional, middle and farming class persons are not of the working class. Their very classifications in the language of the day implies something distinct and different from the working class. And we may rely on it, these classifications are correct. We also may rely on it that doctors, dentists, lawyers, delicatessen store keepers and cobblers generally would feel insulted and deprived of eclat and prestige if reduced to the working class; for it would appear as social degeneracy to them, as we shall make clear later on, to have such a thing befall them.

A few glances at the working class in general will reveal economic contrasts with the professional, middle and farming classes, that make it a class apart from all these. In the first place, the working class is a capital-less class. It does not own the land, machinery, raw material, funds and credit with which it operates. In the second place, it is an employed class. It works directly for wages for the profit of others: namely, employers and capitalists, i. e.' the owners of the machinery, etc., which it uses. In the third place, the working class is an exploited class, giving up in return for wages received all that it produces. In the factory, workshop, mill and mine; on the railroads, steamships, aeroplanes; on the land, and sea, in banks, hotels,—everywhere—will men and women be found producing and distributing wealth by means of capital owned by others, for the profit of the latter,—all for wages received. They constitute the armies of workers, the great working class.

Doctors, dentists, lawyers, delicatessen store keepers, cobblers, farmers, et al., own their own capital and equipment. They are not employed by others. Nor are they exploited for all that they produce in return for wages received. Factories know them not. Nor do any of the other places of exploitation in industry, transportation and finance. Generally, they are neither employers nor employes. But they aspire to become the former as opposed to the latter, as they know that that is the road to greater enrichment and social advance. Not a few of them are former workers; hence their peculiar aspirations and desires.

It is only when doctors, dentists, lawyers, etc., are employed at salaries and commissions for the profit of insurance companies, railroad companies, company hospitals, hospital and health corporations, and similar institutions, do they become members of the working class. The same holds true of farmers who are farming farms directly for wages for the profit of others. All are then employes, working the capital of others for the profit of the latter in return for wages received.

Whenever one is employed to work the capital of another for the profit of the latter, in return for wages or salary received, he's a worker and belongs to the working class. And there are some thirty millions of them in "little U. S. A." Are you one of them?

# Labor Banks Not Enough

Apparently, the labor bank is not all-satisfying. "The Chief's Page," i. e., Warren Stone's page, in the July Locomotive Engineers' Journal, is illustrative of the fact. In the first paragraph the stocks of "The Brotherhood Investment Company" are boomed. But in paragraph 3, headed "Wage Increases," "Warren Stone, Labor Banker," gives way to "Warren Stone, Labor Leader," and as such, is being prodded into securing more wages for locomotive engineers in a way that he, great financier that he is, quite obviously does not relish.

Says "Warren Stone, Labor Leader": "A number of resolutions are coming in from different Divisions criticizing the Grand office, and insisting that a wage movement be put into effect at once . . . Your interests are being looked after, and the Organization will come out of this as well as any of the rest in the final analysis, so do not be carried away by a few soap-box orators, or a few One Big Union men, who are carrying out their instructions to 'bore from within.' "

From which it is safe to conclude that "Warren Stone, Labor Leader" is arrogant and given to insulting his membership. Also that a few dollars annual bank dividends to a few stockholders is no substitute for the tens of dollars that should be in the weekly pay envelopes of all of the 90,000 locomotive engineers enrolled in Stone's Brotherhood.

# Where Wealth Accumulates

By ROBERT GRAYSON

BY securing work in a bowling alley it had become possible for me to complete the common school grades. We were very poor people, dwelling in a rear hovel whose entrance was through an alley which communicated on one side to our "home," and on the opposite to a stable. To this day the strong odors peculiar to livery stables assailing my nostrils bring back that rare retreat as an ugly souvenir of a life that was all but bestial.

When Father Dominick understood my ambition —to finish the grades of his parochial school—he used his kind offices to establish me at the receiving end of the bowling alleys. At this station I gyrated up and down, setting pins and returning the huge balls from eight until twelve each night. For this violence they paid me thirty cents a night. The alleys were in the Parish Hall basement, and were controlled and used by societies connected with the Church.

However, even this sinecure failed to make sure the educational journey, and it was terminated after a very brief glimpse of the freshman life at high school. My entire time must be devoted to gainful occupation. There were several children younger than myself in our family, and my father had displayed the ill grace to go seeking "if God improves on better acquaintance." What ever conclusions he reached as to the Deity, our mundane affairs did not improve with his quest.

### Squeezing Through Life

Some of the sensations impressed on us as we squeeze through life are not to be erased. Of such an indelible character are those which were my own on that first February morning that I entered the labor market in earnest. It was six o'clock and still dark, but the streets were filled with workers either homeward bound after the night shift or going to their labors. My small lunch was under my arm against the possibility of finding work at once. And I shivered with a double discomfort, first because the wind did not respect my coat, and then with a deeper chill a little like that of childish fears on being taken to school for the first time. Only now, with work as a definite objective, where I should find it was not so definite. So I timidly approached one factory gate after another with a halting appeal that seemed to become frozen and changeless. For some unfortunate reason thirteen year old boys of small size did not seem in demand that morning. And while no reasons were advanced for refusing me at the outset the same were supplied when my search continued after all the whistles had blown. I was told to come earlier, or asked if I thought these factories were banks.

### A Prison Without Bars

At Noon, when the day was not as cold, I munched my sandwich on the tow-path of a canal. Across this waterway lay a damp meadow, and immediately beyond this the State Prison. I meditated this dull pile silently. There men and women were serving sentences of varying lengths. With pity for those behind its bars and walls I did not know that with them I had much in common, for without knowing it I had been sentenced to hard labor for life in penal institutions having a superior economy, being minus bars. This is the sentence pronounced for the crime of entering the world poor. Moreover it is the judgment heaped upon all workers for the crime of lacking solidarity.

Leaving this gloomy landscape my search was renewed. At about four o'clock, with darkness gathering again, I found the Precious Job! In that factory district, with all its blending of productive smells, I had sniffed out from afar what was to be my first real lesson in that course with which most of us are familiar. The watchmen had been instructed to hire someone. I came at the opportune moment, and was told to come back at seven that same evening to work on the night shift. It was a linoleum factory and the paints used for the prints when being dried gave off an odor which dominated all others nearby.

Having received and punched a card at a time-clock I found my foreman and was given a wheelbarrow. As the long strips of linoleum were run through the machinery which printed them, their edges were trimmed by revolving cutters, and these fragments I was to gather into bundles and wheel to a "mill" through the yards where they were again ground up. For twelve hours a night this was a very hard job, but where the bowling alley paid seven and one-half cents hourly, this labor gained me fifteen cents. So, when morning came I was richer by one dollar and eighty cents!

### Sympathy, Nearest Kin To Solidarity

Sometimes—to my great joy—the machinery would jam and I was reprieved mercifully while the machinist repaired the fault. At such times I used to go out to the "mill" and watch the old man there at his work. Soon we were friends, and I gained

much from knowing him. His name was Harrison and he had been born in England. Two of his fingers were gone, and when I observed the loss sympathetically he divined my thoughts and said abruptly:

"Lucky it wasn't my arm!"

He was one of those thin, wiry old fellows who seemed able to thrive on privation, if merely continuing existence is any sort of thrift. When he discovered that I used my ears and eyes more than my tongue he indorsed this reticence by many confidences. I learned that when one of his fingers had been caught under a "cutter" the management had ordered the machinery to be again started, rather than lose the time of lifting the heavy wheels. Thus was the second finger amputated. Indeed, it is by practising such economies that foremen are advanced and rewarded.

Harrison had been in America since he was a small boy. His mother had recently died at a great age, but his father had been dead for many years. Harrison had once been a skilled mechanic in printing linoleum. It was he who told me how the machines came in to do with a crew of six laborers the work previously done by fifty mechanics. This led us around to mechanical progress generally. The old man working alone in the twilight of his life at a task which called for no mental effort employed his mind on many matters, and as a result of his skill having been superseded by a machine this subject was prominent. I had been denied higher academic training, but Harrison was a man who had read much and well. In the infrequent visits I paid him during the dead of night while the machinery was being repaired, my mind was given some good exercise, and a consciousness was born therein which might never have had a being elsewhere.

### An Important Span of Existence

One night he was telling me about his mother: "She lived through this kind of a life, that knocks them out usually at forty or so, until she was ninety. My father died at thirty-eight of the 'con.' But, son, what always seems to me as important about my mother's life is the time it was lived in. I guess that a ninety year life a thousand years ago wasn't much different from another ninety year stretch two thousand years past. But with my mother and those others there was a big difference.

"When she was a girl they used candles for lights, when they had the price. She lived to see the electric light. When she was a kid horses and oxen pulled the carriages and carts on bad roads. Before she died she saw airplanes buzzing around the clouds. And news that in her youth traveled at a snail's pace was flashed around the world by wireless in her old age.

"And these factories. When she was born they were just starting. They were weavers at home. She saw that kind of thing broken up, and the family forced to the factories. What the inventions do to skilled workers I know! Why, son, fifty of us used to do the work by hand that these machines turn out now with half a dozen hunkies and farmers!"

He was out of breath. I had to push my wheelbarrow back to the machine, but he had done something to me that could never be undone. My curiosity was aroused, and I began to try to understand all about the progress of these machines. And thus I learned that the farmers in colonial days were just about as far advanced in agricultural methods as were the ancients. In manufacture, simple, inexpensive tools worked by footpower at home did the spinning and weaving in the 18th Century A. D. in a manner not much different than it was performed a thousand years earlier.

One night I asked Harrison if he thought we were better off now than workers were before the machines were invented.

"Well, son," he said. "With all these machines ripping out products about a hundred times as fast as they used to I suppose the workingman is just a little better off when he has a job. But if you mean has he as much share of the stuff he makes I'll say 'No.' Between the rich and poor of this day and the rich and poor of a hundred years ago there is a big difference. The rich now have a bigger share than the rich did then. If it was twenty-five for the worker before and seventy-five for the boss, it's about five for the worker now and ninety-five for his boss."

"Then we're getting poorer all the time!" I exclaimed.

"Yes, and the others are getting richer," he ended.

It is nearly twenty years since old Harrison started me on the real road of education. The old man has long since quit feeding the "mill" with the trimmings fetched by my barrow. Eternal shadows are around him. He was poor, mangled and twisted by the toils and violence of this ogre, the Machine. But his head was straight.

### Fire the Boss!

Seeing that life was all wrong for the workers I remember asking him at last what he thought could be done to make our lives better. And he looked sraight into my heart as he replied:

"It's up to the workers to get together and 'fire' the boss."

Twenty years of study and observation have served to convince me that this simple expedient,—so difficult of effecting!—holds the solution of all economic injustice and the hope of a happier and more enlightened human race.

This little story is substantially true, and contains a lesson for us all. It is not by "uplifters" and "saviors" that the workingclass will win to its freedom. Salvation not self-achieved is worthless. Our emancipation is timed by the blows we beat ourselves against the bars of our own prison, this vast economic system. It is the Harrisons who forever smash at this citadel of wage slavery. Each one has

## THE ORIGINAL CENTRALIA DEFENDANTS

**Top Row—Loren Roberts, James McInerny, Britt Smith, O. E. Bland, Bert Faulkner (released), Ray Becker.**
**Bottom Row—Mike Sheehan (released), John Lamb, Eugene Barnett, Bert Bland, Elmer Smith (released).**

ARMISTICE DAY, 1919, was used by lumber trust interests at Centralia, Wash., to turn a peaceful parade celebrating the end of the world war into a mob raid on the I. W. W. hall there. The raid was successfully repulsed by the I. W. W. Some of the mob were killed.

Instead of holding F. B. Hubbard, lumber magnate, fomentor of the raid, and his criminal associates responsible, 11 I. W. W.'s were arrested for murder. Three were released. Eight are now buried alive in prison, the victims of rank injustice.

**Even the jurors have revolted against the crime FORCED on THEM. Six of them confess that, such was the atmosphere of terror surrounding the trial, that they dared not acquit the I. W. W.'s What a confession! What a shame!!**

A state-wide agitation is now being conducted in Washington against this conspiracy to imprison workmen for manfully defending themselves and their rights. A movement is now afoot to secure a reversal and re-trial. Archie Sinclair and Elmer Smith, the fighting lawyer, are addressing large mass meetings demanding release. The good work will continue until this end is achieved.

---

a duty to perform. A word here, and a deed there, and a leaflet somewhere else—these are the deadly weapons endlessly at work to eternally damn human slavery.

### An Unsung Educator

Under somewhat better financial circumstances I suppose I should have gone to college, there, to secure knowledge and contempt. Who knows? I might have become a figure in the business world! In such an event I should have lived always with the moneybags bucking big and human life small. How many first-class possibilities of how many potential skinners are side-tracked by such as a wheelbarraw and linoleum trimmings! And how many mediocre minds twisted by our patriotic school training receive the light from unknown, unsung and at last unwept educators such as the Harrisons!

He had a light and he did not hide it under a bushel. In the dark night I went in covered with sweat and filth pushing the great weight. And when at last I came out again there was a light in my brain, and a flame in my heart. The miracle was done. Never more would I bow before industrial piracy contentedly, for I was a rebel.

# The Ballad of the Fifty-Five

[Dedicated to the San Quentin Strikers]

By HENRY GEO. WEISS.

Fifty-five men on hunger diet,
Rotting in solitary,
Some in the dungeon dank and black,
Oh, but the night is dreary!
Fifty-five men on hunger diet,
Rotting in solitary.

Fifty-five men on hunger diet,
God! but the days are long!
Fifty-five men in solitary
Trying to mouth a song,
Fifty-five men on bread and water—
Christ! but the hours are long!

Fifty-five men—and what have they done
That they should be treated so?
Did they murder and rape or rob the poor
In the land where the oranges grow?
Say! what is the crime of the fifty-five
That they should be treated so?

Oh, some of them said that they ought to be free
Of hunger and dirt and filth,
And some of them pointed out the fact
That the workers produced the wealth,
And some of them POINTED OUT THE MEN
WHO ROBBED THEM OF THAT WEALTH

For since the days of Jesus, the Christ,
And this all men do know,
To scourge the moneychangers forth,
And strike at Profit a blow,
Is to invite the doom of him
Who did it long ago.

And some of them preached that war was hell
And exposed the profiteer,
The pious fraud who mouthed "MY flag"
And sat in a swivel chair,
And tried to hide the million he made
Behind ONE DOLLAR a year.

And some of them helped to organize
The men in the O. B. U.,
And some of them spoke from the old soap-box
That Labor must have its due,
And some of them said, IF ANY ARE FED,
BY GOD! IT OUGHT TO BE YOU!

YOU mine the COAL, YOU drive the TRAINS,
YOU man the SHIPS AT SEA,
YOU cut the LUMBER, reap the GRAINS,
YOU LABOR MIGHTILY—
YET YOU, THE WORKER, TOILER, DWELL
In DIREST POVERTY.

And all of them preached of a better day
When want should be unknown,
When gold and greed should lose their sway
And hate be overthrown—
AND ALL OF THEM PINE TODAY BEHIND
GRIM WALLS OF STEEL AND STONE.

Fifty-five men on hunger diet,
And this their only crime:
They tried to lift the workingman
Out of the muck and slime,
Fifty-five men on bread and water—
Men's saviours!—DOING TIME!

# Hell: Sensational Verse Drama

A Review by RALPH CHAPLIN

HELL is the name of this sensational verse drama by Upton Sinclair. The reason it is called "Hell" is because it is a picture of the awful mess that capitalism has made of the affairs of this world.

The scene opens up in the throne-room of hell. The court jester comes in with the astounding news that he has succeeded in stealing the key to heaven after having locked the pearly gate upon all the angels. The imps and devils rejoice with his Satanic Majesty. Plans are made to organize the universe upon a business basis. Mammon and his efficiency experts are placed in charge. The fun begins.

The people of earth are divided into two groups —the Verticals and Horizontals. War is precipitated. An attorney general with a Quaker countenance and a spiked tail gets on the job. A lot of I. W. W.'s and other rebels are thrown into hell. They start kicking, as usual. As a result of their agitation Satan finds himself without a throne and the Wobblies have job control. An attempt is made to extend the strike. Condemned souls are organized, the campaign waxes furious. The rule of Mammon on earth and Satan in hell seems doomed to permanent extinction. Victory is at hand. The gates of heaven are opened and Fellow Worker Jesus makes a last plea for brotherhood. Then all the scissor-bill actors in the play go on strike and . . . . but read the rest of it yourself!

"Hell" is as beautifully written as Romain Rolland's "Liluli," but it is more popular in tone and more modern in spirit. It is full of breathless incidents, subtle contrasts and touches of real poetry. "Hell' sparkles with wit and bubbles with Rabelaisian laughter, and yet its general tone is as sober as a sermon. "Hell" is imagination run riot—a phantasmagoria of uncarthly imps, angels and persons. It is distorted, weird, exaggerated, impossible; and yet it portrays the spirit of the jumbled age in which we live more accurately than a photograph.

("Hell," published by Upton Sinclair, Pasadena, Calif. Price, 25c.)

# Magnus Johnson

MAGNUS JOHNSON, newly elected U. S. Senator from Minnesota, has already filled a useful purpose in raising the cry of revolution in one of the worst periods of reaction the country has ever experienced. It is indeed refreshing to see at least one conspicuous personage in the U. S. get up and threaten this event, so terrible to the ruling classes of all ages, "if conditions confronting the laboring man and the farmer are not changed;" when too many others are so supine that it seems as if manhood had departed this life for ever and aye.

Magnus Johnson's words have accordingly received extended editorial notice, while he himself has become the object of many journalistic write-ups. It is freely predicted by some of "our" greatest newspapers that another wave of radicalism will sweep the country as it did in the days of Bryan and free silver,—a wave of radicalism that will have to be combatted by the same means as was its alarming predecessor. All of which is good news to thinking men, who will rejoice over the prospect of the country being shaken out of its dangerous conservatism to face modern world-economic problems once more.

But, otherwise, it is hard to believe that there is anything really serious to be feared in the situation personified by Magnus Johnson. It is true that the farmers in the wheat growing states of the Northwest are suffering bankruptcy and ruin. Prices do not cover the cost of production; nor do they provide for taxes and interest. But the farmers, despite their varied ancestry and pioneer qualities, are not of a revolutionary breed. Their environment has not caused them to be revolutionarily inclined. Nor is there any likelihood that, in conditions as they are, they will ever be revolutionary.

It must be apparent to all, that it is characteristic of the farmers to abjectly worship the system that destroys them as a class. They have sacrificed themselves to the Molochs of private property, personal gain and individual shrewdness, so-called, and will, apparently, continue to do so to the end of their days. This is evident in all of the farmers' measures, such as price guarantees, excess profits and other corporation taxation, governmental regulation, ownership and credit, etc.

There isn't a suggestion of revolution in all this. On the contrary, these measures aim merely to extend the capitalist principles of state aid to include the farming class. They are an attempt to make the farmer more thoroughly capitalistic. It is only ultra-capitalist imperialism — the policy of exporting capital in return for products imported—that causes ultra-capitalist opposition to such an extension of state aid; and that makes political resentment on the part of the farmers possible. Otherwise, the farmer as a revolutionist is nothing more nor less than a figment of the successful politician's brain;—a scarecrow wherewith to compel concessions and recognition.

This becomes all the more apparent when we recall the fact that 1,700,000 farmers were recently forced off the farms without any manifestation of revolt whatever. Further, the farmers have been warned that within the next two years, 1,500,000 more of them will also be compelled to travel the same route. This means that the holdovers from the deflation of 1920, i. e., the farmers of small capital who now find themselves completely exhausted, will augment the ranks of the evicted. Still, there is no farmer revolution; no violent upheaval; nor a radical psychological or economic break with capitalism. Only a non-essential political revolt; a relapse into populism and grangerism, with Johnson as its most pronounced personification.

Surely, there must be a reason for this extraordinary phenomenon of a class destroyed practically without resistance. The reason is not far to seek. As already indicated it is to be found in the essentially capitalist character of the farmers' mind. It is also to be found in another and more vital reason: viz., the transformation of the nation from an agricultural into a manufacturing entity. This has enabled industry

to absorb the one-time farmer and to keep alive his devotion to capitalism. The millions driven from the farms have found refuge from hunger and starvation in auto-plants, chemical works, steel mills, movie studios, etc., where they have preserved their essentially capitalist minds and proven themselves staunch upholders of the capitalist system, indeed. Had there been no expanding industry to receive them, had there been a prostrated industrialism, a wide-spread panic, the story would have been different. But as it is, recent contemporaneous events make very glaring, the significant fact that agriculture is no longer the basic factor in American culture, on whose prosperity the latter rises or falls. It has simply become another source of labor supply for capitalism to be reckoned with, as such, by the working class.

Under these varied psychological and economic conditions who believes in a farmers' revolution? Revolutions are made by an increasingly important class in the functions of society. This is true of the working, but not of the farming, class in the U. S. today. Accordingly we can only hope for a revolution when, under the unjust exploitation and oppression of capitalism, the one-time farmer is thoroughly rendered class-conscious as a wageworker. As now constituted, a farmers' revolution will prove a reactionary futility; that is, provided such a revolution is even thinkable.

# The Big Bout

Date and Time—Thursday, July 12th, 1923, at 7 P. M.
Place—Front of "The Times," Eureka, California.

WHILE walking along opposite side of street my attention is called to the large crowd of men congregated in front of the "Humboldt Times" offices.

What is holding them? Ah, I see—it's a bulletin of the fight—Firpo vs. Willard,—that attracts the crowd.

And on closer examination I find workingmen in overalls predominating. On my side of the street are several women, some holding on to baby-buggies too, who no doubt are awaiting (not the fight decision) but for their husbands. On mingling with the crowd an acquaintance of mine asks me, "What do you think of it, who's going to win?

And Oh, Workers—Hosts of Us—Industrial Workers of the World—dues-paying members or soon to be, I could not refrain (under a rising inspiration) from delivering the following answer:

"Fight? What fight? Friend, you've got me wrong, I am very little interested as to the outcome of this little fight.

"I am interested in the Big Fight. What one is that? Why, the biggest Pug on earth versus the only Giant on earth. Fellow Workers—the Pug I am interested in seeing licked—by the way his name is Plute.—delivers a wallop that knocks out millions of us at one blow! And he hits below the belt, too, don't you see? He cares not for any rules.

"Oh, Men! Get wised up—why, in order to win the decision he hits women and babes too!

"It's all right men, we like and want diversion in the shape of clean, honest sports—can't we do without them, sure. But say, if we workers altogether will interest ourselves only half as much in the outcome of the Real Big Fight, it wouldn't last one round.

"And we wouldn't need the seconds, sponge men—towel manipulators—viz., (Salvationists—Sky Pilots), we'd win hands down!

"Oh, You Men with Wives and Babes waiting for you, Men and Women, there's a message written for You!

"Think of your economic condition! How to better it!

"There's the fight—the Real Big Fight—right before Us every hour, awake or sleeping, and from cradle to grave! Interested in this Real Big Fight? Bet on it?

"Why yes! There are thousands upon thousands of men and women good and true who are betting on this Real Big Fight!

"Money?

"No! No! No!

Betting their freedom, their very lives!!

"Oh say! Men, can you not see, what so broadly is writ in the skies?

"Let's get interested in THE BIG FIGHT!"

A Painter (Card 27,824)

# The Parlor Provocateur

Book Review By J. D. C.

THE other night," says a Los Angeles newspaper, "5,000 strikers and their wives and children down at San Pedro harbor, cheered" —a woman, a millionairess, one who is described as having a "beautiful home behind a fringe of tall, restful evergreen trees. There are servants in that home. There is ease and comfort and even luxury there."

Who is this woman? What has she done that she should win the applause of strikers led by the I. W. W.,—for that was an I. W. W., M. T. W. strike —an organization of the exploited and enslaved of the present social order—and she a member of the oppressor class?

The answer is given in a little book, just sent out for review; a book that is neither fiction, romance, nor history, but which combines them all and is epoch making in that it portrays the truth and idealism of present day, pulsating, real life—the life and struggles of the great advancing working-class, the vanguard of the Industrial Republic.

This little book is entitled, "The Parlor Provocateur, or From Salon to Soap Box." With the subtitle, "The Letters of Kate Crane Gartz." Mrs. Gartz is the woman cheered by the I. W. W.

It is difficult to review the book without reviewing the subject it discusses. As a matter of fact there is no book. It is just a compilation of a number of brief, pointed and quite well composed letters of protest to the rulers and dignitaries of our day on behalf of the disinherited and discontented of our day—and in which the compiler, Mary Craig Sinclair, very modestly and properly, keeps herself in the background.

Instead, therefore, of reviewing the book we shall proceed to cull a number of excerpts from "The Parlor Provocateur" for the benefit of Pioneer readers, allowing them an opportunity to judge for themselves as to whether or not the writer of these excerpts, Kate Crane Gartz, is the one and only 100 per cent American of the American capitalist class: a woman who is championing the cause of labor and permits her house to be the haven of working class apostles.

### Pleads for Magon

The first letter in the book is herewith reproduced in full. It is addressed to Margaret Wilson, the daughter of the ex-president of now unenvied memory. It reads as follows:

"Because I am the sister of Charles R. Crane who is a close friend of yours and your father's and having met you in Chicago, I am venturing to enlist your sympathy and love of justice in behalf of this high-minded man—Ricardo Magon—whom the Department of Justice has seen fit to put behind iron bars as a 'common criminal.'

"I am enclosing one of his letters to his adored wife, whom I saw yesterday, living in squalor, but on

KATE CRANE GARTZ

a plane as far above her surroundings as either you or I could hold ourselves. She too has spent eight months in our filthy Los Angeles jail, ruining her health by the degrading work she was given to do—and all because she dreamed of a kinder, juster world, where all human beings may dwell in peace and happiness.

"And while I am appealing to you to intercede with your father in behalf of this man, the George Washington of his country, Mexico, I wish to raise my voice in behalf of all our conscientious objectors. Such men have been released automatically in all other countries, even the most benighted, since the signing of the armistice. How can we think to stifle all the voices crying out for freedom and justice, by putting them in dungeons, and otherwise mistreating them?

"America, once the beacon star of all the world's oppressed, is now lagging far behind in leadership. What has become of the lofty words that spurred us on toward a realization of our ideals? Every man who utters them now is clapped into jail—even Debs, the most Christlike man in our country, for uttering the very words your father uttered. Our government, by its blindness, is driving the people toward a violent revolution. Please try to awaken

your father before it is too late and we are face to face with inevitable chaos. And please, in my case, let me send you some of the facts about this man, Magon, who is going blind in jail, and will never see his loved ones again.

Yours for more humanity in our public officials."

### An Outraged Soul

This next one is a gem of pathos and a monument of social justice. It is addressed to Mr. Thomas Lee Woolwine, District Attorney of Los Angeles, in behalf of Raoul Palma, Mexican, and reads in part:

"We are acquainted with this boy and the work in which he has been engaged, and the reputation which he has established in the movement for social justice. These things mean something to us, and are the basis for our belief that the boy is unjustly accused.

"We have attended his trial, and listened to all the evidence which the state has been able to produce against him, and we are more than ever convinced that the accusation is baseless . We implore you to think of the endless burden of injustice which is heaped upon the weak and helpless by the strong and powerful; and the protests which they inevitably engender; the bitterness aroused in the hearts of social protestors by cases of police persecution such as this.

"I tell you my soul has been outraged by the daily evidence of prejudice and injustice which I have seen in the conduct of this case. The persecution of a fine type, so high above the average that those charged with enforcing the law cannot understand him, or the idealism which he is preaching.

"We should go to courts of justice as to a church, knowing that we shall be defended rather than persecuted. The whole system is bad enough, even when dealing with the guilty; when dealing with the innocent it is intolerable. Does it not occur to you that there should be a defender as relentless in protecting the poor and despised, as the public prosecutor is in seeking for legal points against him?

"I am so wrought up by this case of Palma that I cannot sleep nights, and am even now writing in the wee small hours of the morning with aching heart and streaming eyes. I am not sure that I would feel so about it if it were an ordinary man unjustly accused. But Palma has a message we must hear, a message such as Tolstoi taught, which is nothing more or less than the Brotherhood of Man."

### "Parlor Bolshevik"

This bit is from a letter to the editor of the Los Angeles Times: "I may be 'a parlor Bolshevik' simply because I am not capable of being the real thing. But I know that I am ashamed of myself for it. Until all have bread and plenty of it, I resent eating cake, and shall fight with the fighters until no man must ask another man for a job and until religion and education stop justifying war, and until profiteers are ashamed to face their victims."

Very satirical is this excerpt to Professor Ira Cross: "I admire you so much and feel so humble in your presence, you being a college professor, and I only a sympathizer with the dispossessed, not a real student of economics as you are. But I note that you wish merely to reconcile Capital and Labor, admitting the necessity of two classes of human beings, workers and drones forever. To perpetuate such a system is your idea of a just and happy society! For employers to be kind is to you the only solution for a distraught world. The employer can still go on piling up millions of profit, made from the broken lives of men, women and children toilers. Why should not the workers reap the benefit of their own toil, and not just make parasites of the rest of us? How can it be right for them to create all the good things of life, but never enjoy these things for themselves?

"No, the system is wrong, it must be changed. We must get rid of poverty, and you a learned professor, ought to find out the way and tell the rest of us."

### The I. W. W. Trials

Read this one, to the editor of the Pasadena Press: "An American woman, the mother of two American soldiers, wishes to submit to you a few reflections upon the I. W. W. trials now going on, and which she attended continuously.

"I noticed that at the beginning of the first trial men were admitted to the jury box who confessed to intense prejudice against the organization of which the persecuted man was accused of being a member. The judge would cajole the prospective jurors into a reluctant statement that they might possibly be able to change their point of view, and then he would force their acceptance as jurors.

"In the midst of the trial I saw a man arrested, charged with perjury, his crime having been that he dared to appear and testify in favor of the defendant. At the conclusion of the trial I heard the prosecuting attorney justify and practically incite to tarring and feathering of the defendant's attorney.

"If these things do not result in the conviction being reversed by a higher court, what shall we think of justice in Southern California? I wish to ask also—why did the morning newspapers both give the prosecutor's speech and ignore completely the truly noble words of Ryckman and Pandit?

"Bear in mind that this man Steelink has committed no overt act; he is simply charged with being secretary of an organization of persecuted men. The judge instructed the jury to find him not guilty unless it was proven beyond a reasonable doubt that an overt act had been committed. But the jury disregarded this instruction, and gave preference to the bitter and furious prejudice of District Attorney Woolwine. Never in my life have I listened to a more unfair, a more inhuman and cruel speech than this; the speech of a man who had absolutely no sense of the social wrongs of our time.

"District Attorney Woolwine says I. W. W.'s are thinking only of their selfish ambition. What he means is that they want some of the fruits of their labor. Is this such a base ambition—considering

the ambition of some people to take all that labor produces, leaving the laborer a bare existence?

"I tell you, Mr. Editor, that the questions brought up by this I. W. W. trial are deeper than Mr. Woolwine's vision ever carried; they are not to be settled by putting men into jail. It is an old and wise saying that there is no agitator but injustice; and it is this agitator we must seek to drive from our midst. What a just government has to do is to answer the complaints of the oppressed, and to bring them justice. A government which fails to do this cannot survive—not by all the cruel force it can summon. If revolution comes in America, it will be because of such exhibitions of criminal tyranny as were given in the courtroom by District Attorney Woolwine."

### In the Court Room

Part of a letter to Judge Frank Willis of Los Angeles after attending a trial in his court: "I entered the sanctuary, and gazed upward to the stained glass dome, upon which were inscribed four words: Peace, Justice, Truth, Law—and I felt hopeful. Before me were men who had violated no constitutional right, who had not the slightest criminal tendency, who were opposed to violence of every kind, knowing that it retards their cause.

"The trial proceeded. I looked again at the beautiful stained glass dome, and whispered to myself those majestic-sounding words: 'Peace, Justice, Truth, Law.' I listened to the prosecutors; the law in their hands was a hard, sharp, cruel, blade, seeking insistently, relentlessly for a weak spot in the armor of its victims. I listened to their Truth, and it was Falsehood; their Peace was a cruel, and bloody war; their Justice was a net to catch the victims at any cost—at the cost of all things but the glory of the Prosecutor's office."

Another letter to Mr. Woolwine: "Why should your office be associated with such a low-down character as Dymond—a man who has turned traitor to his class for money? How can you trust him, and what right have you to take $350 a month of the people's money and hand it over to such as he, and send him back and forth over the state to testify against workingmen, whose only crime is that they are members of the Industrial Workers of the World? You allow Dymond to arrest a witness, simply because he was defending his cause. The business of your office seems to be not to prosecute but to persecute. Why not inject a little humanism and a little mercy? I know that many of the men your office sent up are idealists not criminals."

### Letter to Harding

The following are a few lines from an appeal to President Harding for the release of men "in jail because of conscientious scruples": "Three years have passed since the armistice was signed, and other countries released their prisoners. Why do you not live to your high words, spoken on the first day of the distarmament conference: 'How can Humanity justify or God forgive a war.'"

Part of a letter to Woodworth Clum of the Better America Federation: "I did not bail out the Industrial Workers of the World in January, as you say; not because I would not but because I was not asked to. There are a few others besides myself willing to come to the aid of men who are being railroaded to the penitentiary, simply because they belong to an organization, never having committed an overt act."

From another letter to President Harding: "For the second time, I ask you to live up to your high-flung phrases, 'Expend your power in righteousness.' You believe in God; I do not, but I do try to believe in man, and find it is most difficult many times. You let those children who are now picketing your front door plead in vain for 'righteousness' for their fathers, who have been languishing in jail for five years for absolutely nothing! Not only should they be released now, but an attempt at an atonement should be made to them for the five years stolen from their lives—if such were possible."

### Arraigns Scabs

In another letter to the editor of the Los Angeles Times, Mrs. Gartz says: "You speak of the courage and the loyalty of the scab—your sympathy for some inexplicable reason is always with him, and against the man who is making the fight for better living conditions for all workers." And further: "The principle you stand so valiantly for in your editorial today—that a man must be free to work when and where he pleases—sounds very well to the unthinking person, but you know that such a man is keeping Negroes down below the American standard of living. The five thousand strikers in Los Angeles today are starving for principle. Are you? Are the scabs?"

To the Rev. John M. Dean, Pasadena, Calif., she writes in part: "Let the 'Wrath of God' come down upon your head if you suggest more war."

The above is the ample reason why the San Pedro I. W. W. strikers cheered the wealthy woman, Mrs. Kate Crane Gartz.

"The Parlor Provocateur" contains scores of other letters that are very valuable from other angles, letters from friends and relatives some of them denouncing her and others praising her efforts. Several from her son, whom she has succeeded in winning over to her way of thinking; and from her sisters who are also somewhat interested in labor struggles.

Reluctant as the reviewer is to give credit to a member of the enemy class, one who is a legatee to perhaps millions of dollars of unearned increment,—we cannot but concede that here at least is one woman who has suffered ostracism by the capitalist class; one who is sincere, is truly not a fadist or notoriety seeker, but a humanitarian, who is sacrificing position and risking persecution on behalf of freedom, truth, justice and the labor movement.

(Published by Mary Craig Sinclair, Pasadena, California.)

**Push Industrial Pioneer!**

# Whither Russia?

By NEIL GORDON

SOME facts have reeently come out of Russia, by way of communist sources, that are worthy of working class consideration. They raise the question, whither is Russia tending? And what of the international working elass?

Take a glance at the following item. It is from "The Labor Digest," a weekly organ of the proletarian party, connected with the communist international:—

**"Trotzky Sees American Capital Buying up Europe"**

"Moscow.—In the newspaper 'Pravda,' Leon Trotzky, war minister of Soviet Russia, says, 'America emerged from the war, not weakened, but strengthened. The internal power of the American bourgeoisie is still very great. The revolution in America therefore, is in the distant future.'

"He sees the economic ruin of the European nations and the purchasing of European industries by Ameriean eapital at its own priee, as in the ease of Austria.

**"He argues that the only force that will be effective against America, the last stronghold of capitalism, is a 'United Proletarian States of Europe.' "**

(Bold faee ours.)

From another Communist International weekly, The Glasgow Worker, of July 7, we also take the following, in their entirety, from under "Russian Notes":

**"Russia and France**

"Referring to the official appointment of Mr. Kawakami, former Japanese Minister in Warsaw, as plenipotentiary for the Russo-Japanese negotiations, 'Izvestia,' remarks that it is satisfaetory that the choice has fallen on a Japanese delegate, who on many oecasions has made statements in the press in favour of a Russo-Japanese rapprochement. Ineidentally he has published a book about Soviet Russia, based on his recent journey, and filled with a sincere friendly spirit towards Russia."

**"Russia and France"**

"In conversation with representatives of the press M. Duverget, Chairman of the French Commercial Mission, stated that he is returning to Paris with a number of draft agreements for the export of Russian grain and timber. He hopes that the business circles he represents will succeed in inducing the French Government to reeommence first economic and later political relations with Russia. He is confident of being able to persuade the Government to recognize Russia de faeto, and send a permanent official representative to Moscow. He thinks the negotiations for oil concessions are of immense importance for France, and will further the achievement of the above ends, to which wide eircles are working in Franee. Diseussing his impressions of Russia, Duverget said that a eountry capable of restoring its economic strueture so rapidly after the erisis it has undergone shows that it has a vast reserve of energy and a great economic future. A member of the delegation is leaving for Baku to inspect the oil wells. Duverget has written a letter to the Director of the State Bank expressing his admiration at Soviet Russia's financial organization."

What do these faets portend? Let's see.

The International Press Correspondence, organ of the Communist International, issues of June 28 and July 5th successively, contains the speeches of Trotzky and Radek on the Ruhr situation and the English ultimatum to Soviet Russia. Both these speeches are significant. That of Radek is espeeially noteworthy.

**Fear America and England**

From both of them it is apparent that Russia no longer stands in fear of France, Japan and Poland; as mueh as of America and England. Especially does Radek's attempt to analyze the formations of the various national groups in the struggles of international eapitalism reveal this. This is more particularly seen in his analysis of the situation in the Far East. Says Radek:—

"The Washington Treaty was intended to be the basis for the relations of power there. Russia was not recognized as a Great Power and was not invited because it was not interested in the Far East. Since then we have marched into Vladivostok. Meanwhile, the Washington Treaty was concluded. It fixed a certain number of dreadnoughts for each of the participating powers, England, America and Japan. Japan understood that this was meant to crush her and although she submitted she changed her strategic plan and counted upon the construetion of fast eruisers and submarines. This provoked counter measures on the part of America and England. America responded by an extensive scheme for the construetion of fast eruisers and submarines, while England, who saw her base in Hongkong menaced, built a great harbour in Singapore. **This situation renders Japan to a great extent dependent upon Soviet Russia. She absolutely requires peace and good relations with Soviet Russia in order to leave her hands free against America."** (Bold face ours.)

**Some Recollections**

Reeall the words of Trotzky on the necessity for a "United Proletarian States of Europe" to war on Ameriea. Now recall also Radek's statement of Japan's dependenee on Russia and the good opinion of the Japanese negotiator with Russia expressed in The Glasgow Worker Russian note. Recall further the words of the Chairman of the French Commereial Mission, also from the same paper. Having digested that, turn to Trotzky's speech in The International Press Correspondence. Therein he says of conditions in France: "The next elections, in about 11 or 12 months, will probably bring vietory to the left bloc, and this will lead to some form of understanding with Soviet Russia."

# Injunction Cloaks Failure

FORMERLY, not so very long ago, the injunction was regarded as a powerful weapon, as a legal document intended to force Labor's submission to certain policies, ostensibly for "the public good"; but really for the good, i. e., the profits, of employers at war with their employes. As such the injunction generally exerted an awe-inspiring influence over the workers, that contributed greatly to the successful accomplishment of the purposes of its issuance.

But the injunction is now coming to lose its caste as a powerful weapon. It is coming to be regarded as a cloak wherewith to cover defeat and to be laughed at accordingly. This was the case in the Kansas state injunction restraining the I. W. W. from committing crimes that it had no intention of committing—after trying in vain to drive it out of the state by means of unsuccessful criminal syndicalism persecutions. Of course, the Kansas state injunction against the I. W. W. is a joke. It does not stop any legitimate I. W. W. activity,

King Canute Webb Is Impotent
(From Industrial Worker)

such as has always been pursued in Kansas. It simply hides official discomfiture, that's all, to the amusement of those in possession of a knowledge of the real state of affairs.

Now comes the injunction of the state of California. Identical in every detail with that of Kansas, it serves the same purpose and achieves the same results. It marks the anti-climax of bitter working class persecution and is laughed at accordingly. California is going the way Kansas went.

---

This, and the trade agreements already described, which precede the elections.

Radek evidently has no fear of England, when Russia is leagued with France. Says he: "Speaking militarily, England has ceased to be an island. It consists of nothing but Achilles' heels owing to the overwhelming superiority of French aerial forces."

All of the foregoing should make plain the trend of Russian development. It is nationalistic and, in common with other nationals, imperialistic. Russia must develop her own economy—her own capitalism and imperialism—with such outside aid as she through force of circumstances, can command. In so doing she must sacrifice that complete working class internationalism for which she, through her spokesmen, is alleged to stand; for there can be no such internationalism where such a development is under way, as her case proves.

### Developing Nationalism

Radek declares in the speech already quoted: "In Russia, where the working class is in power, **national consciousness is a part of the dictatorship.**" (Bold face ours.) And it was Lenin, who, preceding a certain historic occasion, declared, "We go to Genoa, not as communists, but as merchants." They evidently went to Lausanne also with the same policy and found the French and Japanese more advisable and better customers than the English; for it is at Lausanne that Curzon and Tchitcherin parted company and the subsequent national groupings arose. As for America, her fortunes are bound up with those of England.

**The question now arises, shall working class internationalism continue to be the tail of Russian or other state politics? Or shall they be divorced? Apparently, the day when the Third International will split, as did the second, on the basis of national groupings, arrayed in economic and physical warfare, is already in sight.**

What the world's workers need is an economic international that is not the appendage of the world-politics of any state, whether in process of modern development, or otherwise. That's the key to the workers' control of the international situation and not adherence to any international run by politicians in alliance with national groups intent on war.

In this connection, the following Federated Press dispatch, from London, England, is worthy of deep reflection:—

"The Transport and General Workers' Union Conference passed a resolution against international war, and pointed out in the resolution that a world-wide transport workers' union could prevent such war. One of the delegates stated, 'It is better, I think, that you give all your money for peace than give your lives in war.'"

# The General Strike

By JOHN GRIFFITHS

THE general strike is a theme of great interest to the working class. As a means of liberation it looms large among the workers. It implies a Solidarity such as will eventually make the lock-out of the capitalist class possible.

It used to be the fashion to refer to the general strike as "general nonsense." That was before it was used with such good effect in saving the German republic from the Kapp "putsch." Now it is referred to with more respect, as its history requires. Now, the general strike is generally useful.

The general strike in this country is seemingly impossible. With the working class divided into 110 A. F. of L. international unions, each with trade and local autonomy, no basis for the solidarity that is its first essential seems near. They are a barrier, against which working class unity apparently dashes in vain.

However, all this notwithstanding, strikes tend in this country to take on such immense scope as to become practically general in character. This is due to the general nature of industry and the general conditions that arise from it as a whole. It is only where these circumstances abound that the tendency towards general strikes increases.

General strikes result from general industry and general conditions. They are impossible in isolated industry and isolated conditions.

It is in this sense and for these reasons that the great steel strike of 1919 and the great coal miners', shopmen's and textile workers' strikes of 1922 take on the nature of general strikes and may be justly characterized as such. Here were armies of workmen —200,000 steel workers, 600,000 coal miners, 400,-000 shopmen, and 100,000 textile workers—fighting over a wide expanse of territory against general conditions for general improvements. They were all fighting essentially general industrial strikes, i. e., a general strike of a single industry—one including all the trades and establishments in their respective industries, wherever located.

Especially were the great strikes of 1922 more general in character than any other preceding strikes. They all practically occurred together, at one time; and so included simultaneously, more industries, territory ,workers and institutions than had ever been affected before in this country. Their effects were more nearly revolutionary and more portentous—nay, prophetic of future strikes—than any other series of strikes in American industrial history.

They, further, resulted from the open shop drive that threatened the organized workers, not in isolated trades or districts, but in general. They aimed more specifically to prevent the destruction of unionism by the organized capitalist class, in order to prevent the general "deflation of labor," i. e., wage cuts, increase of hours, abolition of overtime rates, etc. They were, in brief, general reflexes of general underlying, basic conditions, without which general strikes cannot exist.

General strikes, be it stated again, are not made; they are born of general conditions, of which general industry is the biggest of them all. And so general strikes are likely to occur despite the A. F. of L. which, because it is organized according to craft, is no match for general industry or the conditions born of it.

* * *

Some time the American labor historian will give general strikes in this country his special attention. He will devote a monograph to them. Early American strikes seem to have been general strikes. That is, they often were "walk-outs" of all the trades involved in a given industry. This may have been due to the lack of marked technical development at that time, in which, accordingly, craft divisions were not as distinct as they became later on.

The first general strike of any great magnitude that struck this country, seems to have occurred in 1877. Then all the railroad systems were tied up by spontaneous revolt against repeated wage reductions and managerial arrogance. Beginning at Baltimore, Md., it spread northward and westward; with Pittsburgh, Pa., as its storm center. It came like a thunderbolt out of a clear sky. State militias went over to it en masse. Other industries joined it; some through sympathy, others because of the stoppage which it entailed. Its general effect was one of consternation and paralysis; of great indutsrial agitation and rebellion. Big mass meetings, for and against, marked its course. Riots and federal military suppression were among its features. It was a volcanic upheaval and a test of Republican institutions during the month or so that it lasted . Its reverberations were heard for a decade or more.

The 8-hour movement in 1886 also developed some general strike features, in that it embraced all trades and industries in its sweep. Chicago was the storm center of this movement and the hanging of the so-called anarchists (one of the most damnable frame-ups against workers ever perpetrated, as Gov. Altgeld subsequently showed), was its most historic episode. It accomplished much indirect good, as did the railroad strikes of 1877.

Next comes the general strike at Lawrence, Mass., to free Ettor, Giovannitti and Caruso. This was a local general strike, confined to Lawrence and called to resent the imprisonment of the leaders of a successful strike. Its slogan, "Open the prison gates, or we'll close the gates of the mills," was literally put into effect. The Lawrence general strike was a great factor in the subsequent release of three prisoners of the class war.

Th recent May Day general strikes of the I. W. W.

# The Passing of a Great Union!

By HARRY FISHER

JUST 23 months ago, Kern River Local, of the Oil-field, Gas well and Refinery Workers, was in the zenith of its power. Yesterday, July 23, 1923, spelled the final 23 for Local No. 19.

The Kern River fields are less than five miles from Bakersfield, California. For this reason, the local established its offices in the Labor Temple of this city. For a time the local was the strongest, numerically, of any craft affiliated with the central council. Naturally the local had a great deal of influence in the council, especially on the date of the council's annual election. The membership of Local No. 19 was around the thousand mark, hence an official seeking re-election, could not overlook such a local, and be a good ward heeler.

### The Last Sad Rites

Yesterday the last sad rites were enacted over all that remained of the oil workers' union Then the remaining furniture and office fixtures were sold for $110.00. There were no formal ceremonies attending the obsequies; it was like the dying flicker of a wasted candle.

As a contrast to the enthusiastic meetings, overflowing the large meeting hall, we have it from the lips of one of the faithful die-hards, that the membership had stopped paying dues. Only seven members remained to hold the charter and if one of these was absent, there could be no quorum for a meeting.

Some of the proceeds from the sale of fixtures will go to pay outstanding bills and the rest given to a charitable institution or thrown into the waste basket. The latter most likely is only meant as a figure of speech, to show the disgust of the last of the rank and file, for OFFICIALDOM HAD LONG AGO MIGRATED SOUTHWARD TOWARD LONG BEACH, where the International president appealed to the city council for funds "with which to stamp out the I. W. W."

At Long Beach, to its everlasting disgrace may it be added, a "convention" passed a resolution opposing the repeal of the Criminal Syndicalism laws. In this the oilworkers of that local distinguished themselves as being the only labor (?) organization in the state, to rise in the defense of a law that was only applied to the working class. Whether this was a gesture to gain the plaudits of the M. & M., who were then waging a relentless warfare on all organized labor and more particularly on the organization of the Industrial Workers, remains a moot question, yet there is no gainsaying the fact that its conception was rooted in mercenary avarice of the most venal type. Else why appeal to the representatives of big business for funds "to stamp out" a rival labor organization?

### The Fiasco of 20 Months Ago

It is indeed with ill grace that these oil workers should now feel so cocky toward others, after the ignominious sequel of their own, ill-advised fiasco of over twenty months ago.

While in their hearts members of organized labor generally, may have disapproved the calling of that strike just before the winter months, yet not a voice was raised against giving the fullest support after the die was cast. FOR LABOR WAS NOW ON TRIAL and if this strike was lost, it would only encourage those forces whose lust was bent on complete annihilation of every union in the state.

What part the defeat of the oil workers played in subsequent struggles may be problematical, though it also may have been the vital factor.

**Hardly had the oil workers called in the picket lines, when the Industrial Association hurled defiance and established the "American Plan" in "the largest and best organized community west of Chicago," when they bluntly told the building trades of San Francisco, that the "American Plan" had come to stay.**

On the surface it would appear that no strike was ever launched under more favorable auspices.

The pickets were nearly all ex-service men. Unlike other strikes, these patrols were schooled in army discipline. Furthermore they had been deputized by constable, as peace officers. On the highways one found huge signs informing the traveler that: "You are now entering the strike zone. I. W. W. and bootleggers stay out." All day and night automobiles containing pickets watched the railway

---

are well known. They affected two industries mainly: viz., lumber and marine transportation. General construction and oil were also partly affected. 100,000 workers participated in this movement in favor of the release of war-time prisoners and for immediate economic demands. The results were highly beneficial, as much was gained through them.

From this it will be seen that general strikes are becoming more general. They increase, despite barriers, with the expansion of big industry. Their spontaneous character makes it likely that they will flourish even where unionism is wiped off the earth.

General strikes are the working class reaction to general capitalism and its general policies.

stations. At the entrance to terminal yards other groups held the fort. Passengers on the stages had to be able to give a good account of themselves. The writer himself, known for years in the state, did not happen to be known to a particular squad that halted the stage on which he happened to be going to a union meeting and came very near being held for "investigation" or to be returned on a returning stage. Luckily the stage driver was able to vouch for him and he was allowed to pass, only to meet another squad a few miles further on. As the driver had the O. K. from the first squad, we were allowed to proceed to our destination. This is only an illustration, showing how ever ydetail of post-duty in warfare was carried out. Just imagine seeing campfires ahead and then suddenly hearing the command to "HALT" and then seeing patrols, armed with rifles and with cartridge belts and holsters strapped to their sides as you rode along the different roads at night. It was a cinch that no strike-breakers got past these cordons of armed patrols, whom no policeman dared to interrupt. All along the railway for thirty miles either way, in any direction, the patrols kept vigil, to see that no train stopped and that no srike-breaker jumped off.

**Under these circumstances it would seem that the strike could not be lost. Yet the strike, which was called on September 11th, was ended before the month of November had been fairly started.**

A $250,000 defense fund and over $50,000 donated by labor organizations, represented a pretty fair war-chest and besides this the West Side fields, extending from Maricopa through Taft, Fellows, McKittrick, Belridge and on to Lost Hills, were separate divisions, with their own headquarters and their own finances. Then at Coalinga, in Fresno county, the banner local of the entire San Joaquin valley held the lines.

Well-stocked commissaries and canteens, must have made the patrols think of the "Y" huts over in France. Beds were placed in the labor temple for the patrols to rest and sleep until the "officer of the day" called them to go on post duty.

Then came notices for the strikers who were living on the leases, to vacate the cottages. Lawyers took the matter into court and the strikers got the advantage of a thirty day notice requirement in all eviction cases.

Surely, if ever strikers had favorable conditions, the oil workers did. Yet after eleven weeks the general staff declared a truce, the patrols disbanded and everyone who could get back to his job was welcome to do so, for there was no hope of winning.

The operators were in a position to dictate the terms on which they would take a limited number back. The best conducted and best disciplined and most formidable strike of the age culminated in an abject surrender in eleven weeks. Why?

Because the operators understood the psychology of the membership better than did the membership itself. If it needed anything to substantiate this assertion, then the need is eloquently expressed in a statement made by the "advisor" for the oil workers' union at an open session of the central council in Bakersfield, when he reported, though it may seem ludicrous, it was nevertheless a fact, that there were operatives employed by the companies whose duties consisted of examining discarded tobacco cans, cigarette packages, wearing apparel and everything that the workers buy, to enable the offices to keep a tabulated record of just how strong the union sentiment really was among the employes. In passing, he also found that on one large lease, he learned that everything that the workers bought was the product of scab labor. So when we reflect that among several hundred "union men" there could not be found a single article that bore the union label, it is no surprise to find that the companies felt a scornful contempt for a unionism that patronizes only scab labor itself. They had nothing to fear from such unionism.

Then came the Santa Barbara "conference" between the government and the operators and the employes, at which the Standard Oil Company was conspicuous by its absence. The outcome of this "conference" was not conducive to the enthusiasm of the membership, when their leaders practically accepted the "open shop" by the waiver of a closed shop clause in the agreements, yclept "the memorandum of terms."

During the following summer the oil workers' unions levied an assessment on the entire memberssip for the purpose of creating a "defense fund," with the particulars of which no doubt every superintendent was more familiar than the average wage-earner on the lease.

So when the time arrived for the renewal of the "memorandum of terms," the employes appeared on the defensive. The operators dictated "the terms." A wage cut of a dollar per day all round was agreed to, in fact every point of the operators was conceded with the exception of the continuation of the tripartite arrangement of conferences, which the operators refused to accede.

So a strike call was issued to commence when the old agreement expired, about September 1st. For "strategic" reasons this call was rescinded but a fortnight later the members were called off the jobs. A majority of the higher officials of the union were natives of Great Britain and, by a strange coincidence, the only large operating company declared to be "fair," was the British Dutch Shell Company, while the Union Oil Company, which used the American shield as its trade-mark, was the center of attack. Strange to say, after the strike was over, the newspapers published a story of what purported to be a kind of merger between the Dutch Shell and the Union Oil companies.

Though the writer does not now remember the details of the "merger," it seems a stange cozenage in view of previous estrangement (?) of these concerns.

A few minor companies, anticipating a temporary spurt of business for themselves, evidently felt that

it would redound to their profit, to be on the "fair" list, with no stoppage of production. But these may have been reckoning without the host if they figured on a monopoly of trade. The other companies had been preparing for just such a contingency.

When all the storage tanks and reservoirs were full and no strike was called, the operating companies began laying off men. This was the cue for calling a strike and many fell for it, little realizing that the companies were more prepared for a long siege than was the average employe.

Another thing, which may have disgusted the rank and file, was the fact that the refinery men were permitted to distill and rectify the contents of the well-stocked tanks for shipment. While the union made a pretense of calling these men out, it is nevertheless true that the refineries kept on refining. The Standard Oil Company continued producing oil and refining it, as though there was no union, while the few union members working for this company were not called out so as to enable them to continue to pay their pro rata of the assessments. Had they been called out, it would have made no difference to the company anyway, for they knew the men liked their jobs only too well.

So, in summing up, what was there at stake in this controversy? We are told that it was principle. When the closed shop was waived and a wage-cut accepted, in fact when every point was yielded there could not be much principle involved, in view of the purchases of non-union tobacco, cigarettes, shoes, hats and clothing, previously referred to, which fact the operators no doubt were keen to sense.

If it was expected that capital would be more considerate, because so many members of the union were ex-service men, the remark of Mr. Zeehandelaar, secretary of the Los Angeles Merchants and Manufacturers Association, when he said to the editor of "The Dugout"—"To hell with you as a returned soldier!" may be illuminating.

Do not expect capital to respect you more when you come with hat in hand, seeking alms to be used toward the destruction of your fellow man. Do not let history mark you with a brand of Cain for passing resolutions, conniving at the unjust imprisonment of fellow workingmen. Do not add to the infamy of barbarism by assuming the role of a stool. There is no honor in it, when even Judas "went out and hanged himself." Don't be cravens.

While the modern Pilates are passing sentences of twenty-eight years, do not shout "Crucify Him!" All are our brothers' keepers. Capital will take good care of itself.

It was a California bard, Joaquin Miller, "the poet of the Sierras," that wrote

"In men, whom men condemn as ill,
I see so much of goodness still:
While in men whom men pronounce divine,
I see so much of sin and blot,
I hesitate to draw a line
Between the two—where God has not."

—For yesterday the curtain was rung down on the final act on the last vestige of a tragedy where only a little while ago, the Oil Workers' Union felt invincible. Verily the proud and haughty could be no more humbled than when they asked a city council for funds to crush a militant union.

# An Outline of the Labor Movement

Reviewed by PHILIPP TAFT.

BOOKS and pamphlets giving an outline of the currents, tendencies and history of the labor movement serve a more genuine need than do the large and voluminous treatises on abstract philosophy typical of the radical wing of the movement.

The lessons that one can gain by reading the history of labor in America, its pitfalls and methods, its policies and forms, are far more lasting and less open to argument than conclusions deduced from purely philosophical speculation.

It is that factor that makes "An Outline of the American Labor Movement," a syllabus for study classes, by Leo Woltman, an interesting as well as an important contribution to labor's literature.

Briefly outlining the factors that lead to and from labor organization, the author refers the reader to a number of works dealing with particular phases of the movement.

Writing, as he does, for the International Ladies Garment Workers' Union, it is to be expected that the author of this study would minimize the influence and importance of organizations like the I. W. W., who, he says, are small in numbers, but vigorous in methods; and, after spectacular strikes in lumber and textile industries, survived to see their influence wane and their numbers dwindle.

To all of which the I. W. W. answers: Our numbers may have dwindled on account of fierce persecution but the permanency of the I. W. W. in peace times is manifested by recent growth and the splendid battles of its membership in California, Washington and Oregon; not to mention the marine workers' strikes on the East coast.

As a whole, readers will find this pamphlet helpful and instructive, an aid toward finding larger volumes dealing with the labor movement in a more elaborate manner.

[Workers' Education Bureau of America, Publishers, New York City.]

# Ford as Labor Historian

When it came to writing the Origin of Species Darwin did a big job. But when it comes to writing The Origin of Labor Unions, Ford is doing a bigger job still. The labor union, according to the much-advertised auto maker, was organized by the Jew financiers as a means to get their hands on industry. Shades of trade union history! What was it Marx said about the capitalist being great because he is a capitalist and not a capitallist because he's great?

# The I. W. W. Flag Flies in Hoboken

HOBOKEN, N. J., is a part of the port of New York. It is the terminal of great German-American transatlantic lines, that enjoy the paternal patronage of the U. S. Shipping Board. This, to the great profit of their financial owners and loss to the U. S. Treasury.

Hoboken is also a stronghold of the Marine Transport Workers' Industrial Union No. 510, I. W. W.

A strike has been raging in Hoboken. It was a strike of longshoremen, unorganized and organized. During the strike the I. W. W. hall at 316 River St. was raided and its flag torn down.

The story of the raid is told in the following telegram of protest sent to Governor Silzer of New Jersey demanding the arrest and prosecution of Shipping Board officials in Hoboken, who are charged with acts of mob violence in raiding their hall. The telegram quoted a statement inciting trouble given to newspapers by officials of a Shipping Board line. This statement said:

"If Hoboken had any pride whatsoever it would chase out the undesirable I. W. W. It has been done in other places."

The telegram in part follows:

"In spite of the knowledge that we were lawful in our acts, these Shipping Board officials tried to incite the American Legion to violence against us, on the charge that we were flying a red flag over our hall.

"The American Legion refused to be the tool of the Shipping Board.

"Unable to use the legion in unlawful acts, a mob, under the leadership of Thomas Dunn, a foreman on the Shipping Board docks, wrecked our Hoboken hall Saturday. Our property was destroyed and our branch secretary, John Gunlach, was assaulted.

"We demand that you live up to your oath of office and investigate and prosecute these Shipping Board officials for their illegal actions."

The flag has been replaced and is still flying.

## Argentine Labor Slaves

Labor recruiters penetrate to remote villages of Northern Argentine and with the promise of high wages induce Indians and their families to leave home. The laborers are transported on flat cars with accomodations worse than those provided for live stock . They are herded on estates under the open sky without sufficient food. They are hard workers, and their pay is practically nothing, their wages being in the form of orders, valid only at the plantation store, where they are charged exorbitant prices for the poorest quality of goods. If any balance is left at the end of the accounting, the workers are induced to spend it for liquors, of which they are very fond. The national department of labor of Argentina is authority for this information.

## Be a Cork -- Be an I. W. W.

A little cork fell in the path of a whale,
Who lashed it down with his angry tail;
But in spite of his blows
It quickly arose
And floated serenely before his nose.

Said the cork, "You may flap and sputter and rap,
But you never can keep me down,
For I'm made of the stuff
That is buoyant enough
To float instead of to drown."

—Selected.

The Lumber Workers' Industrial Union No. 120, I. W. W., has more than trebled its membership in the past year. It has a G. O. C. man in Michigan,, organizing unorganized territory. A stationary delegate has been elected at Bangor, Maine.

# Frank Lindroos

**DEAD COMPOSER**

IT is one of the indietments of eapitalist soeiety that too often it drives sensitive men of genius to despair and suieide; espeeially those who look forward to a new soeiety. Sueh a man is the well-known musieian and eomposer, Frank Lindroos, whose portrait is herewith reprodueed. Lindroos on July 10 committed self-destruetion at his home in Duluth, Minn., the victim, so it is believed, of sorrow and overwork. He was mueh beloved and his end is deeply regretted.

Born in Petrograd in 1874, he supported himself and family by playing the violin on the streets of that eity when only 10 years of age. Later, at Viborg, Finland, and Petrograd, Russia, he was eonneeted, as a musician, with military bands. He came to this eountry in 1904.

During this and following years, there was a boom in the Soeialist movement among the Finns in the United States. Lindroos got in contaet with this movement and joined. With sueeess, he also conduеted bands and orchestras in eastern eities; and, in 1913, settled, together with his family, at Duluth, Minn. Here, in the eontroversy between the politieal soeialists and the industrial unionists, Frank Lindroos lined up with the "wobblies." Ever since then he has been eonneeted with the local Finnish Association at Duluth. At all entertainments in behalf of the cause, Frank Lindroos did his share, supplying the music.

Lindroos' first composition, a mareh, was written in Petrograd, when he was 24 years of age. But most of his work in this line was done in his later years. The revolutionary struggles in Europe brought mueh inspiration and material to him. Numerous are the compositions that he wrote from them. When the white terror swept Finland, Lindroos expressed its horrors in musie. And so appeared "The Coneentration Camp at Viborg" "This Land" and many others. His last eomposition was ealled "The Deaths on the Gravel Hills." This is eonsidered one of Lindroos' best works; and its composer has stated that it contains his heart aehes and tears.

Many are the works of Frank Lindroos. When the Revolution took plaee in Russia and the Czar was overthrown then "New Russia" was also eomposed. Therein one eould feel the rising power of labor. Numerous also are the songs of Joe Hill that Fellow Worker Lindroos has arranged for orehestra and ehorus. These songs, of course, are heard wherever there is a working class in existance.

Among Amerieans and non-working elass elements Lindroos was a noted musieian. Time and time again had he been offered good plaees in large orehestras, only to turn them down. He wanted to do his duty among his own elass. Only last Spring, Lindroos arranged the musie for "Creation," given at the Duluth Summer Festival. The

general opinion was that this was the best musie the festival ever had. Only after Lindroos had died, was it given out that "Creation" was his work.

Frank Lindroos is dead. In the words of Joe Hill "Don't mourn; Organize!" to end capitalism.

## Science and Nationalism

The city of Gothenburg in Sweden is celebrating the third eentennial anniversary of its founding. In eonnection with the eelebration the country has opened an industrial exposition.

During the summer, quite a few eongresses have been held there by different assoeiations. At the eongress of scientists reeently held, a number of seientists lectured on a lot of seientifie subjeets.

Among them was Professor Einstein, who spoke on "The Theory of Relativity." After the lecture he was interviewed by a bourgeois reporter. The latter asked Einstein: "What is your opinion, Professor, of Swedish seienee?"

To this Einstein answered: "There is no Swedish nor English nor French nor German seienee. Seience is International."

Let us add, so is industry; and so are the Wobblies and their organization.—C. G. ANDERSON, Stoekholm, Sweden.

# The I. W. W. Steel Strike

(Continued from page 4)

ing was done by the director of public safety to prevent this meeting. Evidently, he had already begun to realize that his bluff had been successfully called. All the literature on hand was sold. The crowd at both street meetings was practically the same.

**One of the features of the steel campaign will be educational. Field headquarters with literature stations are now being established as a result of the conference's decisions.**

Great quantities of literature have been shipped to the many points during the past two years, but the amount has been much increased during the last few weeks and just previous to the conference one hundred thousand new leaflets were sent out from the Chicago Main Office. Additional material will be forwarded to the field forces as fast as needed to carry on the work of organization and education. Several hundred additional job delegates throughout the steel industry will also be appointed as a result of the conference's actions. Headquarters will be added wherever necessary in the steel centers. General organizers will be added, as conditions require.

**Special efforts will be made to explain industrial unionism to uninformed workers that are now entering the steel industry, such as the Mexican workers who have been imported recently, and the Negro laborers from the South, who are now being brought in in large shipments.**

Without doubt, the steel campaign will also give renewed impetus to I. W. W. organization in other parts of the metal and machinery industry. Branches already established feel the impetus which the new drive giving. Especially is this true of the large metal and machinery centers of Ohio. This is felt to be the biggest campaign that was ever undertaken by the I. W. W. in the key industries of the country.

"Wake up, metal-machinery workers! Get behind the steel drive!" is the cry now heard. Old timers are getting active again and a new lease of life is apparent on all sides.

**Close co-operation and financial assistance is expected by the Metal Workers' Main Office from all the branches of the union and subordinate parts of the organization as a whole, and, no doubt , it ought to be forthcoming.**

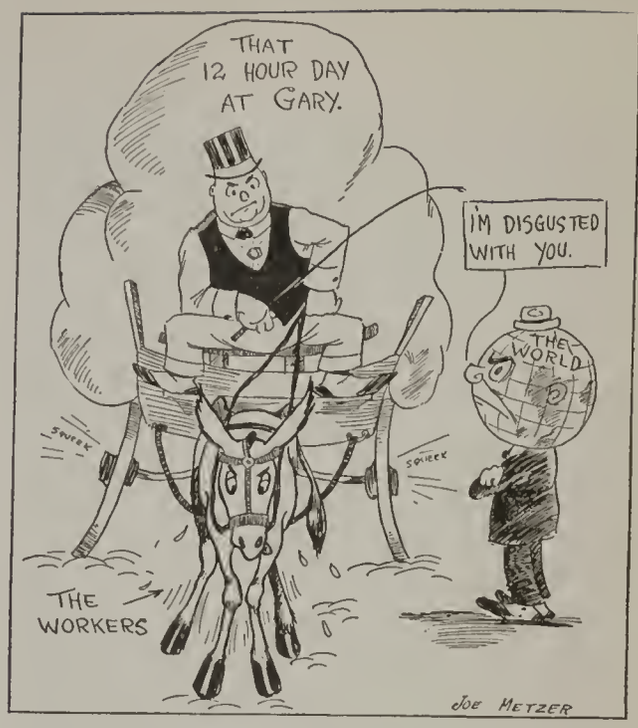
All the members and sympathizers can also help in this work. Agitate I. W. W. organization among the metal and machinery workers in your city. You'll find them in machine shops, foundries, auto works, etc., etc. Go after them! Line them up to back this steel drive!

Already is 440 feeling an increase in membership.

The Toledo conference took up and adopted the following recommendations to 440 branches:

(1) The issuing of Steel Drive Contribution Lists at once, (2) the issuing of a $1 Steel Drive special assessment stamp, (3) that each branch and group of I. U. 440 should hold three affairs for financing of the steel drive, one in July, one in August and one in September, the full proceeds to go to the steel drive, (4) every delegate at the conference to pledge himself to a certain amount to be raised prior to September 1st.

All aboard for the steel drive. It's now or never!



**He Said a Mouthful!.**

# Convention Draws Near

THE I. W. W. convention is drawing near. General Secretary Harry Clark has already addressed the industrial unions and branches on matters relating to it. The suggestions contained therein are worth considering. They deal with the improvement and expansion of the I. W. W. as a whole.

There is no doubt that the I. W. W. is confronted with a great opportunity and that it will endeavor to rise equal to it. Great numbers of unorganized await organization, both among migratories and homeguards. Revolt is in the trade union air. Organizations are tearing away from the A. F. of L. with nowhere to go.

It is up to the I. W. W. to get out of the rut and meet these facts bodily. It must raise ways and means wherewith to solve the problems thrust upon it by economic conditions generally. It must secure the money and the ability to organize the working class, or else disappoint the latter at a crucial period during its existence. It must improve and expand or shrivel and disappear.

The I. W. W. has all else, namely, correct principles, philosophy and spirit. It needs better and more organization.

# The White Terror in Italy

By M. De CIAMPIS

THE war fought on the European battlefields from 1914 to 1918 that was to outlaw war and bring about a new era of democracy and good will among the people of the whole world, left in every country a marked sentiment of revolt and discontent. This particularly applied to Italy, which, in such a war shamefully spent all its economic resources to further the imperialistic aims of its bourgeois class. The working classes who unwillingly had fought in the bloody conflict for so many years found themselves, at the end of the war, much more impoverished, overtaxed, without work, and with the ruling class without any constructive plan that would adequately meet the unusual situation and build, on the widespread ruin and chaos, the welfare of the people. Oppressed under the iron heel of a ruthless military machine, that in the war had poorly showed itself, the Italian workers, notwithstanding the rosy war promises of the politicians and the government, began ot think over and take matters into their own hands, trying to work out their own salvation.

### War's Bitter Lessons

The war had taught many a bitter lesson. It showed its own utter uselessness and stupidity. Thousands and thousands of soldiers in the trenches, so thinking, aequired a radical mental attitude and, kindled by the fire of socialist teachings, soon became revolutionists in body and soul. Seeing that the powers that be had no concern at all about the rights of man and the welfare of the people, they took a keen interest in the problem of the hour, namely, that of the nation's economic reconstruction on a more equitable basis.

That the ruling class did not care to concern itself much about the very needs of the working masses was soon plainly felt and seen. The government dumped the idle soldiers on the labor market and the captains of industry did not arrange any comprehensive plan that would give work, bread and comfort to the workers and appease their discontent. The breakdown of the capitalist system of the nation could not be more eloquently seen. Italy, in the last year of the war was doomed to go down as a bourgeois regiment; and, in 1919 and 1920, was a country hopelessly lost for the dominant system of society and held on mostly by the sheer force of its old decayed remains of vitality. Only now, after the bloody defeat of the proletariat, we can see how and why the Italian bourgeoisie was saved from inevitable collapse. No better man than Ludovico D' Aragona, the Gompers of Italy and yellow socialist, secretary of the Italian Confederation of Labor, can testify to this. Last year, this man, in one of his speeches, remarkable for its brazen frankness and affrontery on the heroic sacrifices and prowess of the fighting working class, said: **"It is praise and honor to us** (meaning all his reformist following in the G. C. of L. and in the Socialist Party) **to have stood firmly against the extremists and hindered the outbreaking of the impending revolution. We are those most responsible for having listened too much to them; but our conscience is clear and tells us that we have done all that could possibly have been expected to restrain the impatient masses."** No wonder that only the other day, Mussolini, the Fascist chieftain and practical dictator of the country, we read in a press dispatch, embraced and kissed D'Aragona in the Chamber of Deputies, when the latter went to congratulate him, after having finished one of the many stupid and tactless speeches in behalf of the new electoral reform, which is to give more electoral power to the Fascisti Party and assure it a stable and trustworthy support in the Chamber.

### Working Class Rise to Power Feared

With the industries disorganized and prostrate; with a monetary system becoming every day more worthless; with the workers lying idle, incapacitated even from buying the most necessary things to sustain life; with no foreign markets for the products of whatever little was produced; with a military machine that sucked the life blood of all, and a rapacious dominant class bent to despoil its victims; without any human thought and no thoughts nor plans to rise above all this collapse, the Italian bourgeoisie saw the only chance of salvation in the arming of the White Guards. So it came about that Mussolini and his followers, the Fascisti, were armed and financed by the captains of industries and the lords of the land bent on destroying the conquests of the workers. Because amid much capitalistic disorder and ruin the working class had succeeded finally in coming to a power of its own.

Most of the American fellow workers know too well what has taken place in Italy during the years 1921-23. During these years a bitter and bloody struggle has been waged against the economically organized working class, continuing even now. Labor organizations that in 1920 were in a commanding position and full of ardor and zeal in the ever rising power of the workers throughout the land, in the last two years have been crushed, and if surviving, stripped of their rights. A reign of terror, the white heartless, ferocious, beastly terror of panicky masters, took hold of the Italian peninsula and every freedom-loving man was either beaten or killed. The Fascist's butcheries greatly resemble those of Mannerheim in Finland; Horthy in Hungary; Noske in Germany—done in the name of the social-pluto-democracy of Hugo Stinnes and Company. More than that, all these butcheries taken together grow pale in comparison with those

ordered by Mussolini and acquiesced in by a demoralized capitalist class.

### Fascismo Worst Rule Ever

Often has it been said that the Fascisti dictatorship so far has been worse than the Austrian, Papal or Bourbonic rule that more than 50 years ago unhappily . . . blessed Italy. Bad as each one of them was from every conceivable viewpoint, Fascismo has done much more in stiffling free thought and initiative. In fact, if Lord Gladstone, appalled by the trocity of the Bourbonic rule in Southern Italy, once said, that King Bomba of Naples was **"the negation of God"** because he shot, imprisoned and exiled men of talent and genius; Mussolini is the reincarnation of King Bomba.

Literally tens of thousands of Italian workers have been either killed, imprisoned or exiled. We know too well of the hardships that our fellow workers in other countries suffered, namely, those who have repaired to France, Switzerland, Vienna, Berlin, Spain, Greece, Egypt and South America. If they would have remained in Italy, they would certainly have been cooly murdered by the Vandalic hordes of Mussolini. And yet, some American citizens, in speaking of the Fascisti rule, have much praised it! In answer to them we appeal to the freedom-loving spirit, to the keen interest in justice and liberty of the makers of America!

### Seizing Power

After wrecking and crushing almost every revolutionary labor organization, especially the Italian Sindicalist Union that had fought so many gallant battles in behalf of the working class, up to the very last of its breath, Fascismo, (the reader should read **fessismo**) felt safe enough to seize power. So in the fall of 1922, it, on advice of the predatory financial and industrial interests of the nation, directed its marauding bands of cowardly hooligans, assassins and outlaws towards Rome, where an impotent government, the one headed by Factas, was earnestly waiting for the last stroke in order to fall. Fascismo, being a movement wholeheartedly supported and encouraged by the **ultra**-reactionary elements of the master's class, it follows that all those that parasitically make a living from the exploitation of Labor, are in favor of it. The army, the police, most of the white collar slaves were jubilant over every Fascismo-mad triumph. Seizing the reins of State, it became apparent that Fascismo had no other object and aim than that of installing iteslf in power and leaving the laboring people more than ever before in the hands of a ruthless cliquc of exploiters. In fact, Fascismo had no program whatever on which to work out its aims in the government chairs of the nation; and its policy merely had to follow the **dictum** and the program of the exploiters of Labor.

### Fascismo Impossible

Many rosy-cheeked promises have been made to the people by the Fascisti chiefs on occasions in order to secure some worthwhile support; but none of them have been kept. Fascisti oratory could not cure the ills afflicting such a nation as Italy—mostly economic ills that could be readjusted only through a rearrangement of the social system whereby the workers, and the workers alone, should manage the industries and control the wealth of the nation, through their industrially organized labor organzations.

That Fascismo has failed, is a well known fact. It could only be an element of destruction against the working class institutions created by the workers during 50 years of tireless effort. It maintains itself in the saddle of power by force and violence only. Resting on the support of a couple of hundred thousands hot- and sore-heads, the emptiness of which is an assured fact beyond any cavil, it is most hated and cursed by the thinking people who long for the return of sanity and decency in the affairs of state and country. Even the bourgeois opposition of Fascismo is becoming daily more and more noticeable. No less a paper than the **"Corriere della Sera"** of Milan, edited by Senator Albertini, chief spokesman for the intelligent conservative bourgeoisie of northern Italy, is bitterly opposing Fascismo and pleads for the return to the methods of constitutional government and an ultimate attempt to save the nation from ruin, which will happen if Mussolini will have his way any longer.

It goes without saying that the tired and bleeding working class is most decidedly opposed to Fascismo.. It is recuperating from the blows that so far have been experienced. Another significant fact is the many dissensions that have lately broken out in the Fascist's camps and rent asunder part of the organization. All in all, history will tell in the future of the dastardly accomplishments of Fascismo, just as similar phenomena has been judged in the past by the progressive forces of mankind. No right-thinking man or woman can ever condone the affront made to civilization by the handful of followers of "the brigand of Predappio," as Mussolini is referred to by his enemies.

### Rays of Hope

Out of the dark cloud that at present hangs over Italy, come bright rays of hope and faith. The workng class, though broken and beaten, is not doomed. Every bourgeois scoundrel should know that! Its revolutionary soul is still in the hearts of many valiant fighters for the advancement of Labor, and the mighty songs of our poets, still in the bosom of the unbeaten workers, are chanted with a bit of melancholy but fiery determination. Cleansed of the lurid elements of speculative opportunism that came among the working class in the hour of success and triumph, the workers, left alone, are silently, patiently, fearlessly preparing themselves for the solemn hour of reckoning. Let Fascismo beware! The working class will soon come to its own!

# The Negro in the Sacramento Woodpile

By RALPH CHAPLIN

MANY people wondered why President Harding did not include the Sacramento I. W. W. group in the commutations he issued just before starting on his trip to Alaska. At the eleventh hour, the President was induced to grant conditional release to the Chicago and Wichita groups. But the Sacramento men were almost entirely ignored.

It was expected at this time that the long-delayed release of political prisoners would be general and include all three groups. Many had been led to expect such action by Mr. Harding's statement that he, "would be glad when the contention over these prisoners becomes a closed question." The conditional commutations which he granted grudgingly as a sop to public sentiment did very little to make the question a closed one. On the contrary, it made this already vexatious problem more difficult of solution than ever before.

### A Political Blunder

Men and women who favor release look upon his action as a political blunder. They feel that the President's indecisive action is unsatisfactory to everyone concerned and that, particularly, the inclusion of drastic and misleading conditions on the commutations was anything but just and wise. Be that as it may, the problem is not solved; it is merely complicated.

There is no fundamental difference between the Sacramento cases and other cases. Senator Pepper and numerous other capable and conservative lawyers who have examined the facts thoroughly are emphatic on this point, insisting that these federal I. W. W. cases should be considered as a whole and that political prisoners are all worthy of immediate and unconditional release.

Senator Pepper, on June 16th made the following statement regarding this case:

"The Sacramento case, like the others, was appealed, but the court sustained all the counts. This fact has been cited by Department of Justice officials as cancelling the claim that the Sacramento prisoners are 'political' prisoners confined only for expression of opinion. They have sometimes been referred to vaguely as 'murderers' and 'dynamiters,' though neither the charge of murder nor dynamiting figures in the 'overt acts' alleged against them.

"To say merely that the Court of Appeals affirmed the conviction of the Sacramento defendants leaves out the equally important fact that the court, owing to a delay in the filing of the bill of exceptions, did not have the evidence before it. The decision, therefore, was merely on the validity of the indictment." This fact has previously been noted, and Senator Pepper emphasized it again in his discussion of the case.

It is Senator Pepper's opinion that, when the appellate courts in the Wichita and Chicago cases, in the latter of which the full trial record was reviewed, reversed the conviction of the defendants on the "sabotage" counts, they established a "controlling precedent" which would have governed in the Sacramento case if the evidence had been reviewed.

The "sabotage" charge was the same in all three cases. Pepper holds, therefore, that, while there is a technical difference between the legal status of the Wichita and Chicago cases on the one hand and the Sacramento case on the other, there is no moral difference.

But Mr. Harding, for some reason, insists on making a distinction. He has stubbornly refused to consider the question of commutation for the Sacramento group. It is insisted that the men remain in prison but when reasons are asked for they are not forthcoming. There is a report, purporting to come from Mr. Christian, Secretary to the President, that the Sacramento prisoners, "believe in the overthrow of the government by force." But this charge is too absurd to be taken seriously. Nothing of the sort was charged against them at their trial. So it must be some other reason that persuades the President to keep these men locked up.

The recent references to the "vicious crimes" of this group has created the impression that they are in reality guilty of doing other things besides expressing their opinions. What are these crimes? When and where were they committed? Would the evidence have convinced the jury of guilt in peace times? And if so, why were the prisons of the land not filled with such miscreants before the war sent the first batch of them behind the bars?

### Disagrees With Pepper

The President evidently has not asked himself these questions and is therefore in serious disagreement with Senator Pepper who has. It would seem that the judgment of such an able and distinguished constitutional lawyer would impress Mr. Harding somewhat. But it does not appear to have done so. Apparently some sinister and powerful influence has reached him and he has simply hardened his heart. The appeal to his Anglo-Saxon sense of fair play and to his often-expressed devotion to the tradition of American justice leave him equally unmoved. As do the examples of Lincoln and Grant in regards to amnesty. They do not inspire him in the least. He is even unmoved by the opinions of his own best legal advisers. Whose voice then has reached him that he is so implacably unyielding? These are questions asked by thousands who are puzzled by his incomprehensible stubbornness on the subject of amnesty.

The question arises in the minds of many, is there really a difference between the Sacramento and other cases? Are the men more culpable than the German spies and dynamiters whom he has released uncondi-

tionally or the other political prisoners whose cases he at least consented to consider?

This is the impression the President and his amiable Attorney General have seemingly sought to convey to the public. But it is not borne out by the facts. In the opinion of Senators Pepper, Borah and a host of other disinterested investigators this viewpoint is utterly erroneous. Evidently then we must probe deeper for the hidden reason that prompts the President to pursue his inexorably unyielding attitude.

As far as comparative "guilt" is concerned the Sacramento case does not in reality stand apart from the other cases. It is part and parcel of the labor cases prosecuted during the war under the convenient provisions of the espionage law. The conviction took place at the height of the war-hysteria. The indictment was practically the same and the same charges of violence and destruction were used. Diamond and Coutts, it is true, added their unwholesome weight to the prosecution, but these government stool-pigeons have since been so discredited by their own lies that intelligent juries on the West coast refuse longer to be swayed by them.

### The Silent Defense

The Sacramento case differs from the other cases in one respect only. The story of the "silent defense" adopted by these men and adhered to throughout their lengthy trial is too well-known to need retelling here. The "silent defense" was unique in the history of American courts. It was at once a challenge and an accusation. And no doubt this "silent defense" held against the Sacramento group to a degree by the conservative gentlemen who are keeping them in prison today. Such a defense with these gentlemen is no doubt anathema. It horrifies them to think that American workingmen refused to spend money for a mockery of a trial in court when they were convinced in advance that conviction was certain.

But the "silent defense" put the Sacramento group in an unusual position which at present works to their disadvantage. No record was made in court of the evidence and no exceptions were taken as to the admissibility of evidence or the rulings of the judge. They were not represented by counsel and so it was impossible for the defendants to appeal their case to the higher courts. Had they been able to do this the obnoxious and unsustainable counts in their indictments, charging violence, etc., would no doubt have been dropped as was done in the Chicago and Wichita cases.

### No Exception

But do these largely unfounded charges and the irregularity in the trial proceedings account for the fact that the men are still in prison? Unquestionably not. Senator Pepper, Senator Borah, Captain Lanier and the other experts no doubt took these facts into consideration when, after exhaustive study they stated that ALL political prisoners should be released—WITH NO EXCEPTIONS. But why is the President so immovable? And why does he hold out even in the face of political expediency, against the liberation of these workingmen?

There is a reason and a very real and obvious one which forces itself upon the attention of anyone studying these cases in their broader aspects. There MUST be a reason why Mr. Harding has singled these cases out for special severity. One guess is as good as another. This is mine:

### California to Blame

These men are being punished not for being members of the I. W. W., but for being members of the I. W. W. convicted in the militantly anti-labor state of California. California—the Golden State, the home of reaction, the frame-up, the open-shop and many other manifestations of unremitting labor persecution. Her corporations and land owners are prosperous, determined, vindictive and very influential. And politicians of the reactionary stripe in Washington (and some of her local ones who pretend to be progressive) are notoriously eager to give ear to their counselings. Beyond the shadow of a doubt it is the arrogant, unchecked and unreprimanded business interests of California that are instrumental in keeping the Sacramento men in prison? They have done the same thing with Tom Mooney and others for years when the whole world knows them to be innocent.

It remains now for the labor movement and the liberals of America to force the issue or to share the shame of the consequences. The President should be asked bluntly and in unmistakable terms whom he intends to listen to,—the voice of intelligent public opinion backed up, as it is, by the judgement of his own legal advisers, or the still, small, machiavellian voice from the state of orange groves and jails.

If it is not the insidious allurements of California's financial sirens that has charmed his ear perhaps he will be willing to tell us what has.

At all events it is time that he laid his cards on the table!

---

A new revised and enlarged edition of the pamphlet, "The I. W. W. in Theory and Practice" is now off the press. This is the best I. W. W. seller. Fifty-five thousand copies have been printed in English. It can also be had in Finnish, Italian, Portuguese and Croatian. Price, 15 cents.

# Health Note: "Take the Air", a la Eden

By Dr. CUREM AHL

Well, well, wonders never cease! That scientist (?!) out in Frisco who's got an electronic theory that cures all diseases—beg pardon—I should say who's got an electronic machine (it don't matter much, however, it's pretty nearly the same thing), is behind the age apparently; in fact, he has arrived a decade and a half too late! Here's a natureman who writes to inform the Pioneer that he's got him beaten to a frazzle. For 15 years he's been getting electric air currents directly from the atmosphere—taking the air, as it were—without—shall we blush to say it?—the interference of any personal adornment whatsoever, except, of course, a smile of pure and undefiled satisfaction; not to mention gratification.

He calls it, "Clothless clothing" and "Ozoning the body." He says, "Go thou and do likewise." As he lives out in the redwoods of California that's all right. But consider what would happen here in Chicago, if any great portion of its 2,500,000 inhabitants should ever become enamoured with the advice and go around in garments designed, not in accordance with the latest Parisian models, but those in style in the most primitive days of the Garden of Eden. Why—but what's the use to try to picture the situation that would probably ensue. It taxes our prophetic powers just as it would, most likely tax the powers of police, should it ever come to pass. We must, therefore, rely on the scientific imagination of the reader to help us out.

Says he—now remember, he's dead in earnest about this—says he:—

"Customarily clothing hides a multitude of sins and mounds of filth." (Heavens, is it as bad as all that? How did you happen to find it out?)

"Medical men, clothing dealers, and other knowing

ones are slow in owning up to the unnaturalness of customary clothing for business reasons. (Righto, old boy. That accounts for the lack of confession in all capitalist enterprises.) "Plants by the wayside, when covered with dust, will not grow. Eggs will not hatch when dirty; and man expects to live eternally when covered with clothing and the filth that it accumulates." (Oh, the d——n fool man!)

"Dr. Abrams is curing any and all diseases by electricity" (Go slow, old man; consult Dr. Liber first; see July Pioneer); "while I have proved to my own satisfaction in the last 15 years the same results can be achieved by using the electric air currents of the atmosphere direct. This, in combination with oxygen produces the elixir of life, the so-called Ozone, which, when taken in properly, prevents any and all diseases.

"People have been made to believe that, in order to live, all that is necessary is to inhale pure air through the nose or mouth; while the proper way is to absorb the free-for-all ozone through the pores of the naked body." (We repeat again, this is impossible in Chicago. First, there is no free-for-all ozone here. We have a gefillte atmosphere, stuffed with smoke clouds and bituminous cinders. Second, the police and our own innate modesty won't let us.) "Experiments of scientists have shown that the encasing of the human body in plaster of paris has caused death in a few hours." (We believe this without any difficulty whatever. We used to wear starched collars and boiled shirts one time. After that, we can easily imagine what a plaster paris uniform would do to us.)

"In 1915, a newspaperman told me that my experiments are kept out of print, because they would revolutionize the world. Other newspapermen think highly of my experiments as a natureman. I hope you will give me the much desired publicity that capitalist sheets will not give."

Sure, old boy; sure! You have a good deal of truth behind you! We do not live as naturally as we should! Also you go Dr. Abrams one better in that you would prevent, rather than cure disease. But here we must part company, as we live, not in the Redwoods of California, but on the west side of Chicago. Au revoir.

# Oh Horrors!

By WOODBY SIANTIFIC

I awoke with a terrific start. The room was flooded with light, and I knew it must be about five or six o'clock. It was remarkable that I could have noted these conditions, for I was in a most heart gripping panic of fear. Some uncanny presence was in that room. A fearful thing was about to happen. My salivary glands became paralyzed with the result that my tongue stuck to the palate. The vaso-constrictor nerves had functioned promptly and shut off the blood supply to several parts of my body. My toes were tingling, and every hair was standing erect. It seemed that my heart had migrated to the cranium and was trying to push the eardrums out beyond the periphery of my body.

Lying there in that terrible state of apprehension I took account of all the familiar noises and objects within my vicinity, and noted how unusually dear to me they now seemed. Surely these things had been present for the last six or seven months that I had been a resident in this room, but they had never made the particular appeal that they now possessed. As impending tragedy stalked farther into my consciousness and set awhirl anticipation of the probable outcome I affectionately watched the little canary hop from perch to perch, the while trilling his early morning carol. How softly he sang! He had done that on previous mornings and I thought it was intended to wake me gently, but now I knew his notes contained warning.

Even the pictures on the wall seemed to sense the danger. They had a startled expression. I fancied they signaled me to remain quiet for a moment. All about the room was that grating, shrieking silence that omens imminent catastrophe. This suspense could not last long; it was maddening. And just as I would have turned my head in the direction from whence I expected the attack to come the dripping water from the refrigerator seemed to pause and warn me to hold for a moment.

How precious life was just then! I reviewed the many vicissitudes of my experiences:—Cold nights spent in box-cars; miserable nights in lousy ten-cent flop houses; weary days in filthy prisons and slave pens, called factories; nerve-deadening, back-breaking, monotonous slavery for a mere pittance. Why should that monster, Fate, have spared me through all those harrowing experiences and come now when I am comparatively happy to snuff out my life? For six months I have worked steadily (the longest period in my life), and have been going to school every night. Delving into those text-books at night and contemplating them by day has served, to some extent, to ameliorate the master's brutality. Cruel gods! Why, oh why should this abrupt ending come now!

At least I must not go down without an effort at defense. Arouse ye, said the Urge, and grapple with this intruder! Clinch him and try to choke his life out. Be quick, for there is no time to spare. Tensing every muscle—I was now quite alert—I prepared for the supreme struggle of my life. Until now I had been merely intuitively aware of his presence and location. Slowly, lest he note my consciousness, I turned my head to the right and beheld his ghastly face. Quick, action! Out went my right hand. Firmly grasping the lever on the alarm clock I pushed it against the clapper. It was all over.

# Building the I. W. W.

## An Outline of Its Forms and Practical Organization

TO begin with, the I. W. W. is built on the wage-working class. Unlike the A. F. of L., it is a labor organization; not a capitalist protective association. Consequently, none but wage-workers are admitted to membership in its ranks. These wage-workers may be of any size, shape, creed, color or sex. All that is required is that they work at wages for the profit of some employer. The latter may be an individual, a firm, a corporation, or a trust. They are all labor exploiters and, on that account, look alike to the I. W. W.

The I. W. W. organizes wage-workers only because it is fully convinced, in the words of the opening clause of its preamble, "that the working class and the employing class have nothing in common." This their opposing organizations and continued increasing warfare eloquently testify. Further, the I. W. W. is fully convinced that employers' associations and chambers of commerce are impotent unless aided by the workers. Hence it refuses to render any aid to them or to assist them to blur the class lines through the admission of any but wage-workers or by espousing any other principles than those of the working class.

### Industry the Basis

Next, the I. W. W. is built according to industry instead of trades. Employers nowadays take trades and unite them into industries. They also unite the industries into ever fewer hands. This centering of management makes the trade unions unable to cope with modern capitalism; as they present a divided organization against a compact one.

The I. W. W., in organizing the working class, pursues the same plan as the industrial magnates. It unites all the workers in an industry into a workers' industrial union and combines all the industrial unions thus organized into one big union of the industrial workers of the world, hence its name. The workers in the railroad industry, for instance, are organized into a railroad workers' industrial union, textile workers into a textile workers industrial unon, and so on down the whole gamut of all the industries. And all the industrial unions thus organized form part, wherever they exist, of the Industrial Workers of the World, more popularly known as the I. W. W.

This method of organizing the workers JUST AS THEY WORK is pursued with the idea of ultimately enabling the workers to take over the industries in behalf of themselves and society, when the present system is either overthrown or collapses through its own inherent class conflicts and economic contradictions.

The I. W. W. calls this "building the new society within the shell of the old."

### Present Industrial Unions

At present, the I. W. W. is composed of workers organized in the following industrial unions:

Agricultural Workers' Industrial Union No. 110; Lumber Workers' Industrial Union No. 120; Fishermen's Industrial Union No. 130; Floriculture Workers' Industrial Union No. 140; Metal Mine Workers' Industrial Union No. 210; Coal Miners' and Coke Oven Workers' Industrial Union No. 220; Oil, Gas and Petroleum Workers' Industrial Union No. 230; General Construction Workers' (Railroad, Road, Canal, Tunnel and Bridge Construction) Industrial Union No. 310; Ship Builders' Industrial Union No. 320; House and Building Construction Workers' Industrial Union No. 330; Textile and Clothing Workers' Industrial Union No. 410; Woodworkers' Industrial Union No. 420; Chemical Workers' Industrial Union No. 430; Metal and Machinery Workers' Industrial Union No. 440; Printing and Publishing House Workers' Industrial Union No. 450; Foodstuff Workers' Industrial Union No. 460; Leather Workers' Industrial Union No. 470; Glass and Pottery Workers' Industrial Union No. 480; Marine Transport Workers' Industrial Union No. 510; Railroad Workers' Industrial Union No. 520; Telegraph, Telephone and Wireless

Workers' Industrial Union No. 530; Municipal Transportation Workers' Industrial Union No. 540; Aerial Navigation Workers' Industrial Union No. 550; Health and Sanitation Workers' Industrial Union No. 610; Park and Highway Maintenance Workers' Industrial Union No. 620; Educational Workers' Industrial Union No. 630 and General Utilities Workers' Industrial Union No. 650.

In addition to these, there is the General Executive Board and General Secretary-Treasurer, who represent the general organization.

### Not A Mass Organization

It should be observed right now that the I. W. W. is not a mass organization, that is, it does not take the workers en masse and organize them regardless of modern industrial formation. As already shown above, it follows industrial lines in organizing the working class. Within these lines it has many subdivisions. They are known as Job branches, Industrial Union branches, Industrial District Councils, General District Councils, Industrial Departments and the General Industrial organization, comprising them all.

The I. W. W. is a growth from the bottom up. Let us follow it accordingly, starting from the beginning with the unorganized worker.

The latter is approached to join the organization in various ways. Appeals are addressed to him through the press and public meetings, leaflets and literature of various kinds. But mainly, at present, through the job delegate.

### The Job Delegate

The job delegate is a member of the I. W. W. who is credentialed to organize workers "on the job"; that is, the place where he and they are employed. The job delegate is instructed by the organization on the procedure to be followed in initiating members and reporting on their activities. For these latter purposes many blank forms aree issued, covering all the details, such as occupation, industry, applicant's name, industrial union and number, dues and initiations paid, supplies received and distributed, etc. Job delegates are expected to familiarize themselves with the instructions, as given in the constitution and by-laws. This will do away with a lot of confusion and misunderstanding.

Job delegates' credentials are initialed, showing the industrial unions for which they are organizing and the cities in which the industrial unions' headquarters are located. Those for 1923 are as follows:

"AG," Agricultural Workers' Industrial Union No. 110, Chicago, Ill.; "LU," Lumber Workers' Industrial Union No. 120, Chicago, Ill.; "MM," Metal Mine Workers' Industrial Union No. 210, Butte, Montana; "CM," Coal Mine Workers' Industrial Union No. 220, Butte, Montana; "WP," Oil Workers' Industrial Union No. 230,, Oklahoma City, Oklahoma; "GC," General Construction Workers' Industrial Union No. 310, Chicago, Ill.; "BC," Building Construction Workers' Industrial Union No. 330, Chicago, Ill.; "3S," Metal and Machinery Workers' Industrial Union No. 440, Chicago, Ill.; "FS," Foodstuff Workers' Industrial Union No. 460, Chicago, Ill.; "TR," Marine Transport Workers' Industrial Union No. 510, New York City; "RR," Railroad Workers' Industrial Union No. 520, Chicago, Ill.; "SU," all small unions, Chicago, Ill.

### Organizing the Unorganized

The job delegates, thus credentialed and instructed, approach the unorganized to join the industrial union of the industry in which they are employed. Sometimes this work is rendered easy by bad conditions. Strikes ensue and the enrollment is very rapid and big, as a result. So often is the subsequent drop of membership, when the strike excitement has subsided. Job delegates, under any and all circumstances, must acquaint the unorganized with the principles, forms and tactics of the organization. The unorganized, upon expressing a willingness to join, are required to fill out applications for membership.

The application for membership consists of two questions, which the applicant signs; the remainder is filled out by the job delegate, as follows:

**APPLICATION FOR MEMBERSHIP**

Appl. No.....

Do you agree to abide by the constitution and regulations of this organization?.....

Will you study its principles and make yourself acquainted with its purpose?.....

Name .....

Occupation..... Industry.....

Address..... Street

City..... State.....

Date..... I. U. No..... Card No.....

Initiation..... Dues..... Ass'mt..... Total.....

Del. Name.....

ON THE JOB WITH THE DIRT MOVERS

### Job Branch

The job delegate issues membership books, constitutions, etc., to the new members. Further, he organizes them into a job branch. This consists of 7 or more members working on that job. They are organized for the purpose of holding regular job meetings and discussing job problems. They elect their own job delegate, secretary, treasurer, grievance, strike, auditing, publicity, lecture, entertainment, trial, and other committees. The job delegate opens meetings and acts as chairman; the secretary records the proceedings, the grievance committee formulates and presents grievances to the employer, the strike committee conducts strikes, the auditing committee audits books, and so on; each and every committee functioning within certain well defined parliamentary and practical limits.

Of course, the job branch is affiliated with the industrial union in which it is operating. A job branch in general construction is located in the general construction workers' union; one in the lumber industry, with the lumber workers' industrial union; and so on throughout the entire list of industries. Its affiliation is expressed through its own elected job delegate, acting in co-operation with the industrial union.

### Committees Representative

The job branch makes it a point to have representatives of all the trades working in any place of employment, whether on a construction job on a highway, a lumber camp in the woods, or a factory or plant in the city, on all important committees, such as wage scale, grievance, strike and other committees. There are no distinct trade lines; yet all the trades are equally well looked after. Harmony is provided by all working together for their mutual industrial and class interests. This process is helped along by standardization and the destruction of trades by automatic machinery.

In general, the job branch, with all of its modifications, leads up practically to the workers' council and shop stewards' movement; for job is united to job, factory to factory and plant to plant by way of the industrial union and its system of representative bodies, such as the industrial district council and the general district councils. But of this more anon. Let us consider in our next article, the industrial union branch.

# To Fellow Worker Frank Little

**MURDERED BY THE COPPER TRUST SIX YEARS AGO TODAY**

**WE NEVER FORGET!**

WE'LL remember you, Frank Little!
They couldn't still your voice,
So they strangled it;
They couldn't chill your heart,
So they stopped it;
They couldn't dam your life blood,
So they spilled it.

We'll remember you, Frank Little!
They didn't come in the broad of day
And warn you that in a world
Being made safe for Democracy
There was no safety for you.
In the dead of night they came
And pounced on you,
Dragged you out as if you were an animal
Without daring to let you put your clothes on
Or bind up your broken leg.
They spared you no indignity,
They withheld from you no shame;
Afterward, no doubt, they washed their hands
With the air of men who've done their bit
In the cause of freedom.

We'll remember you, Frank Little!
The papers said: "So far as known,
He made no outery."
No, not you! Half Indian, half white man,
All I. W. W.
You'd have died ten thousand deaths
Before you'd have cried aloud
Or whimpered once to let them
Enjoy your pain.

We'll remember you, Frank Little!
Long after the workers have made the world
Safe for labor,
We'll repeat your name
And remember that you died for us.
The red flag that you dropped
A million hands will carry on;
The cause you loved
A million tongues will voice.
Good bye, Frank Little!
Indian, White man, Wobbly true,
Valiant soldier of the great red army,
We'll remember you!

**Phillips Russell.**

# The Climb to Calvary

J. BERNEDINE TEVIG

FREEDOM! FREEDOM! What is freedom?
This we know:
Man has died for thee and for thy seed to sow.
Far beyond the bridge of history's' span
Freedom was the Light and Goal of man.
When man was little more than brute and beast.
He supped and died at Freedom's feast.
Since man first pinioned man to slavery
Freedom vowed that man should be free.
The noblest hearts of every age
Has in Freedom's name been outraged.
From Freedom's altars, where hopes burn high,
Comes the unending, undying cry:
"If you seek Truth, if you will be free,
Come, come live, labor, die if need be!"
They come, they come to dungeon, rack and beast,
They are the victims of Freedom's bloody feast.
They died for lies that Truth might come;
They died for myths and called them Freedom.
They died that a God might give them joy,
They died that a God they might destroy;
In Freedom's tracks are littered the dead
As each bloody step has upward led.
Upward....Onward....Still slavery....
Service....Pain....Death....But never free!
The path of labor is the path of pain
To the burden-bearer hope was vain;
But beyond the seas of blood and tears
The final Goal dimly appears—
Today man climbs to Calvary
That man may labor and yet be free!

# Our Defense

Vera Moller.

IN the end the loss or triumph of the ease shall not be hung,
On the golden ease and smoothness of a hired lawyer's tongue
Nor ably or how bungling every man shall plead his cause,
Its something beyond the courtroom that makes judge and jury pause.
For they sense the mighty forces in the mutterings of unrest
And the songs of hope and freedom rising in the Workers breast'
And wherever men are willing for their beliefs to do and dare,
There's a cause that stands behind them and they feel its power there.
Over treachery and cunning, thru all darkness and suspense,
'Tis the cause itself shall triumph and in that is our defense.

# Facts for Arguments

The home guards are up against it. They are getting fewer in numbers. A writer in Keith's Magazine says the proportion of home ownership has been falling off at the rate of 10 per cent in each 3 years. Less than 50 per cent of the American people own their homes now. We are beeoming a nation of renters. And even as sueh our hardships are growing. In 1913 the average man spent 20 per eent of his ineome for rent. In 1921, he spent 40.

Fifteen billion person rode on the electrie railways of the United States last year, according to the Pennsylvania Publie Service Commission. This was an inerease of 15,000,000 over the previous year.

Heart disease is inereasing in frequency. From 1910 to 1920, the inerease amounted to 18.3 per eent in Chieago, 25.3 per eent in New York, 40.9 per eent in Boston and 47.6 per cent in Syracuse. Sehool ehildren, industrial workers and young men as a body are among those showing a eomparatively large number of heart defeets. The strain of preparing for life under eapitalism, is becoming no less dangerous than that imposed when hustling for a livelihood.

Roger Babson has issued an interesting chart showing the periods of prosperity and depression in terms of eommodity priees from 1790, at the end of the Ameriean Revolution, to 1920, after the end of the World War. Under the title "History Repeats Itself" the following explanation of the chart is given. "It will be noticed that after the Napoleonic Wars and after the Civil War in 1865, there was a rapid downward movement, sueh as took plaee in 1920-1921. After these downward movements, in 1815, and 1867, the ehart shows there was an upward movement, sueh as we have experienced during the past two years. After this temporary upward movement, however, eonditions then set in for another decline whieh further completed the readjustment. Statisties elearly indicate that the United States is now entering a similar deeline."

The Bureau of Labor Statisties of the United States Department of Labor issued on July 19th an interesting statement of the priee movement during the month of June. There was a deerease of 2 per eent in the wholesale prices of all eommodities and a decrease in the wholesale priees of foods amounting to 1½ per cent while for the same month there was an inerease in the retail priees of foods of 1 per eent.

On July 7 a dollar would purehase only 64.8 eents worth of goods, eompared to its value in 1913, aeeording to statisties of Prof. Fisher, money expert, basing his figures upon a compilation of priees of a number of essential commodities.

In January, 1922, the dollar bought 72.6 cents, eompared with prices before the war. The low level of the dollar in purchasing power was reaehed in May, 1920, when it bought only 40.5 eents, eompared to the 100 per cent dollar of 1913.

According to Washington dispateh es, the national wealth of the United States amounts to $3,600 for eaeh resident. That means that each family's share would amount to $18,000 if the total were equitably distributed. This fact appears in the offieial records of the treasury department covering finances for the year ending June 30.

The national income is estimated at about $70,000,000,000 for the year. This should mean a per capita ineome of about $3,180 if ineomes were fairly distributed. In that ease, of course, eaeh family would be able to save some of its ineome eaeh year and the total of these savings would ereate the capital necessary for maintaining and improving the eountry's produetive resourees.

The result, however, would be that the eountry would be owned by all the people instead of by a fraction of 1 per cent of the people.

N. H. Comish, professor of eeonomies and sociology in Oregon Agricultural College, has written a book analyzing the elements of consumption. According to Comish's figures the American standard is nothing to boast of. In 1910 one-sixth of all the families in the eountry were on or below a pauper standard, an additional one-third were just able to sustain a bare subsistence, less than half the families in the country were able to maintain a health and eomfort standard estimated at anything over $800 a year. On the other side of the elass line less than one twenty-fifth of the families in the United States lived in luxury.

During the last year Labor has attempted to collect on pre-election promises of industrial legislation. According to the National Industrial Council in 34 states, 32,599 bills were introduced and 8,340 became laws. In general the agitation to reduee the working day by law has not been suceessful. In Wisconsin the Eight-Hour Day measure was defeated. A similar measure was defeated in New York, Ohio and West Virginia. Bills for a nine-hour day are pending in California, Conneeticut, and Pennsylvania. The eampaign for minimum wage laws was generally unsueeessful. Old-age pension laws were enaeted in Montana, Nevada, and Pennsylvania. In Colorado anti-labor legislation forbidding strikes in publie and semi-publie industries without notiee and a preliminary arbitration effort was passed over the protest of labor. Idaho repealed its State Constabulary law but the bill to repeal the West Virginia State Cossaek law was defeated.

The financial section of the Berliner Tageblatt, (Berlin, Germany), one of the foremost capitalistic newspapers on the European continent, has published a two-column article entitled, American Labor Banks. It gives exhaustive statistics concerning the ownership, capitalization and reserves, location and date of organization of the eleven labor banks already in existence, and of ten banks in process of organization.

The Tageblatt observes that the American labor movement "has always aimed at the immediately practical." It quotes the Index, monthly organ of the New York Trust Co., as authority for the statement that the American banking world "welcomes experiments of this nature for the simple reason that the appreciation of business and financial matters among the workers grows thereby." This utterance of American banking capital the Tageblatt characterizes as "cautious and wise."

The International Typographical Union reports that it has paid out thirteen million dollars in strike benefits for the 44-hour week, and when their report was made some sixty-thousand members were still on strike. These millions were raised mainly by compulsory assessments on the wages of members at work. They are mainly located in Chicago and New York.

The imports of foregn raw material to this country for the fiscal year which ended in June, 1923, aggregated nearly 2½ billion dollars, as against an annual average of less than one billion dollars for the years immediately preceding the war. This illustrates the growing imperialistic, industrial tendencies of the country, which necessitate the import of products in payment of export of capital.

Hay acreage in the United States has increased in eight years by three million acres. In crops other than hay there has been a decrease of almost two-million acres. Here, as in England, sheep and grass are increasing—the regular signs of reversion of land from agricultural to pastoral use. The American farmer is losing out.

At Del Mar, California, Rancho Santa Fe, a 9,000 acre estate, is being developed as a model community for orchardists by the Santa Fe Land Improvement Co., a subsidiary of the Santa Fe Railroad system. The company is working on the theory that a community planned from the beginning and built accordingly will be better than a city that "just grew."

One billion dollars a year are spent in business bribes, according to Howard R. Heydon, president of the Commercial Standards Council. These figures are worth bearing in mind when we are told about the "unimpeachable integrity and honesty of business men." They not only pay bribes but take them, too. They are crookeder than politicians, as the politicians would not be crooked if it wasn't for them. Back of political crookedness is business.

The Louisiana State University library contains a copy each of Karl Marx's Capital and Thorstein Veblen's The Theory of The Leisure Class. The first has been borrowed three times since placed there in January, 1917. The second has never been borrowed, though in the library since Feb., 1918.

# The Co-operative Fallacy

THE members of the working class are constantly being urged to embrace co-operation, that is, organize co-operative societies. This, it is claimed, will provide them with training for industrial control and solve the problems of capitalism.

The workers should be warned against such deceptions. For co-operation is simply a more democratic form of stock-corporation. When successful, it includes more persons in its benefits and experiences, but these only extend to its own membership, who are generally a very small minority of the working class.

The main defect of co-operation is its continuance of the profit and wages system. The profits go to the co-operators—the shareholders, the purchasers—and the wages to the employes. The result is strikes, just as in or against any other corporation of a capitalist nature.

England is the native heath of co-operation. Just now England is the scene of a unique labor struggle. It is the combined strike and boycott waged by The National Union of Distributive Workers against the Co-operative Wholesale Society. The cause is the action by the Society in cutting wages, abolishing wages during sickness, and cutting the yearly holiday in half. The workers claim that the Co-operative wishes "to alter wages how they chose, when they chose, and where they chose" and are "defying the whole trade union movement just like Lord Penryhn of Bethsada, and William Martin Murphy of Dublin." As the Co-operative refuses to arbitrate, this looks true. The capitalist corporations also proclaim "there is nothing to arbitrate."

From this it will appear that co-operation instead of solving capitalism is merely aggravating it.

As for getting training in industrial control, the workers already have it. They are now controlling industry for the capitalists. What they need to do is to control it for themselves, instead. Once they awaken to that fact they will not need to step out of their proper sphere to experiment with modified forms of corporations in order to get the industrial training which is already an accomplished fact.

Co-operation in the last analysis is dislocated experimentation. It's an attempt to fit trained workers into positions where they do not belong. It is to make, for instance, coal miners and overall dealers of railroad men; instead of leaving them on the railroads, there to oust the stock-jobbing, profit-mongering railroad plunderers, the financiers.

# Editorial

## "CANNING" THE TECHNICIAN

THE impression prevails quite generally that workmen of rare technical and mechanical abilities are free and independent; especially of the financial and other restrictive and oppressive policies of corporations.

Just now in railroad circles there is much discussion going on regarding the victimization of certain superintendents:

C. E. Fuller, general superintendent of motive power of the Union Pacific Railroad, has been let out after 13 years of service. Fuller bears the reputation of being one of the most expert mechanical superintendents on American railroads. Some people go so far as to say he is superior to all the rest.

H. N. Curry, after 11 years' faithful service on the Northern Pacific as superintendent of motive power, has also been dismissed.

W. C. Smith, superintendent of motive power of the Missouri Pacific, was also suddenly discharged recently.

Such treatment may account for the increasing tendency among technicians to sympathize with the wage workers and to condemn the present system.

Mortimer E. Cooley, president Federated American Engineering Societies and dean of the engineering schools of the University of Michigan is one of these.

Cooley, like innumerable other engineers, believes the world's industrial machine is going to pieces. "Unless a new point of view is adopted," he says, "which will remove the reasons for the growing distrust and and suspicion in the ranks of the workers, an uncontrolable situation will result."

## FORD CONFIRMS I. W. W.

HENRY FORD is ignorant of many things. His views on the origin of labor unions, for instance, are a joke. So also is his failure to recognize the capitalist class nature of politics and finance. And to these may be added his inability to grasp the necessity for the upward development of the working class in his theory of social evolution. To subvert the workers to Fordian industrial autocracy is to promote social degeneracy and decay. It is to create a few colossal profiteers and armies of slaves.

It is only when he advocates the application of the technological method to the solution of political problems that Henry Ford shines. This enables him to see the international character of industry and to urge free trade and internationalism in conformity with it. It also provides him with a knowledge of the overtowering importance of industrialim in modern life, as evidenced in the interview by Chas. Wood in Colliers.

Therein Ford gives expressions to these half-formed but wholly sound ideas:—

**"The industrial organism is stronger and healthier than the political organism. It has more life flowing through it, more energy. Wouldn't wonder if industry would eventually absorb the political government."**

"We speak in awe of our 'form of government' and even pass laws making it a crime to criticize it. You can't imagine an industry thriving if it considered its form of organization beyond criticism."

Also "Society is evolving toward the industrial idea."

In all this Henry Ford simply confirms the I. W. W.

## A NEW GENERAL STAFF

THERE are many who think that the organization of the working class on industrial union lines is not enough to secure working class emancipation. They argue that industrial unionism, like concrete, must be reinforced, preferably by politics, though co-operation is also thrown in for good measure, occasionally.

They are informed that there is no objection to their joining a political party or a co-operative society, in addition to an industrial union ,if they so choose. But, as for industrial unionism in general, it entertains a far better opinion of itself than they do.

This opinion is based on contemporaneous facts. On all sides the capitalists are virulently opposing the growth of industrial unionism. Note the Brockton Shoe Workers' revolt. Also the Nova Scotian miners' strike in sympathy with the steel workers. Both are recognized as attempts to convert

the A. F. of L. to industrial union principles, forms and tactics. And both are opposed by the capitalists as such.

On all sides the capitalists are also attempting by means of gunmen, injunctions, etc., to destroy even the strike activities of the A. F. of L. In the case of the railroad organizations, for instance, the latter are prevented from doing everything under the sun, except to permit their members to remain alive enough to be exploited for capitalist profit. Despite all this, strikes increase and workingmen insist on organizing.

Now, why these capitalist attempts at the prevention of industrial unionism and the destruction of trades unionism? Are the capitalists engaged in fighting **futilities?** Or do they fear the evolution and development of a unionism that strikes at the very heart of their own system?

Possibly, the capitalists are not as good strategists as are the critics of industrial unionism. They ought to employ the latter as members of their general staff. These critics will tell them what's essential and what's insufficient. They know!

## IN MERRIE ENGLAND

THE British Labor Party is the cause of much enthusiastic imitation in this country. Many workers refer to it as though it is a revolutionary socialist organization, when it is only the left wing of English liberalism. At the annual conference held recently, Mr. Sydney Webb pointed out that the British Labor Party is a parliamentary and not a revolutionary party. He also said that the English labor movement derived its inspiration from Robert Owen and his idea of universal brotherhood and not from Karl Marx and his theory of class warfare.

There is no doubt that, if the British Labor Party ever succeeds to power, as is likely, it will be an exact counterpart of the German Social Democracy. It will be the agent of British capitalism, willing to do its bidding, just as the German Social Democracy is the agent of Stinnes and Co., intent on executing its policies.

Should war ever come between France and England, the workers may rest assured that the British Labor Party will be the "goat" just as the Social Democracy is in Germany.

**Push Industrial Pioneer!**

# Modern Science and Materialism

Reviewed by WILLIAM THURSTON BROWN

WHAT is the meaning of this world of ours? What is it all about? Where did all these ideas I hear or read about come from? What is their value? Is there any purpose in this process we call civilization? Are we getting anywhere? What are the facts and forces with which we have to deal? What can we do, if anything?

Some or all of these questions are asked by every person who awakens to the fact that a human being may be something better than merely a part of the landscape, something higher than a toll for somebody else's convenience or profit.

How many ever ask any worthwhile questions such as these? Very few. Why? Partly because, as some one remarked after the examination of our young men in the draft, "We are a nation of Sixth Graders;" partly because the educational agencies of America could hardly be more futile for the purposes of dynamic citizenship if they had been organized with the set purpose of defeating the hope of national and social progress—this, too, because, in the words of California's foremost educator: "the schooling mechanism for training men to be serfs has been passed down, unchanged by tradition, to become the schooling system of American democracy for the training of free-born, thinking, self-responsible, government-making citizens of the 20th century."

### A Fascinating Book

Is it any wonder that Hugh Elliot, in one of the most fascinating and convincing books yet written in the field of experimental physics—"Modern Science and Materialism"—should say: "Nothing can be more palpably false than the system of ideas now reigning throughout civilization!"

In that one sentence lies the supreme justification and inspiration for such a splendid contribution as he has made to clear thinking and dynamic action. For, as he truly says, "when once we have acquired true habits of thought, the fight is over; true modes of conduct and activity will flow inevitably from them."

What has Mr. Elliot done in this book? This: first, he has shown with resistless logic what the inevitable limitations of the human mind are—the indispensable starting point of all useful or fruitful thinking. Savages and primitive men do not know the meaning of ignorance—never know that they do not know. What do these savage and primitive minds—many of them surviving in civilized society today and occupying places of power and influence in existing commerce and government—do? Why, they simply fill the abysmal gaps in their ignorance, as Elliot says, with superstitions.

Well, what do we know about the way in which knowledge is gained at all by men? The answer is

easy: knowledge of the external universe is gained solely thru sense-impressions. How many senses has man for receiving these impressions? Five. Suppose he had but one—taste, or smell. Well, for one thing he wouldn't be man at all. Suppose he had a hundred or a thousand senses instead of but five. How inconceivably more he could know of the universe, and what an inconceivably different thing it would be to him!

But, using the pitifully few senses he possesses. what does he find to be the forms which sum up all the phenomena of the universe to his consciousness? These: matter, energy, life, consciousness. These cover the whole of human experience.

The task which Mr. Elliot set himself in this fascinating volume was to report in simple language and in most readable form exactly what experimental physics has to say about these four things. If there is in the whole range of human thought one proposition which may be accepted as final, it is this: Science will always say the last word concerning any problem our minds can consider. If any one doubts that, he should read Andrew Dickson White's "History of the Warfare of Science with Theology in Christendom." Elliot's work is the latest word of physical science on the subjects discussed.

### Constitution of Matter

Well, what does physics find to be the constitution of matter, and what is the nature of energy? It has found that, as all matter is composed of molecules, all molecules in turn are composed of atoms, and finally that all atoms are composed of **electrons**, or charges of electricity. Most startling of all, it is found that while there are negative electrons and positive electrons, there is absolutely no difference between one electron and another.

It is found, then, that molecules differ from one another because they contain different numbers of atoms, different kinds of atoms, or atoms in different relations to one another in the molecule. But atoms differ one from another solely because of the different number of identical electrons they severally contain. It is seen, further, that matter and energy are not two things, but merely different phases of the same thing. More than that, experimental physics declares that the final unit of existence—all existence—is the electron—that the universe is simply the seat of electrons.

### Life and Consciousness

In the words of Elliot, summing up a part of his discussion: "The electrons are not matter, they are not energy; but from them both matter and energy are born. The electrons combine together in a number of different ways, and we get a corresponding variety of atoms. The atoms combine, and we get molecules. Some of these molecules contain vast numbers of atoms. These complex entities combine again to form the still more inconceivably elaborate substances called proteins. And yet again the protein molecules join together into systems, till we get still another substance, protoplasm, where the incredible degree of chemical elaboration has reached such a state as to have lost all semblance to the simple reactions of the laboratory. The sum total of these reactions is so far beyond the range of chemical analysis that we can do no more than lump them together and call them collectively by a new name—Life. Nor have we yet done. Further elaboration of the molecules of protoplasm gives rise to a new and distinctive set of reactions, which again paralyze the intellect of Man; and he can do no more than invent a name for them—he calls them Consciousness."

But no review and no quotations from this book can begin to do justice to it. It is as fascinating reading as a novel. Besides, to digest this book is almost to add a cubit to one's intellectual stature, to stimulate one's mind, and to afford a starting point for vastly more fruitful thought and action than are possible without such knowledge.

# Economic Action Growing

THE importance of the economic weapon in the struggle for a better society is gaining widespread recognition. Its use by the Negroes in the South has already resulted in reforms beneficial to them. The Negro, by withdrawing his labor power from this backward section, has advanced much further than he otherwise would have done.

But, apparently, he has not travelled far enough for he is considering other means of an economic character to achieve still greater gains than are already his. Through his race economic organization, the African Blood Brotherhood, the Negro is urging a general strike in the South itself, as a means wherewith to get rid of the many disabilities imposed on the Negroes still remaining there.

The African Blood Brotherhood sees the overthrow of peonage and the complete emancipation of the Negro race in the South made possible through economic pressure, calling this weapon the greatest of all, greater than prayer or ballot, to both of which the Afro-Americans are strongly addicted. Undoubtedly, such a course would demonstrate the dependence of the South on the Negro, a dependence that, properly employed, can be converted into an agency for independence.

A general strike of the Negroes in the South would be a belated bit of action somewhat similar though less bloody than the general uprising that the Randolphs feared when in their anxious eloquence they pict-

ured the awful possibilities of the chattel slaves' awakening.

A South, in the collapse of a complete labor withdrawal, may then learn the dependence of its institutions on self-respecting workers, such as the Negroes will prove themselves to be once they engage in a general strike in that section. It would then make concessions, as it has already done, to a limited extent.

But the Negroes are not the only persons in this country alive to the importance of economic action. It is a well-known fact that farmers—big farmers especially—advocate economic remedies instead of political devices. They withdraw acreage from cultivation; which is the same thing as withdrawing labor, for it is labor applied to the land that makes acreage.

These farmers recently had a national wheat conference here in Chicago. Alonzo Taylor, food scientist, spoke before them. Says a report of the proceedings:

"All governmental, all political devices for solving the wheat growers' present woes were shattered by Dr. Taylor. The American wheat acreage must be accommodated to American needs, with no more dependence on Europe's needs and demands than was customary before the war. Along with the tendency towards centralization, however, there must at the same time be an opposite tendency toward trying to expand the domestic internal wheat market. Americans are eating less wheat than formerly. The wheat trade and the flour trade and the baking trade must entice them back to their original wheat appetites."

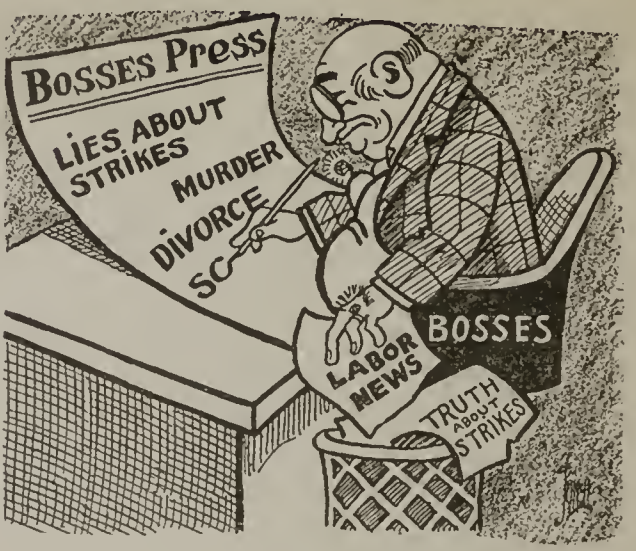
Here, then, we have two typical, though divergent, domestic examples of the growing importance of action via economic agencies. If we went abroad we could find more, as in the passive resistance movement of the Ruhr or the boycott movement of the nationalists of India, for instance. But let these suffice to show the necessity of cultivating economic means for the reform and abolition of capitalism, by the workers industrially organized. Such means strike at the heart of capitalism while, at the same time, developing the agencies that will eventually supplant it.

---

More new leaflets are issuing from the I. W. W. press. They are entitled "Does The I. W. W. Preach Violence?" "Destroying the Home," and "Why Not Shorten the Hours?" The second leaflet is especially good for homeguards and city workers.

---

The Textile Workers' Industrial Union No. 410 is not making much noise. But internally it is working hard to perfect and extend organization.



## Buy the Working Class Press

The I. W. W. press consists of the following 13 publications in ten different languages:

**Industrialisti** (Finnish), daily, subscription per year, $4.50. Address Box 464, Duluth, Minn.

**Industrial Worker,** twice a week, per year, $4.00. Box 1857, Seattle, Wash.

**Industrial Solidarity,** weekly, per year, $2.00.

**Industrial Pioneer,** monthly, per year, $2.00.

**Solidaridad** (Spanish), twice a month, per year, $1.00.

**Golos Truzenika,** (Russian), twice a month, per year, $1.50.

**Felszabadulas,** (Hungarian), weekly, per year, $2.00.

**Il Proletario,** (Italian), weekly, per year, $2.00.

**Tie Vapauteen,** (Finnish), monthly, per year, $1.75.

**Rabotnicheska Mysl,** (Bulgarian), monthly, per year, $2.00.

**Jedna Velka Unie,** (Czecho-Slovak), monthly, per year, $1.00.

**Industrijalni Radnik,** (Croatian), twice a month, per year, $2.00.

Address above 10 publications at 1001 West Madison Street, Chicago, Ill. Send subscriptions there.

**Muncitorul,** (Roumanian), weekly, per year, $1. Address: 13492 Orleans St., Detroit, Mich.

Drop a postal for sample copies.

---

### Another I. W. W. Paper

"Industrijalni Radnik" is the name of the latest addition to the I. W. W. press. It is printed in the Croatian language, and means Industrial Worker. It will carry the message of industrial unionism to Croatian workers, of whom there are many in this country, employed in mining, construction and other basic industries. Publication will be twice a month.. The price is $2 per year, $1 for six months; bundle orders, 3 cents per copy. Address, 1001 West Madison St., Chicago, Ill.

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of management of the industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell fo the old.

## HELP MAKE CALIFORNIA SAFE FOR THE WORKING CLASS

Eighty-seven of our fellow workers have fallen victim to the labor-crushing campaign of California's business interests. These fellow workers are serving from one to twenty-eight years in the California state prisons for having defended the right of the working class to organize. Seventy are at San Quentin, thirteen are at Folsom, one is at the Preston Reform School and three are awaiting the outcome of appeals. A number of other cases are pending in Northern and Southern California. Regardless of what the outcome of these cases will be, the fact remains that the defense office at San Francisco must be supplied with funds. The exploiters of California must be forced to relinquish their prey and their disgraceful and barbaric anti-labor "criminal syndicalism" law wiped off the statute books.

How many of you are willing to donate a day's wages to the defense?

How many of you are willing to boycott California fruit, movies, etc. until our fellow workers are free?

Let's show them that we care.

Send all funds to CALIFORNIA BRANCH GENERAL DEFENSE COMMITTEE,

226 Russ Building, San Francisco, California.

# A Modern General Strike

By HENRY HAZARD
(Special to Industrial Pioneer)

AIRPLANE and Auto! The fastest methods were used to rush the strike call through the dim forests of the Columbia River basin.

Nowhere in the great northwest was the walkout for class-war prisoners more effective than "Where Rolls the Oregon." The men who came out for blankets and the freedom of the prisoners last May came out solely for the boys in jail this time. They won their blankets in the May strike.

* * *

It was a sudden strike that swept over the timber lands, construction camps and harvest fields of the northwest this September. It caught camp foremen by surprise in many places and some fellow workers also. The May strike had been announced seven months before. But this strike was different.

No general headquarters started off the movement. First action came from Centralia. The fellow workers of Wesley Everest elected a strike committee in August to grease the wheels for action in their district. August 30 came the strike call and thousands of printed strike notifications began reaching the long log camps of central Washington. Centralia flashed the word to all other branches of the Lumber Workers' Industrial Union in the northwest.

**Seattle** took a hurried strike vote and sent runners to the camps in its district.

**Tacoma** organized flying squadrons to sweep the slow comers off the jobs.

**Bellingham** for the north Sound region; **Aberdeen** for the Gray's Harbor timber lands, and other branches showed that Centralia had not counted on them in vain.

### A Thriller

A thrill went through the whole northwest when the Agricultural Workers of the Spokane district ordered a strike of grain harvesters for the class-war prisoners. Workers in the Whitman wheat country had already been on strike for some time, fighting bravely against the efforts of the sheriff to break solidarity by a series of thirteen arrests.

Kelso construction workers went out early in the game, tying up big Long Bell road work leading out of the new "model" industrial city of Longview on the junction of the Columbia and Cowlitz rivers.

All eyes were on Oregon where lumber production is assuming more importance than in the state of Washington itself. What would Oregon do? The success of the strike hung on the fellow workers in the sister state. Rumors were flying that Oregon would not strike.

But the Oregon workers put their critics to shame. Portland and Astoria flung themselves into the strike movement with more enthusiasm than was shown in places where the I. W. W. has been established longer.

### Airplane on Job

They are up to date in the Columbia River Valley. "We can't reach the far away camps!" said some pessimists. It was to laugh. An airplane was chartered and the strike calls dropped like rain on the heads of astonished foremen in the far off reaches of the great timbered basin of northern Oregon. Automobiles carried the messages to other places.

All over Oregon the loggers came tumbling out. Coos Bay had been looked upon as safe for the Lumber Trust but that important nook in southern Oregon backed up the strike also. Some camps could not be reached in the required time because no airplane was chartered there and there was no other way of reaching the outlying logging operations.

Loud cheers in Portland greeted the announcement that the Hurley Mason jobs out of Oregon City had been shut down. Here is where Louisiana lumberjacks had been fetched after the May strike. But the men whom the company looked upon as ignorant "hicks," safe for exploitation, joined forces with the rest of their fellow workers in the great movement.

Last came wires that the short loggers in the Spokane district were affected and that the strike wave was breaking into the British Columbia forests as fast as Vancouver messengers could reach the jobs.

The strike was all over the northwest; complete in some places, only partly effective in others, but demonstrating to the world by curtailment of log production that the I. W. W. was able to hit the profit mongers at the shortest possible notice.

### Problems Faced

Four big problems met the strike committees of the diifferent branches:

**Getting out the strike calls effectively;**

**Stopping scab shipments;**

**Publicity;** putting the real strike facts before the workers who might be misled by the silence or lies of the capitalist dailies;

**Finance,** of which the most important phase was the protection of weaker brothers from the booze and gambling sharks who would fleece them and starve them back to scabbery.

The aiplane method, used by Portland, was found to be the most effective way of getting the strike calls quickly to remote camps. No other way had the necessary speed, for time was short. No time limit was set but it was generally understood that this was to be a short off-the-job strike in line with the in-again-out-again I. W. W. policy. In British Columbia many camps could not possibly be reached. No airplane could be obtained and distant camps could be notified only by irregular water transportation. In the more congested areas on this side of the line automobiles and foot messengers did the trick effectively.

### The Daily Worker

Flying squadrons were used with magnificent success in the Tacoma district as the Boomer dispatches printed in the **Daily Industrial Worker** showed. Where camps were poorly organized and sentiment was weak a flying squadron crystallized strike spirit and took the fear out of individuals who trembled before the local thugs of the boss.

**Scab shipments** were hit by the common sense method of picketing employment offices in the cities. Some of the employment offices were quick to put up strike notices. "I. W. W. Strike" on the boards made it impossible for the scab to plead that he didn't know there was a strike. Where men signed on anyhow pickets notified them at greater length. A few pickets were arrested but the work went on. But still more picketing efforts, in the cities and the camps, would have made the strike still more effective though the pickets on the whole obtained excellent results.

The manager of the public employment office in Portland quit shipping scabs after a visit by the Lumber Workers' I. U. committee.

No attention was paid by strike committees to the employers' announcement in Seattle that all camps would be closed for thirty days. This was a pure and simple publicity bluff to save the faces of bosses who did not like to admit that the I. W. W. was closing them down. As soon as branches called off the strike employers were quick to notify workers by special messengers to get back on the job.

**Publicity:** The **Daily Industrial Worker** was the publicity feature of the strike. It was the first time a full sized daily paper was gotten out by the I. W. W. And it went strong.

### Special Strike Extras

Eighteen thousand copies of the semi-weekly edition of the **Worker** were published during the strike. About 10,000, on an average, of the special strike extras in between. The special strike extras were concentrated in the northwest where the need for them was greatest.

This **Daily Industrial Worker** showed what could be done with a small staff and limited equipment working under pressure. Printed in the old plant, before the installation of the new press, it taxed facilities but it got out on time none the less. An editor and one assistant handled the office end of the editorial work, by sitting up late nights. The business manager worked overtime with his usual smile.

Splendid correspondence work from the field made results possible. A glance at the pages of the **Daily Industrial Worker** showed the debt due to the keen correspondents in the busy strike centres. Take Tacoma, for instance. In one issue there are nearly four columns of readable, informative matter from one individual and more from others. There were humor and dramatic quality in this correspondence and the news, at times, gave such strategic facts as to the extent to which log transportation had been stopped on important railroads.

Short wires from outlying centres kept the paper up to the minute on vital happenings all over the field. The correspondence far exceeded expectations. Not in vain has been the **Industrial Worker's** practise of making up its paper from the contributions of its members. By this means a corps of qualified correspondents has been developed in the I. W. W. ranks of the northwest.

Again the **Industrial Worker** is a semi-weekly but the writer believes it will become a permanent daily before next Summer.

### No Strike Finance Problem

**Finances:** There was no strike finance problem in the ordinary sense. Nearly all the work was volunteered. Branch printing bills were small. What deficit will be found when all the returns are in will be met by the regular **Industrial Worker** treasury which has a surplus ahead at present in spite of the purchase of a new printing press. There was no strike relief except some free coffee and sandwiches in the halls. It was not needed in a short strike.

But right here is where the story of the "dehorn" committees comes in, for the "dehorn" committees saved the weaker strikers from the booze and gambling sharks who would have stripped them clean and made them ripe for the solicitations of the scab herders.

As in the May strike the I. W. W. strike committees in Portland, Seattle, Aberdeen and Centralia formed special squads, popularly known in Seattle as "dehorn" committees, to clean out and close up the peddlers of poison and the card sharks in the working-class districts.

### Smashing "Smilo"

Perhaps the eastern readers of the **Industrial Pioneer** never heard of "smilo," the man-maddening liquid which flows along the Seattle skidroad. I

(Continued on Page 26)

# The R. R. Company Union, a Grecian Gift

By JULIAN DEUTER

SINCE the walkout of the Railroad shopmen last summer, a number of important railroads have organized company "unions" for the workers in the shops. When big transcontinental railroads send their vice-presidents over the entire system to organize "unions" for the workers, such a solicitude for the workers in their employ is remarkable. There has been a lot of talk of the open shop, or the so-called "American plan", and now we find that this is not quite suitable to the big employers. They fear the entrance of an industrial union like the I. W. W. into the unorganized field so they put over a union of their own, or a company-dominated association. Through it they try to give a semblance of protection to the workers' interest,—security, redress in grievances, equitable adjustment of differences, etc., but in practice it is found that the company decides the matter any way they see fit.

Even among the most recent recruits made during the shopmen's strike, few are found who are "hoosierfied" enough to believe that a railway corporation would organize any "association of workers" that would have the workers' interests at heart. After all the bitter experiences of the RR workers in past years, in the many clashes and struggles for better conditions, shorter hours, and more pay, it would seem scarcely necessary to remind them of the ancient adage "beware the Greeks bearing gifts". So the railroads, in order to prevent industrial unionism, resort to company unionism.

The roads not included in the separate "settlement", i. e., the abortive Willard-Warfield-Jewell agreement were quick to take advantage of the situation on the unsettled roads. After several months of fruitless dickering, all negotiations were broken off by the railroads. Then instead of the open, the closed shop,—company-union closed shop—ultimatum was delivered and enforced by many of the roads, among them the Pa., C. & A., L. & W., U. P., Southern Pacific, Great Northern, Mo. Pac. and others. Some of the above roads, in the endeavor to lure back the required number of the old timers, the majority of whom still remained off the job, announced at first that it would be optional with the employees whether they wanted to become members of the "union" or not.

**Repairing a Crossing**

In a few weeks, however, the solidarity in the ranks of the strikers having been broken, mainly thru the connivance of the officials of the Railway Employees' Department of the A. F. of L. in the "Baltimore agreement", announcement was made, ostensibly by the mere nominal officials of the company unions, but really at the dictation of the railway executives, that the shops were to be 100 per cent closed shop—"Company-union". The RR companies were prompt in making the most of job control, and it was a case of signing the application, submitting to the arbitrarily fixed dues and assessments together with the check-off system of collection—or get out. Many of the shop employees refused to sign and were immediately dismissed, the majority were coerced into the membership. It was made plain that "no further nonsense would be tolerated" from any independent organization.

How generous these suddenly paternalistic railway corporations can be when it comes to railroading thru a subsidized association for flim-flamming was shown last summer. They invited, or rather requested the hastily "elected" shop workers' representatives to a "conference" with the RR executives at the main office headquarters of the road. All expenses were paid by the RR and when they all got together an "agreement" already prepared and print-

**A Suburban Stop**

ed was put before them. "Sign on the dotted line, gentlemen," and "how about taking in a show tonight after the banquet." It was a farce as a conference, and if there were a few simpletons who went thru the procedure gravely, the most of them realized that their feeble individual protests were ineffectual to alter materially the made-to-order program, and if they did not use the soft pedal, they were sure to lose their newly found sinecure mighty pronto.

By observing how the "benevolent" employers want the workers to be organized, the way they sort them out themselves in little separate groups, the plainest demonstration is given of how the workers should not be organized, or encouraged to organize. Full well do the big employers realize the truth of the old axiom "divide and conquer". The first thing noticeable about the company-union lineup is the retention of the crafts division among the railway shop workers' organization. The machinists, blacksmiths, sheet-metal workers, electricians, boilermakers, stationary engineers, car repairers, etc., all have a separate "union", altho they all work in the same shops on railway equipment, repairs, etc.

The railway companies prefer to force the obsolete craft form of organization on the shop employees rather than to allow them to remain unorganized, thus showing plainly, the intention to "head off" organization of the workers in other, to the employers, undesirable unions. They know that the tendency of most of the railroad workers is to organization, mostly closed union shop organization, and, lately, industrial organization; so that it was deemed politic to rig up a dummy "union" for them to play with. By retaining the old craft form in the new counterfeit, camouflaged outfit, it became clear that the railway companies desired to perpetuate as long as they could this ancient, outworn, inadequate system of organization, in preference to suggesting or making possible, a better one.

What the railroad companies objected to was being "shaken down" and "held up" by a lot of craft union officials, who were regarded as outsiders and jobbers in the commodity of railroad shop labor power. Eminently satisfactory as the craft union form is to the employers in many ways, they make it plain that there is a certain point in the adjustment of claims for the delivery of a required lot of RR labor, supplied by the labor fakirs, beyond which they will not "go".

When the time is deemed opportune to take another slice off the pay check of the RR workers next in line, a great hue and cry is raised about the excessive wages paid these workers compared to the "going wage" for labor in other industries. A proposed wage reduction is announced generally affecting only a portion of the workers in the industry at one time. A lot of hot air about arbitration on an equitable basis is vented, and if the Brotherhood officials are not tractable in acquiescing to the cut, a walk out results, with the majority of the RR workers remaining on the job "carrying on" and in the end contributing most to the defeat of their "union brothers".

How beautifully the method of division among the railroad workers works to the benefit of the employers, and the detriment of the workers themselves.

How absurd for the union officials to boast of their "sixteen recognized Brotherhoods"! How many are still "recognized", and by whom, since the switchmen's and yardmen's strike of several years ago, since the "federated shop men's" strike of last summer?

The fact is the boasted RR brotherhoods have been for years permitted to exist, an obstacle in the path of true Industrial Uionism, only on the sufferance of the railway companies. Any time the combined railway interests choose to dissolve and remove them, they'll "blow up in the pinch". The "grand presidents" of the craft unions know this very well, and in order to hang on to their handsome "pie-card" will go great lengths to render service to the railway corporations and propitiate the all-powerful big interests.

There is "Brother Bill Lee", grand president of the B. of R. T. The chief mogul of the "stingers" has the gall to brazenly state, in effect, that the so-called "Big 4 transportation brotherhoods" are too strong ,and must divide and diffuse their strength and forces. Economic action, the only really effective weapon Labor has, this willing tool of the RR corporations denounces as something Labor must let alone. The capitalistic employers use economic action every day, right along, always concentrating their forces, and then this traitor to the cause of Labor advocates still more division among the railway workers, instead of greater unity, and SOLIDARITY in the railway workers' organization.

"Brother" Warren S. Stone, grand president of the B. of L. E. is too much occupied with his banks and scab-manned coal mines, to work for the advancement and improvement of the standard of living of the RR workers. His motto is"Me first, to hell with the rest".

One of these days, when they feel like it, the RR corporations are going to force the much coddled transportation brotherhoods to go out on strike, like they did the switchmen and the shopmen, counting on the willing organized and unorganized scabbery of the rest of the workers.

Have the costly lessons taught in past struggles with the One Big Union of the railroad companies been thoroughly appreciated and learned by the workers? The signs are not wanting that indicate that thousands of the "rails" realize that only a One Big Union of ALL the railroad workers, Industrial Unionism, not craft unionism, is the only means of obtaining more of the good things in life that they help to produce.

When all the railway workers determine to organize industrially, the company union will be no more, the railroad companies to the contrary notwithstanding.

# The "Boomer Rails" Have a Heart to Heart Talk

TWO "rails," a hogger and a shack, were taking a little nourishment in the beanery at Kelly Lake after bringing a train of iron ore empties up thru the fog-shrouded night from the Allovez docks, when the tallow-pot who had been "spading the fogstones" on the trip up, wabbled in with a look of complete exhaustion on his map and collapsed on a stool.

"I'm cured," he gasped, "never again; for years I've heard of this 'iron ore rush' and always wanted to see just what it was like, but I'll tell the world that I've now got the desired info.

"I've nursed leaky old hogs over Tennessee Pass on the D. & R. G., made steam out of pine-knots on broken-down mills on the Y. & M. V. during the sugar cane rush down in Louisiana, fought zero weather on the Canadian Northern during the wheat rush and roasted myself on Mallets on the Santa Fe when the canteloupes were coming east in the month of June, but never in all my extra-board-bucking existence have I endured the grief which is indigenous to this pike. Great Northern, hell! it ought to be called the Great Grief!"

"Listen to him rave," said the hogger, between bites of one of the doughnuts that have made Fogg Bro's beaneries notorious wherever boomer rails congegrate. "The boy has an overdose of undernourishment from trying to live on the hog-feed they dish out up here, also he's had a little too much of that crap which Jim Hill wishes on us under the alias of coal. That 3205 is a bad actor anyway."

"Cheer up, buddy; maybe the M. M. has looked your record up and you won't have to go back down to Allovez."

"I should worry," rasped the tallow. "Record or no record I'm not going thru any more of this misery for Father Jim. My back is broke, enough is sufficient, and I've reached the last mile-post of my run on this pike.

"We're all nuts anyway. If we had a brain in the world we'd kick over the traces. I'd like to see Stone and Carter trying to nurse these old 'pigs' along and keep them hot with the tankfuls of slack I've been getting lately.

"I'll bet that stuff came from those scab mines of Stone's and was sent up here as a curse on us guys for allowing such a fink-loving rat as he is to run our union."

### Unfraternal Fraternal Societies

"Union, hell!" spoke up the shack. "Every one knows our organizations are insurance companies pure and simple. There's only one way of beating the game. We have to die to collect. Me, I'm about fed up with them too. There surely must be some way for us guys to make these jobs fit for humans, and I'm going to look for it."

"Well, well, well," piped up an individual who had been sitting at the end of the counter, getting an earful; "is it possible that you birds in the train and engine service are disatisfied. Why, I thought you were as happy as bugs in a rug. You seemed contented enough last summer when we shopmen were on strike. I saw you taking engines out of the house that scabs had been repairing (?). I mean you Mr. Hogger and Tallow; and as for you John Stinger, you put in lots of time on the road brassing hot-boxes which would not have been hot if the shopmen and car-tinks had been at work. They couldn't get enough 'scaleys' to fix them up in the terminal so you fixed them up on the road. Yes, and I saw whole 'crummy' loads of scabs come in here with you good union men. You birds didn't feel very discontented then, did you? Oh, no, the contracts you are cursing now, were 'sacred' then."

Firing an Engine

"Who the hell are you?" asked the tallow.

### A Disappointed Shopman

"Me? Why I'm one of those boobs who thot then as you do yet. I felt sure that our craft unions were strong enough to protect us shopmen. 'Sure,' I said, 'they can't get along without us, they can't get enough scabs to keep the rolling-stock from rusting on the rip-tracks and in the backshops when we go out.' Well, I notice they did, with the assistance of you contract protectors, of course.

Now I know better. The fault was all our own, we never had a chance. Think of trying to win a strike with sixteen shop unions instead of one. Why, it was hopeless. Your turn is next. I guess you guys can see the handwriting on the wall now. Carter, Stone, Shepard and Lee are not going to help you. You ought to be wise to that now. They're too busy looking after the investments your money has provided for them. Stone came out in his true colors last spring in his dealings with the miners his company employs. He's a scab at heart. Carter, Shepard and Lee are still under cover, but they're just as bad. Your big four with these piecards for officials will go the way the shop craft unions went just as soon as you put them to the test. They're in just as bad order as our unions were."

"Well," said the hogger, between bites, "what would you reccommend as a remedy?"

### The Right Semaphore

"The answer is as plain as a red light on a semaphore;' answered the ex-shopman. "We are all working together in the transportation industry, all of us are necessary to the operation and maintenance of the railroads, our interests are identical, anything which hurts one of us, is bound sooner or later, to react on the rest of us, we can't get along without each other, so I recommend One Big Union of all rails which will not allow one bunch to scab the others out of existence, but which will tie the whole damn works up so tight that the bosses will forget they ever had any railroads if we don't get what we want."

"He's right," spoke up the shack. "We've been fooling around long enough. Twenty-two unions on the railroads is twenty-one too many. Contracts are not worth the paper they are written on. We've found that out long ago. Seniority is just another club the companies hold over our heads. We must forget all that old-fashioned junk, that went out of style along with the link and pin. What we need is an up-to-date union like those new ten driver Mickeys that can make a whip cracker out of five thousand tons. Old fashioned ideas won't work with new equipment. The companies found that out long ago. You don't see them sending out those little four-wheelers to take a train over the road now-a-days, do you? I should say not. They were scrapped long ago. That's what we need. Send the old wornout insurance policy unions to the rip-track and couple on a new up-to-date industrial union mill to the head end of our interests' train, give the hogger (who won't be Stone) the high-ball and pull out of the yard of contracts and seniority onto the main line of solidarity with rights over everything clear through to the terminal of Victory and then look out the window and see 'em roll.'

"Atta boy," said the shopman, "I'll tell you just the kind of mill to get. Its name is Railroad Workers' Industrial Union No. 520 of the I. W. W. and it was built in the shops of practical labor experience. It's guaranteed to pull any load the draw-bars will hold and to always take the workers interests into the terminal on the 'advertised'."

"I believe you're right," quoth the hogger and tallow in unison. "We've been riding on a bum poor steaming-union mill long enough. We'll take a chance on the new one."

"Me too," said the shack.

And the blonde waitress, who happened to belong to Foodstuff Workers I. U. No. 460 smiled.

# The Onlooker

I STOOD on a busy corner—
In the heart of a modern city,
And watched a group of SLAVES
Fasten mighty chains and cables—
The work of other unseen SLAVES—
To a heavy load of polished stone
Which other SLAVES had chiseled
And blasted out of Mother Earth;
Polished and rubbed it to a shining brightness,
Gave it over to still more SLAVES
That they might transport it over land and sea—
To where these waiting SLAVES were ready—
To lift it high—ten—twenty—thirty stories—
Above the SLAVE-jammed street—
To where more SLAVES were waiting to receive it
And to place it in a SLAVE-picked spot in a
Colossal building—
A building of such passing fairness,
That the eye was dazzled by its beauty;
A million windows pierced its towering sides.
The ends of the Earth had given of their store
To make it what it was—
A monument to SLAVES!
And when I looked and perceived its beauty,
Grandeur, stability and strength—
And knew that SLAVES had stood it there—
With its head among the clouds—
My heart was filled with a great sadness
To think that those who were **so wise and strong**—
Should still be SLAVES!

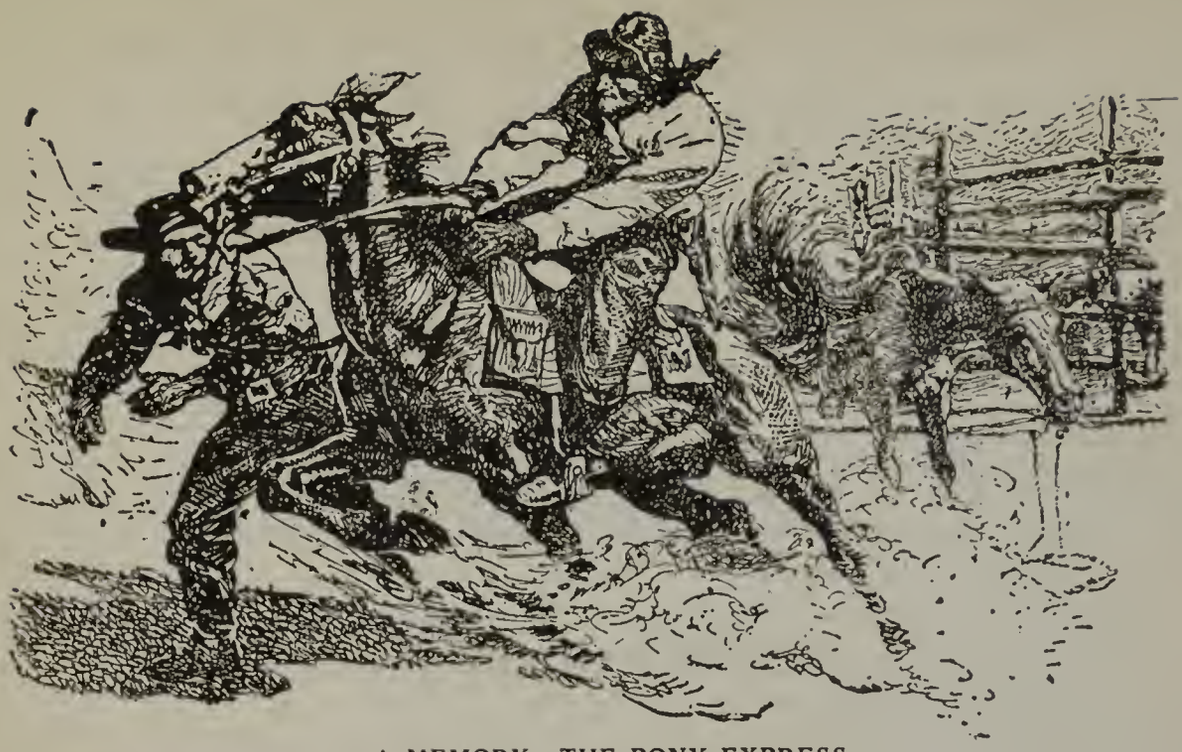
J. J. L.

## CALIFORNIA BOYCOTT IN CANADA

The Swift Current, Sask., Canada, branch of 110, passed a motion to boycott all California-made goods and movies throughout Canada.

From Regina, Sask., come reports that there will be a long run of threshing in Canada this year. If you are looking for new fields try this part of the world. Sentiment was never better and most of the boys will be able to pick up between $200 and $300. Delegates are badly needed.

No. 110 is going into Illinois. At Mattoon there is a demand for men to cut broom corn for a radius of 30 miles.



A MEMORY—THE PONY EXPRESS

# The West is Dead

By RALPH CHAPLIN

WHAT path is left for you to tread
When hunger-wolves are slinking near—
Do you not know the West is dead?

The "blanket-stiff" now packs his bed
Along the trails of yesteryear—
What path is left for you to tread?

Your fathers, golden sunset led
To virgin prairies wide and clear—
Do you not know the West is dead?

Now dismal cities rise instead
And freedom is not there nor here—
What path is left for you to tread?

Your fathers' world, for which they bled,
Is fenced and settled far and near—
Do you not know the West is dead?

Your fathers gained a crust of bread,,
Their bones bleach on the lost frontier;
What path is left for you to tread—
Do you not know the West is dead?

# The New, The Living West!

THE West—the old West—is sure dead. With electric trains crossing the Rockies and 'Frisco looking towards the Orient for the commerce that will make it an even greater port than New York and cause a thousand factories to bloom along the Pacific Coast where only one bloomed before, —with the Colorado Fuel and Iron Company at Pueblo reading the Steel Trust lectures on 8-hour day efficiency and production and St. Louis becoming the great open shop of manufacture for, and commerce into, Mexico,—with the farmers of the great prairies "bumming" the country as "auto tramps" or filling the factories of the Mid-Continent cities with workers by the millions, we'll say the West, as formerly known, is dead—deader, in fact, than a collection of tombstones in a cemetery. The performance that was put on the other day, in which the old pony express was re-enacted, is simply a reminder that a New West has come, and come to stay.

No more will the pioneers of the West cross the plains in "covered wagons," or in "prairie schooners," as they were once more poetically called. The present-day pioneers ride in boxcars, or side-door Pullmans, to use the modern poetic phrase. As their fathers starved and sacrificed to subdue a continent, so do they starve and sacrifice to subdue the expropriators and exploiters of that continent. Where their fathers rallied to the union standard to abolish chattel slavery, they rally to the union standard to abolish wage slavery. And where their fathers labored to build a political democracy, they labor to supplement their work with an industrial democracy.

# Make Whole Continent 110's Jurisdiction

AGRICULTURAL Workers' Industrial Union No. 110 is demonstrating its capacity to adapt itself to changed conditions and thrive. Its harvest drive met a set-back in poor crop conditions in North Dakota. Instead of lying down and permitting the fact to crush it, 110 is now enlarging its perspective and taking in the whole continent as its jurisdiction. It is now seen that expending all efforts practically in the middle west is poor policy.

Accordingly, the organization looks to Montana and Washington, where crops are good and the harvest plentiful, to recover lost ground. At the same time, it is developing organization in Canada, where a good crop and a strong sentiment for the I. W. W. prevail. Two traveling delegates are now in Canada which offers 110 the greatest opportunity since 1915.

The Pacific coast for the winter is also kept in mind. There will be a conference of 110 members at Stockton, California, October 6, 1923.

Bulletin No. 34 says:

**"We must rise to the conception that the only bounds to our activities are the two oceans and the Gulf of Mexico; that wherever men work in field, garden, orchard, threshing or packing shed, there is an opening for us, and a need and a demand for the A. W. I. U. When our members see from this viewpoint and in this manner, we shall move forward to really successful achievement."**

# 1,000,000 Migratory Workers

THERE is considerable attention being paid to the migratory workers just now. This is the season of the year when migratory workers are in demand, which may account for the interest displayed. Labor is always important, when needed. ..**The World Tomorrow** devotes its entire Sept. issue to the migratory workers. From it, the following facts and figures are transcribed:—

There are 1,000,000 migratory workers in this country. They hew forests, build and repair the railroads, tunnel mountains and bridge ravines. They harvest wheat in the fall and cut the ice in the winter. They operate the steamers of the Great Lakes. No great engineering project can be built without their aid. In brief, migratory workers are most prevalent in the lumber, railroad and general construction, agriculture, ice and marine transportation industries. They are drawn from the crowded slave markets of the city.

The migratory worker is a hobo, but he is not a tramp nor a bum. A tramp is a stationary non-worker. The tramp beats his way from place to place without labor. The bum stays in one place, and makes booze his aim in life. The hobo lives on his work mainly; resorting only to charity when down and out. He is the foundation of industry.

Migratory, or mobile labor, is a reserve force, that can be rushed to any point where labor is needed. The army of the hobo is the reserve army of industry; and on its proper treatment depends civilization.

The migratory worker is a manifestation of the desire for change and travel. Working his way from town to town and job to job, he is like the rolling stone that acquires a polish; and the roving bee that brings home the honey—figuratively speaking.

Comparison is made between the drummer and the hobo to the disadvantage of the former. The drummer is a migratory worker, too. He not only produces nothing, but he is a heavy burden on those who do produce. He travels in luxury. For him there are hotels, Pullmans and obsequious porters and clerks. The hobo, tho a producer, rides in box cars, or on the rods and buffers. He is the prey of scissor-bill constables and grafting sheriffs and the convict-lumber camp is often his lot.

## ORGANIZING FARMERS IN I. W. W.

THERE is a healthy self-examination now going on in the I. W. W. It is confined, for one thing, to finding out what's the matter with the I. W. W., if anything. That is, it is intent on improvement and development.

The results can only be beneficial. In fact, they are beneficial already. This is shown in a recent issue of The Industrial Worker, wherein H. Thomas tells how he extended the I. W. W. propaganda to farmers, meaning thereby steady farm hands and working men in the small towns also.

He found them disposed at first to think the I. W. W. is "organized to commit anything from arson to murder". But talks and literature later won them to state that "the principles of the I. W. W. are all right." Thomas says: "I lined up several steady farm hands who at first told me that they would have nothing to do with the I. W. W. but changed their minds after reading our literature."

That's the way to build up the I. W. W. Don't think the "scissorbill" is without brains or ambition for a better society. Do not believe the same of the steady worker, either. Organize all of them.

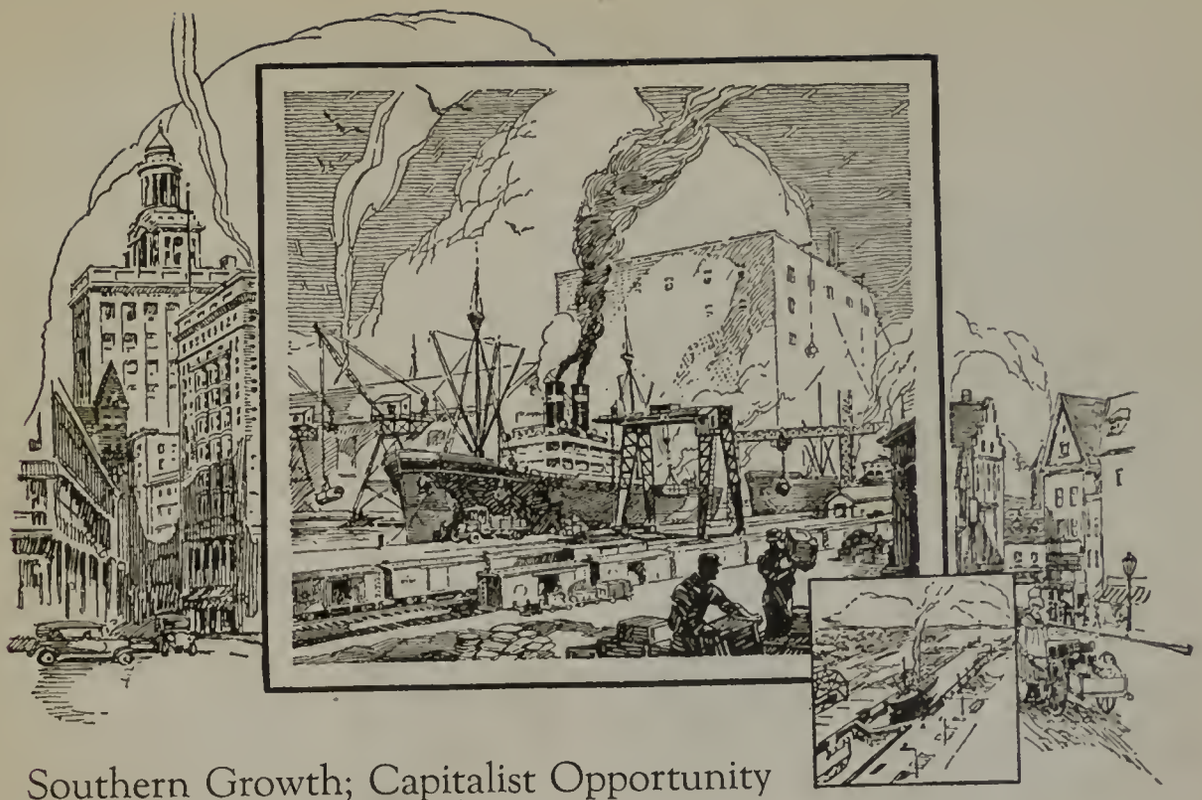
**SUBSCRIBE FOR THE INDUSTRIAL PIONEER. $2 A YEAR; $1 SIX MONTHS.**



## Southern Growth; Capitalist Opportunity

THE South is being pushed by mortgage and securities companies as a good field for investment. Especially is the growth of Southern cities put forward as offering great investment opportunities .

New Orleans is particularly represented as a good example. In the last 15 years, exports and imports have increased at the rate of 10 per cent a year, until now New Orleans is America's second port. During the last 10 years, the value of manufactured products has increased 165 per cent. The city has grown to a population of more than 400,000 and is now recognized as a distributing center for Central and South America.

A new era in Southern commerce began May 5, 1923 when the New Orleans Inner Harbor-Navigation Canal was formally opened. This project, costing more than $20,000,000, is proclaimed the forerunner of a great industrial movement and the first step in the construction of a canal from New Orleans to the sea.

What this Southern development of capitalism means to labor may be judged by the negro exodus; also by the article on Labor Hells in Dixie printed elsewhere in this issue. It's not all gold for labor that glitters in mortgage companies' prospectuses, though it means big investment returns for capital. The above picture is reproduced from one of these prospectuses.

# Labor Hells in Dixie

By J. W. LEIGH

TEN thousand bread-winners, men and women, the majority of whom are advocates of the so-called American plan, are walking the streets of New Orleans in a vain quest for bread, while in other sections of the state of Louisiana the condition is more pitiful, which proves conclusively that a labor surplus exists, despite reports to the contrary.

True, many are employed, some at standard wages, due to union conditions, but the great majority of laborers, both skilled and unskilled, have not yet seen the light which points the way to industrial freedom and better living conditions for themselves, their families, and the millions who will live after them. Extensive surveys made from the office of the state labor commissioner show that no labor shortage exists, or has existed for some time past, and that even during the strenuous times of the world war that labor could be obtained in any industry in the state of Louisiana, provided a living wage was paid.

### Imported Labor Failure

Importation of Mexican and Porto Rican labor has proved a failure for many reasons, principal of which being that the foreigner was too light for the heavy work demanded of him, the climate, and last but not least, insanitary quarters and practically a lower rate of wage than that paid in his

native land, when living conditions were taken into consideration.

### Square Deal for Negro

Give the negro a fair, square deal and he is no longer a liability but an asset. He knows the South, and the South knows him; but under the conditions prevailing in Louisiana at the present time he cannot be blamed for the migration to the north and east. On the plantations whole families are employed, and the parents are urged to raise still larger families, and are assisted in many cases by rascally overseers to pay attention to the young female as soon as she reaches the age of child-bearing, for the more children on the place, the smaller the pay-roll, for all must work, from the child to the aged grandmother. Quarters provided for these black humans in the South would be rejected by the swine of a respectable northern farmer.

### The Debt System

Stores are established on the "place", and the help compelled to purchase at prices one hundred per cent above wholesale; at the end of the season they are in debt to the planter, and must remain as none will engage help until they are clear of the debt owed their former employer. They are kept continually in debt. Wages for adults range from eighty cents to one dollar a day, with fifteen cents a day for children and the infirm.

### 100 Per Cent "Americanism"

In the lumber camps, which employ 90 per cent negro labor, and in the Murder City of Bogalusa, wages average $1.50 for ten hours. In this hell hole of the South the Great Southern Lumber Company has 3,000 human beings on its pay roll as laborers, and probably 500 spies and gun men engaged ostensibly in other lines of industry. Workers are forbidden to organize, and at the entrance to the city on either side of the railroad station, these words greet the traveler: "Agitators, Bolsheviks, and I. W. W. do not stop; keep on going. This is a 100 per cent American city".

Here in 1914 six members of organized labor were murdered by the Loyalty League composed of "citizens", and twice has the grand jury refused to indict those accused of complicity, altho 80 witnesses testified that thirteen men, whom they identified were members of the mob. It is also claimed that at the last grand jury hearing two of the murderers sat on the jury, with the consent of the attorney general of the state and the prosecuting attorney of the parish. Today the Mexican consul is investigating a charge of peonage in that city, wherein it is charged that fifty Mexicans were held in a stockade, worked from dawn till dark, fed on spoiled food, and refused any compensation.

### A State of Child Workers

Louisiana is a state of child workers, from the cotton and sugar fields in the rural districts, to the mills, factories and stores in the cities. The working hours in the city factories are 60 a week, while on the farms and plantations, from sun-up till sundown. As a matter of fact, there remains only a few states where chidren are worked as long hours as in Louisiana. No relief can be expected from the legislature, which is controlled by corporate interests and crooked politicians. Many factories, when employing women, girls and children seek to evade the compensation law by compelling each employe to sign a statement absolving the factory from all blame in case of accident, fatal or otherwise.

### State Federation Non-Constructive

Labor conditions in the state of Louisiana are in a deplorable state, due in a measure to the inactive work of the State Federation of Labor of which nothing is heard of only once a year when that body meets in annual session, passes innumerable resolutions, fight among themselves, banquets and adjourns. No constructive work in organizing the workers of the state is on record, while in the city of New Orleans factional fights which are retarding the movement are a common occurrence.

The Central Trades and Labor Council is not a representative body of labor—it is political and is dominated by politicians, who tho carrying cards in their respective crafts, have not done an honest day's work in the past ten years or over, while the Building Trades Council is a separate and independent body functioning for their own benefit exclusively.

### Organizers Lacking

Organizers, devoting their time to the upbuilding of the labor movement in this section are an unknown quantity. Of the forty-eight states Louisiana carries the least resistance when an open shop drive is precipitated, because in cases of adversity, union men of Louisiana will not stand together against the common enemy. I do not mean that they will disregard their obligations, but the agitator in the pay of the corporations advocates laxity and "talks" securing of additional members for the various craft unions in time of peace with the argument that "there is not enough work for us now, without taking in any more."

### Negro Organization Zero.

While no law exists against the organization of the negro into trades unions the percentage is practically the zero mark, owing to propaganda spread by the manufacturers that if the negro is organized he will demand the ballot and equality. Equality is a tender spot in the make-up of the Southerner, and it is used to whip the Southern white workman into subjection. The negro, when organized, makes an admirable union man and very few are the cases reported where he has deliberately "scabbed".

Craft unionism is fast crumbling owing to the fact that one set of workmen scabs on the other in the same factory and one organiaztion is used to whip the other.

Industrial unionism is new in this section and the last strike of the marine transport workers showed the public that destruction of property was not a cardinal principle, but in its stead solidarity brought victory out of pitiable defeat.

---

**BOOST THE I. W. W.**

# Why Are We Discontented?

THIS question is asked by the leading Chicago newspaper, which claims to be the world's greatest. It thinks discontent amid the prevailing prosperity paradoxical, and says so. Picturing the country as enjoying unusual well-being it declares:—

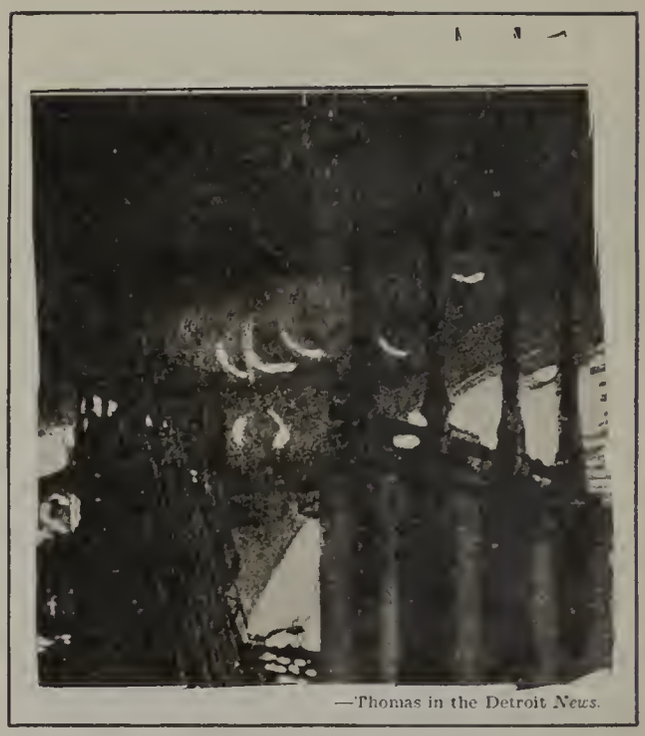
"In spite of all this there runs through American society a current of disquiet and discontent. None seems at peace. None seems satisfied. None seems to have kept the confident optimism that was the outstanding characteristic temperament for generations. There is something radically wrong with us."

This is sure a candid acknowledgment of fact, from quarters where strenuous denial has heretofore been the rule. But, as usual, this acknowledgement is simply made in order to avoid the real significance of the facts that cause it to be made. We are told that the cause of discontent is to be found in the lack of altruism and a want of the spirit of Christ. In other words, we are discontented because we are not spiritual.

Considering the source, which upholds the worst in modern civilization, this preachment sounds sardonic, nay, diabolical. Besides, it's neither new nor original. It's a stock answer to every grave question. And we've been getting it for over two thousand years and its greatest preachers are those who are least guided by it. This preachment, to the unsophisticated, is merely a mystical refuge from practical necessity. To the knaves in control of the country, it's a screen behind which to commit more depredations on mankind. Why are we discontented? The question will not down, despite the hypocritical, sanctimonious answer given by the "world's greatest newspaper".

Before answering the question ourselves, let us admit, only for argument's sake, however, that we are in the midst of a period of material well-being, and that therefore there should be no discontent. But, how long is this period going to last? And what is likely to follow it?

Babson tells us that every upward movement following a war readjustment is succeeded by declines. He also says we are now entering the second decline since the world-war. Will it be followed by another deflation, like that of 1920? Will some two million more farmers be forced to the wall? Will labor suffer another 30 per cent reduction in wages and another 25 to



—Thomas in the Detroit *News*.

30 per cent reduction in employment? (National Bureau of Economic Research figures, depression of 1920). It is this Damocles' sword of business cycles that is hanging over our heads that makes us discontented. It makes prosperity look simply like a "come-on" with which to entrap us and leave us fleeced and "broke" in the long run.

But there are deeper and more profound reasons still than economic insecurity for our disquiet and discontent. We are on the threshold of a new era—an era of giant industrialism and imperialism. As a result, we face new conditions full of threatening possibilities. We are fearful of a vague something, we know not what; plainly, we are frightened. For already, in the late world war, has the steel of industrialism and imperialism entered the American soul. It likes it not. It has grim misgivings as to its ultimate value and outcome.

This, we believe, will account for America's brutal cruelty to political prisoners, its revolutionary nightmares, its loss of optimism, and its ominous undercurrents of disquiet and discontent. The future looks dark and foreboding. So why smile? Merely for the sake of Coueism, Christian Science, or Auld Lang Syne?

Let us review the details of present day conditions as they bear on the subject in hand, and the following facts will be conspicuous:—

1. The co-ordination of industrial capital into a giant combination to exploit the world. This is effected by forming manufacturers' associations according to industry and uniting them all into national bod-

[redacted]

the supreme importance of the workers in all industries, they are deprived of their own organizations and have no voice in the redress of grievances or in constructive management, except such as is permitted to them, or directed for them collectively, by the capitalists and financiers in control of the combinations by which they are both employed and enslaved.

In other words, modern American industrialism demands, not only the uprooting of large numbers of farmers from the soil, but also the complete surrender of every vestige of independence and association by the workers in order that the masters of coordinated capital, may have immense armies of servile slaves—Robots—regimentized and drilled for the successful invasion of the markets. In the light of American tradition, with its extreme individualism, is there any wonder then that there is so much disquiet and discontent and that none are at peace or satisfied? What does Chicago's leading newspaper expect, the erection of such a colossal tyranny, without any manifestations of revolt at all from a traditionally brave and free people?

But let's proceed. We have only been examining the ground work of this new era. Let's now take a look at the superstructure; viz.,

2. The possibilities of war, on a worse scale than ever recorded before. An America embarking on world conquest, economically and commercially, will become involved in world-problems and solutions. That is already the case. It will be more so the case tomorrow and the following day. Shipping hundreds of millions in commodities abroad annually, exporting capital in tens of billions periodically, America will become, willy nilly, a combatant, ever pushing and elbowing its way where others are also pushing and elbowing, too, in the determination to rise supreme and survive.

Once America went abroad to save democracy. Some day it may have to go abroad to save its trade, its billions and itself. Already is there talk of arraying a United States of Europe against the United States of America. America knows all this. It doesn't like the prospects. It fears that the next war may involve, not only its own undoing, but that of so-called Christendom also.

America already has had a disagreeable taste of the whole bloody business in the late world war. That was enough. It has since tried to withdraw into its one-time splendid isolation; but without avail. How can it? It must expand in outlets or else stew in its own economic fat, or else get rid of industrialism as now carried on by paying labor all that it produces and enabling it to buy back the same!

Do you wonder then that America, facing another depression, together with increased loss of independence and association and more war, though wealthy, is unhappy? Do you wonder that, in the face of all this, America, though prosperous, is disquieted and discontented, with none at peace or satisfied? We don't.

But let's go on still another story upward in the superstructure of American industrialism. There we will find the crowning infamy of all, namely, the greatest outrage against traditional American democracy and republicanism ever perpetrated, viz.,

3. The danger of what Glenn Frank so ably calls "the dictatorship of the reactionary". This latter is being boldly advocated in this country. Mr. Julius Barnes, head of the U. S. Chambers of Commerce, Judge Elbert H. Gary, notorious Steel Trust head, and other honorable gentlemen have dined with the Italian dictator, Mussolini, and have extolled his strong arm virtues ever since. They, like the Chicago Tribune, think his "iron hand" is needed to guide democratic and republican America to a place of safety **beyond** giant industrialism and imperialistic wars. They talk Christ, quote the Bible, but bank on the Mussolini type of "Statesman".

But they are not sure about this dictatorship business. They are not sure about

(Continued on Page 25.)

# Organizing in Steel

**What Are the Steel Workers Thinking About, and What Effect Will Their Thoughts Have On The Labor Movement?**

By FRED W. BOWERMAN

WE attempt to sit on the narrow, crowded side seat of a jerky, bob-tailed street car, which carries its pushing and tugging load of humanity from the hill to the mills and back again. By bob-tailed, I mean our car has one small door up front, with one man, who acts as the "crew," motorman conductor and all. The car also acts as a teeter-totter upon its one small truck and gives you a ride up and down as well as ahead and backwards. The "crew" calls out "Twenty-ninth" and your fellow occupants rise as if by command and shoving, pushing, pass out that one single front door. Their places are quickly filled by those waiting to get on and the car is again soon on its way. Those who left and those who have just entered bear the same general appearance as to overalls, dinner-buckets, dress and manners; with the exception that the ones entering look more fatigued than those who left.

I ask my seatmate, "What works was that?" and he answers, "The tube mill," and adds "six thousand working there. They promised us the eight hour day back in August but we 'aint saw it yet." You then begin to understand why those who have just boarded the car after finishing the twelve hour grind look less fresh than those who left.

Out of the window to the right your view meets the muddy Ohio, with its ferry-boats and bridges. On either bank, up and down, as far as the eye can reach, are seen the steel mill stacks, which pour out those great black clouds, darkening the sky, and you know that America is once more suffering from Prosperity. You also know that that prosperity is being made possible, under the black roofs of thousands of steel mills; where the tens of thousands of steel workers are working twelve hours out of every twenty-four.

During the day those clouds, and by night, that huge, red, devilish glare lighting the sky, informs you that thousands are tugging, pulling and sweating for the great Frankenstein, the steel corporation.

Many of your fellow passengers are either sleeping in their seats or on their straps, to which they cling as our car jerks slowly along. I ask my seatmate, "Got the eight hour day here yet?" and he replies, "Not in a damn mill. They claim they can't get the men, but that's the bull. It's the low wages and rotten conditions that's keeping the men away from the mills. There's lots of men to man the mills if they would only offer a decent wage and cut out the seven-day week stuff."

And he, in turn, asks me, "How'd you like to do the twenty-four hour trick every other week??"

I answered with a shake of my head, and further inquire, "Then it's a fact that the steel industry is not being placed on an eight hour basis?"

**"Why, of course it's not; and there's a lot of us that don't want it, if it's going to come over the same route it did in department eight this spring. Over there they used to have four men to the furnace and two to the ashes; but after they got the eight hours, two were taken off the furnace and one off the ashes, and the company wanted the three men to do as much in eight hours as six used to do in twelve. That's the kind of an eight hour day we're not in a hurry for."**

I then realized that the Judge was partly correct when he said that his workers preferred the twelve hour day, the only thing he neglected to mention was the kind of an eight hour day they opposed.

After conversing with a few other steel slaves, I began to realize that the Judge, the Capitalist Press or any one else was not going to fool the workers into the idea that they will get the eight hour day on a silver platter.

If you inquire further among the steel workers

you will also discover that a very respectable number of them know that their only hope lies in organization and also are awake to the fact that it must be the correct kind of organization, the I. W. W. kind. When you talk to them about the eight hour day and better things, as if the steel mill owners were going to give it to them, you are met with a look of contempt. They look at you as if the jokes sprung on them by the steel trust were not enough and you were trying to rub it in. But when you talk about these things from the angle of organization you receive a ready ear and response.

A few days later I was talking to a group of steel workers in a small Ohio steel and coal center, and one, in relating about his search for a job, told of refusing five different jobs at the mills due to the forty-five cents offered, and added, "What's the use of taking a job with them fellows at forty-five cents an hour and take the risk of losing a hand or an eye?"

Upon inquiry, I learned that five had been killed in the mill during the past week, besides the many accidents which took place. The company never allowed a full report of any accidents to leave the mill; and, in many instances when a worker is killed the news is not allowed to get out for several hours later unless it is brought out underground.

**During one accident when four were killed in one day the women folks crowded the mill gates to learn if death had overtaken any of their family. They were held back at the gate and four reporters were arrested by the guards for attempting to ascertain how many and the names of those killed. It was late that evening before the families of those who had been struck by death were informed of the names of those killed. As one of the injured men from his hospital cot said, "You know, we workers are not supposed to give out any news regarding accidents in the mills, and if we do we take the chance of being discharged."**

Only the steel workers realize just what the word CONDITIONS means. So when you talk about wages, hours and conditions to steel workers, it is the issue of conditions they are interested in most of all. It is the CONDITIONS which Gary is attempting to impose on the steel workers that are bringing about new thoughts, thoughts that will lead to action.

It has been the oppression of the steel trust that has forced the workers to take things into their own hands. At many points the workers in the mills have left their jobs in demand for the eight hour day. **There have been at least three hundred walkouts in the steel industry at different points this year and this shows the steel workers have begun to take matters into their own hands.** These strikes usually developed out of the dissatisfaction existing regarding the long hours and small pay. And yet some people think that the Judge is going to give the eight hour day to the steel workers out of the goodness of his heart. The steel trust is modifying its labor program in compliance with the ever-growing demands of the rebellious steel workers, who have lost all faith in **Garyism** and begin to realize that the steel mills are HELL; let loose on earth.

Going further into the investigation of the steel workers' turn toward unonism, I found that they realize that the new unionism in the steel industry must be the One Big Union kind. At the same time, I found the capitalist press carrying notices to the effect that the A. F. of L. would attempt to organize the steel workers and had arranged a series of meetings for that purpose.

Attending one of these meetings which had been well advertised, I found twenty-three people in attendance, being addressed by six labor fakers. This was at Cleveland and I learned that twenty-one of those attending were delegates or officials from the Cleveland Federation locals. Adding this experience to the general expression of disgust I found among the steel workers toward the craft union idea, it could easily be seen that the Federation will not have any sailing at all in organizing the steel industry and they perhaps realize it by now.

At another meeting arranged by the Federation at Gary a worker asked one of the speakers, "How many unions do you intend to organize in this place?" and the speaker, realizing his listeners were smarter than he, answered in disgust, "About a thousand." Loud laughter greeted this rejoinder.

The steel workers have been taught by the hard school of experience and today to effect any organization among them there must be a program that unites them in One Big Union. Whether it be the Mexican, Slav, Italian, Rumanian, Bulgarian or any other steel worker, if he is interested in any labor movement you can make up your mind it is the O. B. U. Many people do not as yet realize the great undercurrent of revolt that is gathering in the ranks of the steel workers. At times, this feeling overflows in an unorganized strike, but, as a whole, the drift is in the right direction, toward industrial unionism. The oppression of the Steel Trust is going to result in something good, from the standpoint of organization. It is like the black cloud just before the sun shines. The steel workers are reading and thinking. Their thoughts, which point straight toward Industrial Organization, are going to turn the tide in the American Labor Movement.

From now on there will be strike after strike in the steel industry. Where the organization work has not been attended to and the union has not been built, of course, failure will result. But there will be many strikes between now and spring that will bring home the bacon. This will occur where there are I. W. W. members or branches to properly handle same. But regardless of the success or failure of these small strikes in the domain of steel, these outbreaks will lead to a general strike in the steel industry at a little later date. This will mean action in the eastern industry and ACTION is what is needed more than anything else now. And who can say that it will not be the opening wedge that will pry open the whole eastern industries for the Industrial Workers of the World?

STANDARD REFINERY AT CASPER, WYO.

# In The Domain of Standard Oil

THE Standard Oil Company of Indiana is not a weakling, or an ugly duckling, though you would conclude that there must be somethng wrong about it to hear its vociferous defense of itself. It reminds one of the lady in the Shakespearian play who was given to too much protesting. It solemnly declares to the world-at-large that in ten years it paid "to its employees in wages and salaries the gigantic sum of $335,000,000, while it paid to stockholders in cash dividends $74,000,000, and to the local and federal government in taxes, $79,-000,000.

Thus it must be apparent that the Standard Oil Co. is operated primarily for the benefit of employees and tax-collectors. Its stockholders are self-sacrificing citizens who live only to do labor and society good.

That Senator "Bob" La Follette claims a disproportionate amount of that $335,000,000 is "pulled down" by stockholding officials in salaries is not in evidence. Nor is there any record going to show stock-dividends paid in addition to cash dividends. As these stock dividends mean a greatly enhanced stock-ownership in the corporation, Standard Oil, of course, values them so lightly as not to mention them. It's only when somebody wants to tax them as income that they shout "Confiscation."

Oil companies always tell the truth. That is they tell as much of it as becomes the argument. They don't lie, but they don't tell all there is to know. Nor are they given to interpreting all the facts. They are a very disingenuous lot, to be sure.

### Real Strategy

Says the Standard Oil Company of Indiana:—"With the great bulk of production in the hands of competitors, and with their refining capacity far in excess of our own, it is apparent that the Standard Oil Company (Indiana) cannot dominate the market as arbitrarily to put the price of petroleum up or down." No; it's cheaper to let the little fellow do the gambling connected with drilling and production. Corral transportation and distribution; and what can the little fellow do? By controlling pipe lines and marketing facilities the Standard Oil can dictate prices to producers and refiners, while driving out the strongest by price wars. Competitors come and competitors go; but Standard Oil goes on stronger than ever.

The Standard Oil Company of Indiana is not a trust. It says so; and that establishes the fact. It says "monopoly is abhorrent to the American mind" and since it is "the American mind," why that settles it. That the Standard Oil Company of Indiana operates in only 10 mid-continent states and has only 27,000 employees, may be due to the fact

Oil Workers' Office, Casper, Wyo.

that it wants to leave some territory for the other Standard Oil Companies to operate in. And it cuts the prices only in order to help out governors intent on price reduction. That some of its competitors disappear in the course of this campaign, simply proves its non-trustified character. It's so small and insignificant that it wins out on that account.

### Paternalism

The Standard Oil Co. of Indiana, says it is not paternalistic in its treatment of employees. Not at all! It's simply despotic, that's all! Of course, it has the industrial relations play with its employees' council, that was forced on Standard Oil employees by John D. after the infamous massacre of miners' wives and children at Ludlow, Colo. "The Iron Heel"—that's the introduction to the employees' council. It's not paternalism; it's just plain hypocrisy and hell!

An employee of the Standard Oil refinery at Whiting, Ind., said to a Pioneer representative:

"No paternalism in the treatment of employees! That's to laugh! Why it's written all over the plant. It's evident from the time you step into its confines. Rules are evident all over the place. You are told what to eat and how to drink. Not too much meat in summer, nor too cold water. All this has its humorous phase, as I will show later on.

"The paternalism begins in the physical examination, after you enter the main gate. Prospective employees are hustled in large numbers into very cramped quarters four at a time, told to strip to the waist, given a hurried examination by a company doctor, mainly to see if the applicants are ruptured, given a slip stating their condition of health and sent back to the employment office for another examination as to their life history, antecedents, former places of employment, family life, relatives, references, etc. They are then hustled out to work with a 'nose-bag,' i. e. a lunch bag, full of stale sandwiches and fruit. Many do not stay, because of the nature of the work and the bad camp conditions.

### Industrial Relations

"The industrial relations plan, also, is one of paternalism. According to this plan employees elect representatives to an employees' council, which pas-

**Casper Oil Workers**

**Ditching Gang for Midwest**

ses on wages, hours, etc. But the results are almost always nil. They are vetoed by the higher ups.

"Recently, the guards employed to police the works, asked for a reduction of hours from twelve to 8 a day at 12 hours' pay. This request was not granted. The management 'felt' it was agreeable to granting the guards 8 hours a day, but the increase of hourly wages involved was flatly refused. The company did not consider them more valuable than fifty cents an hour. The guards were very much dissatisfied at the outcome. But having no union of their own they had no 'come-back'. However, such is their attitude, as a result of the company's refusal to their request, that they are now able to commiserate with the laborers in the company camp although they do not live in it themselves.

"The switchmen employed by the company also requested an increase in wages. They work 8 hours a shift, three shifts a day. This request was also turned down, as the company heads claimed that to grant it would make the cost of haulage too expensive to warrant the increase. The switchmen did not take the arrangement very well; though some of them, evidently familiar with the outcome of all of the council's efforts, did not expect anything else.

"Another petition that was taken up was one for increased bathing facilities. About 900 men in a certain department go off work at every shift. There is only bathing facilities for about 200. As many of the men are married and anxious to get to their families, minus all the grease and muck of the refinery, the delay robs them of considerable time away from home; hence the petition. But it suffered the same fate as the others. It was placed on file; which is practically the same thing.

"The employees' council idea originated in Colorado. As a result of the mine war in that state, young John D. Rockefeller hit on this briliant idea of doing away with labor unions and labor troubles, only to cause the latter to exist in suppressed forms. So that even the employees' council is paternalistic. It's supposed to be a plan beneficial to employees inaugurated by the company. The men did not inaugurate it.

### The Labor Camp

"Another paternalistic feature of the company is the laborers' camp, wherein 500 skilled and un-

skilled men are bedded and boarded by contractors acting directly under company supervision and in co-operation with the company. These 500 men are without any home-life, except such as that which the company provides. They live not in homes of their own, but in shacks provided by the company. These are practically like army barracks, only less favorably so, being, if anything inferior to them.

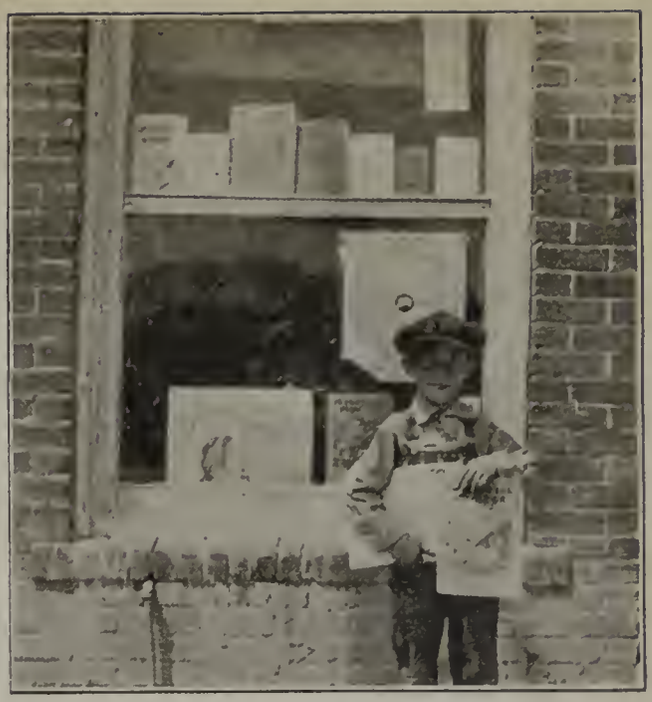
"These company shacks are frame buildings one story high, with concrete flooring and twelve double deck iron-frame bunks; twenty-four inmates to a shack. There is a big stove in each shack. Privacy in them is out of the question; and the method of living in vogue is not conducive to health, to say the least. Large numbers quit every day, making many complaints regarding the rotten food provided by the commissary boarding supply company in charge of the boarding and lodging of the workmen in the camp.

"Another reason for quitting is the general surroundings. Work in a refinery is of a peculiarly dirty nature. It is the dirt of oil and grease and pitch and tar. It is hard to get rid of; and very easy to acquire once you are in and about the works. And so this camp reflects the general surroundings in that it is dirty and greasy, reeking of oil and grime. And another thing about the works are the sharp, cutting acid fumes. These float into the windows and bunks of the camp, and right into the sleeper's lungs, causing sharp pains and making breathing anything but a pleasure. In fact, between a couple of hours a day getting rid of grime and breathing acid fumes at night, life in this Standard Oil camp is far from being an unmitigated joy such as the company organ would lead one to believe it is.

### Why Big Turn-Over?

"It might well be asked why the company goes to such great expense; and why it is content with such a big turn-over of labor annually, due to poor food and housing conditions? The answer is that 'it pays'. This labor employment system, once believed to be peculiarly western and associated with construction work mainly, is now going eastward. Steel, oil, and other corporations are now housing laborers in camps in their plants. They are creating conditions of life and morality that are not generally known. They are not animated by altruistic motives; as the contract labor camp system is one full of jobbery and graft. It also provides a means of guarding labor from unionism and creates caste divisions between the camp employees and the workers living in the cities outside of the plants .

Pipeline Laying in Wyoming



The Pioneer's Newsboy

"The company at Whiting, Ind., employs about 2,500 workers. Practically all of the work is out-of-doors, regardless of weather conditions.

### They Never Die

"Much stress is laid on 'the chances of promotion for the worker with ambition.' But it is mainly stress; for, as in politics, the higher-ups are a long time in migrating to the great land beyond. They stick with the big show, as the actors say. Numerous men walk round with 20 and 30 stars on their sleeves who are still in the very humble classification of laborer. Evidently 'industry and loyalty to the company' has got them nowhere, except a beginning.

"The Standard Oil worker is a company-fed and a company-groomed animal. And he looks it. Stolid, unacquainted with freedom and initiative, he regards the company club house and company enslavement as the height of ambition. Some few are wise to the whole game, which is simply to make suckers of them for the Standard Oil—Standard Oil suckers, that is what they feel is what the Standard Oil is trying to make of its employees. Such is not paternalism; oh, no, but something worse! It's degradation of the many, for the profit of the few."

It is asserted by other oil workers that the conditions at Whiting can be duplicated at Casper, Wyoming, and other points where the Standard Oil Co. of Indiana has a refinery and is a factor.

# The Story of a Proletarian Life

A Review By JUSTUS EBERT

It is always a pleasure to the writer to go back, in rccollection, to the year 1911, when a strike of 10,000 Italian shoeworkers ragcd in Brooklyn, N. Y., where he thcn lived and was acting as the voluntary correspondent for Solidarity. True, there is nothing pleasing about a strikc with its police brutalitics, arrests and imprisonments, its evictions, starvations, blacklists and general hardships. Strikes are a phase of economic war—the result of conflicting class interests in society—the outgrowths of a wrong social system, and to be condemned, together with the system that creates them, as such.

Still this strike had some very pleasing features. One was thc forensic ability of these obscure Italian shoeworkers. They were truly, on the whole, great orators. Though thc writer understood very little that was said, yet he, nevertheless, hung with breathless interest on every syllable uttered. What precision, poise, dignity, cloquence! It was truly superb! The classical orators of ancient Rome seemed to live once more in these humble wage slaves of Brooklyn's shoe hells! At least, such was the charm they threw over the writer he had no difficulty in making the analogy appear real unto himself, no matter how it may have affected others.

It is something of this same charm, this consciousness of a classical heritage, that seems to permeate Bartolomeo Vanzetti's, "The Story of a Proletarian Lifc.' The very first sentence, "My life cannot claim the dignity of an autobiography," possesses a modest, nay, a noble simplicity, that is re-enforced and re-emphasized in the words that immediately follow, to wit, "Nameless, in the crowd of nameless ones, I have merely caught and reflected a little of the light from that dynamic thought or ideal which is drawing humanity to better destinies." Could class-conscious obscurity be more eloquently voiced?

### The Story's The Thing

But the style is not the man, nor the book; it is only the dress that makes the essence of both interesting and absorbing. It is the story of a studious, industrious life in scarch of existence and ideality, ending, through rank injustice, in the shadow of the electric chair—"scheduled," in Vanzetti's own impressive words, "for prison and for dcath"—that counts.

Yct, a well known lawyer, familiar with the case, writes: "The Vanzetti story does not do justice to the man. He is a whole lot bigger than thc story."

Every informed workman knows how, on April 15th, 1920, at 3 p. m. a group of four or five men shot down Alexander Berardelli and

BARTOLOMEO VANZETTI

Frederic Parmenter who werc carrying the payroll of Slater and Morrill, at a point in front of the Rice and Hutchins factory. The attacking party escaped by automobile.

On May 5th, 1920 Nicola Sacco and Bartolomeo Vanzetti were arrested at Brockton, Mass. They were convicted of first degree murder on July 14, 1921. Five motions for new trial have been filed. They arc at the present time undecided. All of these motions involve alleged ncwly discovered evidence.

Every informed workman knows all of the foregoing. But they do not know what went before. They do not know the antecedents of Vanzetti, so full of privation, disillusionment, suffering and hardship as a worker, and so rich in study and aspiration as an idealist, as to make criminality an impossibility. As Alice Stone Blackwell says, in the Foreword:

"Vanzetti's autobiography****is a remarkable human document. Let the reader consider it with an open mind, and judge for himself whether it indicates a character of the criminal type."

The verdict must be in Vanzetti's favor. And with this we urge the reading of the littlc labor classic.

Pipelines Play Strategic Part in Oil Industry

# Coming Fuel and Transportation Trust

By EDWARD E. ANDERSEN

THE use of either of the two main fuels of industry, oil and coal, is determined largely by which is the nearer. Transportation charges enter heavily into this consideration. This is a country of great distances. It costs more to transport a ton of coal 500 miles than it costs to mine and load it. Transportation of oil in tank cars is also costly. Pipelines are being constructed to lower the cost of transporting oil.

One such pipeline is now under construction and will when finished connect the Midcontinent oil fields with the refineries near the Great Lakes. Another is surveyed and contracts for its construction have been let. It is to connect the Wyoming fields with the first mentioned pipeline, at Sugar Creek, Mo. Both of these lines are being built by the Standard Oil group.

### The Internal Struggle of Oil

Present competition with coal as a fuel, and within the oil industry for the control of oil demands independence in transportation problems. Although main pipelines are classified as common carriers and as such under the control of the Inter-State Commerce Commission, they are handy instruments in the internal warfare for control of oil.

In the olden days the Standard Oil gained advantage over its competitors by the use of railroad rebates. Today a more subtle method is used.

### The New Transformation

"Oil in storage" is taxable. But, by pumping the oil from one tank farm to another, "oil in storage" is transformed into "oil in transit," which is non-taxable. A fine distinction and a very profitable use of pipelines. It puts the independent producer under a handicap and acts as a lever to pry him loose from his oil. It provides the excuse for the refusal to accept his oil for transportation that "the line is busy," thereby forcing the little fellow to either ship by rail at a greater cost, sell his oil to the large purchasing companies, who own the pipelines or build storage tanks. To build storage tanks is costly, and without the facilities for transferring the oil held, from tank farm to tank farm, means the payment of taxes, that the large companies escape, and is suicidal for the little fellow. Hence he is forced to sell to the large purchasing companies at the current market price, however low, instead of holding his oil for a better price. The large companies, such as the Standard, in this manner gradually gain control of more and more oil.

### Fuel and Its Transportation Interlocked

In coal production, transportation and mining operations are so intertwined as to make it almost impossible to distinguish between mere railroad ownerships and mere mine ownerships. Fuel and the transportation thereof go hand in hand—coal and railways, oil and pipelines.

### Oil Versus Coal

Despite this surface division, railroads touching the oil fields are turning to oil as a fuel. About a year ago the M. K. and T. began to equip its locomotives with oil burners between Denison, Texas, and Parsons, Kansas, and began the use of oil in the shop boilers at Parsons. These changes caused the closing down and dismantling of nearly all mines of the Folsom-Morris Coal Co. at Lehigh, Oklahoma. The Rock Island has made contracts for burning fuel oil on all its lines in Arkansas, south of Little Rock, and in Louisiana, and is now figuring on installing oil burners on the Memphis-Amarillo line, and part of the mainline from Chicago to the Gulf. All these contracts concluded, the Rock Island will temporarily abandon its mines at Hartshorne, Oklahoma. This change from coal to oil has caused many independent mines also to be abandoned and dismantled.

### One Reason for Choosing Oil

The fuel oil taking the place of coal is the heavy residue oil left after the lighter oils, such as gasoline, kerosene and their by-products, have been extracted from the crude by the process of refining. It has lately been a drug upon the market and taxed the storage capacity of the refiners. The miners' strike of last year created a market for it. The railroads, although owning their own mines, were seriously handicapped by the lack of coal and turned wherever possible to oil. Furthermore, the workers in the oil industry are largely unorganized and consequently the possibility of a strike curtailing the supply of fuel looms less threatening in the oil industry than in the highly organized industry of coal mining. So, naturally, oil received the preference.

### Oil, Coal and Transportation Interlocked

This is a battle between coal and oil—but not on the financial side. It is worker against worker, with the miners getting punished for striking last summer. The Rockefeller interests of the Standard Oil own immense coal deposits in Colorado, and are elsewhere interested in railways and coal mines. The Royal Dutch Shell, an oil company considered the Standard Oil's most powerful competitor, is controlled by European capitalists who are also heavily interested in some of our eastern railroads; which again means that they are interested in coal, because railroading in the East goes hand in hand with coal mining.

### Another Reason

But the fact that the coal miners are organized and the oil workers as a whole are not, can hardly be taken as the sole indication for this change from coal to oil. No, the reason that the capitalists are pushing the sale of oil to the apparent detriment of coal is rather that the oil resources of the world are supposed to be limited and will give out before long. Greed demands that they, the large capitalists, get their share while the getting is good.

### The Mad Scramble for Oil

Oil is a fluid drawn from the depths of the Earth. It is found in pools beneath the roofs of so-called domes which appear along certain faults or cleavages of the Earth's crust. Like other fluids, it is constantly seeking its level. These pools are generally very irregularly shaped, often reaching miles one way and only short distances the other, with arms stretching out in this and that direction; no one knows where until found by the drill. It is at present guesswork to outline pools before drilling. Countless "dry holes" testify to that, and geologists are as often as not wrong in their recommendations. This leaves the holding of large tracts of oil lands for speculation and future exploitation a very hazardous investment. Witness governmental experience with the Naval Oil Reserve of California, which the Standard Oil and others are said to have pumped dry without trespassing upon government land; and the Tea Pot Dome Naval Reserve of Wyoming, where operators upon state land found a seepage, forcing the government to either drill or lease.

### Investments—Safe and Unsafe

Once oil is struck it is necesasry to keep on drilling and draining the pool quickly unless assurance is had that the company owning the lease controls all the land covering the pool, in which case the will may be capped and let alone until needed. On the other hand, coal being a solid, may be left in the ground until needed and actually improves with age. Coal offers a field for safe investment where properties may be acquired and held indefinitely without fear of poachers. Therefore, money gained in oil is invested in abandoned coal with an eye on the future.

### The Coming Consolidation

Hydro-electricity is yet in its infancy. Fuel is still basic as the driving force of industry. Today we speak of the Coal Trust, the Oil Trust and the Railroad Trust as separate; tomorrow we shall see the consolidated Fuel and Transportation Trust. It is here now in substance, but as yet not in name. Control of fuel and transportation means control of all industry thru means similar to those used in separating the independent oil producer from his oil. Control of industry means control of the nation with all it infers—a stranglehold upon liberty, upon our very lives.

Can the workers be said to have their weather eye as keenly peeled for the future as have the capitalist? Can the workers be said to be awake and aware of the situation and to the need of organizing in such a manner as to be able to cope with it when occasion demands it? Both answers may well be in the negative. The workers as a whole are apathetic, dormant, sound asleep! Only the few are awake and aware.

### Worker Against Worker

The capitalists are struggling among themselves for strategic positions, using workers' blood and bone in their battles. Oil workers are being used to grind miners into submission. Miners work two days a week, some not at all; oil workers work piecework and overtime. Some of these days we may expect a turn of fortune and see miners used to crush oil workers.

### Organization, Our Only Hope

We, the workers, must organize the One Big Union of all who work for our own immediate protection, for the protection of our fellow workers and for the protection of posterity as well. Only an all-encompassing union can hope to successfully combat an all-encompassing capitalism.

## A LOCOMOTIVE EVERY HOUR

The Baldwin Locomotive Works, in a recent record-breaking output, produced a locomotive every hour. This is characteristic. Production makes ever new records. But how about consumption? Does it increase in the same proportions? It sure does not; and the result will soon be more under-consumption, otherwise wrongly known as overproduction.

PART OF "HARRY COULBY'S TIN-STACK NAVY," SOO LOCKS

# The Lads on the Lakes

By CARD No. 416,897

FOR a number of years the I. W. W. has concerned itself chiefly with the migratory workers. Now, however, there are plans afoot to push the idea of industrial unionism into the big staple industries. As in any other enterprise, breaking new ground means new problems, new obstacles which must be overcome if the project is to be a successful one.

Every industry has problems peculiar to itself; problems not met with elsewhere—even separate departments of the same industry often have problems not to be met with in the others. A case in point is that branch of the marine transportation industry represented by the Great Lakes. Marine transportation taken as a whole has many phases peculiar to itself, but the Great Lakes present a difficulty not to be found in any other division of the marine industry.

### Migratory Type Does Not Predominate

When one looks the entire marine industry over, it becomes apparent that most of the men employed are of the migratory type. This statement may be questioned by those thinking of the dockworkers or longshoremen but as the men on the ships go, it is incontrovertible. The sailor has perhaps less to make him a homeguard than any other member of the world's working force. The great majority of them are without wife or family. His home is the pitching, rolling, swaying foc's'le of a deep water ship, bound today for the torrid ports which lie beneath the blistering sun of the tropics, and tomorrow is headed up the latitudes for some ice-bound, snow-shrouded harbor in the Arctic Circle. Today he may be wandering down the Bund in Shanghai; tomorrow he is sitting in Battery Park watching the transatlantic liners come and go; or perhaps his floating home has carried him in a different direction, and he may be getting his shore legs in Cape Town and wondering how far it is to the top of Table Mountain. Here, there, everywhere, any port and every port, torrid zone and arctic circle; bucking the great West wind around Cape Horn, lolling peacefully on deck beneath the Southern Cross on balmy nights in the South Pacific, or freezing in the crows' nest while his ship picks its way carefully thru the ice bergs in the North Atlantic in the spring months, the deep-sea sailor has always been the true rover. The nature of the marine transportation industry makes him so. When one turns to look at the sailors on the lakes, however, it soon becomes evident that they will not fit into the same category as their deep-sea fellow workers. Here are to be found men with an entirely different psychology. While the ocean sailor from the very nature of his life has a very proletarian outlook, a great many of the men on the lake boats have an entirely different one.

The men who labor on the deep water vessels are, for the most part, men who figure on putting in their entire lives aboard ship. They accept the sea as a life-long mistress (or master). Efforts to organize them in order to obtain shorter hours, better conditions and higher wages meet with their full approval and co-operation. They feel that they are on the sea to stay, and any proposal which will make their lot more agreeable is met with open arms. Many of them are no more class-conscious than other workers, but they can see an immediate betterment of their lives thru organization, so they are in favor of it.

### The Younger Set

This view of the matter is not taken by a great number of the men on the lakes, particularly by the younger ones. These youngsters form two groups which we will take up in turn. The first

group consists of thousands of young men about eighteen or nineteen years old. They are known as "summer sailors." Unlike the salt water sailors, they have no intention of making sailing their life work. They arrive in the lake ports, usually in the months of May and June, work two or three months and then step off the boats, never to return. Next year another bunch comes to take their places.

During the early months of navigation and thru the cold stormy weather of the fall, this group is conspicuous by its absence. These men are not interested in joining a union to better the conditions aboard the boats because they feel that in a short time those conditions will be matters of no importance to them. They will be driving a delivery truck for some grocer, jerking soda in some soft drink emporium, or in a large number of cases will be out on the football field of the school or college from which they came in the spring. Their attitude is "I should worry" about the sailors' conditions; I'll only be here a short time.

The second group of youngsters is just as much a problem as the first. These boys are natives of the towns situated along the Detroit and St. Clair rivers for the most part. From these towns come most of the captains, mates and engineers of the lake boats.

During the long winter months these officers are looked up to as the leading citizens of the towns, and naturally the younger element is filled with a desire to follow in their footsteps and become captains and chief engineers themselves. As these lads offer an unequalled opportunity to secure submissive slaves, the officers take them along in the spring to whatever port their boat has been lying in thru the winter, take them aboard, acquaint them with the various duties, impress on their minds the axiom of "work hard for the company and you will be captain or chief engineer yourself some day," and thus start them off on their maritime career.

When one takes the motives which actuate them into consideration, the unwillingness to organize which this group (almost as a whole) displays is not to be wondered at. These young men intend to make sailing their life work, but their ambition is not to help the men below the licensed grades better their conditions, but to step upwards themselves without any loss of time. They fear that entangling themselves with the sailors and firemen thru joining a union will militate against their advancement and consequently they turn a deaf ear to any efforts to line them up with their fellow workers for an attempt to secure concessions from the boss.

The thought that they are working against their CLASS interests never enters their heads; in fact, many of them never heard of the war of the classes. In this respect they are very much like the first mentioned group, the "summer sailors."

These two groups of young men present the biggest problem the organization must solve before the lakes can be successfully unionized. There are, of course, thousands of older men, many of them originally salt water sailors, but these men are easily organized. In fact, at the present writing the majority of them are carrying the red card of the M. T. W. I. U. No. 510 of the I. W. W. The few older men who are not yet lined up, are men who have carried craft union cards for years, only to be disillusioned thru the failure of this sort of organization and consesequently they are a trifle soured on labor organization. A little patience with them will enroll them with the rest of the older men.

Without the younger men, however, any organization on the lakes is foredoomed to failure and defeat. A way must be found to interest them.

After extensive observation, the writer is inclined to doubt the efficacy of the system used at present. Not because the system is not right, but because it is a trifle too advanced. This is one place where intensive class education is necessary before attempting organization. These youngsters are woefully ignorant of their true positions in society, and any effort to interest them in a working class organization is a good deal like putting a roof on a building before laying the foundation. When a delegate approaches one of them about organization, they are actually bewildered, they don't know what it's all about. They ask the most nonsensical questions and in other ways betray their total ignorance of the subject.

They need class education first—organization only when they have grasped the principles of the upward surge of the labor movement. Putting cards into their pockets, even if it could be done, would mean nothing. In their present state of mind they could not be depended on anyway. Class education then, is the prime requisite. This can be accomplished in two ways: First: thru the I. W. W. press; second, thru educational meetings in every port thru the summer months and in the towns from which the majority of the second mentioned groups come every spring. No great expenditure of money is necessary for the first part. Every week a certain number of newspapers and magazines, pamphlets and leaflets can be sold, or if necesary, given away at the dock gates in the different ports. (It would surprise the average reader how quickly these boys will buy any kind of reading matter). The second part of the program will require more effort and funds. Able speakers are necessary and full co-operation by the membership, in each port.

A few months of this sort of treatment is bound to interest a number of these lads, and when they are once interested it will not be a difficult matter to arrange a series of meetings in their home towns during the winter months.

One thing is certain: they must be educated; without taking preliminary educational steps, efforts to organize them will be futile, and without them any organization on the lakes will be a joke.

Let us educate them to help us defeat the Lake Carriers' Ass'n., as the L. C. A. once used them to defeat the workers. It will be poetic justice.

A PHASE IN THE LONDON DOCK STRIKE

S. S. Siam City, moored at Royal Victoria Dock, has its captain and officers, with clerks from the owners' city office, to discharge her. The picture shows Capt. Thomas and his colleagues at work.

**When the British longshoremen were on strike, captain and officers, members of the "Officers' Guild," donned overalls, and proceeded to scab on the dock workers. This is one more illustration of craft unionism at work. The scabbery of craft unionism in the marine industry must disappear before the One Big Union of all marine workers, the world over. The M. T. W. I. U. 510 is manifesting itself as the real union. Note the absence, in the picture, or any seamen or firemen.**

# Why Are We Discontented

(Continued from Page 14)

anything. Our masters of co-ordinated capital are divided. They can't agree on the League of Nations; or on an imperialist career. Some think America sufficient unto itself. Others don't. They fear immigration—"the revolutionary hordes of Europe" is their great danger. They do not know where future wars may lead, and so some favor disarmament and world's courts instead. They are in doubt, pessimistic. And as we take our national moods from them, through their press and movies, and have the same fears and rejoicing as they do, consequently, do you wonder that optimism has flown? With our great spiritual leaders talking both Christ and Mussolini, while keeping their airplanes tanked up and their eyes on the other fellows, what is there either inspiring or exalting about all this?

Why are we discontented? Why, shouldn't we be? What is there in present day industrialism and imperialism to get enthusiastic about? Its so-called good times alone?

There is only one ray of hope. And that is the organized labor power of the world's workers. With that succeeding the failure of the present social system, as appears inevitable, there will be something to get sanguine over. Otherwise, life is a fraud; a hideous apparition of one damn depression, industrial enslavement and futile war, with their worse dictatorships, after another.

Up with the world's workers!

# A Modern General Strike

(Continued from Page 4)

will explain what it is. It is a common red cider first, into this the bartender, sometimes the bar-lady, cunningly pours a shot of ether. At once the red cider changes to amber colored "smilo". This retails for ten to twenty-five cents and after two or more injections Dr. Jekyll becomes Mr. Hyde. I am not talking of grain alcohol, readers, but of "smilo," a brain crazing liquor peddled openly to migratory workers in the northwest.

The dehorners did good work in Portland, Aberdeen and Centralia. But the greatest excitement occurred in Seattle.

Seattle is ruled politically by one Edwin J. Brown. If you followed Socialist Party news some years ago you would read a lot about the soap boxing and office running of this red-party-card dentist. He was even arrested on one occasion. But the war came and Dr. Brown got behind the President and shone with patriotism and respectability. Some years later as an independent and liberal candidate for the office of mayor he landed on the municipal throne.

Now Seattle's police force, like other police forces, is not in business for its health. It protects "smilo," moonshine and gambling joints for a consideration. A policeman has just been arrested for alleged bootlegging but the **Seattle Union Record** published a long list of other police who ought to be—giving their names. Brown keeps these vice-protecting cops on the force for his own reasons.

### The Dehorn Committee

Came the strike and danger to the working class movement if the joints ran while the walkout was on. The dehorn committee waited on the Chief of Police and notified him that the "smilo" and marked card stuff must be off immediately. If he did not act they would. The chief promised to act but nothing happened.

**Same Old Act**

Then the dehorn committee took direct action. A group of husky lumberjacks, they were, and followed by a crowd estimated at from one to two thousand. I. W. W. traffic officers kept order. The band swept into the "poison area." Into First Avenue, Washington, Occidental and Main Streets, Second Avenue South, Jackson St. and all through the highways and byways of the district south of Yesler Way they marched. Proprietors become good boys when the committee gave its orders.

* * *

"I'll attend to the dehorners," shouted Mayor Brown angrily next day.

Back came the challenge of the chairman of the Seattle strike committee, asking him if he was lined up with the lawbreakers and declaring that the I. W. W. was going ahead with its clean up campaign. This challenge was nailed to the mast head of the **Industrial Worker.**

Brown quickly showed his line-up. Next evening a small army of police met the dehorn squad. Fifteen cops on motorcycles and more in special automobiles. "Dick's Place," next to Our House, the "Jackson Soft Drink Parlor" and other joints got protection and tried to go ahead with a business-as-usual campaign.

Two fellow workers got thirty days but they feel that the work was well done. Business is not as usual. Many workingmen who had been imbibing the poison obeyed the appeal of the dehorn squad and kept out. And the working people of Seattle saw that the much vilified I. W. W. was the only force aggressively fighting for decency.

### Back on the Job

Centralia out ten days transferred its strike to the job but called on other branches to stay out for that same length of time. Seattle followed suit.

Other branches are out as this is written.

The strike on the job, the slow down program is the next move when the strike off the job is over. Both mean punishing the boss for his refusal to release political prisoners. This punishment is most severe at this time because the demand for lumber was never keener, with the Japanese in the market heavily and prices going up.

Both forms of strike require energy, idealism and organization efficiency. This means tireless work on the part of the active members, willingness to be inconvenienced by frequent losses of the individual job and willingness to post themselves on the facts of their industry.

Just watch the northwest!

THE BURIAL OF ABE SHOCKER

# A Visit to San Quentin Prison

By ARCHIE SINCLAIR

**"The vilest deeds like poison weeds**
**Bloom well in prison-air;**
**It is only what is good in Man**
**That wastes and withers there;**
**Pale Anguish keeps the heavy gate,**
**And the Warder is Despair."**

A NUMBER of fellow workers from San Francisco, visited the boys in Quentin last Saturday. The trip by ferry-boat, train and motor-bus is a pleasant one. It reminds one of a jaunt to a summer camp in the hills, save that on the trip over he sees sad-eyed women and grave-faced men going to see some loved one who has fallen foul of the law. The surrounding country is resplendent in its summer garb beneath the golden California sunshine. The grounds of the prison are kept trim and neat. The guards lounge around the entrance in their spick olive-drab uniforms. A prisoner flits silently by on some errand in conformity with the prison routine. Other prisoners busy themselves with garden and yard work. To the casual eye everything is peaceful and serene, but on closer observation one sees signs of harsh discipline on every hand. Fear is written on the faces of the prisoners; a furtive glance as the guard passes, a quick dropping of the eye-lids, the submissive and resigned air of the prisoners, all tell a tale of a prison system fit only for the dungeons of a Spanish Monastery during the Inquisition.

### In the Visitor's Room!

A guard signaled, and we entered the visitor's room. The prisoners entered by another door. Here loved ones greet each other; mothers embrace their sons, laughing and crying at the same time, wives and husbands cling to one another lovingly. Tom Mooney sits with his arm around his wife, who has visited him regularly thru dreary years of waiting. A Fellow Worker grasped me by the hand and seated himself on one side of a long table while I took a chair on the other side. A striking difference can be seen between the Wobblies and the rest of the prisoners in their attitude towards the guards. Instead of humility and resignation, so noticeable in the other prisoners, one sees in the Wobblies the personification of the indomitable spirit that has kept the I. W. W. alive through the dark days of the modern Inquisition. It is not bombast, it is not defiance to the prison rules. It is self-respect, and an innate sense of justice that commands the respect, not only of their fellow prisoners, but of their keepers.

### Their One Concern

The first question asked on seating yourself at the table, is:

"Well, Fellow Worker, how is the organization progressing?

This is the problem uppermost in the minds of all our men confined in San Quentin. They do not brood over their imprisonment, they do not indulge in self pity. Their only thought is to see the organization they love, live and thrive and flourish.

The conversation drifts to old times, you are asked where is this fellow worker, where that fellow worker has gone? Did you meet so-and-so, in your travels around the country? How is the I. U. 110 getting along in the harvest fields this year? Has I. U. 120 got job control in the lumber camps of the North-west yet? Are the construction "stiffs" lining up in 310? Never a word of complaint, never a thought of their own condition. They would rather talk of the organization in the half hour or so that they have to visit. The visitor must be a prosecuting attorney to get anything out of them relative to themselves.

"Oh! I'm getting along alright," is the inevitable answer, when asked how they manage to live in "Castle Despair".

"The food? Well, it is pretty rotten. The work is not so bad outside the jute mill. The mill is hell."

One gathers from what is said, that the jute mill must be terrible indeed.

### The Jute Mill Strike

In fact, so bad is the mill, that men prefer isolation on bread and water, to having their health wrecked in that iniquitous place. The inhuman conditions existing in the mill caused a strike among the members of the I. W. W. confined in Quentin a short time ago. The prison rules call for twelve months work in the mill by each prisoner before he can be assigned to other work. On several occasions members of the I. W. W. have been refused other work, upon completing their twelve month period in the mill. On such occasions a display of the solidarity of organized labor asserted itself. Several weeks ago a fellow worker upon being denied the change of work that was due him, refused to go into the mill and was thrown into the hole, a strike among the membership of the I. W. W. followed. They were put in isolation and kept there forty-two days on bread and water. This was the only means they had of protesting against the discrimination shown members of the I. W. W. Incidentally, this was an illustration that the slogan "An injury to one, is an injury to all", are not idle words. The strike was won; although some of the boys returned to the mill, the speed-up system was eliminated and has not been again put into effect.

### The Death of Abe Shocker

Among those who went on strike, at that time, was a fellow worker by the name of Abe Shocker. After coming out of solitary confinement, Fellow Worker Shocker was assigned to the dock to shovel coal. In his weakened condition he was unable to perform the task. Instead of sending him to the hospital, the guards in charge of the work had him again put into the hole. But he only stayed there a short time and was taken to the hospital for treatment. This was on Monday, on Wednesday morning he was again assigned to work; this time in the rock quarry. That evening he returned to his cell in a state of physical exhaustion. Not being able to perform the task assigned to him, and not wishing to embroil his fellow workers in another strike on his account, he preferred to take his own life rather than to submit any longer to the intolerable conditions prevailing in the prison. Wednesday night, he committed suicide by hanging himself with his bed clothing. A note explaining his act was found beside his dead body. The death of Fellow Worker Abe Shocker, tells all too plainly the story of life in San Quentin prison.

### Books Are Needed

During the conversation the writer had with Fellow Worker William Baker, the subject of books was discussed, and I found that the boys are in need of reading matter. They have read nearly everything that the prison affords. So, friends, if you can spare a few dimes, send along some good books. They must come direct from the publisher or from a book store and the name of the bookstore must be on the wrapper. This applies to the boys in Leavenworth as well as the ones in 'Quentin. In fact wherever our Class-War prisoners are they can always use some good books. In Leavenworth the books must come direct from the publishers. There are many more articles that the boys need, such as candy, fruit, tobacco, base balls and gloves, fountain pens, tooth brushes and paste, soap and bath towels, etc. It is against the prison rules to send these articles in, but if money is supplied they can procure them. The California Branch of the General Defense are supplying these needs, but must have your co-operation.

An automobile horn sounded, and the guards in charge of the visitors' room informed us that the stage to 'Frisco had arrived. Hurried good-byes were said. The boys turned into the gloomy prison, there to become once more numbers instead of human beings. They belong to the "subterranean brethren", who are forgotten, for the most part, by the great world outside.

### Poet's Words Are Too True

As we left the prison and inhaled the crisp sea air, a feeling of rage against the system that condemns men to penal servitude because they are Soldiers of Freedom welled up in me. How true are the words of the poet:

**"But this I know, that every law**
**That men have made for Man,**
**Since first Man took his brother's life,**
**And the sad world began,**
**But straws the wheat and saves the chaff**
**With a most evil fan.**
**This too I know—and wise it were**
**If each could know the same—**
**That every prison that men build**
**Is built with bricks of shame,**
**And bound with bars lest Christ should see**
**How men their brothers maim."**

On the return trip the sun did not seem to shine so brightly, as the cloud in my heart obscured its radiance. The grim walls of our penal institutions were before my eyes, behind whose shadows men are hidden whose only crime was that they preached the doctrine of industrial brotherhood. A vision arose, of the red brick walls of Leavenworth penitentiary, topped with turrets in which guards, armed with rifles, scowl down on the prisoners within. I could hear the slow stealthy tread of other guards atop of the grey stone walls of Walla Walla, Boise and Folsom. The vision fades; the scene shifts to the court house in Sacramento, where five men are on trial for violation of the Criminal Syndicalism law. The question arises, will they to go manacled to the state prison, to swell the ranks of our entombed fellow workers, who dared to think? Again the scene changes and I see the wan faces of other men, in the county jails, awaiting trial, on the same old charge—Criminal Syndicalism.

In Leavenworth, Kansas, there are approximately thirty-five men, who went to prison during the war hysteria, because they preached a message of industrial unionism to the workers of the United

# Immigration and National Development

By JAMES WILLIAMS, Able Seaman.

MR. ARTHUR BRISBANE, very able and very high salaried editor of the Hearst newspapers, makes the burning subject of immigration the topic of his leading editorial in the August 22nd issue of The Evening Journal.

Mr. Brisbane admits that his mental effusion in this instance has been inspired by a letter recently written by M. L. Vasser, to whom he graciously refers as "an earnest, and doubtless a first class workman."

Mr. Vasser, according to the noted editor, is "excited and annoyed; he thinks that keeping out immigrants will help workers, now here, get better wages."

In our humble opinion, however, it is the mighty corporation editor, not the "earnest, and doubtless very good workman," who is so madly "excited and annoyed" over the present phase of the perennial immigration problem.

At the outset of his astute argument, Mr. Brisbane attempts to floor us with the astounding, and oft-reiterated stock quotation that, at the beginning of our national history, when the population of the United States was four million inhabitants, or even less, that "the average pay was less than fifty cents a day, and only one man in the country was able to earn as much as a dollar a day the year around. That is FACT," exclaims the haughty editor, in accentuated type. "No theory about it."

Now we have some other FACTS of our own, that were not imparted to us at the leading universities where the millionaire dictator of economic theories has spent so much of his time.

In our judgment, Mr. Brisbane's arguments, not to quote him at length, are entirely too far-fetched and illogical, and utterly irrelevent and beside the issue as well.

There can be no logical or practical comparison drawn between the economic conditions existing in these United States at the close of the revolutionary period and those obtaining today.

At that time the exchange value of money was probably more than ten to one against what it is today. The fifty cents per day, therefore, was not so small as the Boss's editor would try to make us believe. Moreover, there was no great corporations, or vast industrial concerns to exploit labor and grind the faces of the poor. Agriculture, fishing and maritime commerce, constituted the principal industries of the country.

### Home Industry

Everybody could have access to the soil, and every houscholder could keep his own cow and pigs and chickens and cultivate his own cabbage patch. Every housewife had her own spinning wheel, and, perhaps, a hand loom, on which the women folks made homespun and sewed it into raiment for the whole family.

The field labor, in those days, was performed mainly by Negro slaves and white bondmen, who were also slaves in fact if not in name. There was, therefore, no pressing need of foreign immigration to develop the fundamental industries then available.

With the development of our railroad systems, the opening of our coal fields and mines, the establishment of immense manufacturing plants, which marked the evolution of the age of iron and steel, and the advancement of our new national era, together with the abolition of slavery, and the statutory inhibitions against white peonage, which resulted from the arbitrament of the sword after the Civil war,—then came the great and growing demand for foreign labor, skilled or unskilled, to man our ever growing national industries, and help develop our unknown natural resources.

### Organized Labor's Stand

It was at this period that, owing to the unlawful and corrupting methods adopted by the industrial barons in their efforts to exploit unsophisticated and illiterate immigrants that Organized Labor throughout the country was compelled, in self defense to institute its crusade for the reasonable restriction of surplus immigration that glutted the labor market, and threatened the country, at times with anarchy and bloodshed.

It is in defense of the poor immigrant, as well as in behalf of the American workman, that organized Labor speaks today in its protests against a reversion to the former status in the labor field when the great corporations were permitted to bring in swarms of helpless foreigners, in direct violation of the "Alien Contract Labor Laws," then extant, thus menacing the lives, health, morals and happiness of American workers, by forcing them to work for European wages, and accede to

---

States. Walla Walla, Washington claims seventeen victims of the Class-War. Boise, Idaho has its quota of three Industrial Workers of the World, and four others awaiting trial on a C. S. charge. In California the number of Class-War victims is appalling. There are eighty-three in San Quentin, thirteen in Folsom, one in the reformatory, five on trial at Sacramento at the present time and over one hundred awaiting trial and pending appeal. The total in the earthquake state reaches almost two hundred and fifty. This does not include the many who have gone before, Ford and Suhr, Sacco and Vanzetti, Rangel and Kline, Tom Mooney and a host of others. It includes our so-called political prisoners and victims of this outrageous Criminal Syndicalism law.

Think of it, Fellow Workers! Three hundred men and over in the prison camps of the enemy! What is the answer to the Plutocracy of America? Agitate! Organize! Prepare! for the general strike for the release of all Class-War prisoners.

European conditions of life and labor, or even worse in many instances.

The present attitude of Organized Labor on the question of immigration, is inspired by dread, and not by prejudice, as all the apostles of Mammon are trying to make the world believe.

We are, all of us, either immigrants or the off-spring of older immigrants. Why, then, should we try to exclude our own families and fellow workers? Simply because we realize the conditions existing in the country, and would warn them against the consequences their coming is bound to incur upon themselves as well as others if they are permitted to arrive in overpowering numbers.

### National Greatness

We agree with Mr. Brisbane in his assertion that "A great country needs a great people, a BIG POPULATION," etc. But, we respectfully submit that the greatness of a nation does not consist in population alone, but in the greatness of its industrial opportunities. If we glut the labor market with millions of unemployed, for the sole benefit of the capitalists, we are simply driving the workers into serfdom, and the idlers into starvation, misery, discontent and crime.

We have had too many exhibitions of this kind during the past half century, to allow ourselves to be beguiled by a lot of well paid blatherskites and intellectual prostitutes, who sit in high places and presume to act as the national arbitrators of our national economic and industrial policies.

The man who never did a day's work in his life is hardly the safest one to dictate to Labor what it needs.

Mr. Brisbane refers to the tariff, which, he alleges, "we have been forced to put around our shores in order to protect our highly paid workingmen." It is hard to tell at this point in his essay, whether the great editor is deliberately lying, or trying to test his sense of humor on our credulity.

To the best of our recollection, information and belief, however, the various commercial tariffs existing under the U. S. statutes, were originally erected as barriers against the importation of foreign made goods in open competition with home manufacture. The tariff laws were enacted by Congress at the earnest and anxious behest of the manufacturers, and labor had nothing to say in the matter. But, far from protecting American labor from foreign competition, these laws had, in practice, exactly a contrary result as their promoters intended they should have.

### Foreign Labor

For, as soon as the tariff schedules had been safely established in the Federal Statute Books, the business interests proceeded to import hundreds of thousands of unsuspecting immigrants to enter their factories and produce their goods under practically the same terms and conditions to which they had been accustomed at home—and this to the practical exclusion, likewise, of American Labor.

This was true in all great industries. In factory and foundry, in mine and field, in forest or stream, and in the merchant marine, American labor was almost entirely eliminated, and foreign labor was grossly exploited, degraded and abused. But when the foreign elements had been here long enough to become enlightened, by observation and contact, and had imbibed a smattering or more, of the spirit of American independence, the meaning of American ideals and traditions, they, too, organized, and gave the interests which had so shamefully hoodwinked, and so heartlessly exploited them the fight of their lifetime.

Then, of course, they were denounced as low-lived foreigners, ignorant agitators, dangerous aliens, etc. They were fired quicker than they had been hired; reviled, deported, imprisoned, and otherwise maltreated, and more greenhorns imported to replace them.

Such has been our modus operandi with regard to immigration for the last fifty years, until now it is evident that too much population is apt to be a standing menace to the public order and industrial tranquility of the country, and that it is safer and wiser, in the interests of all concerned, to limit the influx to industrial requirements of the nation at all times, editors and aggressors to the contrary notwithstanding.

### Over-Population

Both India and China are over-populated, not beyond the available resources of the countries mentioned, but far beyond their material development. What is the result? Disorder, misery, starvation, stark anarchy and class ignorance, everywhere. And similar conditions might easily be imposed upon the United States, unless the progress of degradation should be arrested by revolution.

In China, surplus female children are slain, and in India they are fed to the crocodiles to prevent over-production. Such is the result of huge populations without sufficient supporting factors available to keep the people profitably employed. That such horrid methods should ever be resorted to in this country is, of course, unthinkable; but, nevertheless, we would warn all editors, arbitrators and capitalistic aggressors, that "he who sows the wind shall reap the whirlwind." And the most casual perusal of wide world history from the earliest dawn of civilization down to date, emphasizes the truth of this one proverb more than any other. Tyrany always digs its own grave, and financial and political arrogance, run to excess, is tyrany in its grossest and most dangerous form. But while he was about it, the exalted high priest of the Hearst windbags might have informed us what salary the editor of a newspaper received a hundred and forty years ago, and likewise how much he draws today, for placating the interests and blinding the ignorant.

**(See article on Some Anti-Immigration Fallacies, elsewhere in this issue.)**

# Henry Ford, a Peculiar Entity

By GEO. WILLIAMS

HENRY FORD is the most outstanding figure in American industrial life, or in the world, today.

Henry Ford is the most powerful individual (financially) in the world today.

Henry Ford will still acquire more power and influence. The profits from the Ford auto alone are sufficient, at the present rate of profits to make and maintain him as the richest man; and yet he is reaching into other industrial fields, the extent of which will equal his automobile interests.

Ford is a peculiar entity among the modern industrial lords, in that he has acquired enormous riches without encountering the hot-blast antagonism from the radicals that has so justly been laid at the doors of other predatory individuals.. Not that he is escaping some criticism, but what is directed at him is of a different nature. He is debited with no Ludlow or Calumet style of enforcing his proprietorship or of maintaining his power. From all opinions, friendly and hostile, he appears to be a smooth and painless exploiter of labor, and very successful.

### Ford Can Be President

Ford can be president of these United States with no more effort than passing along the word to an admiring mass of scissors and scissorines. He can be anything that they have in their power to give, for he has captured the imagination of the great majority of what is known as the common people, or that portion of the population that is neither radical nor reactionary.

In connection with Ford's popularity with the rank and file on the one hand, he is thoroughly disliked on the other by the big banking and other interests, simply because he is a poor customer to the bankers in Wall Street, and a dangerous competitor to certain large industrial interests. The Ford organization conducts operations seemingly against sound business practice and by all the dope it should have failed. But what is seemingly against sound business practice is not in reality against it at all. The Ford organization has only applied modern ideas of exploitation to its labor force and thereby succeeds in increasing production and profit.

### Ford's Life by Himself

I have been asked by the editor of Industrial Pioneer to read a new book bearing the title MY LIFE AND WORK, By HENRY FORD, In COLLABORATION WITH SAMUEL CROWTHERS, and give my impressions of it. I have found the book very interesting, not that I agree with any part of it, but because it deals with industrial conditions in the Ford plant that in themselves provoke thought.

I am only acquainted with Ford's method of production from second hand information. However, I am acquainted with the knowledge generally prevalent that the Ford auto is assembled by the conveyor method and by reason of such methods of assembling the Ford car, the Ford organization is far ahead of competitors in the automobile industry.

Each part of the car "flows" together, we are told (not unlike small creeks and rivers flowing into and swelling the larger river), through the means of the conveyor, and at regular intervals, as the various parts "flow" together, are human beings who place nuts and bolts and other parts on the "flowing" car that is in the process of formation, until at the end of the conveyor system there emerges a completed car. Nor is this all; each of the component parts of the finished car, the engine, the wheels, chassis, magneto, and whatever goes to make up the finished Ford car, are themselves assembled in the same manner in their respective departments, and the assembling of these parts being completed in their departments, by its own conveyor system, "flows" on uninterruptedly into the main assembling shed and moves into its place in the final operation like converging waters. And yet more: this conveyor system not only assembles the autos rapidly, but it also performs the valuable function, in a figurative sense, of carrying back a steady stream of golden profits.

### Production Methods

Around this method of production, aside from the profits derived, there is much discussion concerning the human element. In the book, Ford, through his collaborator Samuel Crowthers, discusses his production methods.

I am sure that a thoroughbred Marxist could scuttle Ford's economic ideas from a Socialistic viewpoint overwhelmingly and conclusively, but as I am no prodigy on Marxian economics, I can only deal with other phases of his discussions.

Through the medium of the book Ford is giving voice to his philosophy of life and business. He attacks both the radical and reactionary groups in society and lays down a principle of industrialism which he thinks will cure all the evils that now exist. This principle is, briefly: That modern business and manufacturing is conducted not with a view of producing a good servicable article, but of producing in order to grab quick profits while the grabbing is good; whereas manufacturing and production of anything must be based on the service to the users and its utility, and with no thought about profits. In the words of Ford's book, "If we shift the manufacturing from the profit to the service basis, we shall have a real business in which the profits will be all that any one could desire." Chief among Ford's ethics of business is, that lower production costs should always be balanced by lower selling prices, and if present-day business were conducted on that

basis, argues Ford, there would never be a falling market. Thus Ford propounds the great IF, which obviously is a destroying IF; for IF all other manufacturers produced for service and not for profit, Ford's market advantages would disappear. But why predicate an argument on the impossible IF? Capitalism is not going to discard profits for service any more than water is going to flow up hill.

### Labor Increases Own Productivity

Ford confuses service with cheap production made possible by extracting a larger volume of productive labor from the general working force. He has demonstrated in his book that labor scientifically distributed can and will increase its own productiveness. As an instance, the book describes a certain operation in which three men were necessary, until a blind man was put to work. This particular operation required only certain definite movements, viz.:—counting bolts and nuts for shipment to branch establishments. In two days, we are told, the blind man did the work so well that it was necessary to take the other two men (who could see) out of his (the blind man's) way. We are also made acquainted by the book with ways in which men are replaced by new machines or frequently displaced by quicker and finely calculated moves.

There is the example of assembling the chassis, cited in the book. In the early operations it required an average of twelve hours and twenty-eight minutes per chassis. The first crude conveyor method of a rope and windlass reduced the time to five hours fifty minutes per chassis. By experiments and improvements the time of assembling the chassis was finally reduced to one hour thirty-three minutes.

"It must not be imagined, however," says Ford, "that all this worked out as quickly as it sounds. The speed of the moving work had to be carefully tried out; in assembling the magneto we first had a speed of sixty inches (conveyor) per minute. That was too fast. Then we tried eighteen inches per minute. That was too slow. Finally we settled on forty-four inches per minute. The idea is that a man must not be hurried in his work—he must have every second necessary but not a single unnecessary second."

### Principles of Assembling

In describing the principles of assembly, the book says:

"1—Place the tools and the men in the sequence of the operation so that each component part shall travel the least possible distance while in the process of finishing.

"2—Use work slides or some other form of carrier so that when a workman completes his operation, he drops the part always in the same place—which place must always be the most convenient place to his hand—and if possible have gravity carry the part to the next workman for his operation.

"3—Use sliding assembling lines by which the parts to be assembled are delivered at convenient distances."

Ford deals with the question of whether the displacement of labor by machines or improved methods does not stagnate the labor market. He answers substantially as follows: That such displaced labor is absorbed in the increased production of industry, in new industries constantly created by new methods. Thus the motor car industry which destroyed the bicycle gave employment to many times more workers than were employed making bicycles, in addition to which it created other industries and opened up a tremendous amount of road construction work. This I think is in great part true; however, under capitalism, there is always unemployed and the benefits of this process is not returned to labor as it should be, in the form of shorter hours nor in increased quantities of food,clothing, shelter and the articles thus newly created. While more and more things are produced the great majority of the people still remain on the same comparative level of existence, if not lower.

### Little Skill in Ford's

There is very little skill in the Ford factory, we are told, and very little hard work. No expense has been spared to place machines to do the heavy work. Only about 16 per cent of the labor in the Ford plants require physical strength. A full grown child, woman, or a man below the common physical development, can do most of the work required. Nor is the mental effort high. A very large percentage of the work done takes very little skill, only 14 per cent requiring from one month to one year to become proficient, the rest of the operations calling for experience ranging from only a few hours to a few weeks at the higher remuneration, which is a mental palliative. machines."

Now a person might say, in contemplating the labor methods of the Ford organization, that the monotony must be terrible. But Ford says, in substance, that while there is some monotony necessarily in the methods used, there is less than in the old and less intensive methods. There is less monotony in doing a light task over and over again than in doing a heavy thing over and over again, besides the physical exhaustion is eliminated. And, too, the Ford employes receive a higher remuneration, which is a mental palliative. His employes, however, have yet to be heard from on this point.

Ford argues that the vast majority of men do not want to go ahead; "they want to stay put. They want to be led." They are satisfied with the economic security and the slight responsibility that goes with their job.

However, much logic there is in this view—and we must concede there is some—we find out on reading further that the majority of improvements in assembling the cars are due to the employes. To use the words of Ford, "Whatever expertness in fabrication that has developed has

been due to men. I think that if men are unhampered and they know that they are serving, they will always put all of mind and will into even the most trivial of tasks." On reading the foregoing and from other instances cited in the book we become suspicious that the whole vast scheme in the production of Ford cars is the sum total of the thousands of ideas handed in by the rank and file, which ideas finally appear in total on the balance sheet as assets of the Ford Motor Co. Thus the brain and labor of myriads of workers are converged by another invisible conveyor into the legal proprietorship of **Ford, the owner.** Under this system Ford does well to appraise the "help" as mere automatons, because the productivity of such help is then lost behind the magical and symbolic "Ford."

### System Impersonal

That Ford has an impersonal view regarding the human element in his plants is only natural. Ford thinks in terms of production, and humans are only necessary ingredients in fabrication. That they are "Robots" is the best thing that could happen to them, thinks Ford. For one cannot have efficiency unless labor is "Robotized." Efficiency in production means the elimination of waste labor motion as well as wasted material. It must be remembered that the revolutionary Russian government officially installed the "Taylor system" in its factories wherever possible and "efficiency" and "scientific" are terms extensively used in radical programs. Thus the efficiency methods of the Ford plants are not to be condemned as such, but rather because the "Robots" are still robbed of the results of their efficiency. The argument is that the efficiency "Robot" (term Robot mine), in the Ford plants are better off materially and every other way than the non-efficiency "Robots" in other capitalist plants. Now the term "Robot" may not be applicable to the new society; however that may be I am of the opinion that efficiency may be insisted on to a larger degree under a new system of production than under capitalism, because the worker, being in control of production and distribution, will insist on the best possible methods of production in order that he may have more time for recreation. So, I repeat, there is no logical argument against efficiency, but there is in being robbed of the results.

So it is that Fords' citation of efficiency and how it develops from the suggestions of the workers themselves is the strongest corroboration of the I. W. W. argument that the creative minds of the workers is the greatest force existent. Ford, by giving better conditions and wages to his "help," has discovered this himself and has capitalized this very principle. But Ford is limited in the development of the re-creative propensities inherent in the worker by the necessity of selling his cars for profit; he cannot reward his "help" in wages at the full value of the finished car, for Ford must have his profit. Thus is he limited to developing the creative abilities of the workers. Only under a wageless and profitless system of society is the full benefit of this possible.

### Wages

In the chapter on wages Ford makes the usual expressions and covers the same ground. It seems to me that he draws unqualified conclusions. He says that Labor is the productive factor in industry, but distinguishes management and superintendence as separate from Labor. By this method he establishes an argument against manual labor. Wages as such, are created by skilful management molding so-called manual labor into an efficient force. The labor creates a good cheap car; it is then taken out and sold and wages are thus made possible. The better and the cheaper a car created by labor in the shop, the more cars will be sold, and consequently the better wages will be paid to labor. That is in substance Ford's theory.

We read further:

"The wage carries all the workers' obligations outside the shop; it carries all that is necessary in the way of service and management inside the shop. The day's productive work is the most valuable mine of wealth that has ever been opened. Certainly it ought to bear not less than all the worker's outside obligations. And certainly it ought to be made to take care of the worker's sunset days when labor is no longer necessary. And if it is made to do even these, industry will have to be adjusted to a schedule of production, distribution, and reward, which will stop the leaks into the pockets of men who do not assist in production. In order to create a system which shall be as independent of the good-will of benevolent employers as of the ill-will of selfish ones, we shall have to find a basis in the actual facts of life itself."

Ford means by this that the worker who works for wages should establish a cost accounting system similarly used in business houses, and charge to wages all the necessary things that go to make up a worker's life. Then in turn he sells his labor for the amount it takes to maintain and develop his labor power.

This is a naive conception of the wage problem, since Ford forgets that the employer also keeps a cost accounting system in which "labor bought" is charged to the cost of production, so whatever computations are made by labor are nullified by the selling price of the finished product that labor produces. In other words, the workers, like the dog chasing his tail, can never catch up with the margin of profit that is always exacted by the employer regardless of the wages paid. Besides, the worker spends according to what he gets and not what he should have. He doesn't sell his labor, THE EMPLOYER BUYS IT. And even Ford explains to his reader that he conducts his business on that very principle. HE buys labor and charges it to production.

### Railroads

"There is a railroad problem," says Ford. "Everyone is dissatisfied with them. The public because

(Continued on Page 48)

## The Organization of Modern Industry

One of the most striking features of modern industry is the increase in the size of factories and other industrial enterprises. A few years ago a plant employing 1000 men was considered a large concern. Today, factories employing 5000 men are common, factories employing 10,000 men are not unusual, and a few plants have employed as many as 25,000 men within the confines of a single yard. A number of large corporations owning several industrial plants in different localities employ much greater numbers of workers. Statistics show that the number of corporations as compared to privately-owned enterprises and partnerships tends to increase, thus indicating a tendency towards mass financing and constant growth in the size of industrial undertakings.

There is a general tendency, also, toward specialization of industry. A few years ago it was common practice for manufacturing establishments to produce a very great variety of products. Today the general practice is to confine the activities of an industrial plant to a somewhat restricted range and in many of the newer industries a very limited number of products are produced. There are a number of reasons for these noteworthy tendencies.

Industrial enterprises tend to increase in size in one of three ways. The first is by natural growth in size of a single plant or by AGGREGATION as it is sometimes called. The second method is by INTEGRATION; that is, by extending the control over the supply of raw materials or the disposal of finished products by acquiring the methods and processes that are concerned in these operations. The third method is by CONSOLIDATION; that is, by combining industrial undertakings of a similar character under one management whether these undertakings are single plants or integrated industries. The economic reason for this tendency toward growth and expansion may be conveniently divided into two groups: First, economies that lead to reduced cost of production; second, economies that give greater competitive power.—DEXTER S. KIMBALL, Dean College of Engineering, Cornell University, in Management and Administration.

There is still one step not mentioned above. That is called coordination, in which all industrial enterprises are formed into a giant combination to exploit the world.

## On War Propaganda

So apt are mankind to be wrought up into a passion by false reports and slight offenses that it is an easy matter for cunning men to set peaceable families and friends at variance, where there is no grounds for it on either side. In the same manner towns, states and nations may be set at war against each other, and I have no doubt but that it has been the case many a time, that thousands and millions have been slain on both sides equally thinking that they have been fighting in a good cause, when the whole matter in dispute would have made little or no dispute between honest neighbors.

Nor do I dispute but that it has been agreed upon by rulers of nations to make war on each other, only that they might have a pretense to raise and keep up standing armies to deprive their own subjects of their rights and liberties. This is a great object with the few, and when they attain it, it adds so much to their number, strength and importance that they have but little more to fear, and the many have but little reason to expect that they can maintain their liberties long.—The Key to Liberty, WILLIAM MANNING.

# The City and It's Workers

SPEAKING of the city and its workers is to speak of Chicago. Chicago is the second largest city in the country. It is the great metropolis of the West, and the rival of New York. In proportion to its working population, Chicago is poorly organized.

Just now, Chicago is the scene of great activity, intended to make I. W. W.'s of its homeguards. Hotel and restaurant, packing house, building construction, metal and machinery, textile, railroad, agricultural, general construction, lake marine transport, and other workers are being enrolled thru their respective industrial unions.

Chicago has also a district council in which the branches of these unions co-operate.

'Frisco, Los Angeles, Portland, Seattle, Cleveland, New York, Philadelphia, Boston and many other cities are also scenes of I. W. W. activity. The homeguards are being steadily enrolled and will soon be with us in large numbers.

# William Manning's "Key to Liberty"

A Review By PHILLIP TAFT

THE well-paid mouthpieces of class privileges, are wont to charge social radicalism with being a foreign growth, intellectually nourished from abroad.

This gentry evidently does not recognize that knowledge is not the peculiar property of any one nation but that truth is the universal heritage of all mankind. However, as this class of writers is more interested in obscuring an issue by the creation of prejudice than laying its causes bare, they therefore raise the cry of "alien importation," against any attempt to do so; and it therefore becomes necessary to expose their misleading arts.

For instance, the recently discovered series of letters of William Manning, entitled "The Key of Liberty," written in 1798, show that the basic doctrines of Communism and Socialism, instead of being foreign importations, were discovered and enunciated, to a remarkable degree, by an American, 53 years prior to the publication of the Communist Manifesto, or before the writers of that manifesto, Marx and Engels, were even born.

### A Minute Man.

Wm. Manning was a New England farmer, residing at Billerica, Mass. He served in the Continental Army as a lieutenant; a Minute Man who answered the alarms of his country was Manning. This man, who according to his own admissions, had less than 6 months schooling in his life, recognized the existence of the class struggle and the nature of value; while at the same time advocating a world-wide union of farmers and workers for the prevention of wars.

Manning recognized, moreover, the necessity of organization among the laboring classes, urging them to follow the example of the merchants, lawyers, and ministers, who had, even at that early period in American history, associations through which they obtained favorable legislation; so why not the farmers and laborers?

Wm. Manning was aware of the conflict of interest between the few and the many; classifying as the few the merchants, physicians, lawyers, divines, literary persons, public and executive officers and all the rich, who live without bodily labor. The many, of course, were the farmers and laborers.

### Anticipating Marx

As Manning saw it the whole controversy of his times was between those who labor for a living and those who do not. This statement, though lacking the literary nicety of one better educated, is essentially the same as the doctrine of the class struggle, as enunciated by Marx and Engels fifty-three years later.

Manning perceived the true relation of labor to capital; and his views are all the more remarkable when we consider that the United States was at the time primarily an agricultural nation, and was by comparison with England or France a backward nation industrially.

**"Labour is the parent of all property—the land yieldeth nothing without it, and there is no food, clothing, shelter, vessel, or any necessity of life, but what costs labour and is generally esteemed valuable accordng to the labour it costs. Therefore no person can possess property, without labouring, unless he gets it by force or craft, fraud or fortune out of the earnings of others."**

In the above paragraph there is stated several ideas which have become the cornerstone of all the important social revolutionary movements of the world. "Labor produces all wealth" is simply restating the above paragraph in a more epigramatic fashion. The Marxian theory of value, as well as a recognition of profit as the unpaid labor of the worker, or surplus value as it is now termed, are enunciated in this paragraph.

### War on War

Manning, as already stated, believed in a workers' organization for the prevention of war; and, as the following words prove, he had a pretty good conception of the causes and consequences of war:

"And I have often had it impressed on my mind that in some such way as this (speaking of a workers' society), society may be organized throughout the world, as well as government, and by social correspondence and by mutual consent all differences might be settled, so that wars might be banished from the earth; for it is from the pride and ambition of rulers and ignorance of the people that war arises. No nation, as a nation, ever got anything to make war on others; for, whatever the conquests may have been, the plunder always goes to a few individuals and always increases the misery of more than it helps."

Considering the times in which these letters were written, they exhibit an understanding of social forces seldom equalled even now by more learned and scholarly men.

Though Wm. Manning can no longer be classified as entirely mute; yet it is men of his type that are forced into silence by conditions and environment. Man whose crude brain is capable of superior analysis and development. Men of whom Gray in his Elegy, sung: "A mute inglorious Milton here may lay."

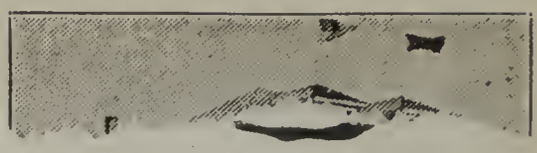
Wm. Manning, at least contributed a little to the ultimate removal of the conditions that make such destruction of brain power possible. His advocacy of education, as the chief agency for the abolition of social inequality and war, reflects the needs of himself and his class.

(Publishers, Manning Association, Billerica, Mass.)

# The Need of Workers' Education

## The Work Peoples' College and its Courses

THE old revolutionary slogan, "agitate, educate, organize," is just as effective to-day as it ever was. The working class needs to be awakened out of its lethargy and indifference, it needs to be agitated and aroused by new ideals, and aspi-



### A JOY REVOLUTION

In years of yore the worker
Was the butt of wit;
But now the capitalist is "it."
He—Superman!—made an awful bull of life,
With his wars and class strife.
Now, none's so small as to
Honor him—
They pass him by and grin!
So, stop giving the worker
The merry ha, ha!—
Give the capitalist the tra-la-la-la!

### TIMELY LOGIC

Office Boy—"I want a little time off to get a hair cut."

Boss—"What! Get your hair cut in company time?"

Office Boy—"Sure; it grew in company time."

### ANOTHER HENRY FORD

Teacher (during visit of the school board): "Robert, who signed Magna Charta?"

Robert: "Please ma'am, 'twasn't me."

Teacher: "Take your seat."

Hiram (business man, school board member): "Call that there boy back. I don't like his manner. I believe he did do it."

### HAY-WIRE FOR FAIR

The uninitiated are puzzled to know where the phrase "hay-wire" comes from. It is derived from the farmer's custom of mending everything with wire from baled hay. It means a miserable, poverty-stricken make-shift.

A story is told of the farmer who wouldn't buy any hay unless it had three wires on it. He explained that, otherwise he could never make his ranch hang together. His was a "hay-wire" ranch.

### A FORD PRODUCT

A story is told of a "machinist" who wanted to get into the aviation corps. The officer in charge investigated his abilities as follows:

Are you a tool and die maker?

No.

Do you run a lathe?

No.

Ah; possibly you operate a drilling machine?

No.

Well, what kind of a machinist are you, anyway?

Oh, I am a Ford No. 14 bolt tightener.

### THEY GENERALLY DO

The Credit Man—Your business seems to be tottering. You must have met with some staggering loss.

The Merchant—I have. My bank failed on me and I lost my balance.

### MODERNITY

Sleepless night; bad food—bad liver: nervous tension. A seat at the window.

The little park across the street is dark and full of clouds. Still there are the stars in the high heavens; no rain is forboding. But the carbon odor in the air tells the tale. It is the smoke of the city.

Light is reflected in the little lake under the stone bridge in that little park. It is not the moon. The sky is moon-less. Search discloses an electric light on the roof of the factory nearby.

Foul desecration of nature's beauties: Soot, smell and camouflage. Such is modernity. J. D. C.

### THE BLESSED PEACEMAKERS

Oh, well! the capitalists who say "the I. W. W. is a failure," will have to demonstrate the success of their own system before we get discouraged.

* * *

The capitalists who mistakenly allege that the I. W. W. favor violence never permit themselves to indulge in a worse infraction of the peace than a world-war.

* * *

While capitalists accuse those "terrible I. W. W.'s" of practicing sabotage they set them a good example of real constructive achievement by wrecking civilization.

### THE LESSER EVIL

It's false to say "The I. W. W. is a menace to society"; but it's within the realms of truth to state that capitalist culture menaces society with cancer, consumption and syphilis. And as between two evils, alleged or otherwise, we always choose the lesser one.

* * *

This here labor shortage goes to prove once more that labor is always short somehow. One thing, it's short of is the wealth it produces. And it's shorts of guts in not resenting the fact.

# William Manning's "Key to Liberty"

A Review By PHILLIP TAFT

THE well-paid mouthpieces of class privileges, are wont to charge social radicalism with [illegible],
Republics,
Empires,
Rest upon my shoulders—
For I am labor!
I sail their ships and planes—
I watch their citadels and towers—
I run their presses—
I drop their bombs—
I spread their gasses—
I starve their enemies—
I furnish the corpses for their faiths and victories—
MY blood is the crimson of their flags—
By ME their glory lives—
From ME their power comes.—
I make them all—
I keep them all—
I guard them all—
**I, the man without a country!**—
I feed the Race—
I clothe the Race—
I house the Race—
I am Agriculture—
Industry—
Transportation—
Commerce—
And Art—
I am fire and steam—
Light and electricity—
Civilization and society—
For I am labor!
The wizard gold producer—
The raw material of wealth—
The exhaustless source of—
Taxes and the parent of all property—the land
The Aladdin's lamp and the Frankenstein of Capital.—
I shoulder the State—
I carry the Church—
I build the Union—
I make them all—
I keep them all—
I guard them all—
**I, the man without a country!**—
I am love and life—
I am bread and liberty—
The womb of thought and truth—
The mother of Democracy—
The father of Freedom—
The nemesis of Slavery—
For I am labor!
All that you hold is **mine**—
But for ME—
Your fields were wilderness—
Your mines dark caverns in the Earth—
Your railways streaks of rust across a silent desert—
Your mills and factories mausoleums of dead and powerless steel—
Your palaces and temples, mints and banks, the home of ghosts and worms—
Your fleets, lost derelicts on portless oceans drifting—
Without ME all is **nothingness**—
I am the Logos—
The Living Soul of the Machine—
The maker, keeper, guarder of them all—
*I, the man without a country!*

## ORGANIZATION BREVITIES

Lumber Workers' Industrial Union No. 120, has trebled its membership during the past year.

Agricultural Workers' Industrial Union No. 110, increased its membership 60 per cent during August.

General Construction Workers' Industrial Union No. 310, reports an increase of almost 50 per cent in 12 months.

A feature of I. W. W. growth is its extension into Canada and Alaska. The lumberjacks, harvest stiffs and dirt movers are increasing operations in these territories.

Building Construction Workers' 330 and Foodstuff Workers' 460, are two industrial unions that are not making much noise, but are growing, nevertheless.

Eastward the star of the I. W. W. takes its course. General Construction Workers' 310 is now invading Ohio. The lumberjacks are going into Michigan, Minnesota and Wisconsin. The steel drive is also reaching into Ohio, Pennsylvania, West Virginia, and other points.

---

### Not a Secret Society

No, the I. W. W. is not a diabolical secret society. Now, would you believe it, it's just a labor organization. Instead of organizing on trade lines it organizes on those of industry. And instead of confining itself to the workers in the industries of one country, it seeks to embrace those of all countries. That's where its name, "the Industrial Workers of the World," comes from.

# The Need of Workers' Education

## The Work Peoples' College and its Courses

THE old revolutionary slogan, "agitate, educate, organize," is just as effective to-day as it ever was. The working class needs to be awakened out of its lethargy and indifference, it needs to be agitated and aroused by new ideals and aspirations. And it also needs to be educated and organized in a way that will make those ideals and aspirations capable of realization.

**Sensible workingmen no longer entertain, or take seriously, the theory, that mere contact with production makes revolutionists. If that was a fact the working class, as a whole, would not be so subservient to capitalism; but, on the contrary, would be intent on its overthrow.**

There is no mechanical and automatic creation of a revolutionary working class in modern production. There is, however, on the part of increasing numbers of workers, a conscious recognition of certain duties to be performed to make a revolutionary working class possible. And these include agitation, education and organization, assisted, of course, primarily by economic conditions. Let us agitate, let us educate, let us organize! On this basis may we feel assured of emancipation. And on no other!

Many of us are already sufficiently agitated to become aware of the base nature of capitalism—of its fundamental injustice, viz., its robbery of labor via the profit and wages system. But we need education in the effort to overcome this gross injustice. We need training in order that we may be better fitted to undertake this stupendous task. And right here is where The Work People's College Duluth, Minn., comes in. Read its statement, as follows:—

### INTRODUCTION

The Work People's College is an I. W. W. institution organized for the purpose of teaching students who are seeking proletarian learning. This school recognizes the existence of the class struggle in society, and its courses of study have been prepared so that industrially organized workers, both men and women, dissatisfied with conditions under our capitalist system, can more effectively carry on an organized class struggle for the attainment of industrial demands, and ultimately the realizaton of a new social order.

### DEPARTMENT OF SCIENCE.

#### HISTORY.

1. ***History of the Labor Movement in the United States.** The awakening of Class Consciousness in American Labor. The mistakes of the various organizations, and how to avoid them in the future.

** REFERENCE BOOKS.—**Historical Catechism of American Unionism** (I. W. W.), **Labor in American History** (O'Neal), **History of Labor in U. S. A.** (Commons).

**The Work People's College**

*** 4 hours lecture, 1 hour discussion.

2. Same, in Finnish.

3. **Materialistic Conception of History.** General outline history of the human race.

REFERENCE BOOKS:—**Ancient Society** (Morgan), **Evolution of the State, Private Property and the Family** (Engels), **Economic Determinism,** (Parce), **Ancient Lowly** (Ward), **The Eighteenth Brumaire, The Civil War in France, Revolution and Counter Revolution** (Marx), **Physical Basis of Society** (Kelsey).

2 hours lecture, 1 hour discussion.

4. Same, in Finnish.

#### SOCIOLOGY.

1. **The Motives of Social Activity.** The causes of human activity, and why organizations and social machinery are created.

REFERENCE BOOKS:—**Introduction to Sociology** (Lewis), **Dynamic Sociology** (Ward).

2 hours lecture, 1 hour discussion.

2. Same, in Finnish.

#### ECONOMICS

1. **Economic Theory.** Theory of value. Surplus value and its origin and distribution, Capital, Labor, Work-day, Wages.

REFERENCE BOOKS:—**Shop Talks on Economics** (Marcy), **Economic Interpretation of the Job** (I. W. W.), **Students' Marx** (Aveling), **Capital** (Marx),**Theoretical System of Karl Marx** (Boudin).

3 hours lecture, 2 hours discussion.

2. Same, in Finnish.

3. **Modern Industry.** Conditions existing in textile, iron and steel, foodstuff, marine transportation, land transportation, agricultural, oil, coal, electric power industries in the United States, with some reference to world production and commerce.

REFERENCE BOOKS:—**U. S. Documents, Census Reports, Trade Journals, Market Reports, etc.** Pamphlets (I. W. W.).

2 hours lecture, 1 hour discussion.

4. Same, in Finnish.

---

* Courses taught in English language unless marked "Finnish".

** Reference books are most of them in the college library. Instructors may add to, or change list, and may select some particular book as a text, requiring the students to secure copies of it.

*** Number of hours per week.

## GEOGRAPHY.

1. **Industrial Geography.** General topography, trade routes, centers of industry, products, peoples and language groups. The object of this course is to provide revolutionists with a knowledge of the physical basis of industry, and of the strategic points for attack on the capitalist system.

REFERENCE BOOKS:—**Geography, Physical, Economic and Regional** (Chamberlain), **Physiography,** (Salisbury), **Environment** (Swaine).

2 hours lecture, 1 hour discussion.

2. Same, in Finnish.

## BIOLOGY.

1. **Evolution.** The proofs of evolution, Mendelism, Darwinism, heredity, artificial evolution of domestic breeds.

REFERENCE BOOKS:—**Evolution of Man** (Boelsche), **Law of Biogenesis, Savage Survivals,** (Moore), **Evolution and Adaptation, Physical Basis of Heredity** (Morgan).

2 hours lecture, 1 hour discussion.

## ARITHMETIC.

1. **Elementary Arithmetic.** Addition, Subtraction, Multiplication, Division, Fractions, Decimals, Speed and Accuracy, Short Cuts, Mental Arithmetic.

TEXT BOOKS:—Selected by instructor.

4 hours drill.

2. Same, in Finnish.

3. **Advanced Arithmetic.** A course in arithmetical problems, touching on percentage, proportion, plane and solid geometry, weights and measures, surveying, navigation, monetary systems, interest, exchange and discount.

TEXT BOOKS:—Selected by instructor.

4 hours drill.

4. Same, in Finnish.

# DEPARTMENT OF LABOR PROPAGANDA AND ORGANIZATION.

## PROPAGANDA.

1. **Public Speaking.** Students to prepare lectures on subjects of propaganda value. Lecture to be given to class as if to an audience of workers. Class and instructor will criticize material, arrangement, and delivery. 2 hours.

2. Same, in Finnish.

3. **Debating.** A practice course, under the direction of the instructor. Class to be divided into two parts, and important questions in the labor movement argued between them. In the second half of the term the instructor to take the part of an opponent of industrial unionism, and to challenge members of the class in turn to answer his objections. 2 hours.

4. Same, in Finnish.

5. **Reporting and Editing.** Students write news articles on local events, editorials and essays on important matters in the labor movement. Instruction in logic, rhetoric, the right word, unity, coherence, emphasis. Best articles to be submitted to I. W. W. papers for publication.

2 hours lecture, 3 hours criticism of papers.

## ORGANIZATION.

1. **The I. W. W. Structure, Methods, Present Policies and Position.** Careful study of present day operation of branches, councils, boards and committees. Sample minutes, reports, and secretarial work. Practise in making out minutes, and reports. Relations of parts of the organizations to each other, conduct of press, activities of conventions and powers. Duties of officials. Problem of combining efficiency with Democracy.

REFERENCE BOOKS:—**All I. W. W. Literature.**

3 hours discussion.

2. Same, in Finnish.

3. **Delegates' Work.** Practice in the functioning of a job delegate. How to make out cards, reports, and what to say to the prospective member. How to start branches. Practise in lining up men.

1 hour.

4. **Elementary Organization Bookkeeping.** Principles of bookkeeping (Nurmi System). Accounts of committees. How to open, keep and close books of branch secretaries. How to audit books. Balances and financial reports. 5 hours practise.

5. **Advanced Organization Bookkeeping.** How to keep books of Industrial Union and General Headquarters. How to keep books of periodicals, special departments, etc. 5 hours practice.

# DEPARTMENT OF ENGLISH.

## ENGLISH LANGUAGE.

1. **Elementary English.** Reading, pronunciation, spelling. Class and instructor will read simple texts from the school library. Conversation between members of the class, and mutual criticism. 5 hours drill.

2. Same, in Finnish. (English Grammar in Finnish.)

3. **Advanced English.** Grammar, composition and literature. Reading of selected works in English literature, especially scientific and radical literature. Paraphrasing. 3 hours drill.

# HOW TO ENTER COLLEGE

Those desiring to become students at the Work People's College should write to WORK PEOPLE'S COLLEGE, Box 39, Morgan Park Station, and tell the manager what courses they are interested in, what preparation for the studies they have had, if any, how long they have been in the movement, what offices they have held, if any, and how long they will probably be able to remain at the college. This is information useful to the instructors in planning their lectures and arranging courses.

The expenses to the student after arriving at the college will be $39 per month, which covers board, lodging and tuition. If the student desires to board and room elsewhere, the tuition charge will be $10 per month Charges must be paid in advance for each month.

When starting for the college, bring along all your books as you may find them useful for reference.

The school year begins November 1. If you cannot be there by that time, make special arrangements with the manager.

Both men and women may attend the Work People's College.

## STUDENT LIFE.

The students are organized, and have regular business sessions, parties, games and entertainments. These are never allowed to interfere with their studies. Fellow workers in Duluth co-operate with the students in programs and meetings.

There is a gymnasium, and students are required to keep themselves healthy by regular exercise, either indoors or outdoors.

# Motherhood Under Capitalism

By J. D. C.

EARLY last April, a tragedy was enaeted in the eity of Elmira, N. Y., that was not only pathetie in the extreme, but it also points a moral in that it indiets the present soeial order. The latter makes motherhood intolerable, and death for the beloved ehildren preferable to a cursed existenee. It was the attempt made by a woman soon to beeome a mother for the sixth time to sniff out the lives of her two girls—7 and 5—and herself in order to save them and her, from the sufferings of a life like hers.

The papers of that time were full of the story. Pietures of the home of that family aeeompanied the tale. They illustrated, pretty elearly, the faet that the aet was not eommitted beeause the mother was erazed with too much wealth, that she deeided to kill her girls rather than let them live with the ehanees for the future, no better than were hers.

### Poverty The Cause

A look at the pieture of the dilapidated house and at the eap the husband wears reveals the whole story. Poverty, poor wages, unemployment, laek of eomforts in her condition and perhaps an oeeasional ill temper, of the man due to overwork, were too mueh for that poor sufferer to endure. It had to end.

Unlike the woman of wealth who, under similar eireumstanees, would have the best medieal attendance and whose children would be taken eare of without her, this poor worker's wife had to be and do everything herself. Perhaps too, her child bearing was more toturesome than that of the average woman. In that ease she required all the more eare and patient treatment, instead of having to be housemaid and ehildren's nurse while enduring the pangs incidental to child bearing.

Those who have ever loved ehildren, either their own or of a near relative, say a little sister or brother, would bear witness to the horrors of even the thought of killing a ehild. To the writer, the agony of the deed appears beyond description, unthinkable; and yet, here is a mother who finds solaee in the faet that she killed her ehild so that that ehild will escape the ills that were the lot of the mother.

Under the present system of society, the burden of the worker's household falls upon the woman. The man is himself a slave; working and sweating and enduring abuse and inhuman toil; but the wife is not only the vietim of the same eonditions as he is, but also, in addition, she has to endure the ill-temper that he so often brings home with him from over work.. While he is a slave, she is even worse; she is a slave of the slave.

Poverty and starvation is her lot when he works, and starvation and poverty when a period of unemployment sets in. She must find a way to feed the family. She must go to the groeer and the buteher and borrow and often beg for the food of the day. She it is, who must break her fingers in the wee hours of the night to mend and darn and pateh the elothing of the family in order to keep up appearanees and also, very often, to keep the eold of the winter out.

And the worker's wife bears all these and more often with a smile and a word of cheer. But there is a limit beyond which none of us can go. When the limit is reaehed, there must be an end. And that poor woman did reaeh the limit; a sixth ehild was about to come, and that one eoming might also be a girl. The guilt of bringing three women vietims into the world was a blight on her eonscienee that reaehed the test of enduranee.

Just now our deepest pity is with the unfortunate mother. Preaehers may dwell upon the faet that the girls might be fortunate enough to marry rieh ete. Birth controlists may tell us that their eure-all would settle the problem. But the fact, nevertheless remains that the present-day eapitalist system with its mainstay—wage slavery and its attendant evils of mis-edueation, ignoranee, malnutrition, wreeked nerves and a long string of baneful et eeteras,—stunts the ehild before birth and eripples and even kills those grown up.

### The Only Life Belt

The only life belt on the oeean of misery, the only save-all and eure-all, is industrial organization. Edueate the workers for a definite purpose—to do away with capitalism and to establish the workers' industrial eommonwealth. Educate the man, edueate the woman, edueate the child! Organize them all in the one big union of the I. W. W., and murderers of the unborn and grown-ups alike, will eease forever and aye. There will be eomfort, food, ease, shelter and the proper care for all, and in all eonditions of life.

Were it not for the privately-owned eapital of the nation, there would be today more houses than we could oeeupy, and more food than we eould eat, and more elothing than we eould wear. But for the faet that today the few have too much eontrol of eapital for profit, the large mass of workers are robbed of the neeessities of life and death is often preferable to a life of misery.

Let it therefore be our firm deeision to proeeed to organize and edueate the workers of the world, regardless of sex, ereed, eolor or age, and hasten the day for the republic of, for and by the workers, and in that way put an end to murders of all kinds, forever.

---

The fall convention of A. W. I. U. No. 110 will be held at Fargo, N. D., Oetober 8th. This will be a mass convention. All members who are interested in the organization should make it a point to attend. Any one having any resolutions or suggestions for the eonvention should send them in to the main office.

# Who Finished the Job Up There?

By COLE J. SNYDER

WHEN we get to heaven beyond the pearly gates
Will there be work for all of us to do;
Will noble mansions, lofty buildings
Await our labor true?
I'm told a life of ease awaits our coming
That there is nothing more to build;
That joy and peace await all humans
Who on earth with toil were killed.
Who will feed the hungry there I ask you,
Who will clothe the human race;
Will shelter be provided any,
Who quit on earth the maddened pace?
Where will all the producers go then,
If everything is built complete;
Where will all progressive workers go,
Who on earth had to toil to eat?
Are there no dams to build up yonder,
No mighty tunnels to be bored;
Has all machinery been completed,
Is there no more Industrial Horde?
No mighty ships to be constructed
That shall sail the oceans o'er;
No trains to drive, no trucks to work on
That carry goods from shore to shore?
Are you sure you need no repairmen
To keep in shape those streets of gold;
Are the gates of pearl fastened safely,
Are the gates of heaven sure to hold?
Then I wonder if you will tell me
Is nothing more to do for its worth;
Why have us die here to go up yonder,
When the work is not finished here on earth.

# The New Trinity

By J. BERNEDINE TEVIG

GREAT ideals whisper not of death,
But with music-laden breath
They a song of hope sing
While truth and mystery cling.
As the sun the darkest cloud defies
So Truth to Mystery replies . . .
The Gods are slain in bold defiance
By the blinding light of science.

Science is not concerned with creeds
Born of superstition and intolerant deeds,
But with that knowledge of nature's laws
Which hold the truth of primal cause.
Like a golden ray thought takes flight
And seeks the farthest star of night,
It pries beneath the earth's deep crust
To learn the secret of her dust.

The mind of man will invent the light
That will rend the veil of ignorant night;
No slave, no classes shall there be
When Science is the Trinity.

# The Last Call

ANONYMOUS

EVER clearer grows and more distinct
The note
Swelling in volume and wider ranged
The sound
We hear the chant the prelude to
The Song.
That from the lips of multitudes
Come tumbling.

This is the song we list for through
The ages
And now it comes upon us like
A storm;
A clash of elements—Of wild discord!
Not all your brass and wind can drown
The song;
Emerges there the song in all
Its clarity
And flung upon the winds by
Voices strong—
The blare of trumpets strife and force
Are silenced,
By this the hymn of love of
Fellowman.

## LATEST NEW PAMPHLETS

AMONG the latest new I. W. W.. pamphlets is "The History of the I. W. W." This is a discussion of its main features, especially its war activities, by a group of workers. 28 pages, 10 cents.

Tom Barker's "The Story of the Sea," is also among the latest new pamphlets. It originally appeared in Industrial Pioneer and has been revised and brought up to date. 25 cents.

A new edition of Jas. Rowan's "The Lumber Industry and Its Workers," is also among the latest productions. It has an attractive cover design in light green, blue and brown. 25 cents.

"The Economic Interpretation of the Job," can now also be had in Greek as well as English. 10 cents. "What Is the I. W. W.?" is now to be had also in Swedish, Lithuanian, Greek and Italian. 10 cents.

"The Immediate Demands of the I. W. W." appears in English, Spanish and Croatian.

Get the handbook on "The Building Construction Industry," 25 cents.. In preparation. So is a handbook on "The Railroad Industry." 25 cents.

We thank you!

# Some Anti-Immigration Fallacies

THE article on "Immigration and National Development" to be found elsewhere in this issue, is well worth reading, not only for the valuable historical analogies that it makes and the motives for capitalist propaganda for unlimited immigration that it discloses, but also for some of the fallacies of working class anti-immigration that it reveals.

This article gives essentially the views of "Organized Labor", that is, of the A. F. of L. on the subject; for they are those of the A. F. of L. to a dot and have all of the A. F. of L. defects of argument accordingly. It is printed in order to give those views a fair hearing and also to point out in some detail, the fallacies referred to, as seen by I. W. W. eyes.

In the first place these views are based on the fallacy of working class reliance on capitalist class legislation in the solution of serious problems. It is the old, old, A. F. of L. dope of making the workers dependent on an institution in the control of its exploiters, in the erroneous belief that some help may be expected from such quarters.

What do we behold as a consequence? We see labor placing faith in laws that are either circumvented or were never intended to be enforced. In the matter of anti-immigration we see the spirit of the law violated in wholesale importation of laborers from Mexico and extensive smuggling from Canada. Also we witness, large numbers of workers entering U. S. ports as seamen and then deserting. All this is systematically encouraged.

One immigration official declares an extensive conspiracy exists to bring laborers into the country in defiance of the law and that his department's staff is too small to successfully combat the evil. It is also claimed that 1,000,000 persons annually enter the United States by these various illegal ways. Under the circumstances, what becomes of the quota law? And under the circumstances why depend on that law at all, especially as the capitalists appear to be using it merely as a camouflage?

In the second place, these views promote the fallacy of nationalism in the face of a growing internationalism. They are, accordingly, not in line with advanced working class development.

There was a time, in the history of America, when trade and intercourse between the original 13 American colonies were restricted. But thanks to railroads, that time is gone never to return. The United States are united. They are one, with trade and intercourse free from coast to coast and from the Great Lakes to the Gulf.

A similar condition is developing among the nations of the earth, appearances to the contrary notwithstanding. Thanks to industrial development, we are tending, willy nilly, towards free trade and free migration. Like tariffs, with their suicidal wars for civilization, anti-immigration will have to go, because it breeds national hatreds and contributes to those cataclysmic upheavals so terribly disastrous to the race.

Third, these views are infused with the most absurd fallacy of the lot, namely, overpopulation and race-destruction through the starvation resulting from it. If there is any theory that the intensive productivity of industrialism has laid to rest it is the fear of starvation through overpopulation.

Right now, with the greatest population this country has ever known, there also goes, hand in hand, the greatest overproduction in food and other products it has ever known. Our farmers are being ruined —are going bankrupt,—because they produce excess products by the hundreds of millions of bushels and the hundreds of millions of bales. And that, too, in the face of the biggest consumption of products the continent has ever known.

The trouble is not one of population, but profit, capitalist profit. Take that out of production and distribution and the world will wax fat on products that now are not permitted to grow, because of restricted acreage, or else are permitted to rot, when not dumped overboard, to keep prices up!

Finally, Labor should cease relying on capitalist laws and fomenting national hatreds. It should get rid of exploded theories. It should be progressive and alive to the facts around it. **In the matter of immigration, Labor should build up an international working class organization for its regulation.** This organization should publish the truth about "labor shortages", expose capitalist advertisements for labor abroad; in brief, it should give publicity on labor conditions wherever found; and thereby tend to develop practical international co-operation and understanding. Otherwise, labor will continue to remain the football of international capitalist exploitation. Otherwise, labor will never develop the international organization so essential to the overthrow of international capitalism.

# Criticism of Russia

CRITICISM of Russia is resented by certain elements in this country. Just on what grounds is not very evident. The critics themselves feel justified in criticizing, condemning and, what is worse, destroying, all opposition to Russia. The British Labor Party, the Indian Nationalist Movement, the German Social Democracy, the Mexican Revolution, the American Socialist Party, and others, are all subject to their vitriolic abuse and destruction. But they themselves are to be held sacred and above reproach, even when their conduct is just as traitorous and as treasonable to the working class as is the conduct of some of those whom they condemn.

What absurdity! Let's have done with it. Let those who criticize accept criticism! Let those who destroy prepare for destruction! That's the only logical, the only manly course. Don't play the baby act, and cry out, "It's not fair to do those things to me that I do to you. I am only a child and you're a big grown-up man." That's the attitude of Russia in a nut-shell.

Now, there is one thing that should be realized by the supporters of Russia and that is, since Russia has abandoned communism for capitalism, it must go "the whole hog or none", to use the vernacular. That is, Russia must pass through the capitalist stage of development in all its completeness before it can attain to full growth as a modern power. There can be no hybrid society in such progress. This, all the great industrial nations of the world already foreshadow in their previous growth. And it is likely to be more true in the case of Russia than in their case, as Russia obviously is going to be developed with the aid of the world's greatest capitalisms, with the result, quite logically, that its working class will suffer the world's greatest abuses.

Under the circumstances, it is silly to expect that Russia's working class can have capitalism with working class control. It is far wiser to organize to anticipate a repetition of capitalist hstory the world over, according to which the bourgeois in every embryonic capitalism has used the working class to climb to power, while brutally exploiting them and oppressing them in every way possible.

It is absurd to think that because Bolshevists are at the helm in Russia this repetition is impossible—these same Bolshevists having already proven themselves opportunists, who trim their sails to every peasant and imperialist wind that blows, while at the same time putting the working class in the straight jacket of conformity, much against its will.

We see practically the same thing being done by the Obregon government in Mexico. And we are supposed to denounce the Obregonian policy, with its concessions to Standard Oil, as a betrayal of the working class, and we are supposed to regard its so-called labor constitution as an ideality rather than a reality, while the same policy, the same concessions and the same documents in Russia, are hailed as working class triumphs! How do they get that way anyway? They get that way by living in the tradition of the revolution of November 1917—a revolution that is already gone—**a revolution that has been replaced by the capitalist revolution, the imperialist revolution on which Russia is now entering.**

It is astounding that workingmen familiar with American conditions and history can be taken in by the Russian glamour. Wasn't "our" American Democracy of, by and for the people, just as Bolshevism is of, by and for the workers? That is, wasn't this American political fetich the empty formula behind which capitalism grew to immense proportions in the exploitation of labor, just as in Russia, the foundations of an immense imperialism are being laid behind another formula whose substance has long departed?

Trotsky told Irving Bush, the big capitalist envoy from the United States, that American history is the key to Russian problems. Let's apply American history then to Russian problems, especially to Russian working class problems. Let's not forget how American capitalism developed. And don't run away with the idea that capitalism on any other soil is going to be any different. The American soil was of the best; and the working class results!—contemplate them, oh, you friends of Russia! And, maybe, after such contemplation you will realize that criticism of Russia is primarily for Russian working class good!

---

## THE PRESS IS MIGHTIER THAN THE SWORD

Since April 1st, the I. W. W. press has printed, in addition to its regular monthly, weekly and bi-weekly publications, about 4,000,000 leaflets and 650,000 pamphlets.. Also about 1,000,000 pieces of matter were printed for the General Defense; 1,500,000 stickers for the industrial unions, 300,000 industrial union bulletins, 100,000 due books, and 100,000 constitutions and by-laws.

# Editorial

## THE NEXT CONVENTION

NEXT month—November 12—the annual convention of the I. W. W. will take place. This convention will be one of the most important ever held. This belief is based on the new spirit that is pervading the whole organization. This spirit is expressed in a desre for better and bigger organization, for more co-ordination and expansion. It is best put in practical form by the whole-hearted support which the entire I. W. W. is giving to the steel drive of Metal Machinery Workers' Industrial Union No. 440. It is the spirit that realizes that the I. W. W. must organize the workers in more of the big- basic industries and must adapt its plans accordingly, if it is ever to win in the struggle with modern giant industrialism as it aims to do.

The existence of this spirit is a great fact. It refutes the old claim that "the I. W. W. is merely an organization of western migratory workers". And it upsets the efforts of communists and others to make the I. W. W. such exclusively. With this spirit back of it, the I. W. W. should more truly become, to an even greater extent than at present, the Industrial Workers of the World.

The convention will have many practical problems to tackle along the lines of growth above indicated. The small industrial unions are clamoring for more aid in organization work. This is especially true of the Textile Workers' Industrial Union, No. 410, which operates in one of the largest and most promising industries for the I. W. W. in the country. And the textile industry is only one of the many big industries that should claim the convention's attention in any program of expansion. The railroad, building construction and food industries might also be added; but this will do as an indication of some of the work that the convention might tackle, to the greater growth of the I. W. W. and the greater benefit of the working class.

It is hoped that the next convention will not unduly emphasize relatively unimportant internal matters to the exclusion of the really great and important work of devising ways and means to organize the unorganized. This was one of the criticisms levelled at the last convention; this and its long and costly sessions, consuming time and money that would have done more good if spent in other directions. With some one million of migratory workers still to organize and about 25 millions of homeguards, it is hoped that the next convention will have greater scope and considerably more vision.

Probably the most important of the convention's problems will be financial ones. Organization improvement and extension are impossible without funds. How shall they be raised? By dollar dues? Compulsory assessments? The I. W. W. also needs abler and more experienced officers. How is it going to get them? By permitting reelection? By increasing salaries? The I. W. W. needs more intensive local development. How shall it secure the same? By per capita, branch and district council organization? Or by adherence to universalism and centralism? The I. W. W. needs better parliamentary training and more internal co-ordination! How shall they be brought about? The I. W. W. needs more definite immediate demands; more practical literature explaining its functions as an organization. It needs many reforms that the convention will have to consider, if it is intent on improvement and growth. Other matters such as daily newspapers, the Work People's College, new headquarters, relations abroad, and co-operation with other labor organizations, will also be on its order of business, without doubt.

If the convention is wise, however, it will spend most of its time planning an organization drive on a big scale. Relatively picayune internal tinkerings awaken no great enthusiasm. They only remind one of Nero fiddling while Rome burns. Their aftermath is generally one of disgust and discouragement. What is wanted is something to fire the imagination, arouse interest and awaken such activity as will shake the organization out of its ruts, into a realization of its tremendous tasks and responsibilities to the working class.

This is the opportune time for such an organization drive. It has already begun in the 440 Steel campaign. Let's keep it up! Let's study the methods therein pursued!! Let's extend its spirit of organization. With the working class largely unorganized, and with revolt seething in the A. F. of L., let the I. W. W. be up and doing. Let the slogan be:—

Organize the big, basic industries! Organize them into a big, basic I. W. W. All together!

## AUTOS FOR WORKERS

IN four years every auto in this country will be duplicated, such is the rate of auto production just now. That is, 1923 auto production runs over 3,000,000 cars. Where's all of them going to? People sneer at the idea of workers owning autos. But if they don't, who will?

Henry Ford is wise! He's selling autos to workers on the instalment plan. They'll go into hock to him; supply him with an endless stream of cash and at the same time be his main outlet.

Soon production will be so overwhelming in every line, that the only escape will be to make a luxury-consuming class of the working class. It seems a crazy idea, but what other answer is there?

## THE FOUR-HOUR DAY

STEINMENTZ'S declaration that in another century electricity will reduce the workday to four hours, worries the bourgeois press. The later can't conceive of a civilization founded on leisure for all. It believes that man can't be happy unless he works himself to death—for the bourgeois, of course.

However, the ancients had a different idea. They believed that leisure meant time to prepare for the higher social duties. It meant the accumulation of the knowledge so necessary to government and science. Perhaps in the future, even the humblest workers will have time to become industrial managers and statesmen of the best kind. Who doubts it? We don't! And so, we're for Steinmetz's four-hour day.

## THE JAPANESE EARTHQUAKE

ASIDE from its appalling character, which has aroused both the horror and the sympathy of the world, the Japanese earthquake has had two noteworthy effects. First, nobody has, as yet, insisted that it is a visitation of God on a heathen nation. Perhaps, people are getting disgusted with a God that indulges in such terrible pastimes, and, consequently, prefer not to refer to him. Anyway, they seem very much disposed toward the scientific explanation, which gives the slide of the Asiatic continent into the Pacific Ocean as the cause of this stupendous catastrophe. This mental attitude, therefore, seems to denote progress towards the scientific viewpoint.

Second, everybody (at least, in the editorial sanctums), seems to conclude that the earthquake will put Japan out of running as a world-power, for the time being. The loss of wealth, calculated at over three billions of dollars, it is believed, will be more than Japan can repair in a generation, at least. In the meanwhile, the other world-powers will rush into Korea and China, to the detriment of Japanese capitalism. They will thus secure advantages from which it will be hard to dislodge them in the decades to come. The earthquake thus, apparently, changes the course of history. It is not only a colossal geological, but also sociological event.

## WHY NO GERMAN COLLAPSE?

GERMANY presents an amazing study, that defies analysis from any other standpoint than that of modern industrialism. Here is a nation, defeated in war and harrassed, apparently, to the verge of destruction in peace, that refuses to either collapse or turn to "red revolution." What's the secret of this phenomenon?

When Robert Owen speculated upon the extraordinary wealth of Great Britain, despite the immense drains of the Napoleonic wars, he found an explanation in the invention of machinery and the exploitation of labor which it enhanced to hitherto unknown proportions. Multiply Great Britain of the first two decades of the last century many times and you have modern Germany in all the essential similarities, with some additions, to boot.

Germany should not be expected to collapse as Russia did. Russia is the very anthithesis of all that Germany stands for. It is of primitive peasant development primarily; while Germany is the most highly technical and industrial nation on the globe. Excelling in nearly every phase of modern existence, Germany is practically one vast productive and distributive organ, with extensive rammifications, and as such, capable of sustaining a pressure, as events have proven, such as would have broken down any other nation not similarly organized.

In addition, bear in mind that Germany is at once, paradoxical as it may seem, the victim and the object of support of allied capitalism. While the governments of England, France and the U. S. are wrangling over Germany, their financiers are absorbing its industries and effecting combinations with its financiers. Even "red" Russia is in on the deal; as Germany is the bridge that will bind it to French imperialism. Stinnes, with his Russian concessions, Polish mines and German industries, with their French, English and American backing, personifies the international Germany that, in the new modern industrialism, withstands the pressure brought against the national Germany of old. Stinnes' saying, "I'm a businessman, not a German," typifies the new and unbreakable era.

Of course, in all this the German workers are getting the worst of it. They believe they are saving old Germany, when they are simply weapons in the forcing of new international alliances. Accordingly, they are patriotic and political, when they should be economic and industrial. Instead of seeking to capture this new industrialism at its heart, through industrial union organization, they aim to capture the institutions which it has thrown into the discard. They'll get over it some day, in common with their fellow victims of world-capitalism, everywhere.

# How Is Your Health

By WOODBY SIANTIFIC

### Foods

ACCORDING to press diagnosis the late Gamaliel Harding died from at least six or eight causes; all high sounding names — Arterio-sclerosis, Thrombosis, Apoplexy, Cirrhosis, Hyper-cardiac, Leucocytosis, ad infinitum, ad nauseum. In their regular order these symptoms are, in plain United States: Hardening of the arteries, blood clot, blot clot again, diseased liver, enlarged heart, transient increase of the white corpuscles or leucocytes of the blood stream. This is all in addition to the information contained in the slip of some reporter's pen that he might have gotten some ptomaine poisoning from crab meat that was served on the boat. And old fossilized Sawyer quickly rushed in to save the poison food interests by saying that it is a well known fact that Alaskan streams are tainted with "copper salts," and many people are poisoned by eating fresh fish from these streams. Chemists please take note!

The only reason for using this recent example of medical murder in our magazine is because of the prominence of the victim. It is not that we are grieved over the demise of the so-called great president of the United States, more than we would be for any other citizen. The event is spectacular, dramatic, has received world wide publicity, so we seize the opportunity presented in this connection to state a few very important facts pertaining to health.

Harding did not die a natural death, and millions of others who are dying annually are not going the natural way. Once in a great while you read of a man dying of old age. That is natural death. His symptoms were produced by the insane rush of modern life, and the doctors finished the job. Men of high office, usually of mediocre minds, are burdened with a multitude of duties that a corps of alert workers would be unable to perform, and then prevented from attempting the work by being constantly compelled to attend innumerable banquets where huge gobs of devitalized, degerminated, artificial substances mistakenly called food are piled into the belly. Convention requires that one must stuff it down.

### The Workers' Food

The lower strata, industrial workers mostly, though we might include that conglomerate middle class, when they do eat, usually do so with about the same disregard for the laws of nature as the upper bunch. If he owns a consumptive flivver he will insist upon having the best of gasoline and oil to energize it, or if he is a fireman he will growl about having to shovel slate and dirt into the firebox; but never a murmer against the sticks, trash and poisons the food owners push into his body mechanism.

His sticky, starchy, indigestible white bread is made from the poorest by-product of the wheat grain, the grain that was produced and gathered by his miserable hands. He helps to remove the precious alkali and other mineral salts from it. This flour, deenergized as it is, is rendered further harmful by mixing with putrid, rancid old fat and alum. Feel it roll up and stick to your palate as you try to masticate it. You are fortunate if it does not adhere to the oesophagus before it reaches the lunch tank.

But he has been superficially reading current literature that advocates whole wheat bread, bran bread, bran crackers, bran cereal, etc. On the same page he reads advertisments of these products. They are guaranteed to cure everything from Lethargy Encephalitis to plain, everyday constipation. So he buys bran breakfast food, which is nothing but the most ordinary kind of sawdust. (Go to the library and find the chemical process by which sawdust, through distillation, yields alcohol, and the residue mixed with certain sugars is used for cattle food). He buys a brown loaf labelled "whole wheat," which, in most instances, derives its color from black molasses.

That beautiful white frosting on his bakery pie is made of chalk, eggosee, cornstarch and water. The filling is cornstarch and glucose. His jams, jellies and fruit butters are loaded with saccharine, a sweet product that positively has no food value. His rice has been subjected to a polishing process that removed all the vitamines. His fresh vegetables, if he has the money to buy them, have been preserved several days in transit. And his meat has been embalmed so long that the specie from which it was obtained is almost extinct.

### Ignorance, General and Otherwise

The workers' ignorance of food chemistry is more colossal than their ignorance of history, economics and industrial processes. A study of one of these subjects without properly relating it to the others would be of little benefit. Trained as they are to think of disease as a natural condition, an entity, is it to be wondered that they creep on in the self sufficient thought that they may eat whatever they like whenever they like. All sorts of combinations are heaved into the stomach at divers hours, and usually when the mind is in a turbulent state. Meat, potatoes, white bread, sugar, coffee and canned garbage are all piled in with about the same zeal as he later drives into his work. His teeth are falling out, his heart skips a beat now and then, dizzy spells attack him, he has a headache and is constipated, but all of this he seems to regard

as a natural condition, and relief is to be had in swallowing more poisons in the form of medicine.

He ate his weight in artificial sugar last year, never dreaming that this crystally white stuff is so made by bleaching with the fumes of poisonous acids. Nor is he aware that when it combines with other elements in his digestive tract the combustion that occurs, and which produces alcohol, sucks up all the available oxygen, thus leaving the other foods to ferment. You have your choice — fermentation or digestion. In his cellar or clothes closet he sees the terrific explosion occuring in the home brew vessel, but it never occurs to him that the same thing is happening in his food pouch.

### Some Progress

A few idealists in some of the larger cities have undertaken the tremendous task of enlightening the people as to dietary. Some of these have established little places of business where wholesome foods may be bought, but the very nature of such an effort is futile. The primary motive was to aid, but now they are occupied with the thought of maintaining the business. And presently they are selling substitutes. Only a few people ever find them. Their prices, in the very nature of things, must be higher than is charged by big business for substitutes.

There is just one way to assure ourselves of real live food, and consequently normal health: Industrial Organization to the end that we may fully and absolutely control the entire process, from soil to ultimate consumption, of food production, transportation, milling and canning preparation and distribution. This will entail more than a knowledge of operating technique. In the educational departments, and by that I mean the colleges that we should be establishing soon, it is imperative that we have a well trained corps of HEALTH teachers.

(Next article will deal with methods of "cure")

## HENRY FORD

(Concluded from Page 38)

rates are too high, the employes because wages are too low and hours too long, the owners because no adequate returns are realized on money invested."

Ford says that the men who know railroads are not allowed to manage and run them—the idea of service is subordinated to profit. The bankers' groups have control of the railroads and manipulate stock and bond issues. The price of stock is hammered down or up according to the desired end. The book propounds questions concerning railroad methods that might well be termed socialistic. For it seems that Ford has been stealing socialistic ideas and adding it to his thunder. For instance he asks: "Why are live cattle hauled thousands of miles, from Texas to Chicago and then shipped back dead as dressed meat? or why are enormous shipments of wheat sent from Kansas to Minneapolis, over hundreds of miles of roads, entailing tremendous labor and motive power, and then sent back to Kansas as flour?" He answers, "We need instead of mammoth flour mills, a multitude of smaller mills distributed throughout all the sections where grain is grown. Wherever possible, the section that produces the raw material ought to produce also the finished product. The same with food products and other products of manufacture."

### The New Decentralization

This brings to mind that Ford stresses very heavily on DE-CENTRALIZATION of industry. Not on the DE-CENTRALIZATION of the ownership however, but in manufacturing processes.

The Ford organization, we are told, is now carrying out an extensive plan of de-centralization in the production of Ford cars. All parts are to be made as near as possible to the source of raw material. The glass wind shields, wheels, etc., are to be made in different plants and from there shipped to assembling plants according to the amount needed. The big plants in Detroit and River Rouge now make mostly parts and assemble only enough cars for the Detroit and nearby markets. Assembling plants in different large cities like Chicago, New York, Philadelphia, will receive parts and assemble them for their own market and with their own conveyor system.

There is too much waste in the centralized plant. Under the new de-centralized system a part is only shipped once; from the place where it is produced to the point where it is to be assembled and sold. Under the old system of centralized production the parts were shipped into Detroit to be assembled and sent back as a part of the finished automobile.

The book is well written and interesting from end to end. It is the sort of book that can be read twice and still hold your mind. It is certain that Ford did not write the book, but his ideas are there. He furnishes good arguments which will require discerning reason to pick out whatever flaws there may be, for it must be remembered that the book finds much fault with modern business methods, or capitalism, and on this head no one will doubt that Ford has an argument. As the head of a large corporation, Ford views things from the heights. He qualifies himself by discarding the pronoun I and using the plural WE in his discussion, maybe having his own suspicions that some others besides himself had something to do with building up the Ford organization.

Ford's critics are many. His Jewish campaign, "Peace Ship" expedition, the mere fact that he is rich, have brought forth critics of a type. There remains yet to come from an employe of the Ford plants a criticism of the working conditions.

Next month we will deal with some of Ford's critics and discuss what they have to say against Ford and the Ford organization.

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

## "PEACE ON EARTH"

IS THIS THE 1923 INTERPRETATION OF THE CHRISTMAS SPIRIT?

# The Industrial Pioneer

Vol. I. DECEMBER, 1923 No. 8

# Amnesty by Christmas!

**Let The Cry Ring Out from Coast to Coast, from the Lakes to the Gulf!**

**All Factions, Liberals And Radicals Alike, Join In Demand That Jails Be Opened And Men Set Free Who Dared To Stand For Free Speech And Industrial Democracy.**

**Sunday, December 23, is Day Set for Giant Demonstrations All Over the Country. Arrange One For Your Section. MakeIt A Rousing One! Begin Arrangements Now!**

THE General Defense Committee of the IWW has issued the following proclamation:

Well into their seventh year of unjust imprisonment our members in federal prisons have failed to win from the government authorities that consideration which has been extended to conscienceless profiteers who grafted upon the government, the spies of other governments, and malefactors who scuttled ships, wrecked warehouses and blew up munitions factories. Evidently, the government holds crime to be less offensive than the holding of opinions that do not accord with those who control it.

Senator Pepper of Pennsylvania, one of the acknowledged legal authorities in the United States, expressed the opinion openly to the late President Harding that the conviction of the IWW prisoners was not warranted by the evidence. He urged their unconditional release as a matter of legal justice without any humanitarian considerations whatever. He spoke as a lawyer, not as a man.

More than ever, then, does it become our duty to stir the consciences of the people of the United States, in whose name the President becomes a party to the legal crime committed by withholding from these men release from cells in which they should never have been incarcerated.

IS THIS TO BE THE STORY OF FREE SPEECH IN AMERICA?

Fellow Workers, wherever you are, try to get in touch with persons of influence in labor unions, civic and religious organizations, women's clubs and fraternal societies. Endeavor to have them arrange for meetings of protest against the inactivity of the government authorities in the cases of these innocent victims of wartime passions and prejudices, who have suffered the tortures of a prison hell for seven years.

Have resolutions demanding the release of these prisoners by Xmas passed. Only if, and when the nation resolves to wipe away this stain upon the reputation of a country that stands preeminently for freedom of opinion will the rulers of the United States attempt to repair this crime which has robbed these honest men of seven useful years.

These men are our fellow workers. They were condemned to living deaths for us. They must be freed. Let us say so with no uncertain voice on Amnesty Day—Sunday, December 23rd. Write in for literature.

GENERAL DEFENSE COMMITTEE,
1001 W. Madison Street.

STILL IN THE DARK AGES
—Fitzpatrick, St. Louis Post-Dispatch.

BARS TO FREEDOM

# Yesterday, Today, the Future

By HAL BROMMELS

TIMES of the kings are gone,
Their days are numbered;
They ruled with bloody hand
While people slumbered.

Lords, dukes and royalists
No longer chain us;
They used to rob and rule,
They've jailed and slain us.

Now we have gods of gold,
Coal, steel and lumber,
Greater than kings of old,
Fewer in number.

Present-day emperors,
Giants in power,
Slave us in industries
Even this hour.

But right today there form
Means for our freeing;
Labor is rising up—
Thinking and seeing.

Someday the end shall come,
Labor will fight free;
Earth then shall bring for all
Gladness and plenty.

## GOLDEN RULE OF MODERN BUSINESS

**Dollars and dimes; dollars and dimes,**
**To be without money is the worst of all crimes:**
**To keep all you get and get all you can**
**Is the first and the last and the whole duty of man.**

**—R. F. Pettigrew.**

# California the Beautiful and Damned

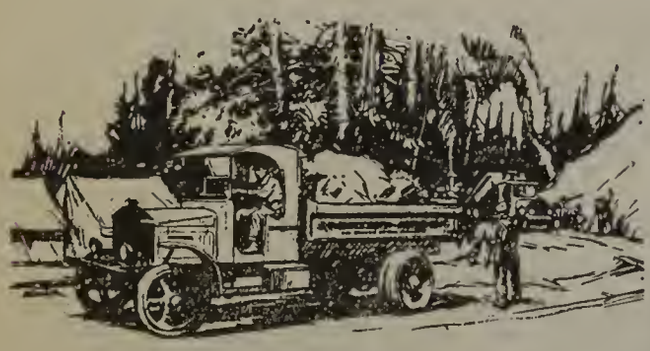
## Sends Workers to Prison for Being Members of a Labor Union

## Destroys Workers' Right to Organize and Strive for Better Conditions and A New Era

In the giant redwoods of California, lumber workers are arrested for organizing against the lumber trust.

At Eureka and other points loggers find their constitutional rights vitiated by pernicious state laws adopted during war hysteria.

The hydro-electric monopolies of California do not want any labor unions to interfere with their profits or powers. They



want unrestricted control, not only of natural resources, but also of human resources. Dirt movers, construction workers, power house employes—all the laborers who make possible their greatest achievements—all these must be without rights to organize and subject only to monopolistic manipulation.

It is these monopolies, in conjunction with lumber and shipping trusts, and manufacturers' associations, that are back of the infamous criminal syndicalism laws and persecutions of labor unionists in California.

Boycott California. Arouse it to the injustices perpetrated in its fair name.

# Nailing Christ to the Cross Again

Poems by HENRY GEORGE WEISE

But they shouted, saying, Crucify, crueify him. Luke, 23rd Chapter, 21st Verse.

THEY have men behind bars in San Quentin today
For dreaming of justice and truth;
They have men behind bars, shut from freedom away,
For talking and telling the truth.
They have men behind bars who dared look on the stars
And follow them upward and on;
They have men in" blaek holes" for the saving of souls
And voicing the coming of dawn.

They have men—do you hear it?—By God, I say men!
Hemmed in by their stone and their steel.
And sweated in jute shop and beaten and starved
Because they WERE men who dared feel
The woe of their fellows, the pain of their brothers,
The hunger, the misery, the viee,
The robbing of ehildren, the selling of mothers,
—The value, the profit, the priee!

Go blazon it wide for the smuggest to hear,
Go shouting it over the earth,
That men are in prison for daring to sing
The song of the world's rebirth!
Go thunder it forth from the mountain tops,
Go spreading it over the plain,
That Jesus the worker, the toiler, the slave,
Is nailed to a eross again!

# Standing Fast!

Written after paying a visit to Fellow Worker Pat Ryan confined in San Quentin penitentiary, California.

SAN Quentin stands in the shade of the mount
And the bay sits at its feet,
And the white road winds thru a landseape fair
Where fragrant blossoms scent the air
Till it comes to the house of dark despair
And bars and beauty meet.

Ah, Christ, I saw my brother there,
And clad in grey was he,
And the look of the chained was in his eyes
And the something of life that never dies;
He smiled, but I heard the thousand sighs
Thru the lips of misery.

They marched him in and they sat him down
One side of a form from me,
And the warder raised in a seat on high
Ran over us all a vigilant eye,
For there was a hundred as he and I
In that pose of infamy.

We did not talk of his tortured nights
Nor his days of endless work;
We did not speak of his longing pain
To walk as a free man onee again;
He spoke no word, for words are vain,
Of cells of deepest murk.

He only asked how goes the fight
This eonvict clad in grey.
He only said I'm standing fast
For truth and justiee till the last.
Tell all the boys—the hours past,
Guards eame, took him away.

San Quentin sits in the shade of the mount
And the sun shines on the bay,
And the gardens green run along the shore
And the riot of blooms are running o'er,
But they blossom outside the prison door
That shuts the damned away.

Ex-U. S. Senator, R. F. Pettigrew, South Dakota, defines capital as "stolen labor and its only funetion is to steal more labor." He also says, "The remedy is simple and plain—the same remedy you apply when a man breaks into your strong box and takes your money. You capture him and take the stolen property away from him."

Tokio press correspondence plaees loss of life by Japanese earthquake at 300,000. These figures are disputed by non-natives, who believe the offieials have "doetored" them for "reasons of state."

# Hypocritical California

By ARCHIE SINCLAIR

GOLDEN sunshine; high blue sky; rolling hills in the distance; the sea singing its sullen, plaintive song near at hand; drab grey walls and steel-barred doors and windows; the "mill" shop, yard and power house—this is San Quentin. Perched atop the wall, in a small box-like tower stands a guard with a ready rifle poised, as if daring the inmates to attempt escape.

Sultry heat; angry sun in the heavens; smiling landscape, dotted with fruit orchards in the distance; four dreary, dirty grey walls; windows and doors steel-barred and fortress-like—this is Folsom. Guards everywhere, atop the walls only too anxious to begin shooting, steal behind the prisoners to hear if they are plotting escape or breaking some petty rule of the prison.

In this highly civilized country, in this land that boasts that it opens its doors to the oppressed of other countries, in California, a commonwealth of that country, men are sent to prison for daring to organize in a labor union for their mutual protection. And yet that does not quite tell the whole story. The men who have gone to prison for violation of the Criminal Syndicalism law are more than Labor union organizers. They are men with a broad social vision. They want more than just a pittance; a share of what they produce. Their philosophy embraces more than the regulation of wages and hours. They want what the seers and sages of all ages demanded for the workers. They want the full social value of the product of their toil. They believe that evolution is pointing the way to a system of society wherein all those who toil shall receive their just reward.

### The Men of Marysville

This brings us to the court room in Marysville where Judge McDaniels presides. The trial is over and two of the prisoners are found guilty of interfering with the profits of the industrial owners. The other defendant, by some queer twist of fate, is acquitted. The names of the men found guilty are Fred W. Thompson and Ed Dawe, Malcolm Fullerton was not found guilty. And in passing I want to say that the report published in a Marysville paper that Fullerton renounced the organization to escape imprisonment is false. He stoutly maintained that his fellow workers were as innocent as he. Perhaps it was a compromise verdict.

Fred Thompson and Ed. Dawe are agricultural workers, sons of the soil who help to fill the world's bread basket, and often times go hungry themselves. (Oh! this paradoxical, insane system, wherein the ones who supply the world with food are forced to hunger, wherein those who make the clothes are clothed in rags, wherein those who build "palaces fairer than dreams" are outcasts.) They are young men, not yet thirty years of age, brawny men filled with a fierce hatred of injustice, intelligent men who know what is wrong and know, too, the remedy.

Malcolm Fullerton is a sailor, a "jolly tar" with sturdy frame and bronzed cheek. He, too, is a young man, about twenty-four. He has seen the vision and become a proselyte of the new freedom.

### Judge Holds Law Is Bad

Judge McDaniels discourses on the Criminal Syndicalism law. He gives it as his opinion that the law is unconstitutional. He believes that everyone has the right to express their opinion whether by spoken or written word. That the law should be repealed. But in view of the fact that the supreme court has ruled it constitutional he is helpless. The judge said that he did not place any faith in the testimony of the star witnesses for the prosecution—Coutts and Townsend. It was his opinion that Coutts was a criminal and unworthy of belief. Townsend, he said, was many times a deserter from the army and navy and that his last discharge was a dishonorable one despite the wording which was "undesir-

able" on account of his previous desertions from the navy. The judge hoped that the jury disregarded the testimony of these two wretches. He also said that had he been on the jury, he might have voted "Not Guilty."

The judge then entered into a long dissertation upon the principles of the IWW organization. He said that if you admit certain premises, to wit: that "labor is entitled to all it produces" the logic of the adherents of the organization is faultless. But that labor does not produce all wealth, Nature produced that. Capital is not stored up labor power. (He did not say what capital is.) He said that although the IWW were wrong in their contention that labor produces all wealth, that people have the right to be wrong.

Let us see whether Labor produces all wealth or not. We will grant that Nature creates all the raw material, but that is not wealth. All the timber in the world will not make a tooth-pick until labor-power has been applied. The whole smiling prairie land from Alberta to Missouri, from the Rockies to the Alleghenies will not produce one loaf of bread until the farmers and wage workers add their social labor to it. Until the grimy hard-working coal miner delves into the bowels of the earth with his pick and drill and powder no coal is forthcoming. Still the coal would be useless unless the railroader hauled the coal and distributed it. My lady's diamonds are bought with the blood of Kaffirs, and the sweat of the sturdy British miner. Iron ore that has made possible the gigantic industrial system, through the manufacture of steel, cannot be mined by Nature or by the wish of any capitalist; labor power must be applied. The clothes the honorable judge wears are made by the tiny, tired hands of children slaving in the cotton mills of the South, the woollen mills of Massachusetts, and the silk mills of New Jersey. His food passes through countless hands before it is served on his table. Every article that the judge uses has been transformed from raw material to a commodity of utility or art by the "magic touch of labor."

Perhaps the judge has a glimmering of the truth, but he is distressingly ignorant of economics. In this respect his education has been sadly neglected. No economist in the world, living or dead, would dare deny that labor produces all wealth. Adam Smith, Ricardo, Karl Marx, Walker, Roger Babson all admit, willingly or unwillingly, that labor produces all wealth

### The Shame of it All

The judge knows in his heart that he is sentencing innocent men. He knows that the men whom he is sending to San Quentin are intelligent, sincere men, whose hatred for injustice and hypocrisy compelled them to unite with their fellow workers in an effort to change conditions. It is very probable that the judge even knows that the predatory masters are the real criminals. But like Pontius Pilate he hearkens to the voice of those who rule. He has not the moral courage to release these men.

It is a far cry from Adam Smith's "Wealth of Nations," Ricardo's "Iron Law of Wages," and Marx's "Das Kapital" to Castle Despair on the shore of San Francisco Bay; and yet, not so far either. The men in San Quentin and Folsom have studied economics and understand surplus value, they know how wealth is produced, and know that those who produce that wealth are robbed of it by the ones who do no useful work. And knowing this they have gone into the industries and preached their doctrine of Industrial Freedom to the workers in those industries. This is heresy in California. It does not matter that the masters have secured control of the industries through exploitation, intimidation, bribery of state officials. They have got them. That is enough. In California possession is ten points in law. Dare to advocate a change in the economic system, or even ask for better conditions and the prison doors will open to admit you. The Criminal Syndicalism law is an ever present threat to those who want better living conditions for those who do the work of the world.

The smug, hypocritical judges fawn at the feet of Mammon and look with solemn cynicism at the suffering of the wage slaves. Swift and terrible is the punishment meted out to the industrial rebels who dare protest. One would almost think that Goldsmith was a prophet and had in mind this land of witch burners when he wrote:

"When I behold a factious band agree
To call it freedom when themselves are free,
Each wanton judge new penal statutes draw,
Laws grind the poor and rich men rule the law."

The struggle is harsh and stern here in California. The ranks of the men in prison grow larger each month. Ninety-seven of our gallant soldiers of freedom have gone through the portals that lead to the dungeons of the masters. They have gone with the love of freedom in their hearts and songs on their lips Their adherence to the principles of the IWW is sublime, almost fanatical.

If you want to see their spirits unbroken and their faith in their ideals unsullied and unquenched you will fight for their release.

## THE WAY

By COVINGTON HALL

**IF, O toiling millions, you suddenly should cease**
**To labor with your hardened, skillful hands,**
**Folding your arms quietly, deliberately, in peace,**
**Ceasing thus to toil in every land;**
**If you should say to those who rule,**
**"Our best beloved you keep**
**Behind stone walls and locks and iron bars**
**And we shall never work for you**
**While in your dungeons deep**
**They bear for us the marks of prison scars";**
**Then would oppression stand aghast**
**And tyrants quake with fear—**
**Awake! Be conscious, workers, of your power;**
**Organized, united, your demands made strong and clear,**
**The prison doors shall open in that hour.**

**CENTRALIA VICTIMS—Standing: Bert Bland, John Lamb, Britt Smith, and James McInerney. Sitting: O. C. Bland, Ray C. Becker and Eugene Barnett.**

# The Centralia Conspiracy

**How did the Lumber Trust Succeed in convicting men of murder who merely defended their lives and property from a mob? Some of the facts are known; others are coming to light daily.**

By RALPH CHAPLIN

"THERE is lots of justice in the United States—if you have money to pay for it!" This cynical and unadorned remark was hurled in the face of an IWW prisoner in Leavenworth by an admitted and brazenly guilty German spy. It was occasioned by the innocuous statement that, "Some day the IWW cases will receive justice and the country will be ashamed of what it has done." Less than a month afterward the German spy was released unconditionally. He was not even deported. The American workingman to whom the remark was made is still in the tentacles of the law.

It is barely conceivable that money didn't release the spy nor the lack of it keep the wobbly in. But the fact remains that, in a lawsuit, the goddess of Justice is always on the side of the biggest money-bags. A man is arrested, charged with a criminal offense, and taken to court. The far-famed Constitution guarantees him a speedy, fair and impartial trial before a jury of his peers. The profiteers violated the laws flagrantly and under the very nose of the government. Yet very few of them were hailed before "hizzoner." These good citizens misappropriated millions upon millions of the people's money, yet it is safe to say that not a single one of them is in prison at present. Yet workingmen, accused of violation of the war-time laws in 1917 were arrested upon the flimsiest of excuses, held, in some cases, two years and over awaiting trial and then given a speedy, fair and impartial conviction. And thirty-two of them are still behind the bars! Even more significant was the trial of the IWW loggers at Montesano.

Perhaps it is not true that, "justice is a purchasable commodity" and that, "there is one law for the rich and another for the poor." But if these things aren't true then they are lies that are mighty hard to answer. At all events money, in America, is one of the mightiest factors in determining the innocence or guilt of a person accused of crime. Even if justice cannot be purchased at so much per, public opinion can be purchased that way. In the last

analysis the ends of justice are shaped by public opinion, which is only making the purchase at the side door instead of at the front. That is why inconceivably huge sums are spent at election time, that is how the people of this country were stampeded into participation in the late unpleasantness, that is how a considerable number of IWW members found themselves in prison just about that time. Money spent to influence public opinion isn't a direct bribe nor an open purchase. Big business looks upon it as a safe and sane investment; which, no doubt, it is.

### Fear A Factor

At the trial of the intended victims of the Armistice Day mob it is doubtful whether money was used to bribe the jurors. It is still more doubtful whether these jurors would have accepted it. The fact is bribery was not needed. Every juror and every witness was coerced by terror and this terror was paid for out of the swollen coffers of the northwestern lumber barons. And the terror did its work. How would YOU feel, if you were on a jury in a town like Montesano and all your friends and some of your most influential neighbors, their minds inflamed by lurid articles and suggestive editorials in the newspapers, advised you, "give the damned IWW's what's coming to them?" Of course you would want to be fair; but, at the same time, fairly comfortable; and, of course, you would not be particularly anxious to leave your home town—in a hurry. The jury in the Centralia case had a hard job. Doubtless not a single one of them would themselves have acted otherwise than the men they found guilty. Doubtless the majority of them would admit it to you in confidence if you were to ask them. Yet they brought in the verdict that sent six innocent men to prison for from twenty-five to forty years! You can gauge the success of the lumber trust's investment by this one fact.

There were other things purchased besides the deadly publicity that poisoned the minds of the great mass of the citizenry of the northwest. Oh, yes, there were many things bought and paid for by lumber trust money besides the four dollar a day soldiers in uniform who gave color to the courtroom. The machinery of the prosecution ran far smoother than machinery does when it isn't oiled a little! And the Judge, if not subtle was at least stubborn.

### An Invented Legend

The prosecution, in order to cover up the crime of the real culprits, sought to press the absurd charge in court that the loggers had fired into the ranks of peaceful paraders. The evidence was all against them. Thanks to the capitalist papers however, the legend existed. It was a valuable asset to the prosecution—bought and paid for with lumber trust gold. And this legend was used to the limit to produce the passion and prejudice that would assure the unjust conviction. Only two deductions were possible: either the loggers fired in self defense or they fired with the intention of committing wanton murder. It happened that the loggers were members of the IWW. This fact alone, in connection with the gravity of the charge and the atmosphere of hysteria that surrounded the courtroom, made a fair trial impossible. If the "evidence" of the prosecution would not convince, the admitted shooting and the admitted membership in the IWW of the men who did the shooting would be sure to convince. Then there was the terror to be considered, the obvious and determined bias of the Judge and the machinations of the prosecution lawyers who "framed" the trial.

### Framed

Perhaps you think the word "frame" is too strong a word to use in this connection. Perhaps "framing" is not the right word. But if the ends of justice can be thwarted in an American court by powerful interests determined to convict workingmen in spite of evidence and facts, then it is time that someone invented a word to designate the process properly. Whether it is called "framing" or not, the thing smacks of the dark ages. It is medievalism superimposed upon the machinery of justice—the processes that are supposed to determine the guilt or innocence of any of us who ever happen to be charged of committing unsocial acts. It makes the courtroom a place where common men and women are not tried, but found guilty. It makes fair play and justice impossible and places any workingman at the mercy of any group of capitalists who wish to send him to prison. Read the facts and judge for yourself.

The defense admitted that there was shooting on Armistice Day in Centralia, that legionaires were killed and that the union loggers were armed. But the defense claimed—what everyone knew to be a fact—that the loggers had armed themselves as a measure of self-protection against a certain number of men who were bent upon murder and destruction. All things considered, in view of the repeated attacks upon the union hall, there should have been a verdict of "justifiable homicide in self defense." But the trouble is, all things were not considered—in fact, were not permitted to be considered in court. The Judge, subservient to the will of the lumber trust, ruled out, as inadmissable, all evidence that the union hall had been raided in 1918 and that the intention of the leaders of the Armistice Day parade was to raid it again. The Judge sought religiously to keep from the consideration of the jury all evidence of the conspiracy to raid the hall and of the complicity of Warren O. Grimm and others in this conspiracy.

### Jurors' Way of Thinking

After listening to the evidence on both sides, the jury was no doubt in a frame of mind something like this: "For some reason the union loggers fired at the legionaires and killed some of them. The Judge, at the last moment, instructed us to return either a verdict of second degree murder or one of not guilty. We feel that there are lots of facts withheld from us that we would like to know about. The Judge's attitude and the state of public opin-

# Apples

By AG-1351

**A SORTING AND PACKING SHED AT WENATCHEE, WASH.**

WENATCHEE, Washington, a main street town of 6,000, lies snugly in a crook of the Columbia River, one hundred and sixty-five miles east of Seattle. It is important only because of being the center of a large apple district—"the world's famous apple orchards." Wenatchee has 3,500 acres of orchard, along the valleys of the Columbia, Wenatchee and Okanogan Rivers, from which to draw its support. This does not include the Yakima district, which has approximately the same acreage of fruit.

The State Horticulture Department's conservative estimate is that 18,000 cars of apples will be shipped from the Wenatchee district this season. Each car contains 756 bushel boxes.

### Big Migratory Employment

Aside from the local people and farmers' work, at least 4,000 migratory workers are required to help harvest the apple crop. The local chamber of commerce looks after the publicity and advertising required and for several weeks prior to the harvest the daily papers of Spokane, Seattle and other nearby towns carry advertisements asking for workers to come to Wenatchee The result is that when the migratory agricultural workers arrive they find about 6,000 men and women workers thrown into a district that cannot furnish jobs for over 4,000.

This is intended and desired by the employers. The Fruit Growers' Assn., which is nothing more than the Orchard Owners' Union, sets the wages and determines the number of hours in a working day.

### The Auto Tramps

Hiring is done through the government free employment office for the propertyless workers. The auto tramps drive over the district until they find a place to work and then make their camp. With more workers than jobs and only a minority organized, they become easy prey to the organized employers, who have previously held a **business** meeting, at which they set wages and hours.

The 3,000 or so auto tramps were given preference since they had their own camp equipment and could live very cheaply. Many stated that they could live on fifty cents per day for each adult. Many of the strictly migratory workers were forced to leave without going to work. This later proved to be very undesirable to the orchard owners, as there was evidence of an early winter and the auto tramps commenced to leave the valley, when the crop was only half gathered. Whether they went east or west, they were forced to cross a mountain pass, which closed early on account of snow.

All work is done on a ten hour day basis for workers employed by the day. But on piece work the pickers pick from daylight to dark and the packers work from ten to fourteen hours. Even the nailing on of the lids and making of boxes is piece work. Picking is mostly paid for at the rate of five cents per bushel box and this proves a great incentive to the unthinking workers, who set a speed that they themselves cannot even maintain. If a worker picking in good sized apples can earn what is considered a living wage, then the ones picking small fruit will be paid at the same rate. The workers who work at the highest rate of speed, for the long-

WENATCHEE VALLEY ORCHARDS

# Out Where Rolls the Oregon

By FRED PUGH

PICTURE to yourself a steep hillside in the forest, a rock crusher, a quarry, trucks coming and going, hauling rock to build a highway for profit.

It is night. Four or five electric lights, such as they use in a ten-cent flop-house, a bonfire, fifty workers sweating, toiling, to load the cars. The roar of the huge crusher. The tit-a-tat of the air drills, the cries of the "Boss": "Come on with the car."

Suddenly a cry, "Look out," from the darkness. Overhead comes upon us a huge mass of rock. A mad scramble. The cries of a wounded fellow worker. "My God, men, pick me up." A huge boulder has rolled over his legs, crushing them! Another is taken from under a car where he was also crushed. Still another comes out, his arm hanging limp, broken in two places. They are all taken away.

The workers gather in groups. Soon the Boss cries, "Come on, men; bring the rock in."

A few minutes later the shift is finished. They come down to the camp. They gather in groups under the stars. From the office come the cries of injured. The call has been sent to the distant town for the ambulance and a doctor fifty miles away.

Hours pass. Finally the ambulance arrives. It is a dilapidated truck with cots, which have to be fastened together with hay wire. The driver is a volunteer from the garage. No doctor, no nurse. They are loaded in. Back they go through fifty miles of darkness.

In the morning, word comes that the fellow worker with crushed legs is dead, a victim of the system. Murdered that a master class may live in plenty.

At the same time, the powers that be are holding a celebration over the building of a railroad, so the timber barons can market the lumber they have robbed the workers of.

What care they about the worker who was murdered. There are plenty more meek and submissive slaves to take his place.

Fellow Workers, will you never wake up and stop this slaughter? You sweat and toil for a few miserable dollars, while the master lives in luxury on the product of your labor.

Remember, there is no compromise; no half-way point. We must force the master himself to become a producer. Do away with the system that murders the worker for private profit and that places the worker in jail for organizing to better his condition.

Don't for the Love of Pete, be just a card packer! Wake up! You have nothing to lose. Everything to gain.

Yours for the I. W. W. and the California Boycott.

---

est number of hours act as a plumb bob for the owners when they meet to set the rate of pay for all workers employed by them. Many workers object to doing two men's work, when there are men who cannot find jobs, while others find it impossible to turn out a large amount of work on account of their mind's being bothered about union men being in jail for organization activities.

### Pickers' Average

The pickers average about eighty bushel boxes per day, and while apple picking is not considered dangerous work, much of the picking is done from high ladders, and the piece worker, if he is to make a wage, does not have time to adjust his ladder securely to hillsides and irrigation ditches. Then, too, there is the time lost when it rains, and as most of the jobs are of short duration, this necessitates looking for another boss about every week. The campers, after picking ten hours, and sometimes more, go to their "jungle" home and cook their own meals.

The packing is all piece work. The bench packers pack apples that have been sorted into three grades, but have not been sized. These workers are paid about seven cents for each bushel box, as they have to take time to determine to which of the five or six different sizes the apple belongs. They pack an average of eighty boxes in ten hours . Each apple is wrapped separately. The ones who pack apples sized by a machine are paid five cents per bushel box and pack an average of one hundred and ten boxes.

The sorting is all speed-up work. Machine sorting is especially hard. Ten hours of feeding apples into a machine that never stops except an hour at noon! The bench sorters are always given more than they can do. Then they not only have the foreman driving them but the piece work packers are always crying for more apples since they can pack more boxes if the bins are kept full all the time.

Some of the active job delegates for the Agricultural Workers' Industrial Union No. 110 of the I. W. W. are discussing a constructive plan of action for next year. They consider that this is a fertile field for agitation against the piece work system and for an eight hour day. Conditions are bad and they hope to improve them by pointing out these things to the workers alongside of them on the job and combining with them to take better living conditions and shorter hours, the much despised philosophy of misery notwithstanding.

# *A Genius Who Was a Real Friend of Labor*

THE working class lost a great friend when the electrical genius, CHAS. PROTEUS STEINMETZ, died. "An unreplaceable superman," he was ever sympathetic to all labor movements. A great technician, he bridged the chasm between men of his type and common labor by practical co-operation and understanding. All this is especially reflected in his support of the much-hated I. W. W., to whose defense and educational funds he was a liberal contributor, as he was also a subscriber to its press, getting two copies of Industrial Solidarity weekly and having his subscription to Industrial Pioneer paid up six years in advance.

CHARLES PROTEUS STEINMETZ Photo by G. E. Co.

Unlike Robert Owen, Karl Marx and Peter Kropotkin, geniuses who were born in the manufacturing, middle and aristocratic classes, Steinmetz seems to have been of working class origin. A poor immigrant, a refuge from Bismarckian tyranny in Germny, he was in danger of exclusion on his arrival in this country. His rise to pre-eminence, apparently, never caused him to overlook his own proletarian beginnings.

Steinmetz was called "the electrical wizard." His achievements made possible the long distance transmission of power, the protection of transmission lines with lightning arresters, the making of small machines which will do the work of larger and more expensive machines; artificial lightning; and the alternating current which makes possible, in turn, the present gigantic power systems which interchange power and have become a copper network across thousands of square miles.

His powerful influence was felt in practically every branch of the intricate and complex electrical industry.

Steinmetz was a many-sided personality. His friend and co-worker, C. M. Ripley, describes him as "draftsman, electrician, inventor, philosopher, engineer, supertest man, trouble shooter, mathematician, astronomer, naturalist, author, lecturer, after-dinner speaker, entertainer, educator, sociologist, economist, socialist,—and at the same time an optimist, kindly friend to the struggling, inspiration to millions of young men, unassuming, patient, simple in tastes and dress."

Other men, well know in the engineering world, also praise Steinmetz.

Walter N. Polakov, another technician, is, like Steinmetz, a socialist also. He pays what is probably the greatest tribute to the latter in The Nation. Therein, under the title, "The Curse of Work," he says:

Charles P. Steinmetz is dead. The big heart in the ill-shaped body has ceased to pulsate. Work killed the brain. Such is the symbol and the last lesson taught us by this engineering genius of the age.

"Work is a curse! The chief aim of society should be to abolish work." Such was the slogan of the "wizard of Schenectady," as the newspapers called him, and it is indeed the aim of every engineer worthy of the title to reduce the drudgery of work, to relegate it to beasts and machines, and to emancipate man, placing him on the dignified level of a human being.

Steinmetz was known and loved far beyond the boundaries of this country. His name carried with it the implication of more than an "engineer." He was a man—therein lay his greatness. Because he was a man, he could not fail to be a socialist, and latterly he freely contributed of the treasure of his knowledge to building up Russia and its promise. Because he was a man and socialist he worked as an engineer. He often stated that the aim of engineering is to control the forces of nature for the well-being of mankind. What are these "forces of nature"? Are they limited to "non-human nature," or do they embrace as well the forces of "human nature" On this point Steinmetz never wavered.

In interviews that were broadcasted across two continents he sharply defined the goal of success

for the engineer—"to find out how human forces work." "For only then," according to Steinmetz, "can we expect any great human progress." That is why he became such a warm supporter of Korzybski's theory of man; that is why he was so persistent in his condemnation of a form of society which "is organized about property instead of human life."

His engineering work was clearly guided by this lucid vision of man liberated from the drudgery of daily toil. It was the system that considered men as "factory hands" that he indefatigably sought to discredit in the popular mind. It was the ideal of man as time-binder, as a creator of the world of ideas, as a director of the incarnate forces of nature which was the compass of his striving.

Mathematics and electricity were his tools. Mathematics, because it is the only natural method of thinking for mankind. It does not depend on fickle emotions and deceiving senses; no potentate or dictator can legislate the laws of mathematics and nature out of human life. Electricity, because its immaterial field so subtly penetrates our life, because its power is so serviceable to mankind, because it replaces with ease the ponderous mass of old, clumsy mechanical devices requiring so much human toil. With these tools he hoped to see the work-day reduced to four hours and to give to the man in the street and the man in the mill time to become truly human.

Steinmetz's achievements are many and mighty. Merely to enumerate them would be beyond the limit of this brief tribute. It may safely be said that at least one-third of the practical attainments in this branch of engineering within the last twenty years was directly or indirectly due to his researches or to his method of reckoning possibilities.

A beast may leave to his children a will: "Do as I did." A man like Steinmetz gives a command: "Do better."

# The Electrical Wizard: A Recollection

SEVERAL years ago, 1916 I think it was, I had the pleasure of working at Schenectady, under the direction of Dr. Steinmetz on one of the experimental transformers in which he was interested at that time. Steinmetz would come around several times each day to see how the work was progressing.

The clearness with which he could see difficulties likely to be encountered and accordingly change plans, was amazing. There were perhaps thirty changes made while the work was going on and each one was for the better. The experiment when completed was successful and the doctor thanked the men in this manner: "It's mechanically perfect and also electrically perfect. Fine job! Now I know what the next step is. Take her down, boys; it has served its purpose." And with a smiling nod he went back to his blueprints.

Steinmetz was not only a great mathemetician and scientific electrical wizard. He was something few scientists are. He was also a thorough-going mechanic. The ease with which he could tell a man a better mechanical way of doing a certain piece of work was uncanny. I remember in the course of that job several occasions on which he demonstrated the right to be termed a crackerjack mechanic. Higher praise than this is not possible from a "working stiff" like the writer. A kindly man, a capable man and withal a real human being, one who could unbend and meet with cordiality the lowest paid worker in the plant, Steinmetz' death is one of the greatest losses the world has suffered recently.

Card No. 416897.

## EDISON APPROVES

Another electrical expert, Thomas A. Edison, has indorsed the opinion of Dr. Charles P. Steinmetz that electrical power applied to industry will reduce the average workday to four hours some time in the future. Following a luncheon given in his honor, Edison said:

"The time will come when full automatic machinery will be so largely introduced that production will not require a man's working more than four hours a day. Some hold that this may not be a good thing; idleness is rather objectionable to the average man. But from the standpoint of the old man it will be a good thing because then old men need never work. The young can work and support the family."

## READ THE I. W. W. PRESS

Consists of 13 publications in 9 different languages. The latter are English (3), Hungarian, Italian, Bulgarian, Roumanian, Czecko-Slovak, Spanish, Finnish (2), Russian and Croatian.

For sample copies and more information, address The Industrial Workers of the World, 1001 West Madison St., Chicago, Ill. Sent to any part of the globe. Write at once.

The number of children in industry has increased amazingly. The recent survey, by the Children's Bureau, of 30 cities located in the United States, shows an increase of 36.8 per cent in the first half of 1923 over the latter half of 1922.

# *The Fairy Wand of the Ages*

The city beautiful, no less than the products of the soil—all that symbolizes man's ingenuity, his manufactures, arts and sciences—his marvelous flights of fancy all are impossible without the fairy wand of Labor.

Only with Labor's brain and brawn are all things possible of production and realization.

With Labor dumb (or stupid), denied the right or the opportunity of development, civilization, in its best sense, is impossible and the race stagnates.

More fascinating than the novelist's tale or the historian's record, is the recital of Labor's achievements and struggles throughout the ages Sometimes they rise to the crest of the waves of progress; and now they are in the trough of reaction.

But rise they will again, for Labor is growing conscious of its progress; it is beginning to realize now more than ever before, that it produces all wealth and is entitled to all that it produces.

And with the momentum born of that increasing consciousness will it again sweep the seas of capitalism progressward, that is, towards the realization of its own ideals and the ideals of the race, namely, peace, plenty and happiness for all, instead of a few.

# The I.W.W. in Convention Assembled

SINCE the appearance of the last issue of Industrial Pioneer many of the industrial unions of the Industrial Workers of the World have held their annual conventions. Their deliberations covered a wide range of subjects of interest to the working class, and reflected an intelligent determination to grapple with all the problems affecting the industrial union organization of the latter.

International co-operation and the organization of the unorganized, especially in the giant industries of the East, were among the many problems acted on. So also were the defense of class war prisoners, increased dues and initiations, adjustment of dues and initiations to international conditions, and industrial and branch autonomy. Nor was the California boycott forgotten.

The reports printed below are brief condensations of more detailed reports printed in Industrial Solidarity The reader is referred to the latter for more details.

### 110 CONVENTION

At the October Fargo convention of Agricultural Workers' Industrial Union, No. 110, general strikes, greater efficiency in the field, support of halls at Minneapolis and Chicago, and delegate instead of mass conventions, were promoted by the adoption of various motions

Five delegates were elected to the general convention.

**Co-operation with agricultural workers' organizations in other countries, was also voted.**

A sliding scale of initiations and dues, to range from $1 to $5 for initiations, and from 50 cents to $1 for dues, was also favored in the instructions to the general convention's delegates.

**The Fargo convention went on record to concentrate the energies of No. 110 in California during the coming months and to vote in the general convention for a pledge against violence, such pledge to be taken by every new member when joining.**

$2,500 were also voted to the California defense.

### 310 CONVENTION

At the November General Construction Workers' Union, No. 310, convention, held in Chicago, it was decided to place on a referendum ballot various forms of internal organization proposed for the Union, such as branch organization, district form, clearing house, supply stations, etc., for the membership to decide.

Every effort was made to do as much constructive legislation as possible and to push organization.

### 330 CONVENTION

The third annual convention of the Building Construction Workers' Industrial Union No. 330, was held in Chicago, November 5th to 7th inclusive. It was judged the most successful held by 330. A referendum for proposed by-laws and the functioning of the industrial union under its own officials, through the election of its own general secretary-treasurer, was adopted.

Two hundred and fifty dollars was voted to fight the California criminal syndicalism cases.

The 330 convention publicity committee emphasizes the fact that:

**"The membership have not overlooked the situation that confronts us in the Eastern states; they sent resolutions and suggestions on the necessity of a great organizing drive in the large Eastern industries and are calling upon the General Organization to use all efforts possible to get organizers and literature for the manufacturing and especially, in the basic industries; they realize that our coming strength lies where the millions of the workers are suffering from capitalistic exploitation, but do not as yet realize that their might is in an organization such as the IWW."**

Other measures adopted provided for a $1 convention stamp, a daily IWW paper, which was left to the GEB, the adjustment of dues and initiations in foreign countries to meet living conditions there and the pushing of the boycott against California products.

### 440 CONVENTION

An enthusiastic convention of Metal and Machinery Workers' I. U. No. 440, was held at Cleveland, Ohio, November 5 to 8 inclusive. The delegates were greatly elated over the progress made since the Toledo conference. (The details are given in last month's Industrial Pioneer.)

**Two scholarships in the Work People's College at Duluth, Minn., were voted by the convention. The latter also favored the enlargement of the IWW Educational Bureau.**

A resolution, extending greetings to all class-war prisoners, and pledging the union to carry on the work for which our members are incarcerated, was heartily endorsed by the delegates. Also, one was passed, its contents calling for making the boycott of California-made products more effective.

**It was decided that the delegates from 440 to the General Convention should confine themselves chiefly to plans for future organization work among the workers, and do their part in helping to shorten the convention. Internal organization matters were regarded by the delegates as secondary to the great problem of how to "Organize the Unorganized," especially in the great manufacturing centers of the East.**

### 510 CONVENTION

One of the largest Chicago conventions was that of the Marine Transprt Workers' Industrial Union No. 510, held October 29th to November 3rd. Delegates were present from New Orleans, Galveston, Norfolk, Philadelphia, New York (Manhattan and Brooklyn), Buffalo, South Chicago, San Francisco, and Portland.

A GROUP OF MODERN INDUSTRIAL WORKERS, U. S. A.
—From The Nation's Business

# Modern Industrialism

## Lecture Delivered Before Chicago Open Forum

By JUSTUS EBERT

IT may seem presumptious on the part of the lecturer to talk about Modern Industrialism before an open forum conducted by The Industrial Workers of the World. Industrial workers are believed to know all about modern industry. The very fact that a man works in industry is believed to endow him with an almost canny knowledge of modern industrialism and to cause him to reason in terms of that industrialism exclusively, and also to make him consequently the only one fit to assume its management and control.

It is, of course, true that being a part of modern industry causes a man, consciously or unconsciously, to reflect its existence and operation. It is hard to conceive of an Esquimeau, for instance, with the intelligence of a modern industrial worker. It is also true that many workers, because of their interest in industrial affairs, are aware of the nature and importance of modern industrialism.

But as far as the vast armies of workers are concerned, it is safe to say that they know little of the system which absorbs their mental and physical lives, to the exclusion, almost, of everything else.

Most of them live in a bygone age, mentally and ideologically. They have to be told what modern industrialism is, why it is, how it operates, and with what results and prospects it does so.

This fact has been forced on the lecturer's attention by a wide and varied experience in modern industry. He has found, by means of questions and through arguments, that most workers are unaware of their part in the industrial process. This is evident from their individualistic attitude and their refusal to organize. Both this attitude and this refusal are impossible with workmen possessed of a knowledge and a consciousness of the part they play in modern industrialism.

The lecturer believes that some of these men may be here this evening and, so believing, has undertaken to lecture to even an open forum of The Industrial Workers of the World on "Modern Industrialism."

* * *

So much by way of introduction. Now for the subject proper.

It is always best to begin a lecture on a subject with a definition. Let us begin by defining what we mean by modern industrialism.

### What Modern Industrialism Is

Professor Frank McVey in his book, "Modern Industrialism," defines modern industry as the massing of men, machines and capital in the creating of goods. A simpler definition would be "the massing of labor and capital," for men represent labor and machines capital. What is intended in the McVey definition is to put forth the idea of labor (men, women, and children), fixed capital (land, buildings, machines, etc.), and working capital (cash and credit) as the important elements of modern industry.

The basis of modern industrialism is the corporation. This is a legally authorized organization, composed of men who invest their capital in its ventures. Their ownership is certified by certificates, known as stocks and bonds. Because of their investments and their stock and bond possessions these men are variously known as capitalists, stockholders and bond holders. They hold meetings and

elect a board of directors who, in turn, elect the officers such as president, vice-president, secretary, treasurer, etc. These officers, in their turn, are placed in charge of various departments; each and every vice-president, for instance, having charge of a department such as finances, accounting, transportation, sales and so on. Under them are trained technical staffs, who plan, engineer, invent, conduct research, manage and superintend.

### Carrying On

Together with these staffs the officials carry on industry. That is, they purchase land for factory or plant sites, erect buildings, install machinery, secure raw material and employ labor to utilize and convert the whole into commodities for use and exchange. All for the profit of the capitalists, stockholders and bond holders that own the corporation. Such is modern industrialism, viz., an institution operated primarily by many technicians and laborers for the profit of its few owners.

Because the capital invested in modern industry is owned by private individuals called capitalists, and is used by them to exploit labor primarily for their own private profit, modern industry is also known as capitalism. Further, because it gives labor only a part of that which it produces for the capitalists, in the form of wages, and binds the workers through capitalist ownership to the control of the capitalist class, it is also called wage slavery. And thanks to its introduction and extensive use of machinery, driven by power and displacing both labor and skill, modern industry is also called machine production.

Discussing modern industrialism in detail, Dexter S. Kimball, Dean, College of Engineering, Cornell University, declares, in the technological journal "Management and Administration:"

### Many Phases of Modern Industry

"One of the most striking features of modern industry is the increase in the size of factories and other industrial enterprises. A few years ago a plant employing 1000 men was considered a large concern. Today, factories employing 5000 men are common, factories employing 10,000 men are not unusual, and a few plants have employed as many as 25,000 men within the confines of a single yard." (It may be stated, parenthetically, that such a plant exists at Hawthorne, a suburb of Chicago, where the Western Electric Company employs 27,000 men and women "within the confines of a single yard," in the manufacture of telephones and telephone supplies.) "A number of large corporations owning several industrial plants in different localities employ much greater numbers of workers." (The General Electric Co. is an example of this type. It has plants in nine states and 25 cities, with 75,000 employes.) "Statistics show that the number of corporations as compared to privately-owned enterprises and partnerships tends to increase, thus indicating a tendency towards mass financing and constant growth in the size of industrial undertakings.

"There is a general tendency, also, toward specialization of industry. A few years ago it was common practice for manufacturing establishments to produce a very great variety of products. Today the general practice is to confine the activities of an industrial plant to a somewhat restricted range and in many of the newer industries a very limited number of products are produced. There are a number of reasons for these noteworthy tendencies.

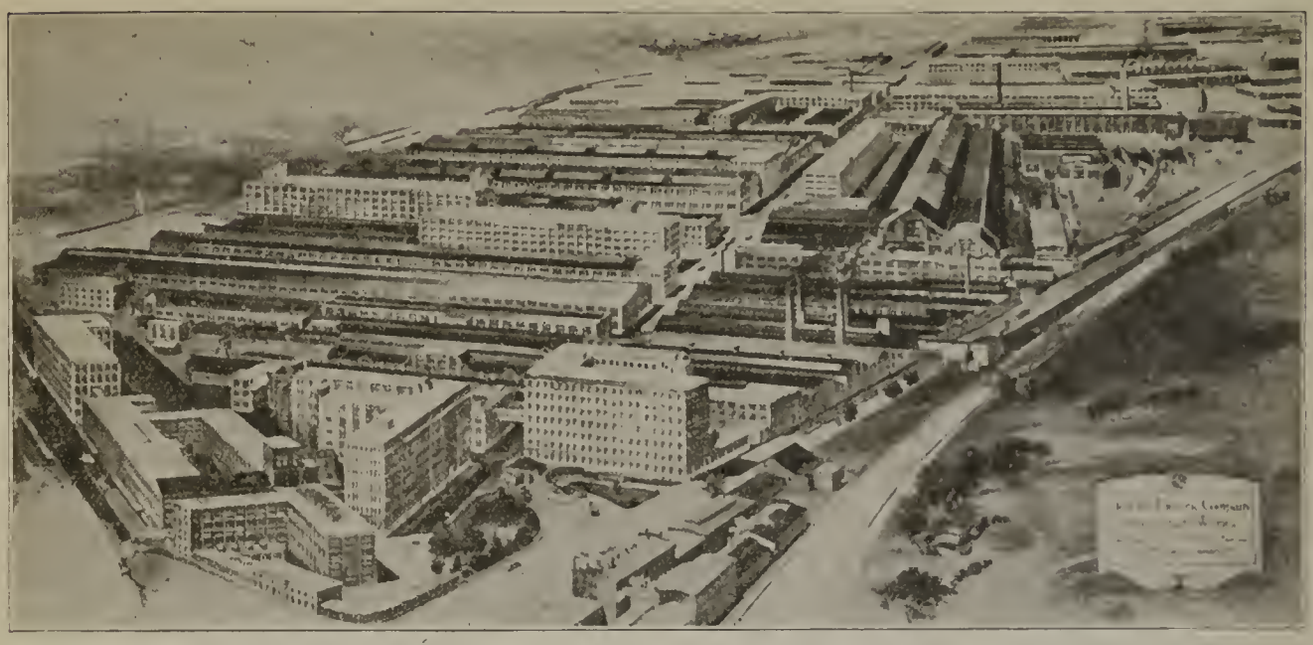
"Industrial enterprises tend to increase in size in one of three ways. The first is by natural growth in size of a single plant or by **aggregation** as it is sometimes called. The second method is by **integration**; that is, by extending the control over the supply of raw materials or the disposal of finished products by acquiring the methods and processess that are concerned in these operations. The third method is by **consolidation**; that is, by combining industrial undertakings of a similar character under one management whether these undertakings are single plants or integrated industries. The economic reason for this tendency toward growth and expansion may be conveniently divided into two groups: First, economies that lead to reduced cost of production; second, economies that give greater competitive power."

There is still one step not mentioned by Dean Kimball in the above. That is called co-ordination, in which all industrial enterprises are formed into a giant combination to exploit the world.

### Illustrations

The growth of single plants by aggregation is noticeable on all sides. Illustrations of integrated plants are to be found in the steel industry. Therein such corporations as the U. S. Steel control ore mines, coal mines, coke ovens, lake steamers, blast furnaces, rolling mills, selling agencies, building construction, export, banking and other companies necessary from the source of raw supplies to the consumer. An example of consolidated industry is the General Motors Company. Therein many types of auto cars, trucks and products are made in many widely divergent and differently located plants, under one corporate ownership and control. Co-ordination is exemplified by such organizations as the American Steel and Iron Institute and the United States Chamber of Commeree. The first is an example of co-ordination within an industry, as it is representative of the combined interests of all the steel and iron corporations. The second unites all of the many varied employers' industrial, commercial and banking corporations and associations into one gigantic whole. Corporations are also made one by means of interlocking directors, of which more later.

There is much discussion as to which is the most essential or basic industry. Some cry out "Agriculture is the basis of prosperity. It feeds the world and without food man is nothing." Others shout, "Steel is the backbone of modern society. Without steel there would be no autos, skyscrapers, machinery, tools, locomotives, railroads, bridges



—From "Life In A Manufacturing Plant"

**A BIT OF MODERN INDUSTRIALISM**
**General Electric Company Works at Schenectady, N. Y.**
**21,000 Employees—Scene of Steinmetz's Achievements.**

and aeroplanes. Even agriculture, in a modern sense, is impossible without steel. Steel rules the world." Then we are told that finance or credit is the prime factor and that he who controls credit controls the life blood of the nations.

We also hear such arguments as this: "Oil is the basic industry. Oil controls civilization, and the nation that dominates oil will dominate the world." Finally, we hear it argued: "Textilers are most necessary. Without them to clothe him, man would freeze to death. Even the blanket stiff would be impossible. For without blankets there could be no blanket stiffs."

### "An Interwoven Fabric"

On the subject of the "basic" industry, Charles Fitzhugh Talman, writing on "The Fabric of the Industries" in "The Nation's Business" for October has this to say:

"The industrial world of today is commonly regarded as a mosaic of distinct though contiguous industries. This conception, though useful for statistical and other purposes, is, to say the least, inadequate. If the industries constitute a mosaic they also constitute an interwoven fabric. The strands of one run far and wide through the others, so that it is impossible to say where one begins and the other ends. Because the industries thus interpenetrate one another, each depends on the other for its prosperity, if not for its very existence."

We might express this same idea more plainly by saying:

In modern industry, raw material is taken from the earth, passed through smelters, mills and factories where it is changed into articles of sale, and then distributed to domestic and foreign markets by way of selling agencies, railroads and steamships. The whole transaction is made possible and facilitated by means of money and credit—by banks and banking. So that modern industry is a working together of agriculture, mining, lumbering, manufacturing, transportation, communication, commerce and finance. Without the constant co-operation of millions of laborers employed in these various sub-divisions there can be no industry in the modern sense.

### Industrial Internationalism

The interwoven and interdependent nature of modern industrialism is further shown in its international ramifications. Raw materials and manufactured articles are shipped from and to all parts of the world. The Standard Oil Co., International Harvester Co., Ford Auto Co., Bethlehem Steel Co., and other big corporations have connections abroad. The Ford Co., for instance, has plants and subsidiary corporations in no less than seven different countries. The Bethlehem Steel Co. owns immense iron ore deposits in Chile.

The international character of modern industrialism was most strikingly shown in the beginning of the world war. In its September, 1914, letter, the National City Bank of New York, the largest in this country and a Standard Oil institution described the havoc caused in these truly impressive words:

"The whole world has tended to become one community with a network of interests and state of interdependence similar to that which exists in a single country. A few weeks ago men were buying and selling, lending and borrowing, contracting and planning, with little attention to national boundaries when suddenly the whole co-operative system was disrupted. Raw materials were cut off from factories accustomed to use them, factories from markets, food supplies from consumers, and millions of men were summoned from mutual helpful indus-

tries to face each other as mortal foes. An outburst of primitive passion in a corner of Europe wrecked the painfully developed structure of modern civilization.

This network of interests the world over is now greater than ever before. American capitalism is invading Europe, via investments, South America via trade and commerce, and Asia Minor via oil concessions.

### Industry an Evolution

All this is a result of evolution—of a slow growth, requiring centuries.

Previous to modern industry, there was no great massing of labor and capital for the profit of capitalists; nor was there extensive machinery. The individual owner and worker, who took all the products, most largely prevailed, and hand tools and skill were the general rule. Gradually firms, copartnerships, corporations and trusts evolved, each absorbing all that labor produced, and consolidating the industrial types that preceded it. All this was due to the invention and introduction of machines that displaced labor and skill, and required more capital than individuals possessed or cared to risk! Hence arose also the need of massing the small capitals of many into large capital. Where at first merchants had supplied the needed capital, now stocks and stock exchanges are required, assisted by banks, trust companies and such fiduciary institutions as the life insurance companies, all dominated by banking groups controlled by a few giant capitalists and financiers, like Morgan and Rockefeller.

This gives rise to the greatest phase of modern industrialism, namely, the financial phase. In this phase, modern industrialism passes under the control of financiers. Louis Brandeis, now U. S. Supreme Court Justice, in his book, "Other People's Money, and How the Banks Use It," shows how finance is concentrated and the total credit of the country is exploited by allied groups of private bankers headed by Morgan-Rockefeller. Woodrow Wilson, when Governor, declared in 1911, "A great industrial nation is controlled by its system of credit."

### The Money Trust

Brandeis quotes the Pujo Committee report on the Money Trust. This committe found that the Morgan-Rockefeller allied groups of private bankers held:

"In all, 341 directorships in 112 corporations, having aggregate resources or capitalizations of $22,245,000,000.

(This includes all of the strategic capital of the country, namely, the railroads, public utilities, "basic" industries, etc.)

"Twenty-two billion dollars," continues Brandeis, "is a large sum—so large that we have difficulty in grasping its significance. The mind realizes size only through comparisons. With what can we compare twenty-two billions of dollars? Twenty-two billions of dollars is more than three times the assessed value of all property, real and personal, in all New England. It is nearly three times the assessed value of all the real estate in the city of New York. It is more than twice the assessed value of all the property in the thirteen southern states. It is more than the assessed value of all the property in the twenty-two states, North and South, lying west of the Mississippi."

These words were written in 1914. Since then the Federal Reserve Bank has been established. But it does not change the actual conditions.. The Money Trust is now more powerful than ever before. Thanks to the war, which caused this country to become a world-financial factor, the American money trust reaches 'round the globe. In co-operation with other national financial groups, it is a factor in Mexico, Central and South America, Middle Europe, Russia and Asia. Thus modern industrialism, in its last analysis, means the dominance and determination of world affairs by organized combinations of finance and financiers.

### Evils of Industrialism

Let us see what this means—that is, what are its results to humanity.

The results, briefly, are two-fold, namely, the creation of class war and international war in human society.

As already indicated in the above quotations, corporations are composed of armies of workers on one hand and a few capitalist owners on the other. Ford, for instance, employs 120,000 persons in his various enterprises which he and his son own absolutely. The U. S. Steel Corporation has 250,000 employees, with a few big bond and stockholders, like the Rockefellers, Fricks, Carnegies, etc., in control. Twenty-five men control 82 per cent of the steam railroad systems operating 211,280 miles and employing the vast majority of the two million railroad employees in this country.

Between these two classes of employees and employers an irrepressible contest is being waged for control and supremacy. The employees want more wages, less hours, better conditions, more control and final emancipation, with themselves as the owners and rulers. The employers want more profits, greater investments, more luxury and sumptuous living, greater economic power and world dominance. And so they lock horns in great strikes, like those of the textile, railroad and mine workers last year, when 1,000,000 men struck and the nation was nearer revolution than at any time in its existence. Unless all tendencies fail these strikes will grow more extensive in the future; or else their place will be taken by wide-spread revolts on the part of the unorganized. The result, in either event, will be a paralysis of society and the precipitation of civil war, with its many-sided horrors.

### World War

But still more threatening than class war is international war; the late world war should leave no doubt of that. Then civil liberties were suppressed and the militarization of the nation took place. And war was engaged in, to the destruction of tens of

(Continued on Page 40)

THE MODERN FLOWER INDUSTRY

# The Boss Florists' Industrial Union

By AARON WEBER

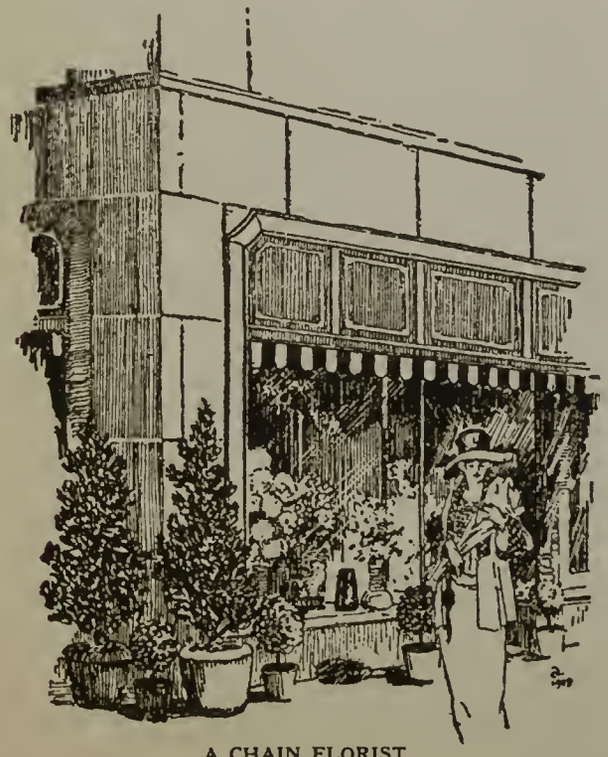
IN Hartford, Connecticut, on August 21, 1923, a meeting was held of the representatives of the Boss Florists' Industrial Union, namely, "The Society of American Florists and Ornamental Horticulturists." To read the list of its members, is to find therein the majority of greenhouse men, wholesalers, retailers, nurserymen, college professors and even their students.

Slowly many colleges are offering courses in floriculture and kindred lines and their graduates are the future owners or superintendents.

Before I complete this article I shall give details of how this union is built up and finally becomes, in turn, a part of the dictator of dictators, the United States Chamber of Commerce.

I believe most all of the florists connected with this organization would very much resent having the organization called a union, but that is all it is.

The slogan, "Say it with flowers," advertised so extensively, has stimulated the buying of flowers to such an extent, that the industry is now doing business to the sum of over a billion dollars and is growing by leaps and bounds.



A CHAIN FLORIST

The florist industry is young compared with many although flowers have been grown since man has become civilized.

The old greenhouse; narrow, low, dark,— a one-man affair—has almost gone. Today we have extensive ranges, such as Pohleman Brothers of Morton Grove, Ill., which employs over 500 men and women.

Florists' chain shops are also rapidly springing up; Breitmeyer of Detroit has almost a dozen in that city alone.

### How Organized Locally

Let me now begin and tell how this Society of American Florists and Ornamental Horticulturists gets its members from all parts of the country. It is composed of units, but all so interwoven that they present a solid front economically.

First we have city organizations, know as clubs. These members are mostly recruited from the retail florists, some growers among them. The Chicago Florist Club, The Cleveland Florist Club, yes, nearly every city has its florist clubs.

Second we have state organizations composed of growers and retailers together, which develop local or state trade. Illinois Florist Association, Ohio Florist Association, in fact, most all states have one.

The city clubs take care of city trade and the state associations do all they can to further state interests in floral production and selling.

Next we have societies that pay attention to some particular flower and develop the interest in its cultivation and sales. Members of these organizations may also through their firm be members of some state group. The Chrysanthemum Society; the Rose Society; the Carnation Society and etc., are paying much attention to special shows of their particular flower.

Then we have a national group known as the Florist Delivery Association. This group does all it can to create more business by having flowers ordered by telegraph.

A purchaser in one state may have flowers delivered to whomever he wishes to receive them—

the same day—though the receiver may be hundreds of miles away in another state.

Now we come to the Florist Hail Association, which shows how deeply they regard the saying, "An injury to one is the concern of all."

This is their effort to protect members from economic losses from the elements. Hail on a greenhouse is always to be feared in time of short and snappy storms, and a florist is soon put out of business when the glass in his greenhouse is broken by the wholesale.

**National Organization**

To continue: we have the National Nurserymen's Association. These are the men who deal in ornamental shrubs and trees and work in perfect harmony with the mother association. Many large greenhouse concerns also have nurseries in connection.

Then we come to the outside men known as the National Association of Gardeners. These are the men who attend to large estates and do landscape gardening.

Do we stop here, no—because we come to one of the most influential of all—the college professors and in some cases their students. Botanists, plant pathologists, entomologists, plant physiologists and those who do experimental work, such as testing fertilizers, improving cultural details and the like.

No convention is complete unless some of these professors are there to help the bosses out of their difficulties or to tell them how they can make a plant produce one more flower, which is "pure velvet," as I heard one of these men say. The students are being continually coached to fit in so that they may become future bosses.

Some Industrial Union—eh?! And they are getting results. They don't wait for the ballot to give them what they want, but their committees get busy and go down to Washington or whatever legislature they want to get at and sit on the legislature's heels.

**Politically Strong**

Right now they are going strong at the agriculture board in Washington, which has placed an embargo on many foreign plants.

Some of these plants can be grown better across the water on account of better soil and atmospheric conditions, but the main reason for sitting on the tail of the agriculture board is to let these plants continue to come in, because labor is so much cheaper and so stock can be bought so much cheaper.

The agriculture board's reason for the embargo is to keep out insects and plant diseases.

Greenhouses are users of hundreds of tons of coal. So we have them keenly interested in the coal situation. Not only do they hound the coal commission, but work effectively through the United States Chamber of Commerce for this end.

And in reference to labor—the United States Chamber of Commerce is the one big union for the open shop, and how florists do love the open shop! Florists pay about the lowest wages of any industry. (Talking about the United States Chamber of Commerce—at present they are building their Washington, D. C., headquarters on the Open Shop plan.)

In conclusion: anyone who has read the preceding will surely see the advantage of an economic organization to remedy the bulk of our social evils, in preference to securing action by the ballot.

Anyone who will take the trouble to read trade papers will soon catch on to how the employers are rapidly approaching a perfect One Big Union, not only nationally—but internationally.

Wherever we turn, we note the importance of economic action.

**Material Things Main Cause**

It is the material things that determine most of our lives and go to make up our environment.

It is unfortunate that the great legion of workers have so little leisure to read and study so that they may understand much of what is going on about them. If they could devote more time to these things, Industrial Democracy would arrive much sooner, and with it one would see the abolition of the wage slave.

The Industrial Workers of the World are aiming for just this, with the aid of industrial unions and the One Big Union of all workers.

# The Strikebreaker

(West Virginia Federationist)

WHENEVER the bitter fight is on
For life against human greed;
When the workers rally ere hope is gone
Which nerves for the valiant deed.

When the price is paid for in silent pain,
In want and nameless dread.
And victory near, then "scabs" sneak in
Like ghouls that rob the dead.

They pluck from a vine they did not prune,
They reap where they have not sown,
With a canting look and a craven heart,
And a soul that is not their own.

In a darker age when the world was young
This jackal human grew,
Skulked in the rear while the fight was on,
And preyed on the valiant few.

They snatched the bone from the woman's hand
And snarled at a hungered child,
Till the heroes were driven from the land,
And earth's garden became a wild.

And ever and ever, where human greed
Holds the human race in thrall,
The fight will be fought by the noble few
And the victory shared by all.

Then falter not while the fight is on;
There are only your fears to dread;
Though cowards skulk and "scabs" sneak in,
Like ghouls that rob the dead.

# The Wreck of the Silk Special

As told by
JAMES LANCE

"THERE you are Tommy," said the third trick dispatcher as he handed the flimsies over to Tommy Moore, better known on the intermountain division of the Transcontinental, as "Shrimp," on account of his diminutive appearance. "You've got rights over everything. Number Four will wait at Red Tower for you, and she's the only thing moving on the division. This damned blizzard's got all the freights frozen up and they're lying on the sidings all the way to Springdale. You've got nothing to worry about except the storm. Beat it!"

"That's enough," said Tommy as he pulled his scotch cap over his ears and picked up his lantern. "This is sure hell; early, too; we don't usually get this kind of a snorter till December," and with that he left the office in a blinding swirl of snow, which had filled the room in the short moment the door had been open. Ten feet from the door he had vanished in the white curtain which the frost king had flung over the scene.

Si Connelly, the dispatcher, reached for his "Bull" and brown papers, cocked his feet on the desk and remarked to the call-boy, "Better load that stove up again, kid, it's getting chilly even in here. I'm sure glad I don't have to take that string of silk down the canyon tonight."

"Me, too," said the kid, "nix on outdoors this weather."

The weather merited all the condemnation the sorely tried rails were heaping upon it.

A sleety rain had fallen during the afternoon, freezing as it fell, and with the coming of darkness had turned to snow. The wind, first merely a querulous undertone, had risen until it now howled in a crescendo of demoniac fury which lashed and tore at everything and shrieked and moaned thru the pines and spruces surrounding the little mountain division point. Down thru the train yard it rattled and shook the long string of box cars which should have gone west over the summit on "first 55" but which had been marooned there because all the wires were down west of Portola.

The silk special had managed to get thru just before the train wire went dead; but now no one could tell how the other trains were faring or what hardships their unfortunate crews were enduring. It was, as Tommy had remarked, "a hell of a night."

Battling his way down the platform to where the 1425 wheezed and panted at the head of the silk special, Tommy was forced to his knees twice and was nearly exhausted when he finally hoisted himself into the gangway, pulled the storm curtains aside and handed the orders to "Big Jeff" Carter, the eagle eye, famous for his genial smile, quick wit and chilled steel nerves.

"Fine night for a ramble, Jeff."

"Yeh, only I don't like the kind of nights you do," drawled Jeff. "If this is a fine night, I'm a Chinaman. Oh, well, you know the mills in the east are waiting for this silk to make fine dresses for the rich women."

Scanning his orders, he said, "Number Four at Red Tower, eh? All right, let's get moving."

Moore climbed down and fought his way back to the caboose which was attached to the ten bag-

gage cars which made up the special, and as the air cleared for a moment, Jeff could see the flicker of the lantern as he highballed him.

Toot! Toot! came the roar from the whistle, scarcely audible above the shriek of the storm and as Jeff opened the throttle the mighty machine strained for a moment and then slowly moved ahead on its journey into the darkness with its precious freight.

Down thru the yard, gaining momentum as the moving side-rods freed themselves from the icy incrustation which had gathered on them during the wait for orders, pausing a moment as Jeff made a test application of the air, then faster again until as the tower at the top of the yard flashed past them they were wheeling thirty, and, as the switch points of the last siding clicked beneath the drivers Jeff 'hooked her up' and shouted across to the tallow, "We're on our way now! Hope this outfit holds together."

"You and me, both," answered the tallow. "Every time I leave here I'm afraid I'll never get back. You know this equipment is all on the pig since the strike. I wish the company would make a settlement with the shopmen."

Behind this feeling of apprehension was a real reason. Since the start of the shop-strike in July the locomotives and cars of the Transcontinental had been deteriorating daily until it was positively unsafe to operate them. The men on other lines had gone back; slick representatives of the companies had succeeded in getting 'company unions' started and strenuous efforts were being made to return to normal operating conditions.

The Transcontinental, however, had not succeeded in fooling its men and the strike was still on. Even the most optimistic of the shopmen realized that their cause was lost, but as a large mining company had furnished jobs for most of the strikers, they cared little. It was just the same to them whether the Transcontinental got thru the winter or not.

Meanwhile the company had made frantic efforts to secure men to take the places of the strikers but without much success. The isolated location of Portola, the lack of conveniences in the little mountain town, together with the dread of the terrible winter months had militated against them.

Daily there were disastrous wrecks caused by defective equipment, daily the strings of 'bad order' cars grew longer, daily more locomotives were forced out of service and daily the fear of 'piling up' on account of defective equipment grew in the hearts of the men who had to take the strings of rattle-trap cars down steep gradients and across high bridges thru the gloomy canyon of the Plume Tail river. Small wonder the fireman on the silk special felt nervous.

On the trip up the canyon a pony truck hanger on the engine had come down and only the greatest of luck coupled with "Big Jeff's" iron nerve had kept them from death.

Hurried repairs had been made on the 1425 in Portola that afternoon but the increasing fury of the storm had lowered the temperature of the shop to such a degree that the "scalies" entrusted with the job had decided that a seat by a red-hot stove beat working and their task had been done very poorly. Under normal weather conditions they might have set the bolts tightly enough to insure their staying but it was too cold for scabs to work, particularly when they were not afraid of discharge.

Then came the word over the wire that the silk special had left Palermo, the division point to the westward and the call-boy awoke Big Jeff and his fireman and they proceeded, after fortifying themselves with a big steak apiece, to take the 1425 out of the roundhouse, and, after a few minutes wait, coupled her onto the silk train.

Jeff had reported the truck hanger on his arrival and when the roundhouse foreman assured him it was O. K. had not given it more than a perfunctory inspection. After they were coupled on he had gone down to have a last look at it, but the snow was blowing so fiercely he had given it up as a bad job. "I'm always lucky," he had said to himself. Later he had mentioned to the fireman his inability to make a thorough inspection and that had added to the latter's gloom.

His heart was filled with a great heaviness. Everything seemed against them. The car knocker, one of the few left who were still working, had told him that the baggage cars were in a terrible shape and the voice of the storm as it howled outside the cab windows made him think that even nature itself was enraged at their actions.

Well he knew, that he or no other fireman or engineer had any business riding on such mills or pulling such trains as those of the Transcontinental. He knew that, he felt it as a matter of personal safety.

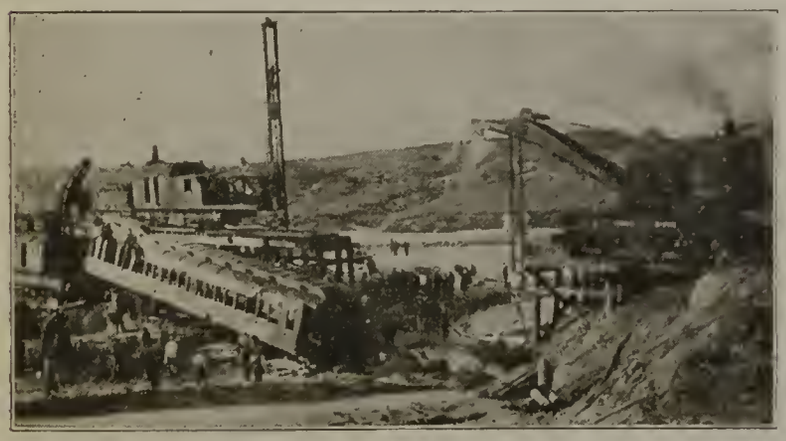
Behind this personal feeling was another one, one that had been growing of late, not only in him but in most of the other men in the train and engine service. He felt, as did they, that he was responsible for the equipment's dangerous condition. He felt that had the road men refused at the start of the strike to operate the trains the company would have been quickly forced to grant the shopmen's demands and that he would not have been going down the canyon on such a terrible night on an engine that should be in the back-shop, with a train that belonged on the rip-track.

"Still," he soliloquized, "everything seems to be holding together all right. Maybe we'll make it, tho it would serve us right if we did have bad luck. That travelling organizer for the wobblies who came up with us last week was right. An injury to one working man must hurt all other workers. Funny I never thought of that before. That solidarity stuff he was telling us about seems to be the right dope. We should all stick together. The companies are smarter than we are, they don't fight amongst themselves; the S. P. and the Transcontinental have made a traffic agreement; they're

Railroad men blame lack of inspection and undue haste in making schedules for such accidents. It is claimed train went through three feet of water before crashing through undermined bridge into swollen river.

**Disastrous Wash-Out at Casper, Wyoming**

Among the many victims were Carl Linn, Portland, Oregon and J. R. Causey, Taft, Calif., I. W. W. members.



It is alleged that railroad officials and police later impressed migratory workers into wrecking crew. It was either work at low wages offered or go to jail. Many went to jail rather than be enslaved in such a manner.

not fighting for this business the way people said they would when this road was built. I guess we're fools alright."

Mile after mile flew along beneath the iron feet of the 1425 as the fireman sat and dreamed, for on the trip down the canyon little attention to the fire was necessary.

Suddenly he sat bolt upright. What was that noise he heard for a moment? Sounded like something dragging—"Damn such a blizzard! A man couldn't be sure what he heard on a night like this. Wouldn't do to say anything to Jeff; he'd think I had a case of nerves. Can't seem to hear it now, oh, well, I guess it was only the wind anyway."

He pulled out his watch and figured that a very few minutes would bring them to Red Tower where Number Four, the crack limited, was waiting for them and even as he returned it to his pocket Jeff shut her off and opening the window for a moment stared ahead into the driving storm.

"Pretty near to Red Tower," he shouted and at that moment the finger of the electric headlight picked up the carhouse at the west end of the siding at Red Tower.

"There she is!" shouted the fireman and Big Jeff, nodding, reached up again and opened the throttle. A moment later they flashed by the engine of the limited and the fireman drew a breath of relief but it was choked in his throat as the 1425 lurched wildly sideways and then rearing up, ripped through the sides of the Pullmans of the luckless train as though they were made of paper. "That pony truck hanger!" was his instant thought and

(Continued on page thirty-six)

# Profits Versus Peggy

By EVA B. PILLSBURY

PEGGY saw the young foreman coming, and lifted an anxious hand to her hair, patting the black marcelled waves into place. Such a slight act was that, but it changed everything.

In the bookbinding plant where Peggy worked, there were no guards on the paper cutters. Just a steel table with a heavy knife that sheared through a thousand sheets when the operator pressed a treadle. Peggy's heart was beating rather quickly as she saw the young foreman turning her way, and when her hand went back to its work it got where the paper should have been. So, when the knife came down, the stump of her hand was on one side of the blade and her fingers were on the other.

Peggy went down in a heap. The fingers—all four—were picked up gingerly and thrown into the furnace; the blood was wiped from the machine and, after an unprofitable delay of twenty minutes or more, the work went on. Some other girl got Peggy's job.

Peggy's hospital expenses for two weeks were magnanimously paid by the bookbinding company. This was really, you understand, quite an act of charity, as the girl was injured through her own carelessness. She had been warned of the danger, The concern had to practice economy in order to make a profit and one of its economies was the omission of guards on the paper cutters. Such things cost money.

Next day at the hospital Peggy signed a paper, with her left hand,—the hand very kindly guided by a man sent over from the book bindery.

She didn't read the paper and couldn't have understood it had she done so. The young foreman sent her some flowers and a box of candy. And when she got home he ran in to visit her one evening.

When Peggy saw him, all the pain left that jagged stump of a hand and she felt that life was good after all. **He** had not deserted her.

You see, the young foreman had been very sweet on Peggy. There had been an indefinite—very indefinite on his part—idea of marriage, and on the strength of this Peggy had allowed him special privileges not supposed to be granted prior to the marriage ceremony.

Peggy felt somehow that it would be all right; he had told her it would.

When an hour later he had gone, Peggy slipped weakly down on the couch and lay there, face hidden, trying to think.

Everything was going round and round. Just one thing stood up clear. He was **not** going to marry her. His reasons ran something like this—"Poor man couldn't afford to marry a girl with one hand. Anyway, had never intended . . . ., had to help folks at home. When he married it would be to some girl of his own religious faith," and so on and so on.

From this hour Peggy did not seem to care so much what happened to her. She couldn't get work. No one wanted a girl with a useless stump where a good right hand should be.

Her parents didn't hesitate to tell her that she was a burden.

Her cheap beauty began to fade. She could no longer have her hair marcelled; couldn't even afford a little rouge to re-enliven the paling lips and cheeks. Tough luck for Peggy.

Worse even than this, Peggy began suffering awful stabbing pains around the severed nerves where the paper cutter had done its work,—agonizing messages went flying to a bewildered and tormented little brain.

Somebody told Peggy that a shot in her arm would ease the pain, and another "somebody," more despicable, helped Peggy to a needle and some dope.

It did what they said it would do. It blotted out the pain, and in its place sent brilliant fantastic pictures through Peggy's sick mind; it gave her hours of semi-conscious drifting on rose-colored clouds, amid soft perfumes and languorous music, and then slowly back to trembling limbs and low hysteric laughter. After that the horrible stabbing pains. So for two years.

Gradually something was happening to Peggy's soul. Perhaps the dope ate it away. She has no beauty left now. The black hair that the young foreman admired is scanty and lustreless. The young body with its voluptuous curves is now thin and scrawny.

That arm that was meant to encircle some lover's neck—that was intended to curl around some baby's soft little body—will never fulfill its mission now. Those fingers became calcined bones, then ashes, in the furnace of the bookbindery company, long ago.

You might meet Peggy on the street any time. Nobody knows where she hangs out by day nor where she sleeps at night. Her parents have washed their hands of her,—thrown her out, disowned her. At home her name is not even mentioned.

Occasionally it appears on the police court blotter. Then Peggy gets "30 days for treatment." At such times she is fed on milk and other nourishing things, and her wasted body is built up a bit, and then she goes back to the dope again.

The bookbindery is showing good profits, because it is very careful about the "overhead" and practices rigid economy in all its departments.

It still finds girls a-plenty who don't mind working around an unguarded paper cutter.

There has to be a certain percentage of accidents anyhow. You can't have progress and machine civilization without some casualties. The wheels must turn and the knives must come down.

# The Revolution In the Air

By C. M. RIPLEY, E. E.

The Harbor of Hamburg, Germany, from Airplane

I HAVE just come from a seven weeks' trip of Europe, which included France, Switzerland, Germany, Holland and England. I travelled over 5,000 miles on the ocean, 2,000 miles in airplanes and less than 1,000 miles by railroad train.

Europe is far ahead of us in the regular airplane service for passengers, freight, newspapers, baggage and mail. Every day thousands of passengers with their baggage fly between scores of European cities at a speed of 80 to 105 miles an hour. The all-metal German airplanes with aluminum wings and bodies are the safest. The Dutch airplanes are the fastest and the English machines are the largest that I travelled in. One of the greatest novelties was the flight over the Alp Mountains between Geneva and Zurich, and I have many photographs taken from airplanes not only showing the Alp Mountains but also fields, villages and cities. In making the flight from Berlin to London it took nine hours. We stopped at Hamburg and Amsterdam and crossed one-half of Germany, all of Holland, every foot of the Belgian coast, where we could see the bathers at Ostend, Belgium and other famous resorts, on down the French coast to Calais and then across the English channel in twelve minutes, and forty minutes later landed at the Croiden airplane field on the outskirts of London.

Airplane travel in Europe is safe, fast, popular and cheap. It only costs $40 from Berlin to London in the planes of the Deutscher Aerolloyd company. To ride an equal distance on the twentieth century limited in America would cost about as much as to fly from London to Berlin. In England they have taxiplanes in addition to the taxicabs. The taxiplane will take you anywhere for two shillings a mile. A shilling is about twenty cents, so forty cents a mile for traveling in the air is cheaper than many taxicabs in America. Although I never rode in an airplane before taking the trips over the Alps, my European experience has converted me into an enthusiastic air passenger. It is the only way to travel long distances.

A map of Europe would show regular airplane routes reaching from Persia to Denmark, from Moscow and St. Petersburg to Berlin and London and from Austria and Italy into Paris, Holland and Belgium. Among the lines are the Trans-Europa Union, the Junker lines, the KLM or Holland national airway and the Daimler airways of England, as well as the Hanly Paige between London and Paris. The Fokker planes, made in Holland, and operated by the KLM, have advertised that they have travelled over a million miles with passengers and freight without a single accident, and the other concerns listed have likewise compiled information as to the tons of freight, the thousands of passengers, the years of service and the distance covered without accidents. America should get busy in running regular aeroplane service between our principal cities. I would like to see Schenectady begin at once the construction of the finest airplane field in the east, brilliantly illuminated at night by the General Electric lighting experts, and so put Schenectady on the map as an airplane center for the New York to Montreal route, the Boston, Buffalo, Chicago route as well as the New York, Cleveland, Detroit, Chicago, San Francisco route.

FRENCH AIRPLANE

# A Farmer Sees America First

WALTER Conlin, writing in "The Llano Colonist" on "Why Radicalism Grows Among the Farmers," give the impressions of a farmer who ventured aboard a flivver out of the South into the North. As a result, he saw at work in the latter section all the remedies for farmer's troubles that are advocated in the former one. Finally, he's impressed with the essential sameness of conditions in both territories.

He finds, for instance, that the farmers of Ohio have not got the "one crop system" and yet "diversified farming" leaves them "in just as bad a condition as the farmers of Dixie." Says he, "the best and most scientific farmers tilling high-priced land, in many instances were unable to sell their crops for enough to cover the cost of production."

"Good roads," another Southern remedy, is regarded by the farmers of Ohio and Indiana "as the climax of all their woes, making the taxes unbearable"; as "many old, substantial farmers are losing their farms."

Conlin writes further, referring to conditions in Ohio:—

**Corporation Farming**

"Thousands of acres of rich farming land near Kenton have drifted into the hands of a great corporation. All farm work is done by hired help under the direction of superintendents. Onions are principally grown, and the company markets its own crops and gets the best possible price. Dotted all along the roads are the shacks in which the hired hands exist. These shacks are not one bit better than the cabins of the negro farm tenants in Dixie. Now and then you see a fine house with beautiful surroundings; this is the superintendent's home. Then you see a long string of shacks again."

Turning from the farms, Conlin investigated the industrial towns. Says he:—

**New Labor Supply**

"Work seems to have been pretty plentiful in the industrial cities for some time, and good roads and Ford cars have made it possible for farmers and men from small country towns to drive fifteen or twenty miles to the cities to work in the factories. These lads have become strike-breakers in many instances, and it offers a new field from which the employers can draw men in times of labor troubles.

"The last few weeks of my stay, Sept. 15 to 30, many men were being laid off in the industrial towns. It looks as if conditions were going to be bad this winter. So much depends on the automobile industry, and if the farmers can't buy autos, how can the work continue in the shops?"

**Back Home**

Farmer Conlin was very badly impressed by what he saw in the industrial towns. The living apartments of the worker looked both shabby and expensive to him. He was glad to get back to the colony at Newllano, Louisiana, after his three months' trip. The conditions there impressed him, by way of contrast, as ideal. Hear him chirp:—

"Newllano looked mighty good to the wife and me when we reached home. The four-room cabin looked almost palatial after a few weeks in 'apartments'; we could get a second helping of sweet potatoes and gravy without a gripe in the pocketbook. When evening came we could hear the people singing and sawing and tooting . . .And when the sun rose over the pine trees in the morning we saw all of our children hurry away to school and all our youths and maidens going to their college classes. It may be 'radicalism' for the workers to want these things in their lives; but, by heck! they do; and, if I am not mistaken, we are going to see some 'radicalism' among the Eastern farmers soon."

That's good news. It is to be hoped that the farmers will get radicalism, so that when they are driven into the cities and factories they will join the industrial union movement, as a consequence. Two millions more of them are due to be driven off the farms in the next two years. There is no place for them elsewhere than in the cities. And there will be no place for their radicalism but in industrial unionism.

It is a hopeless idea, that of believing the farmers can turn to either colonies or politics to remedy their conditions. The tendencies are strongly against them. The industrial financiers have the economic and financial power, and they have decreed that this country, in imitation of England, shall be predominantly industrial, to the sacrifice of agriculture. And there is no political institution in this country that can say them nay; especially one backed by bankrupted farmers.

Augusto Sett, attorney general at Rome, Italy, has taken home a picture of America in which there are 54 million Americans in industrial life and 51 millions in farming. When we recall how, at one time, the proportions were completely reversed, we can see the doom of the farmer as an economic and political factor plainly written on the wall.

He has only one great prospect, namely, to become an industrial worker and join the Industrial Workers of the World. His radicalism will find its best outlet there.

# The Situation In Germany

By LOUIS BARTHA

**MANY articles have been and are being written in an attempt to analyze and interpret the situation in Germany. The following contribution is written by an IWW editor in contact with German workers and well-versed on European questions. It is recommended to the studious perusal of all Pioneer readers.**

THERE is a continuous outcry about a German Revolution. Germany, we are informed, is in a revolutionary ferment. Let us see then how we stand on the question, Is there a revolution brewing in Germany or is it only hearsay?

A loud cry arises from the depths of the starving millions. They want bread and struggle for it. But we must distinguish between the starvation of certain classes and Social Revolution.

By all means, there is no Social Revolution in Germany! There is a capitalist readjustment there, that is causing the workers great suffering.

Revolutions do not start the way the reports from Germany would like to make us believe they do. For instance, these reports state: "The communists gathered near Berlin, in the suburbs of Wandbeck. And the German police surrounded their camp."

And again we read, "Communist armies are marching on Berlin." I presume they are the same armies that "laid down" in the suburb Wandsbeck, and the Berlin police came out from Alexanderplatz in so many auto trucks and moved them around so they'd remain there; for there is more fresh air in the suburb and the "revolutionists" seemed to be very good boys, indeed. Good, law-abiding German revolutionists, in fact.

They may be still camping in Wandsbeck and waiting permission from the police to continue the march on Berlin!

### War Aftermath

The present trouble in Germany is the logical consequence of the world-war. Wilson's fourteen points resulted in a very imperfect and impotent League of Nations. The Versailles treaty did not quench nationalist-capitalist greed; but on the contrary, increased it. The various capitalist interests involved kept up the fight for more power, more territory, more influence; in brief, more of everything that spells profit.

Thus it came that the French capitalist class could not be satisfied by the various German reparations offers. In other words, the booty offered was not enough. And another thing, the French capitalist interests wanted a permanent hold on German industry. As a result, diplomatic manouvers began against Germany—and both sides determined not to understand each other. Therefore, the exorbitant demands of the French capitalists, who knew well that Germany could not provide the many millions of gold marks demanded. And thus came the Ruhr occupation.

### Imitate Ghandi

Now the fight begins in earnest between the two warring national-capitalist interests. Germany selected Ghandi's weapon. But while Ghandi's passive resistance in India against the British was born of religious belief and a desire for sacrifice and martyrdom, attaining the moral height of a Jesus, German passive resistance was born of German capitalist interests and was fed by billions of marks —dirty government money—handed out as unemployment doles to the unemployed and going to the assistance of even the capitalists themselves, in various forms.

In the meantime, the German capitalists were playing another despicable game; they took great joy in inflating the currency and destroying all money values, as well. This was the opportunity to prove to the French national-capitalist group that Germany could not possibly pay the sums demanded by it. Cheap money also created cheap labor and gave the German capitalists competitive advantages in the markets of the world. Further, it enabled

them to bankrupt and squeeze out the middle manufacturing class in their own country.

The fight waxed hotter. One result was that Baron Krupp, the greatest capitalist in the Ruhr, got 15 years in the French "can." Krupp is now out, however.

### Franco-German Combination

Eventually passive resistance died down and was given up. During its height, the national-capitalists groups of both Germany and France negotiated with a view to combining their interests. This having succeeded, to a great degree, passive resistance was no longer necessary. And, as a further consequence, the great Ruhr industries, the subject of French greed and envy, are no longer German. Even Baron Von Krupp has come to terms and agreed to French deliveries of coal from his mines.

The former German industry has become industry pure and simple. As Stinnes, the German Rockefeller said, "I am not a German; I am a business man." He is expected to follow Krupp and surrender to the French also.

The explanation of the German upheaval comes from the fact that the capitalists of all groups can practically change front from day to day; but not so the German people. The German people found themselves suddenly at a loss, when Stinnes called off his dogs, the German government, and ordered a compromise. In order to force quicker and better terms Stinnes laid off thousands of workers and threatened to lay off 1,500,000 more. The Ruhr capitalists' action in suspending work in plants and mines was nothing but coercion in the affected bargaining with both the French and the German governments.

The working class of the Ruhr and Germany also, is the pitiful victim of a high-handed clash of national-capitalist group interests; the tools in the hands of their exploiters, the Krupps and Stinnes. The members of the German working class simply fought their bosses' economic battles.

As things are at this writing, the Ruhr working class and the German working class are starving. The army of occupation is no longer needed to protect French interests but to keep the masses from violence, all in the interests of the corporations headed by the Krupps and Stinnes. And also to have conditions ready for the resumption of work on a capitalist basis in the Ruhr. In this connection, let it be said emphatically that the Ruhr is to Europe what Pennsylvania and Ohio, with their steel and coal trusts, are to the U. S. It is strategic territory.

### Industrialists Most Powerful

The German capitalists who have already come to agreement with their French counterparts, are the chief factory and mine owners. They control 75 per cent of the Ruhr's production, in other words, they control the most essential German production. This means that the German government will have the pleasure, like all other governments, of serving merely as the rubber stamp of the industrial magnates. It will simply O. K. the economic agreements entered into by the Krupps and Stinnes. This too, despite the fact that Stresemann is a representative of medium, or middle class industry, as opposed to big industry. In other words, he represents what we Americans call the anti-trust element as opposed to the trust elements. As we know from experience, they always surrender to big industry, as they invariably must.

Germany's ruling class, i. e., its dominant economic capitalist class, artificially helped to create the present German crisis. Like all ruling classes they are out for big game. What's their present game? Obviously to "shake down" and out the middle class and to more thoroughly enslave the working class? And for this reason, viz., to make more profits, especially in the markets of the world by an extended and expanded industry. To this end are they combining their interests with those of the French, English, aye, and American capitalist class, too. But this latter phase is the subject of another article, so we will not discuss it here for the present.

Naturally, in this international adjustment of Germany's industries, the German working class has had to suffer; as the working class everywhere suffers when capitalist readjustment is the order or disorder of the day. In some parts of Germany, as a result, there are very revolutionary workers and very well organized, too, as far as numbers are concerned; as, for instance, in Saxony. But they are hemmed in with general factors that operate to their detriment.

### German Psychology Against Revolution

Primarily among the latter is the German attitude of mind, or psychology as the high brows prefer to call it. This is largely political and bureaucratic, instead of economic and democratic. The German mind, in other words, is over-centralized, top-heavy as it were.

In Germany, there are about 15,000,000 workers. More than 10,000,000 are organized. Most of the organized workers are enrolled in the Gewerkschaften, i. e., the trade unions. Though the latter have decided industrial union tendencies, they are, like the AFL, in the control of a bureaucracy. And as the AFL is the bulwark of American capitalism, so are they, accordingly, the bulwark of German capitalism.

Even in Saxony, where, until lately, the government was a coalition of communists and social democrats, the trades unions, as a whole, were in the undisputed control of the bureaucrats.

The communists have only succeeded in capturing a few of the unions and getting a majority in some of the branches of others. But the bureaucrats are holding with both hands onto their easy chairs and are not showing the slightest signs of getting out and giving their well-upholstered seats of power over to their communist brethren.

Without the control of the economic organizations of Germany, any attempt to capture political power is bound to become a tragic fiasco, such as the first Spartacus revolution had been; with its

death of Rosa Luxemburg and Karl Liebknecht who were fatally shot and clubbed in the streets of Berlin by the monarchists, as were thousands of workers, too!

Then, too, the Spartacans had no control of the German trade unions; with the result that the Spartacans carried the battle out onto the street, thereby leaving the industries in the hands of the exploiters of labor.

GERMAN AIRPLANE ALIGHTING AT STATION

**The Kapp General Strike.**

How well President Ebert knew the value of the Gewerkschaften during the Kapp monarchist putsch! How quickly the Ebert government called the Gewerkschaften out on general strike that broke the Kapp putsch into atoms. And how quickly the Gewerkschaften responded—no doubt for a good cause—but nevertheless on government orders! With this historical experience to guide them, some of the German working class has grown more cautious and slower to act at the barricades. They now think things over twice before they act once.

Looking at matters from even the foregoing superficial point of view, we find that the German working class is no more ready to seize industry, much less to hold and operate it, than they ever have been heretofore. For without the full co-operation of the Gewerkschaften, every battle is lost in advance.

Again, it must be recalled, further, that the German labor movement is predominantly a parliamentary labor movement, led by the leaders of repudiation, i. e., the socialist representatives. On the other hand, the trade union movement is completely dominated by its great big bureaucracy, who are both representative of political socialism and big capitalism. All in all, the German labor movement, as a whole, was shaped by parliamentarians from its very outset. And in connection with this parliamentarianism, can we quote the language of Faust, "Zwei seelen wohnen auch! in meinen brust." (Two souls also live in my breast)—i. e., the souls of political socialism and economic capitalism.

**Old Methods Unsuited to New Conditions**

The general condition of Germany does not, accordingly, warrant us in reaching such a frenzied assumption as that of social revolution; of a revolution in industry by industrial means. We see in Germany, the employment of an old revolutionary technique—barricades, marches, riots, capture of government, etc.—that does not fit in with modern requirements and consequently leaves modern issues untouched at their very core.

It is true that the German mark has dropped to nil and that food prices have gone aeroplaning. But what has all that got to do with basic conditions? What does that reveal of Germany's real vitality; its industrial resources and gold reserve, if you like? And its controlling class ownership and organization? Nothing!

Work can be resumed in Germany as soon as the French capitalists have satisfied their greed and completely abolished German supremacy in the basic industries of Europe. It is, accordingly, a mistake to believe that Germany is on the eve of a social revolution or that the German working class is in a better position today than it was in the fateful November of 1918. Conditions in Germany cannot be compared with the condition of Russia in 1917.

In Russia, there was a war breakdown— a social collapse resulting in big changes. But there is no sign of a social collapse in Germany, political boundary juggling and changes in office notwithstanding.

Besides conditions in Europe have changed entirely since then. Unlike Russia in 1917, Germany has a powerful peasant class, the largest members of whom are allied with the big industrialists. They form a strong middle class, well-trained and organized; and, together with the industrialists, are the main pillars of the present bourgeois system of society in Germany. Even Russia has become capitalistically inclined.

It is true, the communists are trying to spread their propaganda among the petty bourgeois; in some cases beating even the hated social democrats in their compromises. They accuse the governmental social democrats with not sharing the necessary patriotic feelings of the people; and they want a much bolder stand against "the foreign invaders," the French.

**"Der Tag"**

This is all tactics. They say one thing and mean another. The German communists do not want a Ruhr settlement. They wish for continuous trouble and to capture political power by a daring trick; a la Bolsheviki in Russia, November, 1917. And the Fascist Hittler and Monarchist Ludendorff are aiming at the same thing. In this matter, both extremes have the same object. Both are hoping for "Der Tag," the day when, armed to the teeth,

the French and the Germans will again jump upon each other.

But, as already indicated, there is no likelihood of this occurring, at present. In addition, the overwhelming mass of the German people are behind any government which promises to make peace. For the German people, despite all that is said against them, are a very friendly and peace-loving people, possessed of great culture. This also affords a striking contrast to the situation in Russia in 1917, when the majority of the people were overwhelmingly **against the Kerensky government** and for the same reason, namely, to secure peace.

### Russia No Comparison

Further, as already indicated, there is no revolutionary inclined peasantry in Germany, as was the case in Russia. The German peasant is not starving. He is not land hungry. His man power is not being destroyed by war They are, on the contrary, the hoarders of food. They preserve the foodstuffs that the big cities need and so exert an economic influence on industrial cities like Berlin and states like Saxony.

The German peasant was revolutionary in 1848; but not today. Now he's the most conservative farmer that ever existed. And it is because of his conservatism that the German middle and working classes are starving in the large cities. The German peasants like Stinnes' inflation policy; they are stupendously enriched by it.

How well we know from experience what it means when country is lined against city, peasants against workers. In Hungary, during the commune, the peasants fed wheat to the hogs or hid it in the manure pile; while in Budapest people ate cabbage and then cabbage and then some more cabbage. Cabbage, cabbage, nothing but cabbage!

It is entirely a secondary question whether in Saxony, the federal dictator will remain or the socialists and communists return to executive office. From the standpoint of social revolution, the fight between Saxony and Bavaria doesn't amount to much. Bavaria went through communist experiment and it failed there. Saxony is a great industrial state and Bavaria a great agricultural state.

Nor will the fundamental conditions be affected by the return to monarchy. That will indeed be a deplorable reaction in favor of big capitalism; a constitutional monarchy, at best.

### Part Farmers Play

The conservative farmer corporations do not let very much food accumulate in the big industrial cities. They reason: let the workers have their red meetings; but if they do not conduct things the way we want them to, we will stop their bread. Besides there is a great sectional hatred between Bavarians and Prussians and Bavarians and Saxons; about the same as amongst the Americans and Mexicans. They do not mix well!

By all means, is it correct to say that a shameful famine exists in Germany. German women and children are starving and dying from undernourishment, thanks to their combined industrialists, agrarians and French oppressors. It is the tragic aftermath of the terrible world events since 1914. Did not the French deprive the Germans of 50,000 milch cows since signing the armistice? Yes, there is famine; but on the other hand there is also immense wealth in capitalist depositories and food in the hands of conservative farmers

Ghandi and his followers died by the hundreds; and their hopeless passive resistance against the British was the outcome of conditions in India, inflamed by religious ardor and great altruism. Not so the German passive resistance. It was the most selfish battle in all history; and the chaos it has brought about is in the interest of the capitalist class.

### Hunger Riots Not Social Revolution

Let us repeat, in conclusion, hunger riots in Germany are not social revolution. But it may be said that that process is necessary to alter the system of society. And so with the battles on the barricades; the same claim may be made for them. However, even if there was a chance for armed insurrection to defeat the armies of the ruling class, the final outlook is very foggy, for there are 100,000 federal soldiers and 2,500,000 black militia and about 2,500,000 fascisti to consider.

Armed insurrection would mean a terrible massacre of the working class in an artificially contrived "Social Revolution," just like in Bulgaria. The German capitalists no doubt would welcome this, for they would then get an opportunity to annihilate the revolutionary movement in Germany.

The whole German revolt—outside of some food riots here and there,—as far as the various parties are concerned, is a purely political revolution. None of them want to abolish the wage system. They cannot run industry with bayonets, guns and gallows. There is something else that is needed for that and that is, industrial organization.

A working class that is directly organized in industry with the understanding and object to take over the industries for the workers, would be a revolutionary force, capable of carrying out a real social revolution. Such a highly developed system as the Germans have demands very highly organized industrial organization on the part of the workers in order to make a social revolution in Germany a reality and not a phrase.

It is always most popular to float with the stream, but that will do no good to the long suffering German working class. If we can do anything for them just now it will be to cry out with all our strength, capture the gewerkschaften! Revolutionize them and then the social revolution will be possible of realization. All else is superficial politics.

UNEMPLOYED—After a carving in wood by Garvens, of Berlin

# Retrenchment Hits Hollywood!

THE capitalists show every indication of enforcing a policy of retrenchment in industry. This policy is being pushed in the building industry in particular. Bankers are curtailing loans and are taking other steps to reduce building operations to the lowest figure possible. The aim is to cut wages and destroy unionism, if possible.

Other industries are following suit. Among them is the movie industry. In this industry the stars are being treated just like the rest of the "hands." They are being **laid off**! Imagine! Laid off!! Movie stars, laid off!!! The ostensible excuse is "to cut down the cost of production," which, in other words, means to create a condition of unemployment that will make a reduction of salaries and wages possible. This is the aim of the whole retrenchment policy, namely, to slash incomes, whether large or small! An attack on unionism will accompany it later, quite naturally!

### "Kept At Work"

The leader in the movie retrenchment policy is the Famous Players corporation. It has stopped all production activities, according to October 26th dispatches from New York. No more pictures will be made by this corporation, so the dispatches say, "until production cost is reduced to a common sense basis," which means a basis that will enable the corporation to reap even more than the present enormous profits. This stoppage of production means that drastic cuts in the working forces have been made in every department at both the Long Island and the Hollywood studios of this corporation.

"At the Long Island studios Thomas Meighan and Gloria Swanson are at work on pictures. These stars will be the only ones kept at work." say the dispatches. Notice the language: "kept at work!" And when speaking of movie stars, too!

"Other leading players who will be affected by this suspension besides Miss Swanson and Meighan are Pola Negri, Charles de Roche, Glenn Hunter, Mary Astor, Jack Holt, Ernest Torrence, May McAvoy, Lois Wilson, Bebe Daniels, William S. Hart and Walter Hiers. Besides 300 lesser players and such directors as James Cruze and Sam Wood, about 2,000 clerical and technical workers will have their work curtailed." So say the dispatches. What do you know about that? As the dispatches say:

"The announcement comes as one of the most drastic in the movie industry in years and means that hundreds of screen actors and actresses, writers and technical men will be forced to seek elsewhere for work."

Heretofore, it has been believed that, thanks to their peculiar talent, movie stars are not subject to the effects of capitalism. But here we see them forced out of employment in a general wage reduction movement. As a result, a repetition of the depression of 1920 is likely. On that occasion, the Rialto—that portion of Broadway, N. Y., fre-

# Russia, Saviour of Capitalist Europe

By NEIL GORDON

SOVIET Russia Pictorial, official organ of The Friends of Soviet Russia for November, makes interesting reading. For one thing its contents confirm the existence of an alliance between Soviet Russia and Imperialistic France. We are told on P. 235, "It is **an open secret in the European capitals** that steps are now taken to pave the way for a complete resumption of political and economic relations between France and Russia. As a matter of fact, many people believe that France will be the first European country to conclude **a practical arrangement** with the Workers' and Peasants' Republic." (Bold face ours.)

Another communist organ, The Workers' Dreadnought, London, England, sheds light on the cause of this alliance, when it says in its No. 31, Oct. 20th:

"Now that the Soviet Government is asking for permanent capitalist investments, and protesting that the capitalist investor will have the protection and support of the Russian Government, the smaller fry of believers in Capitalism, who do not take part in high politics, are all ready to support extended trade with Soviet Russia. They hope that such trade may better the general business of this country, and so improve their own affairs. Therefore, the cry, 'Trade with Russia,' is apt to win their support."

**Important Statements**

These statements are both very important, as they enable one to understand conditions as they effect developments throughout Europe. For one thing, they show that there is no possibility of "red communism" sweeping Europe. For the first thing to be noted is that no such communism exists in Europe today. The communism that was once red communism died when **NEP** (new economic policy) was born.

As a result the communism that we behold today, and that is generally referred to as "red communism" is Russian state communism. This communism is based on Russian state policies and its sole aim is to promote those policies. As we have just seen, these policies are inherently capitalistic. That is, they are formed with an eye to inducing, protecting and supporting capitalist investment in Russia and, at the same time, promoting Russian trade. And they are made in alliance with the dominant national interests in Europe today, viz., those of France and Russia. Under the circumstances to imagine that this "communism" is red and that it will sweep Europe in a revolutionary way, is to imagine something that has no basis in fact and that is, accordingly, impossible.

A couple of years ago, The Nation, liberal weekly organ, characterized Russia as the savior of capitalism, in that it offered opportunities for trade and development such as would safeguard capitalism from the destructive effects of the world-war. What we may expect to see in Europe is The Nation characterization come true! Russia, because of its own necessity for capitalist development, cannot from the very nature of its requirements, be anything else than a saviour of capitalism, especially throughout Europe. Such is the logic of events; such is the iron law of economic determinism.

---

quented by actors and stage employes generally —was thronged with unemployed. Benefit performances for their relief was the order of the day. Such is soon likely to be the condition of affairs again.

The men and women in the movie industry are not likely to retain an unalterable love for capitalism under any and all conditions. They may turn against it in time. Especially is this likely if the Players' corporation persists in its intention "not to resume until the salaries as well as the production costs" come down.

LATER—Dispatches from Los Angeles, dated October 28th, say that other companies will follow the lead of the Famous Players and shut down for ten weeks. It is said that 125,000 men and women will be affected; and that the shut-down spells disaster for thousands. Hollywood regards ten weeks of idleness as a tragedy.

## THE PARAMOUNT PROBLEM

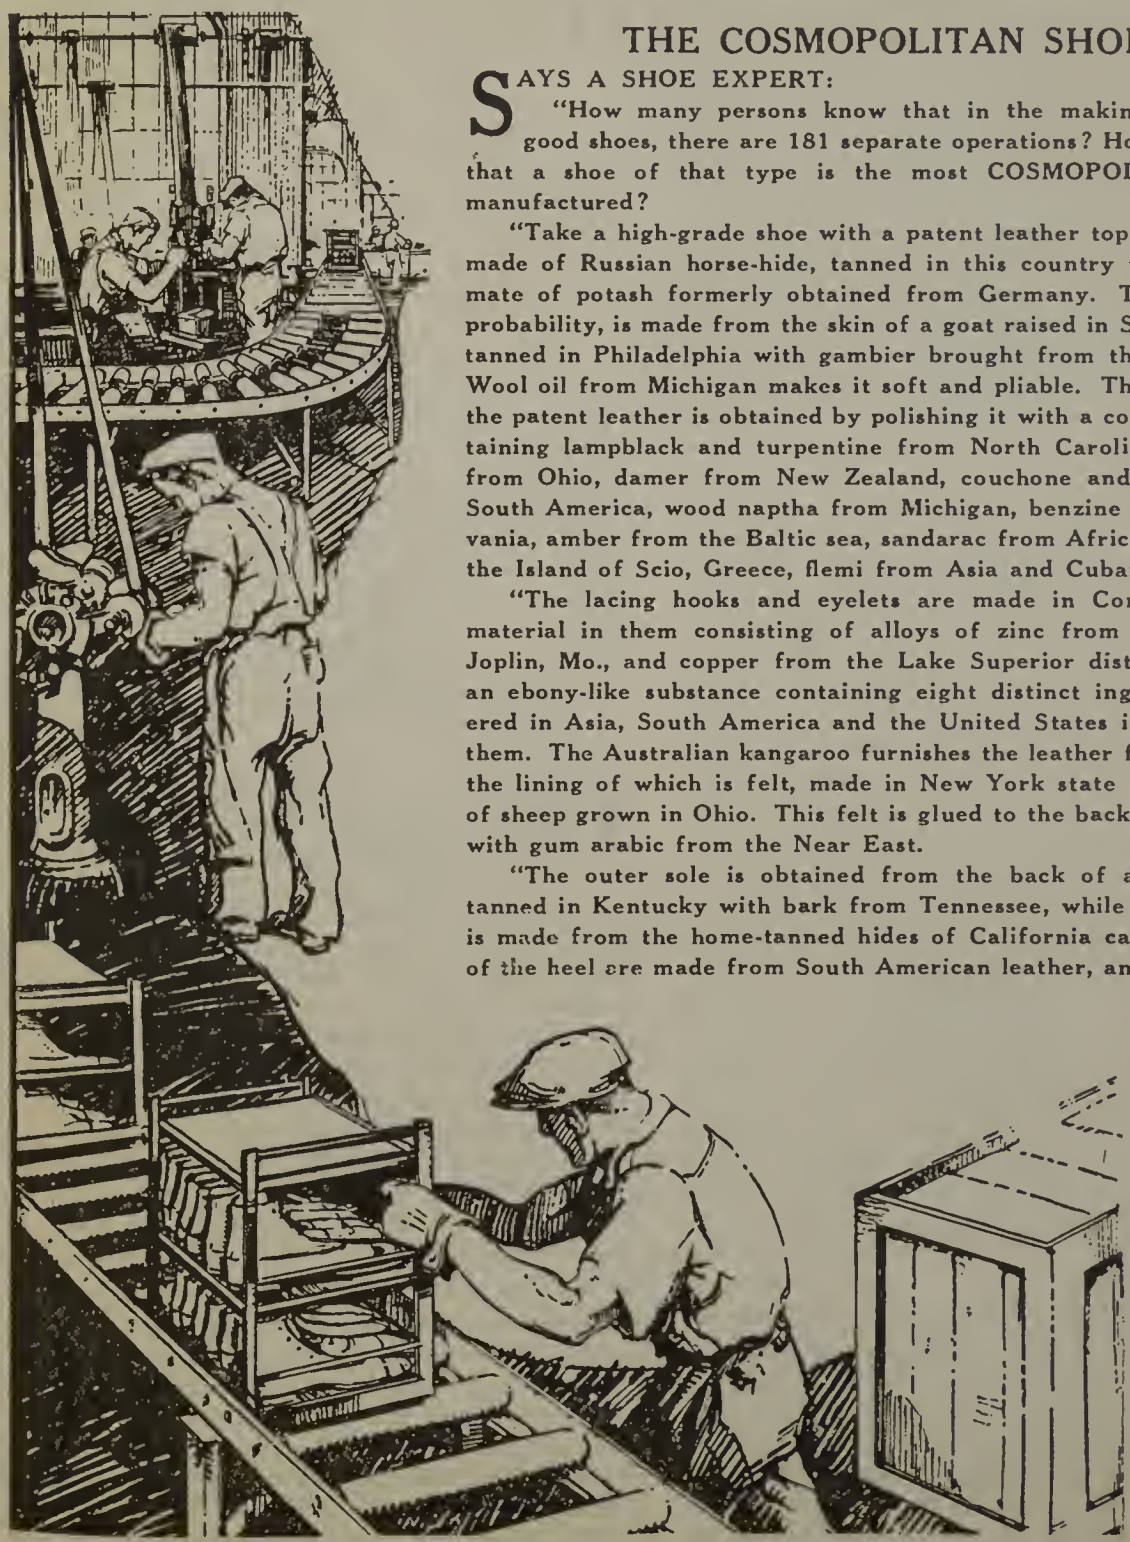
**IN the last thirty years we have watched the balance of power shift from the hands of the public into those of an industro-financial hierarchy composed of a few hundred persons, representing our trusts, railroads, banks and insurance companies. And while these persons are neither better nor worse, nor more intelligent or stupid than the rest of us, they are, nevertheless, for the most part, narrow men, mainly specialists in money making, and actuated by a rather unreflecting instinct of acquisition. For this reason we cannot accept their control of the country as either inevitable or beneficial. To change this control, to relocate power, is the paramount problem of the people of the United States."—Amos Pinchot, "Railroads and the Mechanics of Social Power," The Nation.**

## REVOLT WINS INCREASE

The Brockton, Mass., shoeworkers' revolt was not in vain. Tho the shoeworkers were defeated and driven back into the Boot and Shoeworkers' Union, the bosses have announced a 10 per cent wage increase. This puts wages back to war levels.

# *Conveyor Makes Shoe Worker Appendage*

IT used to take 21 days to make a shoe—now 4½ days. From the time the stock was cut until the finished shoe was packed, it took 21 days. A system of conveying parts and finished products was installed in the modern factory and the time was reduced to four and a half days. As in the Ford plants, the worker was paced by a machine, that is, he was made an appendage to the conveyor and had to work accordingly. The conveyor has other advantages. It eliminates confusion; reduces floor and table space, which is used for more production; and, at the same time, insures a steady flow of goods through a plant with a minimum of interruption.



## THE COSMOPOLITAN SHOE

SAYS A SHOE EXPERT:

"How many persons know that in the making of a man's good shoes, there are 181 separate operations? How many know that a shoe of that type is the most COSMOPOLITAN article manufactured?

"Take a high-grade shoe with a patent leather top. The vamp is made of Russian horse-hide, tanned in this country with a bichromate of potash formerly obtained from Germany. The top, in all probability, is made from the skin of a goat raised in South America, tanned in Philadelphia with gambier brought from the East Indies. Wool oil from Michigan makes it soft and pliable. The brilliance of the patent leather is obtained by polishing it with a composition containing lampblack and turpentine from North Carolina, linseed oil from Ohio, damer from New Zealand, couchone and asphalt from South America, wood naptha from Michigan, benzine from Pennsylvania, amber from the Baltic sea, sandarac from Africa, mastic from the Island of Scio, Greece, flemi from Asia and Cuban lac.

"The lacing hooks and eyelets are made in Connecticut, the material in them consisting of alloys of zinc from the mines of Joplin, Mo., and copper from the Lake Superior district. Agatine, an ebony-like substance containing eight distinct ingredients gathered in Asia, South America and the United States is used to coat them. The Australian kangaroo furnishes the leather for the tongue, the lining of which is felt, made in New York state from the wool of sheep grown in Ohio. This felt is glued to the back of the tongue with gum arabic from the Near East.

"The outer sole is obtained from the back of a Texas steer, tanned in Kentucky with bark from Tennessee, while the inner sole is made from the home-tanned hides of California cattle. The lifts of the heel are made from South American leather, and the dextrine which holds them together comes from Illinois corn fields. Before leaving South America the leather is partially preserved with chenang. The sole of heavy oak is stitched to a welt cut from Texas leather and made into welting in Pennsylvania. The welt is stitched to the insole and upper with linen thread made from flax grown in Belgium and spun in Scotland. This thread is lubricated and strengthened with wax made from resin and tar extracted from the pine trees of North and South Carolina."

# The Wreck of the Silk Special

(Continued from page 25.)

the next moment he found himself crushed beneath a deadening weight, as the 1425 turned sideways and pinned him beneath the boiler.

Outside, pandemonium reigned. Groans, shrieks, prayers and blasphemies were whipped from the mouths of the passengers of the limited and carried into the night by the storm. Flames sprang up in the wreckage and the scene resembled some mad dream of a hashish eater—flame and storm vieing with each other for the lives of those not killed when the 1425 plowed its way thru the sides of the sleepers.

Under the boiler of the 1425 the fireman was suffering the tortures of the damned. Steam from the broken flues was parboiling him as he lay unable to move. "This is the end," he gasped—"serves me right, I had no business scabbing on the shopmen, that wobbly delegate was right, but I've found it out too late."

Big Jeff, he of the iron nerve, had not suffered before he passed out. The first impact had crushed him into a bloody pulp and they found him hours later with his hand glued in a death grip on the throttle. Tommy Moore and the two brakemen miraculously escaped serious injury and made their way with all haste towards the engine to see what had happened to their comrades. But one look sufficed to tell them the sad story and brushing the tears from their eyes, they turned to do what they could for the victims on the limited.

The operator at Red Tower, frantically working his instrument, was sending the news to Portola and a couple of hours later the 'big hook' arrived with doctors and nurses.

Fifty seven persons had been killed on the limited, besides scores of others terribly injured.

The usual investigation followed—but the findings were vague, as the findings of such investigations generally are. They reported that the wreck was the result of the silk special side-swiping the limited—but no mention was made of the cause.

Defective equipment had played such a large part in so many wrecks during the months just passed that it was deemed inadvisable to call attention to the fact that the broken truck hanger had been found lying between the rails at the exact point where the 1425 had made its fatal plunge.

* * *

It was only a contributing factor anyway. The fireman could have told them that something far more important had been broken—broken long before, when the dividing lines of craft unionism had broken the solidarity of labor and had bound the road men with a contract which compelled them to take defective equipment out on the road to murder unsuspecting victims of the railroad companies' greed. With unbroken solidarity the roadmen could have won the strike for the shopmen and the silk special would not have crashed into the limited. The fireman who saw the truth too late need not have roasted under his engine. Big Jeff might have lived a long life of useful service, and the mills in the east would not have waited in vain for that particular load of silk. But when the solidarity of labor is broken dire consequences result—as the world is slowly finding out.

# Martyrs

By VERA MOLLER

(Suggested by Painting by Remington)

"I wish the Indians would kill me first, but they're building me a fire. Therefore I leave this token to tell you I died game." (O. W.)

ONLY a skeleton pinned down with arrows,
Signs of a fire, a word scratched on a spur,
And men with cold horror striking to the marrow,
Behold a comrade's name thru tears that blur.
Only an endless stretch of sun-scorched plain,
What use to rage and curse out to the sky?
Back to the saddle and the trail again,
There's still the fight. Friend past all hope, goodbye.

Only a body hanging to a bridge,
Only a bruised corpse, wrapped in convict clothes;
Only a victim of a brutal mob,
Defiance showing to the last death throes.
WE need no sign to know that THEY died game,
We know what gave courage to each heart.
Give them the earth, The red rose, when we may,
There's still the fight, press on, we'll do our part.

# Civilization

By J. BERNEDINE TEVIG

THE kiss of hate, the smile of deceit,
In the eye the glint of steel.
The laughter of scorn, the friendship of jealousy,
The mingling of repellent units;
Convictions suppressed by lying lips,
Truth killed by insincerity,
A world of guile!
The soul imprisoned by this covenant of sham
Hopelessly beats the bars of hypocrisy
And eats into self to still its insatiable hunger.
Life a mockery—an empty husk.
Ah, if this be civilization
Would that I knew naught but savagery,
For then I, who worship at the shrine of truth,
Am a pagan!

# As Our Enemies See Us

# As Our Friends See Us

The watchdogs of labor, ever on guard to secure its product.

# As We See Ourselves

An organization of workers determined, with the help of our friends and despite the persecution of our opponents, to prevail.

# What Pioneer Readers Say of It

Wallace, Idaho, Sept. 24, 1923.

I THINK that the young Pioneer is just wonderful and getting better. There is no good reason why the workers could not have the best and most constructive publication in the United States.

Am enclosing $2.40 for a bundle order of 20 October issue.

Yours for smaller jails and bigger public forums.

EMIL SCKROMARS

Banksville, Pa., Sept. 26, 1923.

Sample copy of Pioneer received, and am enclosing one dollar for six months' sub.

**The Pioneer is far better than I expected, and if it keeps up to the Sept. standard, a large circulation should surely be built up.**

I might state that I have been sending each week's issue of Sol for the last two years to my brother in England, who says that of all the radical papers and periodicals he reads, the Sol is the best working class paper of all.

Yours for Industrial Unionism.

FRED MOORE

New York, October 19, 1923.

**Pioneer is fine. It is interesting and extremely instructive as an intellectual guide. There is none in our country like our magazine. Besides it is truly proletarian and yet it is not deprived of artistic value.**

I push it and sell a few copies of it, too. I will endeavor to make some thinking slaves happy by acquainting them with such a splendid piece of revolutionary literature as The Industrial Pioneer. Enclosed find their names; please send them sample copies.

Sincere regards and cheerful greetings,

B. OSUCHOWSKY

Los Angeles, Calif., July 10, 1923.

Editor, Industrial Pioneer:

**The first three numbers of The Industrial Pioneer have reached me and have been read with interest. The magazine is typographically excellent, well edited; the illustrations are good and it is a credit to the labor movement.**

Fraternally yours,

R. H. HORNBECK

1605 Van Buren St., Chicago, Ill.
July 15, 1923.

The Industrial Pioneer,
1001 Madison St., Chicago, Ill.
Dear Editor:

Recently I have been reading The Industrial Pioneer and am very much pleased with its appearance and spirit. Such a magazine has a wide field of usefulness. It fills a long felt want. No. 3 is instructive, entertaining and at the same time dignified.

**Most of the articles in the July number are of good quality, two of them at least deserve very special mention. "Savage Survivals in Higher Peoples" is exceptionally good. Quite a number of students, calling on me, have remarked its excellence. Also, they have referred to "Revolutionary History and the Workers." The subject matter of this last, is to my mind, of the greatest importance to the working class. Writings of this description should be sought out and published more frequently than has been customary in the past. Possibly the author, Mr. Pasquale Russo, has some more of the same kind of information in the "back of his head."**

At any rate, Mr. Editor, both articles were all too brief and it seems to me that both Science and History should be featured. Those writers interested in Science and History should be encouraged.

Wishing the Industrial Pioneer every success, I am, respectfully,

SAMUEL W. BALL

South San Francisco, Calif., Oct. 18, 1923.

Editor Industrial Pioneer,
Chicago, Ill.
Dear Sir:

I lately bought a copy of your magazine—October issue—and I like it very much. I think that there is a good field for such a magazine, as we have none now. The Liberator has become Communistic, while the Nation is a newspaper, not a magazine.

With best wishes for the success of your venture, I remain, yours respectfully,

JAMES DEEGAN

Basil Taylor, editor of The Dawn, Leith, Edinburgh, Scotland, writes:

**"I was very pleased with the matter in the Industrial Pioneer; although I do not altogether agree with your opinions, I can admire the fighting spirit of the IWW. I would like to circulate the Pioneer in this country."**

---

The above are only a few of many favorable opinions regarding Industrial Pioneer received at the office of the latter. The secretary of the Building Construction Workers' Industrial Union No. 330 writes, for instance, from San Francisco, Cal.:

"Please send us 15 more copies of the October Pioneer. The October issue is very good."

The secretary of the New York branch of the same industrial union also writes:

**"The 25 copies of Industrial Pioneer that I received yesterday were sold in ten minutes. Kindly send me another 25 copies at once."**

The Paterson, N. J., Branch of the Textile Workers' Industrial Union No. 400, disposed of its first bundle of October Pioneers so easily that it sent for another one. That is, it doubled its order.

**Libraries, university students, labor writers, social students and others are becoming interested in the Pioneer, subscribing for it and requesting copies and the filling of orders for certain issues.**

## ARCHEOLOGICAL NOTE

A canoe belonging to the stone age was recently dug out of a farm in Astbury, Cheshire, England. That's nothing. There's lots of workers in this country still floating around in mental canoes originally devised even before the stone age was in existence.

* * *

## A LESSON IN TOLERANCE

We do not like abstract definitions. We prefer concrete illustrations. What, then, for a lesson in tolerance? Well, we would say to have a Knights of Columbus baseball team play the Knights of the Ku Klux team, with a Negro umpire, and the proceeds to go to a Jewish orphan asylum.

That would be good old-fashioned Americanism.

—The Messenger

## IF SHAKESPEARE ONLY KNEW

By JAMES DEEGAN

OH! Romeo, your time's too slow;
No longer you're an ace!
Your wooing meek against the Sheik,
Would never see first base.
And Juliet, an old-time pet
Fades from the picture, too.
Great gobs of gloom would haunt his tomb,
If Shakespeare only knew!

Now every hack from Los to Sac,
Writes of the passion grand.
Peddle their wares in droves and pairs
Out West in Movieland.
With rambling plot of God knows what,
The same as Macbeth's stew;
I'll bet two bits, he'd throw some fits
If Shakespeare only knew!

Good taste it blunts with strenuous stunts,
The same as Dempsey trains;
With everything science can bring,
Except a little brains.
The product's punk, they can this junk,
And call it art that's new.
In his old grave he couldn't behave,
If Shakespeare only knew!

## A LITTLE LEMONADE

Back in the good old days before the Eighteenth Amendment took all the joy out of life, a boomer switchman was working for the Santa Fe at Point Richmond. One night when a few drinks had made the world look particularly bright he had occasion to call up the yard-office.

Making the connection, he inquired, "Say, have you got a car of sugar down there?"

The yardmaster answered in the negative and inquired in turn, "What in h—l do you want a car of sugar for?"

"Oh," said our friend, "we just kicked a car of lemons off the car-float into the bay and I thought if you had some sugar up there we might have a little lemonade."

* * *

## ROOM FOR MORE

One night, a number of years ago, a switching crew had some work to do at the Vesta No. 4,, the largest coal mine in the world, situated on the Monongahela river above Pittsburg, Pa.

The next morning the trainmaster received the following wire from the conductor:—

"Twenty-two cars of coal went into the river here last night. There is room for twenty-two more at the same place. Please accept my resignation."

## NO; A LA CAPITALISM!

"Horse meat is being served in Berlin cafes," says a news item. The service, evidently, is a-la-cart.

# Modern Industrialism

(Continued from page 20.)

thousands of American lives and the injury of tens of thousands more. In his 1919 St. Louis speech, Woodrow Wilson said, "The seed of war is industrial and commercial rivalry. This war is an industrial and commercial war." Rear-Admiral Niblack also says, "No one can, however, make a thorough and impartial inquiry into the causes of war without realizing their roots run deep into the soil of trade rivalry and economic aspirations."

The trade rivalries of the capitalists of this country are bringing them into competition with England, France and Japan; while their economic aspirations cause them to want to dominate Mexico, South America and Russia; in all of which they will meet tremendous opposition, such as will shake the world once it gets into hostile action. In brief, modern industrialism, in its present manifestations and tendencies, is a menace to society and world peace. It threatens a world cataclysm, such as will justify the contention that it is the epitome of insanity; and therefore to be stamped out as one would stamp out a devastating pestilence of extensive scope.

How to prevent this climax of modern industrialism is the serious thought of all men not enamoured with its suicidal tendencies, or insane platitudes. First men must realize the vast scope of modern industrialism, that is, its transcendental character. It overthrows religion, law, state, national boundaries, everything. It is the greatest factor in all society, driving us all, with the sweep of a tornado, into cataclysmic ruin.

### The New Era

Listen to the words of Wm. Kay Wallace, in the preface of his book, "The Trend of History" wherein he says:

"We are standing on the threshold of an unpolitical age. Politics has fallen from its high estate . . . . . The preeminence of the state politically conceived has been called into question . . . Other forms of corporate organization are pressing for recognition. We may in turn see arising before our eyes a new, great social organization . . .in its essence unpolitical . . . 'Industrialism,' which may serve to denominate this new institution, is a social and economic system, only indirectly political. Such would appear to be the trend of history."

Recall, in this connection, the prominence of Stinnes in German affairs, of Schneider in French affairs, of Ford in American affairs, and then grasp the tremendous overpowering character of industrialism; and then realize that only in industrialism can humanity be saved. That only through a unionism of the working class therein, as integrated, consolidated and internationalized as modern industrialism itself, will modern industrialism become democratic and a blessing to mankind, instead of a curse as at present. Then will modern plutocratic industrialism, with its class and world wars, give way to world industrialism by the world's industrial workers, with its peace and happiness for all society.

# The Argonaut Mine

By DOUGLAS ROBSON

MOTHERS, mothers, bury your sons;
Bury the sons you have lost in the strife,
Heroes who died in the battle of life.
Shed the salt tear on the chill,wasted face,
Silently walk to the burying place,
All that you gave
Lies cold in the grave.
Mothers, mothers, bury your sons.

Wives and sweethearts, bury your men.
Ah, what do you think as you droop your head
O'er the face of your unrecognizable dead?
Do you picture them trapped in the poisonous mine,
Gasping, battling for life in each narrow confine,
While strong arms tear the barriers down to behold
Death reigning alone in that prison of gold?
Does your sorrow abate
When you say "It is Fate?"
Wives and sweethearts, bury your men.

Sons and daughters, bury your sires.
Cold and inert is the fatherly hand;
Cold as the earth where you sorrowing stand:
You are young, you are strong, while you stand at the grave
Does your manhood not question the power that gave
Your fathers to death? List, I, who now speak,
Have toiled with the dew of the mine on my cheek,
In the warrens of death I have seen strong men die,
To uphold Mammon's temples resplendent and high.
Is your womanhood true?
Speaks your manhood for you?
Sons and daughters, bury your sires.

Labor! Labor, bury your dead.
Yet pause e'er you turn from the mothering sod;
Think! Think! Shall you always attribute to God
The gaps in your ranks and the sorrows and tears,
The agonies, tortures, the thousands of years
Of hunger, injustice, oppression and pain,
The prison, the scaffold, the inanimate chain
That schackles your manhood and binds you to earth,
That stifles your joy at the moment of birth?
No! No! You must wake, you must ponder and think,
Bid reason no longer from reasoning shrink;
Stand upright; let all the world echo your cry,
The how and wherefore, the thundering WHY?
Labor, Labor, bury your dead.

# The Lynching of Bud Williams

**Coleman Tracy, a Retired Deputy Sheriff, Relates Some of His Most Thrilling Experience in the Cotton Fields of Dixie.**

By ADAM NOIR

Yes, I've seen a lot of strange things done in the name of law and order, and I've taken part in some, but I believe the lynching of Bud Williams was about the rankest piece of injustice I ever had anything to do with.

You see, it was like this:

Cotton picking is paid for by weight picked. An average hand can pick about 250 pounds per day. The autumn before I was twenty-five years old, the price was 35 cents per hundred pounds, about 87 cents per day.

When the cost of living was at its lowest, such a wage would hardly suffice to keep one alive and well. That year there had been a sharp advance in the price of necessities and there was much hunger and discontent among the working people of the South.

Bud Williams, a negro preacher, came from the state of Mississippi. He was picking cotton on one of the larger plantations—and preaching on Sunday at a little church in the woods.

It seems that he did not confine himself to the usual orthodox interpretation of his texts, and a rumor got afloat that he was exhorting his congregation to organize and demand 40 cents per hundred pounds for picking cotton.

I can masquerade as a negro pretty well. So, I was instructed to stain my face to resemble a mulatto, and slip into his congregation to learn the facts.

The preacher's talk was mild enough. But, he did insist that all cotton pickers, white and black, should get together and demand a higher wage.

I noticed quite a sprinkling of white faces in his congregation, and their owners seemed to approve of his proposition. At least, they were eagerly attentive to his words.

Two of these whites, George Anderson and his wife, Tillie, were known to me. Both of them openly voiced their opinion that the two races should quit quarreling about the color of their skin and the texture of their hair and stand together against the rich land owners.

* * *

I reported what I heard and otherwise observed, without addition or subtraction or comment of any kind, but it appeared impossible for the "higher-ups" to interpret it the way I saw it. The story soon got about that Bud Williams was preaching race equality; intermarriage and the like. I denied this as emphatically as I could, but to no avail. The sheriff took my deputy badge and advised me to get out of the country. Uncle Bill then threw down his badge and resigned. This action caused the sheriff to apologize and reinstate both of us.

A few days later we were sent over in the west end of the county. While we were away, a mob was raised—in which, I am certain, the sheriff participated—which burned the church in the woods and chased Bud Williams into the swamp.

About the time the church was burned, George Anderson got a job making cypress shakes, or clapboards, to cover a barn. Tillie, who was chilling anyway, quit working out and stayed home to pick out a little patch of cotton of their own.

George worked about a mile from home, and it was the custom for Tillie to take his noon lunch out to him each day. She rode a white mule, bare-back, and sitting with both legs on one side, as was the style for women in those days.

Some four or five days after Bud Williams disappeared, Tillie failed to arrive with the lunch. Thinking she perhaps had a harder chill than usual, George worked on until three o'clock and then started home. About half way, he found Tillie lying by the road-side, dead.

The neighbors and the coroner were summoned. As a deputy sheriff, I went with the coroner to summon witnesses and the like, and make arrests if it became necessary.

Tillie had quite evidently been killed by striking her head on a "cypress knee," or root growth which protrudes from the ground at irregular intervals around cypress trees, and bears a fancied resemblance to the closely doubled human knee. In fact, her head still rested on the "knee" just as it had first struck. And, there was no other mark of violence about her. The tin lard pail containing lunch was close by. The mule tracks showed plainly that it had "shied" or jumped sideways.

With this evidence, and the common knowledge that mules will, on occasion, shy at anything or nothing, the cause and manner of death seemed plain.

The affair might have ended there had not a strange foot-print been discovered in the road, about one hundred feet from where the body lay. Someone claimed to recognize this as the foot-print of Bud Williams; and some idiot suggested the possibility of rape.

Acting on this foolish suggestion, a re-examination of the body was demanded. The coroner quickly exploded the rape theory with evidence so convincing that no sane person could doubt. Not one there present but admitted the impossibility of such a crime having been attempted.

When I reached town next day, Colonel Caruth-

ers—on whose plantation Williams had been working—was drunk, and telling everyone who would listen that it was a plain case of murder and attempted rape, and that Bud Williams was the guilty party. By noon he had a lot of men believing him, and just drunk enough to do anything he might suggest. As a clincher, he offered a hundred dollars reward to anyone who would bring in Williams, dead or alive.

I wanted to arrest Caruthers, but no justice would issue a warrant; and, I knew I would start trouble if I tried to take him without one. Along in the middle of the afternoon, he, and a party of about twenty, rode out of town with the avowed intention of capturing Bud Williams.

I did not like the looks of things. There was no telling what those drunken hoodlums might do to the negro should they find him there in the swamp, so I swore to a complaint charging him with vagrancy and went out to bring him in for safe-keeping.

I remembered seeing Anderson and his wife at one of Williams' meetings, so I went direct to him.

* * *

When I convinced Anderson that my arrest of Williams would be a friendly act, he volunteered to guide me to his hiding place, which we reached about one o'clock next morning.

After dodging about a lot to avoid contact with Caruthers and his gang, I got my prisoner safely lodged in jail about ten a. m.

* * *

While I was waiting in the office to get a receipt for my prisoner, Uncle Bill was given some warrants to serve, away over in the swamp, a two-day trip, there and back. I was ordered to go along. We started at once.

When we were well out of town, we turned down a side road and talked matters over.

Certain remarks I had accidentally overheard while in the sheriff's office caused me to suspect that there was a plan afoot to lynch Williams, that the sheriff was a party to this plan, and that we had been sent away so there would be no interference. Uncle Bill agreed that I was probably right, but did not see how we could alter circumstances; orders were orders, and he was for going on and serving the warrants he had been entrusted with.

I grew impatient and told him he might go on, or go to hell, if he chose, but I was going back and stay in town until I could feel sure there was not going to be any foul play.

I expected he would take offense at this outbreak and maybe want to fight, but he didn't. When he saw that I was determined to go back, he gave in and said he would go along and see me through. After a long talk, in which we discussed contingencies and developed our plans, we shook hands on it and rode back to town.

We did not ride all the way into town, but picketed our horses in a thick grove in one corner of the cemetery and, by traversing side streets and alleys, made our way to the back room of a saloon which was handling a lot of whiskey that had never paid revenue tax. It did not take long to convince the proprietor that our presence must not be disclosed.

We stayed in this room all afternoon, the proprietor bringing us food and drink, and keeping us posted on current happenings.

Long before dark, we knew positively that the jail would be raided that night.

When darkness fell, we walked to the court house—just across the street from the jail—and took up a position under a large rose bush.

About eight o'clock, shadowy forms began to gather on the corner a half block away. When they began to move up street toward the jail we ran across and entered the jail office.

The sheriff and night jailer were there alone. They were greatly surprised to see us, but said they were glad we came so opportunely, as they expected trouble.

Uncle Bill stopped with the sheriff, while I went upstairs to a window overlooking the jail entrance.

When the mob reached the lower step the sheriff walked out on the landing and asked them what they wanted. They said they wanted Bud Williams. He then told them they could not have Williams; and, that he had Bill Chatterton and Cole Tracy there to back him up.

I know now that he intended his announcement of our presence as a warning to the mob; but I do not think they grasped its significance. For they just laughed and hooted and started up the steps.

Uncle Bill quickly stepped forward and fired into the crowd—dropping his man. They wavered somewhat, and I fired twice, dropping a man each shot.

Uncle Bill was just in the act of firing again when the sheriff, who was behind him, raised his revolver and shot him in the back of the head. I instantly lowered the muzzle of my weapon and shot the sheriff in the top of the head. Then, something—I think it was the jailer's "blackjack" hit me on the head and I went to sleep.

When I became conscious again I was handcuffed and in a cell. I could hear people moving about in the office and called to them. There was hurried talking, in a tone which indicated argument, and a voice which I recognized as that of Colonel Caruthers, said: "No, we can't afford to do anything like that. We would have the whole state up in arms." "Just leave him where he is 'til midnight. Then, turn him loose and see that he gets out of the country and stays out."

I then heard a sound of dragging, and the trampling of many feet. After that, all was still.

Shortly after midnight, four men came and loaded me into a closed carriage. They took me into the country about five miles and told me to "GIT."

On our way, and just at the outskirts of the town, we passed near a little flickering fire under some trees. One of my guards asked me to guess what it meant, but I declined. They then told me, with much boasting, that it was there they had roasted Bud Williams.

They chained him to a tree, brought packing cases and empty barrels, broke them up and built a pyramid around him and poured several gallons of coal oil over all. When all was ready, Colonel Caruthers fired it with his own hand.

* * *

Well, what happened next is a matter of local history.

Uncle Bill was not killed after all. When he felt the muzzle of the gun against his head he "ducked" and received nothing more than a scalp wound, the most painful feature of which was the powder burn.

At the special election, held to choose a new sheriff, he was elected, and I was elevated to the position of chief deputy.

The sequel to the lynching happened a couple of years of years later, and, for cold-blooded fiendishness beats anything I ever heard of. But, perhaps I'd better tell it, it might prove interesting.

* * *

You know, in that part of the country there was, at the time of this story, mile upon mile of unbroken forest. Perhaps half of this timber was oak, beech, hickory, pecan, etc., the nuts and acorns of which make most excellent pig feed.

People living in, or adjacent to these forests did not bother to feed their growing pigs, but turned them loose in the woods and let them rustle for themselves.

At convenient intervals, the owners would round up the young ones and mark, or brand them. Such as were best suited to the purpose, were confined in pens in order to make the flesh more firm than that which had been fed upon "mast" alone. The others were turned back into the woods.

Quite naturally, many escaped the fattening pen from year to year, until they became very old. With increasing age, they became increasingly wild and savage.

It sometimes happened that one's "Wild Hog Claim" did not yield the number of young pigs required and some of the older ones were captured and confined. It takes a pretty good pen to hold these old timers. It must be made of thick logs, and at least six feet high; for they can jump surprisingly, and, on the approach of a human being, will charge at the logs with the fierceness of a tiger.

* * *

Colonel Caruthers had three of these wild pigs in a stout pen. Being naturally of a cruel and barbarous disposition, he frequently amused himself by standing on the side of the pen and jabbing them with a long stick, just to see them rave. Nor would he quit until they dropped from sheer exhaustion.

In that country, people did not keep their chickens confined, but gave them free range of the grounds, and permitted them to nest wherever they could find a suitable place; which was usually somewhere about the barn. Hunting hen's nests was a regular occupation with those who had supervision of the family larder.

Caruthers had a negro cook whose duty it was to gather up the eggs each day. One day this cook came running into the house and reported that Caruthers had fallen into the wild hog pen.

Mrs. Caruthers and an old maid daughter—Lavina—with the cook—Mary Huggins—were the only persons about the premises. There was not a man within a half mile.

They all seized clubs and belabored the pigs vigorously, but to no avail. They may as well have beaten the stout logs of the pen. The pigs only grunted, and continued their maceration of the not yet dead, Colonel. Nor did their work of destruction cease until a half hour later when a passing neighbor shot the pigs and dragged from the pen the dish-pan full of bones and mire covered flesh—all that remained of the victim.

Mary Huggins fought the pigs as vigorously as did the others, and her manifestations of grief and horror appeared to be as genuine. Nevertheless, in his death agony, Caruthers shouted out something which the daughter interpreted as a statement that the cook had pushed him into the pen.

It really did not seem probable that Caruthers had lost his balance and toppled into the pen accidentally, so, acting on the testimony of the daughter, the coroner decided that he came to his death at the hand of Mary Huggins. She was promptly lodged in jail, charged with murder in the first degree.

Justice moves swiftly where negroes are concerned, and in less than ten days Mary Huggins was tried and sentenced to hang. The date of execution being set for the Friday following Thanksgiving—about six weeks away.

To the very last, Mary protested her innocence, and, notwithstanding the verdict, the official conscience was somewhat perturbed over the possibility of executing an innocent person. So the effort to secure a confession was continued with redoubled energy. Because of my exceptional skill at obtaining the confidence of negro prisoners, I was detailed to get this confession.

I visited her in her cell almost every day, and we became very good friends indeed. But it was not until ten days prior to the date of execution that I accomplished my task. The story she told was a corker:

Altho known as Mary Huggins, she was in reality Mary Williams; a sister to Bud Williams. When she learned of the lynching she was cooking for a white family in New Orleans, but gave up her position and came "up river" for the fixed and sworn purpose of revenge.

It was easy for her to fix upon Colonel Caruthers as the prime instigator of her brother's death; and, because of her superior ability as a cook, comparatively easy to secure a position in the Caruthers' household.

She planned to poison Caruthers, but when the wild pigs were brought on the place a more fiendish plan was evolved. (She said: "More FITTING plan"). In passing to and from the barn on her egg gathering trips she frequently saw Caruthers teasing the pigs. Awaiting a time when there was no one near to effect a rescue, she slipped up behind him, grasped his ankles and pushed him into the pen.

She could have waited until he was dead before giving the alarm, and thus have avoided any chance of discovery, but her long brooding over the torture of her brother made her bitter and she deliberately called the wife and daughter out that they might witness the death agony of the husband and father.

I wrote the confession and she signed it. It was given to the newspapers but none of them published it. Most of them contained only the bare statement that Mary Huggins had confessed. One or two hinted at "some fancied wrong" as the motive.

Caruthers deserved death. In my mind there was no question on that point. I could have shot him with pleasure had a plausible excuse presented itself. I could not but regard Mary Huggins as a sort of God-sent avenging angel—though the form of execution was just a trifle more horrible than I could have wished. And, I determined to save her if it was in any way possible.

I thought over the matter all night. There seemed very little chance of a reprieve, and none whatever of a commutation of sentence; to say nothing of a pardon. There was just one way: The prisoner must escape.

* * *

In the old days, there was practically no attempt at segregation of sexes in the jails. True, the two sexes were never confined in the same cell together, but they did occupy adjoining cells with nothing but bars between; and, all cells opened into one common corridor.

In this jail where Mary Huggins was confined there was a suite of rooms, directly over the office, which had formerly been used as living rooms by the jailer and his family. When Uncle Bill took charge he moved the jailer out and remodelled these rooms so they could be used for the detention of female prisoners.

It was in one of these rooms that Mary awaited death. Being the only woman in the jail (the practice of employing a jail matron had not yet been introduced) she was practically isolated.

The next several days I put in perfecting my plans—and quietly borrowing small sums of money, until the total amounted to more than sixteen hundred dollars. A sum which I deemed sufficient for my purpose. However, I did not see the Huggins woman again 'til I had every detail worked out. I then visited her several times and had her rehearse the part she was to play.

* * *

Beginning a few days before execution, it is, or was, customary to place a "Death Watch" over condemned prisoners. That is, a guard would be stationed at the door of the death cell, night and day. Because the official "Death Cell" was in the men's ward, Uncle Bill did not place Mary there but permitted her to remain where she was. He did, however, post the death watch.

I applied for, and received, the appointment as night guard on this death watch. When I asked for it, Uncle Bill smiled in a queer sort of way. I am sure now that he suspected my intent and secretly approved it.

The first night of my watch, I smuggled in to Mary Huggins a complete outfit of men's clothing. She spent nearly all night adjusting them to fit, but in the end achieved success. When I looked in, along about five o'clock next morning, it was a rather chunky, and very husky looking negro man that I saw. Before I went off shift she removed the masquerade and hid the garments in her bunk.

On the evening before the execution, the night jailer and I broached a bottle of port wine. I slipped some chloral into his glass, and when I went on guard he was dead to the world.

As soon as all was quiet, Mary passed out every garment and vestige of women's clothing and I took it down and burned it in the jail furnace. After-

wards stirring the ashes good, and kindling a coal fire over them so they would leave no trace.

At exactly 11 P. M. I opened her door and we slipped downstairs, past the drugged jailer and out into the night.

The court house was a two story building surmounted by a clock tower. This tower was ten feet square, and extended above the roof of the building some twenty-five feet. There were four dials six feet in diameter. Attached to the wall, just below the south dial, was the clock machinery. The floor, or bottom of the clock, was at a height so that a person could stand and look through the key holes in the dials and see the street below. These key holes were merely ornamental, and had been closed with black painted boards to keep out pigeons and other birds. The bell stood on a frame in the center of the floor, and could be sounded by pulling a rope from below, as well as by the striker, or hammer, of the clock.

The room was entered by climbing a ladder from a room on the second floor and crawling through a trap door. The janitor used to climb this ladder once each week to wind the clock, but it was pretty hard on his old joints, and he rigged up a sprocket wheel and chain belt so he could do his winding from below. One result of this innovation was that the clock room was not visited, on an average, once a year.

There was no one on duty in the court house from nine thirty P. M. to four A. M. and uninterrupted access was easy for one as well acquainted with the building as I.

In the several nights between the time Mary Huggins made her confession and that of my taking the night shift on the death watch I had been busy provisioning this room. I carried up a quantity of crackers, cheese, sardines, boiled ham, etc. Enough to last a hungry person eight or ten days.

The weather was pretty cold, so I carried up six heavy quilts, four large lanterns and ten gallons of coal oil. (By chinking the cracks with rags or paper and lighting all four lanterns the room could be kept comfortably warm.)

In addition to the above, I carried up two two-gallon jugs of water, a can opener for the sardines, a butcher knife, a box of matches, a tin funnel for filling the lanterns, and an empty candy pail for garbage.

It required a lot of scheming to procure and assemble all these things without attracting attention, but, a judicious use of funds made it possible.

That afternoon I placed in my pockets a pair of old gloves and a pair of wool socks which I had worn for a week. When we reached the lower step to the jail, I caused Mary to slip on the gloves. I then gave her the socks and had her pull them on over her shoes. When she was quite ready, I took her astride my shoulders and carried her across the street, into the court house and up to the ladder leading to the clock.

Sending her up the ladder ahead of me, I gave her a few words of instruction, told her I would come for her at the end of eight days, closed the trap and hurried back to the jail. By eleven forty-five P. M. I was at my post at the door of the vacant cell.

The sheriff came down at 5 o'clock next morning to prepare for the execution. In the office down stairs he found the night jailer just beginning to recover from the effect of the chloral. Hurrying up stairs, he found me, apparently, in about the same condition as the jailer. The cell door was open and the prisoner gone.

After letting them work over me for a half hour or so, I "revived' 'enough to tell them the last thing I remembered was drinking a glass of port wine with the night jailer. He of course told a similar story.

We were both rather hazy as to where the wine came from, but each expressed the belief that the other had provided it. I looked the jailer straight in the eye and told him that he knew perfectly well where the wine came from, and that I did not provide it.

He was mortally afraid of me, and interpreted that straight look as a threat of bodily harm. So, he admitted ownership of the wine, but said it was some he had procured several weeks before, and, as he patronized ALL the saloons, could not remember where he bought it. Both of us were believed to be officers of sterling integrity and unfailing devotion to duty, so the matter of the drugged wine was dismissed as an unsolvable riddle.

The blood-hounds were brought to the vacant cell and permitted to smell of the sheets and pillow on the bunk. They took up the trail and followed it to the jail steps, but could go no further. No amount of circling could enable them to pick up the trail again.

The country was scoured for miles around for traces of the escaped prisoner. Every negro cabin, and many white homes, were searched. As always happens, many rumors came in to the effect that Mary Huggins had been seen in this, that, or the other locality. Many suspects were arrested in neighboring towns.

* * *

My object in leaving Mary in the clock tower for eight days was to allow time for the hunt to subside. Also, it would give me time to drop out of sight without arousing suspicion.

Three days after the escape, I pretended to receive a letter from mother saying father was very ill and begging me to come home at once. To carry out the deception, I did go home, but stayed only one night.

The next morning, I pledged my sister to secrecy and engaged her assistance. After I had, supposedly, started to catch the morning train, we slipped back and surreptitiously entered a vacant cabin at the lower end of the farm. There, she clipped my hair so short that no one could tell whether it was straight or kinky. Then, with the aid of a pot of home-made walnut stain, she colored my head, face, shoulders and arms a beautiful golden-brown.

So perfect was my disguise that when, a couple of

days later, I stepped off the train and, absentmindedly, entered my favorite restaurant and ordered a meal the proprietor chased me out with a gun. (In the south, negroes are not permitted to enter white restaurants or hotels except as servants or other hired help.)

That night, while the court house clock was proclaiming the hour of twelve, I was creeping up the ladder to Mary Huggins' retreat. At the last stroke of the bell I raised the trap door and peeped in.

Mary was awake of course—a dead person could not remain asleep while that clock was striking—and she made a lunge with the butcher knife that certainly would have done for me had I not quickly withdrawn my head and dropped the trap door. It took quite a while to convince her of my identity.

All four of the lanterns were going and, altho it was bitter cold outside, it was as warm as toast in the clock room. Mary was in high spirit, and so pleased to see me that I had to pretend anger to avoid a scene.

We made two parcels of the bedding and small quantity of remaining provisions, extinguished the lanterns—taking one along—climbed down the ladder and made our way to the outer air.

* * *

When preparing for the jail delivery, I purchased a sixteen foot canoe and hid it in a cane-brake a few yards from the river and about seven miles from town. We reached this boat just at daylight. On our way, Mary told me she had been kept awake so much by the striking of the clock that she felt light headed, or dizzy, so as soon as we got the canoe launched I made her lie down in the bottom, covered her with bedding, pushed off and started down stream.

For four days we traveled down stream before entering the Mississippi. Paddling all day and camping on the bank at night.

We were perfectly safe, for two negroes in a boat is a common enough sight in that country, and I knew every foot of our river and was able to choose secluded spots for camping. Mary slept nearly all the time, with her face covered up; and, I told the few people we met that she was awfully sick and I thought she had smallpox.

She was masquerading as a man, so we had to choose a man's name for her. I thought it no harm to give her the name of an old time colored friend of mine, so I called her "Bill Kidd"—though I usually addressed her as "Kidd" or "Shorty." She took a cue from my color and invariably addressed me as "Mr. Brown."

The trip down the Mississippi consumed three weeks, and was uneventful enough to satisfy the most indolent. We arrived in New Orleans on Christmas Day.

We loafed around there several days before anything turned up to further our plans. But when these plans finally did get furtherance it was in a way as unexpected as it was agreeable.

One day "Shorty" went into a saloon to get a drink. In the course of conversation with the bartender he said his name was "Bill Kidd." A giant negro, with white hair, and a steel hook in the place of his right hand, asked how he came by that name. "Shorty" told some kind of plausible yarn, and the one-handed negro said his name was also "Bill Kidd."

As soon as "Shorty" told me this, we started out to hunt the one-handed "Bill Kidd." Two days later we found him.

He was as pleased to see me as Mary had been that night when I took her away from the clock room—and almost as demonstrative. He had a long tale of adventure to relate, and we passed many hours regaling each other with stories of our exploits.

Kidd said he was second mate on a small Mexican steamer carrying freight between Vera Cruz and New Orleans. When I told him Mary Huggins' story he offered to get her a job as cook on his ship. As the object in coming to New Orleans was to ship Mary out of United States jurisdiction, we accepted his offer.

The ship was sailing next day. So, in the morning I went with them and saw Mary signed on as cook. Still masquerading as a man, and going under the name of "Bill Kidd" NEPHEW OF THE SECOND MATE.

We parted in private. I knew Mary was going to make a scene and I wanted no witnesses to my embarrassment. At the last moment, that black woman—that human tigress—broke down and wept as if her heart would break. She simply raved; said she would kill herself if I did not go along, and a lot more such nonsense.

I gave her five hundred dollars and told her that when she reached Mexico she must stay there, AND NEVER EVEN THINK OF COMING BACK.

It took so long to get rid of that walnut stain, and let my hair grow to a reasonable length, that it was nearly two months before I dared return.

On New Years Day the janitor thought to celebrate by oiling the clock. The evidence of human occupation found in the clock room was the subject of a nine days' wonder. Up to this day, I have never heard anyone guess, even approximately, their true significance.

Along in March I received a letter bearing the Mexico City post mark. It was from Mary Huggins. She was cooking in a hotel and made a specialty of catering to American and other foreign trade.

Even now, after all these years, I receive occasional letters from Mary. And, I often think of going down there some time just to see her and talk over old times. However, her name is not Mary Huggins any more. Neither is it "Bill Kidd" or "Shorty." It is "Mrs. Mary Blanco." She has married Captain Ramon Blanco—a gentleman standing rather high in the Mexican Government.

# Winter in Working Class Families

A SURE sign of approaching winter." No, not some natural phenomenon, but women of Chicago gathering coal and bits of wood for the coming winter spell is that "sure sign."

The cold winter's shadows send a chill thru the hovels of the poor quarters of the city's workers, long, long ahead of the actual signs of the oncoming season. Mothers, remembering their children's comfort, hustle about gathering cinders, coal and bits of wood for kindling to be used when the severe weather makes its entry.

One often wonders how do workers, who work long hours for small pay get along? How do they live and raise families? How does poverty, generally, subsist?

From what we know of workers' lives and living, we know that, what may be termed well paid workers, employed all the time, are either always in debt or very close to it. It is pretty well known, too, that city employes, for instance, are the prey of all kinds of money lending sharks and that their pay envelopes are mortgaged 'way in advance, and so are the others.

Workers who occupy "flats," have families and raise children, always look to the pay envelopes as merely of transient value, more in the nature of a carrier, a messenger to be delivered to the various parties interested in it. If they own homes, it is taxes to meet, interest on first and second mortgages and on money borrowed, for doctor bills, clothes, gifts, etc., to pay. One must present a cheery front, the same as the neighbor. And the neighbor, the same as the first party, except for the few most fortunate, is equally in debt. If no homes are owned, then it is the landlord who gets the bulk of the money earned.

### "Always In Debt"

Few workers, higher paid or poorer, are out of debt, that is, the ones who like to live almost like human beings: i e., have homes, families, electric light, baths, etc., etc. The others who still lead the life of our ancestors, whose wives have coal kitchen stoves and whose tiny little flats are located in obsolete buildings that are relics of ancient history, and who "save" for a rainy day, they too, are on the narrow margin of starvation and debt. One month, no, even one week out of work and stinting, scrimping and borrowing is the rule.

Many is the home that is miserable and on the point of being broken up because the bread winner fails to secure employment in short order. The children must have shoes, gas bills must be met and other obligations attended to.

The high salaried worker is no better off than the cheaper paid employe. The difference between the two is the every day way of living. The one lives better than the other: i. e., on a higher plane. He can borrow more, has prestige and in a pinch, "can do" somebody out of something. That is all. But homes are lost and little flats broken up when mortgages can't be paid and obligations met. And how these workers do work!

Salesmen of various kinds of merchandise—candy, dry goods, cigars—have the longest work day. Of them it can, more truly, be said than of the proverbial coal miner, that they hardly ever see their children. A salesman who is still selling goods where the writer worked not so long ago, would make his calls to the store as late as 11:30 P. M. Another one would be at the store before it was opened in the morning. Others would come all hours, both day and evening; and many were the tales of woe these workers had to tell, about long hours and poor pay and bad treatment and discrimination. One of them, who owned his own home in a suburb, was obliged to sell it before he would have lost it, to the mortgage holder. It was also a drain on him that he could not stand. After work hours he was obliged to build fires and attend to the furnace in the winter time and do other unheard of things in and around the house in the summer time; after an arduous day of labor.

### Doctor Bills, Too

The doctor bill, too, is of no small consequence. The family must be kept small and the child or children have their ills and aches and the physician is a household friend and his "fee" is rather large.

Homes there are that could not possbily exist as homes if it were not for the fact that the grown children work and help keep them. These homes have their struggles, too; for the young folks have their needs and requirements that must be satisfied, but where the household depends largely on the income of one bread winner, the struggle is intense.

So much for the better paid workers. But how do the very low paid workers manage to get along? How can they work for the low pay they receive and keep up families—and they often have quite large families of little children. They live poorly in hovels in the worst parts of the cities and their

A SURE SIGN OF APPROACHING WINTER.
Women living in the vicinity of Wentworth Avenue and 16th Street have begun gathering fuel along railway right of ways in anticipation of an early cold season.
—From Chicago Tribune

children are in tatters. Even at that it would seem as though the pay envelope is not big enough to meet even these meagre requirements. And it isn't. And so the mothers must go out to pick up coal along the railroad tracks, the debris of buildings, a stray limb of a tree or the like in order to make ends meet. Some women, too, go to work and keep the house after work hours. Other mothers, to be sure, take work in at the house, where even the youngest children play a part in helping along with the work in some form or other. Still others go out and do washing or take in washing and so manage to keep the wolf from the door and perhaps lay by a dollar for the no-work period. And thus we see the signs of the approaching winter by the way the women of Chicago, as the example of an industrial city, pick, load and carry their wood on their heads for the winter season.

### All on American Soil

To be sure these women are not American women. Their very appearance betrays their origin; but the fact, nevertheless, remains that these women are obliged to gather their fuel where they can, on American soil, while their husbands work for American owners of American industries. And were they to rebel and refuse to do that kind of work it would not be possible for the "foreign" workers to work for the low pay they are doled out. Nor is the low pay characteristic of the foreign worker. The native worker is in no better plight. If his woman does not carry wood in the same fashion as her outlawed sister does she is obliged to do many things in order to help meet expenses. She works, in the house or in the shop, and is often obliged to share her little abode with "boarders." "Keeping" rooming houses is a typical aid to incomes applied by the American wife. No easy life is hers. And it is because of the help she is able to lend financially, that the American worker's home is held together.

Also were they to have a higher standard of living generally, a broader vision, and better requirements. Should they want the comforts of life, not its struggles—and should they seek to better their conditions and the chances of their offspring it would be next to impossible for them to get along on the earnings of their husbands. And it isn't. In every case where the woman resolves to work and have, rather than to stay at home and live on short rations, she very soon discovers that in spite of her two pay checks she is still short of funds when the week end comes around.

### Join a Union!

While the workers' wages may be larger now than they ever were, the cost of living is also higher and when the week is ended it is several days later in the race with the pay envelope. Were the women of this country to keep the old time standard of morals, that the women's place is the home, it would be impossible for American men to work for the low wages paid them in this age of "high wages."

And so the workers who do not belong to unions or are afraid of workers' organizations, stint and suffer and get along on the cheapest and poorest of food and clothing, and live in clap trap shambles. Unionism, while not perfect, gives the workers some improvements, that the workers alone as individuals could never achieve. Were all the workers organized as they should be in one Industrial Union, whether they be laborers or salaried workers, their conditions would be immeasurably improved and such things as women carrying loads of fuel on their heads would be unknown.

Let us therefore organize ourselves and reach out for the better things of life and instead of being "meek and humble and satisfied with our lot" let us demand good living, comfort, leisure and the beauties of the creations of science and invention. Let us also imbue the same spirit and outlook in our fellow creatures to the end that they may demand and get all the wealth and art and pleasure that the rich and their tribe are able to enjoy.

J. D. C.

# A Shovel Stiff's Hopes

By DORMAN N. HARRIS

I DO not strive for great renown
Or for glittering jewels or gold,
I would not wear the master's crown
Of present day, or old.

I only want each man's own right
That there'll no slavery be,
And enjoy nature as we might,
When every man is free.

But the industries and sciences,
Yes, those we'll want, why sure,
So look out, hungry tyrants,
Soon you'll be getting poor—

When the workers join the OBU
All throughout the land,
We'll change this society for a new,
Directed by our hand.

To me, oh, that will be a pleasure,
Not for the parasite so sweet—
For work he'll have instead of leisure
If he expects to eat.

I'll show him how to use the spade
And pick the hardened clay,
And earn his keep without our aid
And then I'll say good day.

And go teach some other parasite
This trade I've learned so well,
So bread they'll earn and bed at night,
And the rest can go to h—l.

# Workers Education: Now or Future

THE Workers' Dreadnought of London, England, a communist organ, is much concerned about workers' education. It wants to know, substantially, if the workers shall be educated for capitalism, or to operate production and distribution under communism?

As this question seems to agitate some of the workers in this country also, it might be well to answer by asking another, namely, how shall the workers who are to be prepared for communism function while waiting for that event to happen? In other words, of what **practical** importance will such preparation be to the working class?

### An Intellectual Minority

The idea that a certain section of the working class may be set aside to take the place of technicians and managers in the days to come is only theoretically possible but otherwise there's nothing to it. These workingmen will know a lot about running industry on paper; but they will be without experience and of no value, except to pose as half-baked intellectuals, to the detriment of the workers generally.

Besides, this idea is born of a misconception as to the mission of the working class movement. This movement is not formed to create managers and technicians, but to organize the entire working class. Managers and technicians are being made by capitalism. And they are being ground down by capitalism; and are beginning to turn against it, as a result. They, too, must be organized as a part of the working class.

Take, for instance, the depression of 1920, when, according to the press, over 5,000 technicians, engineers, etc., were out of employment, with many on the verge of starvation. This incident in their otherwise placid lives opened the eyes of many of them. They became very much discontented, as a result. Another depression, such as is now again appearing on the horizon, will serve to open the eyes of still more of them.

### Technicians Alive to Social Defects

In fact, some of the most prominent of American engineers are growing critical of the capitalist system. One of them, Mortimer E. Cooley, president Federated American Engineering Societies and dean of the engineering schools of the University of Michigan, is quoted in a Sept. Industrial Pioneer editorial as saying:

"Unless a new point of view is adopted which will remove the reasons for the growing distrust and suspicion in the ranks of the workers, an uncontrollable situation will result."

Such a situation is coming. Look at Germany, where the technical schools have made intellectual labor a drug on the market and driven the technicians into the ranks of the proletariat. The depression of 1920, already referred to, and the increasing number of situations wanted advertisements inserted in the leading Sunday papers, foreshadow a similar condition of affairs here also before long. The U. S. A. is steadily increasing its technical forces at a rate that precludes their complete absorption and use. Even now technical men, organized as Labor Bureaus, Incorporated, are giving labor organizations expert aid and advice in conflicts with employers and corporations. These tendencies will grow.

GOLOS TRUZENIKA

**Or "Voice of Labor," Russian I. W. W. organ, is celebrating its fifth year of existence. This beautiful cartoon, reprinted from its columns, expresses its victory over many forces that tried, in vain, to mow it down.**

Under the circumstances, why set up another class of intellectuals, viz., the theoretical technicians and managers, to lord it over us? Why not seek to diffuse among all workers a wide-spread knowledge of modern production and distribution, while at the same time, preparing to win the technicians and managers over to us? **Such tactics will tend to make all the workers under capitalism a unit against it.** Especially will this be the case in the event of a capitalist collapse following another war, such as appears in the offing. Then all men will tend to work against capitalism; and then may we hope most for its undoing and overthrow.

Organize the working class. Capitalism will take care of the creation of technicians and managers for the new society.

# The I.W.W. In Convention Assembled

(Continued from Page 16)

By-laws were revised. Resolutions to move headquarters from New York to Chicago and for higher dues ($1 and 75 cents are suggested to take the place of the present 50 cents dues), will be put to a referendum vote. A referendum was also favored on the question as to whether political prisoners accepting conditional clemency should be retained as members.

**It was recommended that the Marine Worker be issued in Spanish as well as in English, one paper in Spanish, and one in English. The Secretary-Treasurer of 510 is to act as editor of the Marine Worker.**

Four delegates to the General Convention were voted.

**The question of international relations loomed large, quite logically, in the marine transport workers' convention. A letter from the RILU urging severance from the IWW and affiliation with that body, was answered by refusing to do the first and pledging co-operation in strikes of all international marine workers' organizations.**

It was the opinion of the convention that the MTW could organize the world over, without affiliating with any of the existing marine unions. The creation of districts—French district, etc.—was urged to this end, in place of one general administration, which is held to be too expensive.

The convention favored small sporadic strikes as being more effective than the big ones.

**The California boycott is to be put into effect something like the strike on the job. California products are to be discriminated against in every way possible.**

The convention also decided to ask the general organization to place all deep-water and coast-wise fishery workers under the head of Marine Transport Workers.

Greetings were extended to all class war prisoners and steps taken to secure their release.

**A special resolution took up the case of the Centralia victims. The convention pledged its economic and all other power to secure their release.**

### 520 CONVENTION

Railroad Workers' Industrial Union No. 520, met on November 5th to 10th inclusive. Delegates were present from many western, mid-west and eastern points; all actual railroad men.

The formulation of by-laws and a program of organization occupied much of the convention's time.

**Resolutions were adopted recommending that the General Convention of the IWW make changes in the General constitution that will allow of greater autonomy in industrial union activities.**

Delegates were also elected to the General Convention.

Judging from the above salient points that have been referred to it, the IWW General Convention will be an exceptionally interesting one—a landmark in the development of the organization.

The General Convention is in its preliminary sessions as The Pioneer goes to press More about it next month.

## LABOR BANKS

There are 15 "labor" banks in this country. They were all founded between May 15, 1920, and October 15, 1923. Their resources are estimated at about $44,000,000. In addition, one-third of a $45,000,000 trust company in New York has been acquired by the Locomotive Engineers' Bank, and two-fifths of a $15,000,000 bank in Washington has been bought by the Machinists' Union. Further, the United Mine Workers will open a new $1,000,000 bank in Indianapolis soon.

Geo. Hinman, financial writer for the Hearst papers, say of the "labor" bank: "It is not radical; it is not revolutionary. It is simply business-like—as business-like as it is for employers or so-called capitalists to put their dollars to work." Another writer, David J. Saposs, calls it "trade-union capitalism."

Lloyd George contends that a war still more hideous than the last one is impending in Europe. This means another world-war that can only be prevented by the world's workers, regardless of race, color, creed or sex. Nationalism, whether Russian or American, must give way to internationalism, if the workers are to be aught else than victims of slaughter.

In 1920, the American Federation of Labor had a membership of 4,078,740. The membership in 1923, as reported by the executive council to the Portland convention, is 2,986,468. This represents a loss of 1,092,272 members in three years.

The Workers' Party, the latest political manifestation of communism in this country, claims a membership of 20,000. About 1,500 of these are English-speaking; the remainder are divided into language federations. There are about one-half the number of organized communists today as compared with 1919.

## SCANDINAVIA AND ITS LABOR MOVEMENT

**By C. G. Andersen, Stockholm, Sweden**

# As Pioneer Readers See Things

## The Significance of the Modern City

FELLOW WORKER Geo. Williams in July and August Industrial Pioneer, "The Significance of the Modern City," invents a strange, and to say the least, brand new Political Economy. All work done in big cities is distribution, all work done outside of big cities is production. This classification was necessary in order to prove that the Bolsheviki could not organize distribution but production was O. K.

If I remember aright the first distress of the Russian revolutionists was lack of coal in Moscow and other places, because of flooding the Donetz coal mines; destruction of boilers and other mine equipment by the white guards. Second, after seven years of war the railroads, according to all reports, were a pile of junk scattered throughout all Russia.

And, most sensational of all, the crop failure in the Volga valley. Now all this is production and not distribution, according to Fellow Worker William's article.

But from different sources we gather that production in cities and big factories fell enormously under the workers' management, due in part at least, to inefficient management or lack of it. Possessing all the shooting irons, distribution did not bother the Bolshevikis at all, not till there was danger of having nothing more to distribute, did the now famous economic retreat began.

If Fellow Worker Williams had left the Russian Revolution alone and devoted his article to the facts and conditions at home his article would be the more significant, because it deals with facts not often dealt with in our publications, namely, the management of enormous industrial establishments of the cities, and their relations to basic industries of the country. After enumerating the importance of the city, he goes on to say that our numerical strength in cities is insignificant compared with the rural localities, especially of the West. He says, "There is a cause for it and whatever the cause it is one that certainly needs close study and adjustment of not only the city condition to our organization but of the IWW to the city."

### Hopeless Cases Redeemed

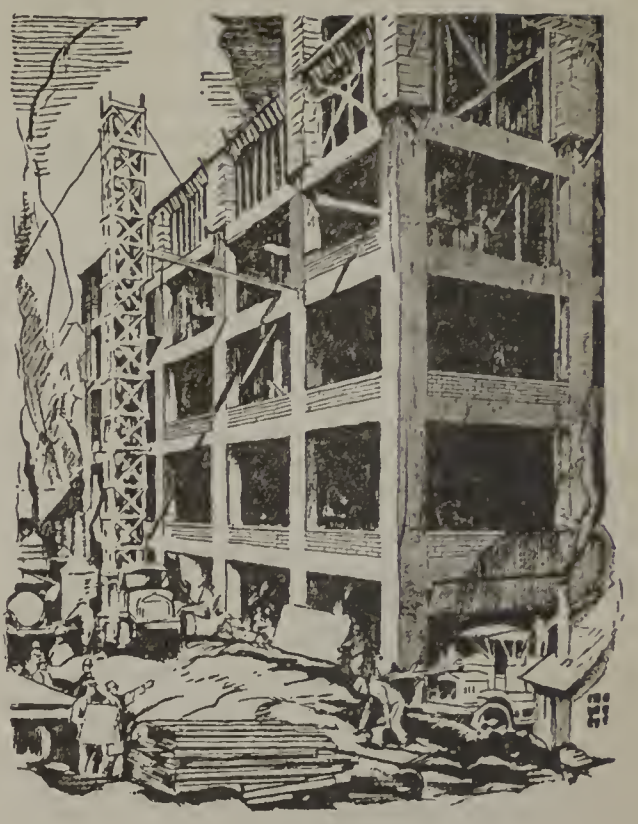
In order to attempt to contribute to the solution of the question I will confine myself to certain facts in the history of the IWW.

Up to October, 1916, the lumberjacks of the Spokane district were considered the hopeless scissorbills. This applied to all migratory workers.

Many a winter up to that date we were paying the secretary of combined Spokane locals a weekly salary of about twelve dollars a week, not to say anything of hall rent, and the combined membership often fell below fifty.

Why the big change from the winter of 1916-17 up to now?

The change first took place in the methods of doing business within the IWW and the jacks rolled in and stuck, as you all are familiar. Prior to this date our activities were those of a debating society of half a dozen political politicians, bawling out the bulls, salvation army, the scissorbills, the preachers, etc. That the organization presupposed work done in a certain definite way never entered our heads, and the results were that the workers felt that we were a hopeless bunch of spittoon philosophers.



BUILDING UP-TO-DATE CITY

In theory we were non-political but in practice we were trying to transact our business on parliamentary lines with the most disastrous result. No organization, no industry, can be run on parliamentary law, because parliamentary law is the way to talk when there is a crowd, while organization or industry is a mass of work done in accordance with its nature.

In 1913 the IWW hall in Spokane needed a box for coal, so the question was brought up at a business meeting. From 8 till 12 p. m. we argued whether to buy a box or borrow or make one. When I left the hall this was what came to my mind, "How in the devil can this bunch manage logging, sawmills, farming, railways, etc."? Well, I quit paying dues for two years.

### A Revolution

The old AWO—400—introduced entirely new methods of carrying on the work of the organization, namely, the delegate system. Needless to say under new methods we started to grow so fast that

we scared the bourgeoisie stiff; hence persecution.

If the ordinary working man listens to us wrangle, often over nothing, at our business meetings and then goes out in a big city like Chicago, this must come to his mind: "If this bunch thinks that they can run this gigantic outfit on political parliamentary lines they are bugs."

The Wobblies of the West during persecution developed methods of doing business peculiarly suited to them. Now from all reports those methods, ways and means are not succeeding in the industrial manufacturing East. Even the sawmills out West are not very strong. Experiments by branches, delegates, members in industrial centers, constructive criticism, and discussion, and special propaganda in the press may perhaps devise methods and means that will be successful in the big eastern manufacturing centers. Russian Revolution teaches us that committees elected and controlled by parliamentary methods falsely called "democratizing," cannot run industry (too many cooks spoil the soup). Debating societies can only talk, split themselves into factions and ultimately ruin anything. The study of how the boss manages industry and different organizations is our only solution. If every worker from accountants and bookkeepers to the sweepers, does the work as it ought to be done, the boss is a useless parasite—his primary function is to "can" the ones that do not fit, for one reason or another.

It has often been said that the general principles underlying the management of one industry are in general the same in all industries. If we learn to manage, control and transact business in general efficiently in our present IU the management of industries after we get them will be easy pickin's.

Reno, Nevada. JOHN CRABAPPLE

## FORD AS HIS WORKERS SEE HIM

IN your October issue, Geo. Williams, in his article, "Henry Ford, A Peculiar Entity," makes the statement near the close that, "There remains yet to come from an employe of the Ford plants a criticism of the working conditions."

I don't want him to feel that he can ever again say anything like that truthfully.

Perhaps I had best explain that I have been an employe of the Ford Motor Co. six months at an assembly plant where I am at present.

Curiosity and a purpose brought me here. Purpose holds me here in spite of the fact that I have had to endure more brutality, both ignorant and refined, than I ever thought I could endure under any circumstances.

My purpose in coming here was to find out why Ford has no labor troubles and in what manner could Ford employes be converted to the One Big Union ideas.

Of one thing I feel certain. Owing to the superlative Ford spy system, and the mental condition of the employes caused by it, ordinary IWW organization methods would be the height of folly. At best it would have to be slow underground work, or so it now seems to me.

The price the Ford laborer pays for his $6.00 per day is the sacrifice of his manhood, likewise literally speaking, Ford's labor is the cheapest that I know of.

I sincerely hope Mr. Williams can conscientiously recogize this as a criticism and if he so desires I will give him any "Ford news" that I can. However, I must ask that you keep my name out of print, if I am to be of any value (in this unorganized field) for Industrial Unionism.

Trusting that I may be of some use in some way, I am, yours very truly.

## CRITICISM OF RUSSIA

ON page 44 of the October Industrial Pioneer, we find the opinion expressed that Russia is becoming capitalistic.

I call the attention of the critic to the fact that the division of humanity into masters and slaves is unnatural, for all of us have equal needs and equal faculties; and that something wrong must be the cause of that anomaly; and that this cause is the stupidity of the ruled class, a disease produced by military obedience and developed by religion and servitude. The only way to eliminate that condition is to develop the people's intelligence.

Karl Marx and the writer of the criticism say that capitalism shows to the workers the injustice of that condition, and indeed it does. But what it doesn't show is how to do without masters.

So we see the people revolt, itself without cohesion or clear aim; and the instruments of capitalism crush and massacre it, to subdue it by terror; which still more stupifies the workers. It follows then that the only way to get out of slavery is through the door of instruction.

Now everybody knows that Soviet Russia is using its utmost efforts to rapidly educate the people, as every one must believe; otherwise that social system could not last long.

But the critic says that Russia is going back to capitalism because of the concessions. But, these concessions, which are only granted for a limited time, are a valuable source of revenue. It is also true that the co-operative societies are increasing there, every day. The more they develop the less hired workers capitalists will find there.

Ten years from now will be the fifteenth year of the Soviet Republic. By that time, the intellectual revolution in Russia will be completed; and due to this fact, all the workers will have joined the co-operative societies. What will capitalism do there, then?

Providence, R. I.

JOSE M. CUNHA.

(NOTE—Readers are advised to re-read articles criticised. It is a good habit, when reading, to check up statements made.—**Editor.**)

# The Last Letters of Joe Hill

I NOTICE that the Pioneer is going to publish a sketch of the life of Joe Hill in the November issue, so thought you might be able to use some of the letters I have and which were written by him while he was under sentence of death. These letters, to a great extent, show that peculiar spirit which enabled Joe to bear up so well under the enormous strain, while all the forces of both sides of the struggle were being marshaled—one to take his life, the other to save him.

I had been with Joe in Lower California, but had seen nothing of him and heard little, as I had been spending my time in an out-of-the-way place till August, 1914, when I arrived in Frisco and received the latest news relative to his case from a fellow worker who had just left Salt Lake.

If you could get a little poem he wrote a little while before he was shot, entitled "The Bronko Buster," and inspired by a picture of "Buster" Flynn on a pony sent to him by Gurley Flynn, it will shed some light on the love Joe aways had for freedom and the untamable spirit that refuses to surrender it.

The cartoon I am enclosing was sent with the first letter I am sending.

SAM MURRAY, SU-410.

Oakland, California.

I

Salt Lake City, Sept. 15, 1914.

Dear Friend and Fellow Worker:

Yours of Sept 9 at hand. Glad to hear that you are still alive and kicking and back on the firing line again.

So, you tried to imitate Knowles, the Nature Freak, and live the simple life. It might be all right for a little while, as you say, but I am afraid a fellow would get "simple" of getting too much of the simple life.

Well, I guess the wholesale butchery going on in Europe is putting the kibosh on everything, even the organization work, to some extent. As a rule, a fellow don't bother his head much about unions and theories of the class struggle when his belly is flapping up against his spine. Getting the wrinkles out is then the main issue and everything else, side issues. That's human nature or animal instinct rather, and any amount of soapboxing will not change it. The man who coined the phrase "War is hell" certainly knew what he was talking about Well, Sam, old boy, I guess Van has told you everything about my case and I think he knows more about it than I do, because he has been around here and on the outside. I am feeling well under the circumstances and I am fortunate enough to have the ability to entertain myself and to look at everything from the bright side. So there is nothing you could do for me, Sam. I know you would if you could.

Well, with best wishes to the bunch in Frisco, I remain, Yours for the OBU.—Joe Hill.

**A RECOLLECTION—Sam Murray as a Mexican Revolutionist, Drawn by Joe Hill.**

P. S. Is Jack Mosby in Washington yet or did he leave?

II

Salt Lake City, Dec. 2, 1914.

Dear Friend and Fellow Worker:

Received your letter and should have answered before, but have been busy working on some musical composition and whenever I get an "inspiration" I can't quit until it's finished.

I am glad to hear that you manage to make both ends meet, in spite of the industrial deal, but there is no use being pessimistic in this glorious land of plenty. Self preservation is, or should be, the first law of nature. The animals, when in a natural state, are showing us the way. When they are hungry they will always try to get something to eat or else they will die in the attempt. That's natural; to starve to death is unnatural.

No, I have not heard that song about "Tipperary" but if you send it as you said you would I might try to dope something out about that Frisco Fair. I am not familiar with the actual conditions of Frisco at present; and when I make a song I always try to picture things as they really are. Of course a little pepper and salt is allowed in order to bring out the facts more clearly.

If you send me that sheet music and give me some of the peculiarities and ridiculous points about the conditions in general on or about the fair ground, I'll try to do the best I can. Yours for the OBU.—Joe Hill.

III

Salt Lake City, Feb. 13, 1915.

Friend and Fellow Worker:

Should have answered your letter before, but have been busy working on a song named "The Rebel Girl" (Words and Music), which I hope will help to line up the women workers in the OBU, and I hope you will excuse me.

I see you made a big thing out of that Tipperary song. (We had secured nearly 50 dollars by selling it for 5 cents for the Joe Hill Defense.—S. M.) In fact, a whole lot more than I ever expected, I don't suppose that it would sell very well outside of Frisco, though by the way I got a letter from Swasey in NY and he told me that "Casey Jones" made quite a hit in London and "Casey Jones," he was an Angelino you know, and I never expected that he would leave Los Angeles at all.

The other day we got ten bucks from a company of soldiers stationed on the Mexican line. How is that old top? Maybe they are remembering some of the cigars in glass bottles that they smoked at the expense of the "Tierra e Libertad" bunch.

Don't know much about my case. The Sup. Court will "sit on" it sometime in the sweet bye and bye and that's all I know about it.

Give my best to the bunch.—Joe Hill.

IV.

County Jail, S. L. City, Mar. 22, 1915

Sam Murray, Napa, Cal.

Friend and Fellow Worker: Yours of March 13th at hand. I note that you have gone "back to nature" again and I must confess that it is making me a little homesick when you mention that "little cabin in the hills" stuff. You can talk about your dances, picnics and blow outs, and it won't affect me, but the "little cabin" stuff always gets my goat. That's the only life I know.

Yes, that Tipperary song is spreading like the smallpox they say. Sec. 69 tells me that there is a steady stream of silver from 'Frisco on account of it. The unemployed all over the country have adopted it as a marching song in their parades, and in New York City they changed it to some extent, so as to fit the brand of soup dished out in N. Y. They are doing great work in N. Y. this year. The unemployed have been organized and have big meetings every night. Gurly Flynn, Geo. Swasey (the human phonograph) and other live ones are there, and Gurley F. tells me things are looking favorable for the OBU. The hearing of my case has been postponed they say, and they are trying to make me believe that it is for my benefit, but I'll tell you that it is damn hard for me to see where the benefit comes in at; damn hard.

Well, I have about a dozen letters to answer, Yours as ever, JOE HILL.

V.

S. L. Cy., June 6, 1915.

Friend and Fellow Worker: Your weleome letter received, and am glad to note that you are still sticking to your "little cabin in the hills." I would like to get a little of that close to nature stuff myself for a couple of months in order to regain a little vitality, and a little flesh on my rotting bones. My case was argued on the 28th of May, and according to Judge Hilton, the results were satisfactory. He says he is sure of securing a reversal, and if so, there hardly will be another trial, for the simple reason that there won't be anything to try, if I can get a lawyer that will **defend** me.

With best wishes to all the rebels, Yours for the OBU, JOE HILL.

P. S. I've just found out that the Superior Court judges are getting ready to go on their vacation until next fall, so I guess there won't be anything decided on my case for some time. But "everything comes to him who waits" they say, and that's the only consolation I got now.—JOE.

VI.

Utah State Prison, Aug. 12, 1915.

Friend and Fellow Worker: Yours of August 5th at hand, and as you see I have been moved to the state prison. The appeal was denied and I was up in court the other day and sentenced to be shot on the first day of October. We were all very much surprised at the decision, because we thought that I would be granted a new trial anyway. But as Judge Hilton says "the records of the lower court are so rotten they had to be covered somehow." I guess you can draw your conclusions from that statement. I wanted to drop the ease right there and then, but from reports received from all parts of the country, I think that the case will be carried to the U. S. Supreme Court. I didn't think I'd be worth any more money. You know human life is kind of eheap this year anyway—but I guess the organization thinks otherwise and majority rule goes with me.

Well, I don't know anything new and hoping that you are successful in snaring the elusive doughnut, I remain, Yours for the OBU,

JOE HILL.

VII.

Utah State Prison, Sept. 9, 1915.

Sam Murray,

Frisco, California.

Friend and Fellow Worker: Yours received O. K. Glad to hear that things are picking up. I see that you are employed at making bait for the German "sharks." Well, war certainly shows up the capitalist system in the right light. Millions of men are employed at making ships and others are hired to sink them. Scientific management, eh, wot?

As far as I can see, it doesn't make much difference which side wins, but I hope that **one side will win,** because a draw would only mean another war in a year or two. All these silly priests and old maid sewing eircles that are moaning about peace at this time should be locked up in the crazy house as a menaee to society. The war is the finest training school for rebels in the world and for

(Continued on Page 56)

# War and Christmas — "Murder Will Out."

By ROBERT GRAYSON

PERHAPS not too vigorous a voice need be raised in ealling on memory in a matter of again unveiling the tragic and brutal pietures of war propaganda. However, that may be, on various sides we hear voices of old men—as cries of repentanee—telling the general "booboisie," or our alleged mass moron population, that not all the tales of German atrocities were true. This is a safe distance at which to discount such ealumnies, and espeeially without hazard to its announcer if he chanees to be a "statesman." So Francisco Nitti, formerly Italian premier, sets forth a very interesting indictment of all the European allies against Germany, in the Hearst newspapers for the 28th of October. His thoughts are worth reading for themselves, and in the light of our own victims of the Espionage Aet earry added interest.

Mr. Nitti is no longer premier. He is getting old and nears the tomb with a wail of despair on his lips, withal eonsonant to Europe's actual situation, declaring that "Among the nations of continental Europe a moral eode of robbery and murder prevails." And with respect to stories rife for so long in a British-propagandized Ameriea about Germany springing on Europe's throat he says (which is important merely because it is a confession of guilt and not a revelation) that "responsibility for the world conflict eannot be laid exclusively at the door of Germany and Austria-Hungary." While impeaching France and reproving Italy he is careful not to inelude Britain or Ameriea. One must have some support.

The most important paragraph of his artiele is summed up in this naive statement: "During the war we proclaimed that Germany and her allies were alone guilty, and that Germany was guilty of unbelievable outrages. **Our excuse is that when a nation is at war fighting for its life, any means that kindles and increases resistance seems justified.** I myself, in order to exalt the spirit of the Italians, have said and written that the responsibility of the war belonged to Germany.

"In war only one thing is neeessary—to conquer. While the struggle is going on only one thing is neeessary—victory. **The enemy must be made as black as possible, inhuman in cruelty, wholly evil in purpose. But when the war is ended and danger over, truth should return."**

### Worth Memorizing

That is worth memorizing, or at least remembering substantially. Because not many years shall pass without another war, one of such terriffic proportions as to overshadow the huge bestiality of the recent one, which, by the way, seems to be eontinuing in the Ruhr. When once again our masters, the arbiters of human existence, who possess us because they own the economic machinery and ean decree almost without protest that millions of Amerieans shall go into trenches to buteher workers of other countries; I repeat that when once again this

PROFIT ABOVE HUMANITY

eeonomic oligarchy finds it to the advantage of an expansion policy to declare another war, press, pulpit and school will blaze with lies about the atrocities of the opponent, and these good Christian ladies and gentlemen will feel justified for reasons quoted above! Then heretofore calm, almost stolid, and always stupid workers will recoil at the horror of "foreigners" with so little humanity as to cut off hands or feet of little babies, to unsex men and to rip wombs out of women, and so on **ad damnum.**

Once again as national monomania of war whirls its foul mental fogs, and ingenious tales of the adversary's brutality ery out on every corner, in each alley, from so-called newspapers, conveniently purchased outright for the occasion, from altars ostensibly dedicated to him who died for preaching the Brotherhood of Man, from the schools that forever exalt war's alleged glamour, when all this degradation constitutes the pabulum of our masses, there will be some cries of protest, some clear voices "crying in the wilderness" and patriotism's glorious duty will again be exhibited in stifling these cries, jailing the men and women who dare to see the truth "out of season," or lynching them without hesitation.

### A Moral Collapse

Ex-premier Nitti and others of high station in a bourgeois world can see what they regard as a total moral eollapse and an economie failure so far-reaching that it means no more or less, to their minds, than "the collapse of European civilization." The mighty are dying, their financial thrones creak dismally on slender, swaying sticks. So the heart crying out for past glory is a heart almost bled white. They want the "good, old days." Their hearts are

not winepresses that but crush the fruits of experience to flow forth at length a seasoned wine of wisdom and of the joy of living. No, these old men despair. Not only is their race almost run, but the power that was hereditary in masters is, too, nearing its last grave. Yet what should these great ones expect? Diurnal things may well melt into the past with skies glorified by beautiful sunsets, but can the long travail of human slavery, born in agony, matured in sweat and blood and tears, blissfully pass along as a being finding some sweet Nirvana?

I think not, and you have only to see this violence all around us together with the confessions of capitalistic incompetency that daily grow more nunerous, to realize that the regime is sick unto death. If there is no hope for its recovery it behooves us to make haste, for life's strands are complex at best, and must be disentangled by intelligence. The germ of such intelligence is small, but it has power to grow, indeed must grow and arrange the affairs of mankind. There is no hope except that which is conceived of industrial freedom. Soft hands cannot always hold the reins, and purrings of aristocracy cannot guide humanity to any advance. It is for rough hands and strong tongues to remould and guide society by causing its elements to pour through channels of industrial democracy—all to work and all to eat.

### The New Philosophy

All those who want the establishment of social justice, which is only attainable by inaugurating an industrial system that is sane and that does not rest on a foundation of mass servitude to privileged minorities, expect rulers to take umbrage at this new philosophy. To feel their wrath is part of the day's work, evidenced by the attitude of our rebels in prisons, yet inexplicable to all who do not feel the tireless driving force that animates evangelists of any kind. Most of the men and women who went to jail for being outspoken in this rallying of workers around the red standard of their economic deliverance had no wish to be martyrs, for such a desire is not normal. But they did not falter, they were consistent and they suffered. It is the story of man's advance throughout all ages, and that mankind did advance, over the bodies it destroyed only to venerate later, has caused it to be truly said: "The blood of martyrs is the seed of the church."

We owe them our support, we owe it to ourselves and to our class. Humanity, with capitalism's end, will know no death. But the might of our proletarian solidarity it must experience a real, thoroughgoing renaissance designed so that no man can live on his brother's labor, that there shall be no mansions, jewels, learnings and abundance of every material kind for any arrogant class of idlers and wasters, while the masses break their backs in excessive drudgery, existing in poverty and ignorance. Therefore, stand up for yourself and your class, it will inherit the earth. Refuse to be reduced by bourgeois propaganda to the common denominator of a fool. "To be or not to be" perplexed Hamlet, just as it apparently distresses certain bourgeois encumbrances of the earth, but the virile, surging, singing workers whose youth is endless in their class, pressing on and up, with all of evolution's truths favoring their future and refusing to remain mute domesticated work-beasts feel an exultant cry of positive life and freedom and happiness in the deathless will "To be!"

## JOE HILL'S LETTERS

(Continued from Page 54)

anti-militarists as well, and I hope that all the S. S. bills in the country will go over there.

Well, Sam, I don't know anything about my case. My attorneys told me to leave it all to them, and that makes it pretty soft for me to have someone else do the worrying for me.

I believe your good work on the coast is being felt at this end of the line, though.

With best wishes I am as ever yours,

JOE HILL.

VIII.

(When the following was written, Joe expected to be shot within twenty-four hours, and all of us had given up hope. However, he later received a respite of something over a month, thus being forced to go over the strain of the last day on earth again.)

Utah State Prison, Sept. 30, 1915.
Sam Murray, 3345 17th St.,
Frisco, Calif.

Friend and Fellow Worker: Well, Sam, I received your letter, but you shouldn't feel so sentimental about it. This dying business is not quite so bad as it is cracked up to be. I have always said "a new trial or die trying," and I'll show that I meant it. I was moved to another cell last night and have an armed guard in front of my cell. I was also given a swell feed for the first time in God knows how long, and that is one of the surest signs.

Well, Sam, you and me had a little pleasure at one time that few rebels have had the privilege of having, and I guess I've had my share of the fun after all. Now, just forget me, and say goodbye to the bunch.

Yours for the OBU,

JOE HILL.

P. S. Sent a letter to Caroline.

This was the last letter I got direct from Joe Hill. But we kept up the fight; telegraphed to the unions of Sweden, the Swedish Minister at Washington, who sent President Wilson a letter; who also wired the Governor of Utah, but to no avail, and the night before the execution finally took place we received together with some of the other organizations throughout the country, his famous farewell wire: "Goodbye, Forget me. Don't mourn, Organize." which we immediately answered, but which, as near as we could learn, he never received.

# A Worker's Wanderings from Italy to South America

By JOHN ASHBURN

IT is just about a year, that, disgusted with the rioting of the Fascist mobs in Italy, I decided to leave that country, as so many Italian Socialists and Radicals were forced to do. Although I was an alien in Italy and I worked peacefully, restricting myself to viewing the development of the political and economic situation, I was not safe with these bandits, who killed and tortured anyone, who had another opinion than theirs.

Once I got a copy of "Industrial Solidarity," in which paper I narrated something about the growing movements of the Fascists and their sainted leader, Mussolini; whom I marked as a corrupted politician, because he was financially backed by big industry. Accidentally a "blackshirt," knowing the English language took the newspaper out of my pocket in my working place and read this item signed with my name. This is a risky thing and so much the more, if you dare to write about the "Duke," as Mussolini's followers call him.

We had some quarrel and I avoided thru some trick to be beaten or forced to drink castor oil or shot down like a laborer, who was bold enough to read on a street corner the innocent "La Giustizia" (Justice), a reformist Socialist paper. A blackshirt passed by and asking him for what reason he reads the aforementioned newspaper and getting no answer from this intimidated worker except a whisper, the blackshirt shot down the unarmed workingman. Under such circumstances I did not feel quite at my ease and I determined, on departing from Milan, to go via Venice through Germany to Buenos Aires.

### A Fond Reminder

I took the night train from Milan to Venice bidding farewell to all fellow workers and comrades having to remain at their posts. As the train moved out on the Lombardian plain, illuminated by the emerging moon, I was reminded of Italy of two years ago, on the verge of social revolution. Malatesta, the great old leader, arrived in the harbor of Genoa from England, where he was exiled during many years, saluted by the steamship's whistles and then came the occupation of factories by the whole working class; the climax of this great historical revolutionary movement equaling in significance the Russian revolution.

All these Italian workers were full of idealism, which seems to be a gift of nature of this southern nation, that I did not encounter either in Germany or even in Russia. The movement declined steadily, due to the fact, that the Socialist and Confederation of Labor leaders betrayed the working class, step by step.

### Italy Amid Civil War

At the present time Italy is doomed to Mussolini's tyranny, worse than Germany during Bismarck's Socialist law

In the train one could see that Italy is amid civil war. In the corridor of the car there are written the diverse slogans like: "Down with the Fascists!" Down with the rascals!" "Long live Malatesta!" "Long live Lenin!" The latter is the only one of the Russian leaders, who is appreciated by the Italian workers. Others are never mentioned. The Italian railroad workers are the most severe enemy of the fascism and the foremost vanguard of the Italian radical, unpolitical Socialism, leaning toward IWW theories. These workers are not organized under the Confederation of Labor but they have a separate organization of their own adhered to the syndicalist confederation.

The train rushed through the fertile plains eastwards; I glanced at the last spurs of the Alps lying in the north. We had a little delay at the station of the university town Padua, on account of the turbulency of a Fascist squadron wanting to get into the train. They sang: "Giovinezza, giovinezza, primavera di bellezza . . . " whereupon the personnel of the train replied with: "Avanti popolo a la riscossa . . " ("Forward, folk") to uproar . . accompanied by the sounds of some shots.

Finally the train drove out of the station. The mountains disappeared more and more from the horizon and a seabreeze began to blow and a wonderful sunrise was visible. The train left the peninsula and ran about 15 miles upon a stone bridge amidst short yellow waves of the Adriatic sea to the artificial island on which the medieval city of Venice is situated. Venice is built up thoroughly on piles driven in the low ground of the Adriatic sea, but in a few centuries this town will be no more an island of lake-dwellings, because the coast of the Italian peninsula is slowly moving out towards the sea.

### Entering Venice

At 6 o'clock in the morning I entered Venice. Few people were on the streets Each step on the big stone flags sounded and echoed solemnly. I asked a Venetian fellow for the best way to Pallazzo San Marco and he responded with a very soft pronunciation in the Italian language, interwoven with some words of the Venetian dialect. Thus I took a "gondola" and drove along the Grand Canal. On both sides one can see "i palazzi" of the middle ages. The steps of these buildings are washed by the water and sometimes it runs even into the hall. A part of these old castles are abandoned and birds are the only inhabitants of the forgotten and sleeping houses, where once upon a time a gorgeous splendor and luxury displayed their might. After half an hour's gondola ride I went ashore on Piazza di San Marco, the center of the town. I also found here a solemn calmness, which lasted during the whole day, although it was not a festival day but a work-day. Venice seemed to me like the castle of the Sleeping Beauty in the well known fairy tale. She lives on the money brought in by foreigners.

Piazza San Marco, a large square, is surrounded by colonades and porticos. I saw the never missed feeding of the San Marco's doves.

Then I went into the Duke's palace, the so-called "palazzo del Doge," in which are sheltered galleries of pictures representing fine art such as we do not any more produce in our century of capitalistic industrialism. The guide led me to the prisons, in which suffered the revolutionists against this aristocratic republic that lived at that time as a parasite and sponger upon the diverse countries of Europe and the near Orient, as today Miami, Fla., or Los Angeles, Cal., are doing upon the toiling industrial centers and agricultural plains of North America; or as Monte Carlo is doing upon Europe and the casino near Montevideo, Uruguay, upon the South American continent. Indeed, it made some impressions on me seeing the small cells without a window, real tombs. The walls, the floor, the ceiling, the bed—all that is of cold stone. I entered each cell with some palpitation and as I felt the smell of mouldiness, it was like the wind of past ages.

I took the through train to Vienna the next morning. In the compartment I made the acquaintance of two young Boers from Transvaal, South African Union, who were travelling to the University of Vienna. I conversed with them upon the ranch upheaval and they told me that the IWW theories are getting a foothold in the Union on account of the general discontent reigning throughout the African continent since the war-end.

**In the Steerage**

Finally I arrived at Hamburg. I travelled as steerage passenger. The majority of these emigrants were German emigrants, most of them industrial workers, who went to either agricultural Argentine or Brazil. As I went to the pier I could make philosophical considerations. There were two vessels, one starting to South America, the other to North America. On the gangway of the former you could see underfed proletarians, disgusted with the old continent and having before them an unknown future. They have no relatives in the far, southern world and they are real pioneers destined to go into unpopulated areas, like the Pampas, Patagonia or Andean regions. On the gangway of the latter you could see well-dressed passengers, who know where to go; namely, to a more developed continent than they leave.

We departed at five o'clock. The relatives on the pier beckoned to their husbands, sons, sisters, brothers, daughters, etc., hoping they will become rich; but how many are going to go under, as I saw, they do not consider.

## NOT HIM

Shop Foreman.—"You ain't one of them blokes wot drops their tools and scoots as soon as knock-off blows, are you?"

Lily White.—"Not me. Why, I often have to wait five minutes after I put me tools away before the whistle goes."—**The Sydney Bulletin.**

# Our Business Corner

WE are not mourning. We say with Joe Hill, "Organize," and organize the proper way.

We have a splendid report to make. The Pioneer has just passed its 8th month Birthday, or eight months since the work on the Pioneer was actually begun.

Our record as an IWW educational and popular magazine is already established and that is no boast.

**Our financial record is also fine. Beginning in May, with no funds at all, excepting what the General Office advanced, and with some comparatively small contributions from outside, we have been able not only to pay our expenses and our debts to the General Office; but also, show a surplus of $143.09. Now, that is not bad.**

However, we'll not stop here. Improvements must be made. We must spread out. We must reach the workers of this country and abroad with the message of Industrial Unionism. To that end, further funds are necessary and further investments.

Our first step in that direction is the special Christmas Amnesty issue to be out about the 25th of November. This Special Amnesty number, as will be seen, consists of 64 pages excellent material and splendid cartoons and pictures. Our regular issue is 48 pages

**Fellow Workers who are interested in the Christmas Amnesty Drive for the release of the boys in jail, should get busy and send in an order for the December issue. Do it now.**

If you are getting an order, you should double that order or multiply it. And those who are not on our mailing list, can send in the order with cash in advance or thru their respective unions, and these, even as small an order as for five, will be filled at once, and forwarded as soon as the magazine is off the press. Extra copies will be supplied as long as there are any left.

Send in subscriptions; names for sample copies; names and addresses of news stands and other dealers anywhere. Send in for a subscription book.

**You know the importance of the press to the capitalist, it is equally as important to us. Spread our press, all of it.**

The Industrial Pioneer for December will be especially good for that purpose.

Get readers, this is the thing. A reader is a friend any way, if nothing else.

You secure the reader and the Industrial Pioneer will break down his prejudices against the IWW, even if it has grown thick with moss.

**The Industrial Pioneer is ploughing new ground and its short existance will show that the plow is not of the old-fashioned kind, but of the latest model, modern type.**

In boosting the Pioneer of December you will accomplish a threefold task, viz.: help boost the Christmas Amnesty drive; increase the circulation of your press and prepare the way for an increased membership. Let's go!

# Gompers and Deportation

By FORREST EDWARDS

THE present immigration act, which limits the number of immigrants to be admitted to the United States from each of the foreign countries, becomes inoperative in 1924.

This law was passed when the capitalists of this country were in the clutch of a fear that a great influx of immigrants from war-torn Europe would bring with them "social" ideas which would make them dangerous and undesirable. Moreover, the industries which were turned from peace production to the manufacture of war material would again assume the old character, with decreased working forces and at a slackened pace, compared with the feverishness of war time. Also, those industries which serve equally the purpose of war and peace, which had been running at their utmost capacity to supply our large military force for a longer period than proved necessary, would reduce the production, and this would also automatically reduce the working force. A dangerous army of unemployed would thus be formed.

In addition, there was a military force of approximately four of the five million under arms to be demobilized and made available as civilians to assist in supplying the human needs of industry. Manifestly under such circumstances the capitalists felt safe in setting up bars against foreign labor.

There was persecution in this "patriotism," too, for if an unrestricted volume of immigration had been allowed entrance into the United States, when the immigrants arrived and competed with the veterans, the Europeans would get the jobs and the hollowness of the capitalists' pretended patriotism have been shown up.

### Open Shop Success

The open shop drive scored such success as proved the capitalist calculation about labor power had been sound. But the industrial boom which created a demand for labor during the past year or so, has proved that the national labor supply was not of such proportions as to enable the capitalists to have their own way to the extent that they desired and to which they had grown accustomed.

As a consequence we find their agents in Washington trying to influence congress to lift the ban higher, and their newspaper mouthpieces throughout the country are shouting about the hardships that the "labor shortage" was imposing upon "our" manufacturers.

A controversy arose as to whether the restrictions upon immigration should be relaxed, made more stringent, or removed entirely. Each contention had its supporters. Of course, Labor, through its "accredited representatives," had to contribute its share to the discussion. Sam Gompers was its spokesman.

Mr. Gompers insists that unrestricted immigration would work hardships and visit injustice upon the working class of the United States. Therefore, he stands for such restrictions as would do justice to the oppressed of other countries but would not imperil the standards of the American workers and threaten the institutions of the United States. He suggests that intelligent immigrants would help, rather than hinder the country. He would gauge the intelligence of the would-be immigrants by a literacy test. There are many capitalists of 'liberal' tendencies who agree with Mr. Gompers. Very well, then; are these gentlemen and Mr. Gompers sincere in their suggestions? That there is a difference as well as a distinction between intelligence and being able to pass a literacy test will be waived.

But if intelligence is the test by which the entry of foreign nativity is to be determined, then by what test is its existence to be determined?

### Deportation Protested?

We have had, and still have, in the penitentiaries of the United States a number of I. W. W. prisoners of foreign nativity, who were not guilty of any crime or misdemeanor and who were imprisoned solely for the industrial opinions they held. These men would qualify with honors in the literacy test proposed by Mr. Gompers and those who agree with him about qualifications for entry into the United States. There are still men in Leavenworth prison, and out on bonds pending a court decision to decide whether or not they shall be deported, as others have previously been deported.

Will Mr. Gompers protest these deportations or, by his silence, give approval and endorsement?

If these men can be justly deported, then the literacy test that Mr. Gompers proposes has no value. And unless Mr. Gompers and those who support his views in relation to the literacy test for foreign immigrants, vindicate the sufficiency of the literacy test, by demanding that the government cease molesting these persons, they stand convicted of not believing in what they themselves propose.

A test is a test for all, or it is not a test but a subterfuge. If one with I. W. W. opinions can pass the test, then no impediment to their entry should be offered. Holding opinions formed in good faith and intelligently expressed, does not endanger democracy. Sam Gompers and his supporters know this. No man in America knows it better than Mr. Gompers.

But Sam is not a Democrat. If he were, the cause of the I. W. W. prisoners, both native and foreign would enlist his support; for, on their incarceration all labor in the United States is threatened. To submit a test for entry that will not hold inside the portals of the country, is to play the prettiest kind of politics.

Where are you, Mr. Gompers? You stand before the bar of working class opinion. Do you know the

# The Centralia Conspiracy

(Continued from Page 10)

ion are such that a verdict of guilty seems to be expected of us. But this, in fairness we cannot bring ourselves to return. The loggers are getting the worst of it, but if our verdict is 'not guilty' the Judge will declare it unsatisfactory. In addition to this we will be condemned and socially ostracised. Perhaps, too, the next jury will not be as generous as ourselves. There is no doubt about the killing, but we have no means of knowing from evidence submitted in court whether the killing was justified or not. Therefore let us give the Judge and the public any old kind of a verdict of guilty and at the same time demand of the Judge that he grant leniency to the defendants."

**Drilling Witnesses**

The reasons the prosecution wanted the case confined to facts of the shooting, instead of the conspiracy of the Associated Industries' officials that precipitated the shooting, are easy to be seen. But how did they manage to drill their witnesses so that the story would sound plausible? What kind of "machine" did they use to "frame" their case and "make" witnesses in order to put their version of the shooting across? How could they best manage to keep the defense from reaching the jury with the real facts, or as many of the real facts as possible? The real story of this machiavellian plot to defeat the ends of justice has leaked out since the trial. A special investigator for the defense has given his findings to the world. It reads like a page from fiction—but it is the gospel truth.

In the first place, there was probably not more than one man out of every ten in the "parade" who actually knew of the conspiracy of the "secret committee" to lynch the union secretary and destroy the union hall. The plan was to stampede the marchers into unlawful action at the opportune moment just as had been done previously in 1918, get the raid started and then use the rope. Not all of the legion boys who marched in that "parade" had murder in their hearts. Some of them may have wanted "roughhouse" and would have delighted in the work of making things hot for the wobblies But only a comparative few either desired or were prepared for a lynching bee. Those who harbored these sinister intentions were members of the "secret committee."

LOREN ROBERTS
I. W. W. whose mind became affected by mob terrorism.

**Truthful Legionaires**

At least two of them were killed in the raid. So there were legionaires who could testify truthfully that they were ignorant of the murderous purpose of the "parade." Some of these were located at the far ends of the procession and did not know what had happened until they were told about it or had read the hectic stories in the newspapers. Some of these testified on the witness stand that they thought the shooting took place before the raid started. There may have been a few legionaires who took this position—honestly. But for every legionaire of this type there were at least five who were willing and eager to make their testimony suit the case. These the prosecution without hesitation or scruples proceeded to use for "cat's paws." just as the lumber trust had used the legionaires in the "parade."

In all fairness it must be admitted that a con-

---

immigrant who is knocking on the gate and the worker who has the courage of his convictions and exhibits the spirit of labor when inside? We don't care particularly where you stand, but where do you?

**An Elevating Factor**

If you and your supporters insist that the principle of deportation is right, and should be applied to aliens who threaten the American standard, by reducing it to a still lower level, then we submit that not one of the aliens now held by the Department of Labor should, or could, justly be deported. On the contrary, since they are a real positive force for the raising of that standard to a still higher level, every resource of the American Federation of Labor should be used to prevent these deportations.

Moreover, there are thousands of aliens in this country who are used as scabs in the time of strike. They are the real force for the reduction of the American standards, and you know it. Yet, you nor none of your supporters have seen fit to insist upon the deportation of **alien scabs.** Why! **Where do you stand?**

siderable number of legionaires were honest enough in the cause of truth and fairdealing to defy condemnation and ostracism and take the stand for the defense. It took courage to do this and too much credit cannot be given to them for their unselfish actions. Unfortunately the legionaires were not all of this type.

American Legion men had gathered together in considerable numbers in Montesano to attend the trial. The prosecution saw to this detail which, like the camping of regular troops on the courthouse lawn, was intended to create the proper "atmosphere." Tacoma, Centralia, Chehalis, Bellingham, Port Angeles, Aberdeen, Hoquiam, Mt. Vernon, Anacortes and Bremerton—each of these towns and cities supplied its quota of delegates, all of them O. K.'d by the prosecution before they came. These men were sent to Montesano with the understanding that they were to submit to the orders of their commander, a Mr. Schant, a former army captain who was in charge of the Montesano American Legion. These men were paid four dollars a day by the lumber interests. In addition to this stipend they were given sleeping accomodations in the fire department section of the City Hall and in a garage nearby. This latter place was a veritable fortress, well supplied with high power rifles and ammunition of all kinds. A certain Lieut. Crawford of Mount Vernon was in charge of this little lumber trust army. The legionnaires did guard duty twenty-four hours each day in their fortress. The sentries were detailed by roster.

### An Armed Camp

It must be remembered that these legionaires were private citizens, living in an armed camp of their own in the midst of a community that had ample protection from the customary law-enforcing machinery. Who armed them and gave them permission to camp in the heart of the city? Why had they been gathered together and for what purpose? Can it be that the lumber interests were waiting, as was openly intimated, for an opportunity to wreak vengeance upon the defendants in case the jury did not do its "duty?"

Lieut. Balcon was in charge of the secret service work for the prosecution. Under him were several legionaires dressed like loggers and workingmen. It was the duty of these lumber trust spies to gain the confidence of defense witnesses, learn in advance of the testimony they intended to give and, wherever possible, influence it to suit the programme of the prosecution. As soon as a defense witness had been interrogated by these sleuths, the findings were transmitted to Chief Balcon who was privileged to enter that part of the courtroom occupied by the attorneys. Balcon would then pass his information over to prosecution attorney Christiansen, who would in turn give it to prosecutors Cunningham or Able during the progress of the trial. Thus were the scales of Justice weighted in favor of the rich and powerful and against the penniless loggers who had dared to defend themselves from the mob.

WESLEY EVEREST

**Overseas I. W. W. veteran lynched by lumber-trust mob.**

### Prosecutor Chief Detective

Christiansen was the most active of all the detectives for the prosecution. His position as Assistant State's Attorney afforded him absolute freedom of action. He had access to everything that went on at the courthouse and the American Legion fortress and headquarters. By examination of the subpoenas issued for the defense witnesses, it was a simple matter for him to keep the prosecution informed about all witnesses likely to be called.

It was a consistent policy of the prosecution to have each and every defense witness interviewed in advance. This was done for the purpose of obtaining advance information as to what the testimony would be and also to influence this testimony BY ANY MEANS POSSIBLE to make it substantiate the prosecution's made-to-order case. To accomplish this end very elaborate methods were employed.

### Intelligence Chief

Lieut. Frank Van Gilder was one of the chief members of this Intelligence Department. Whenever possible this officious person visited prospective de-

fense witnesses before their arrival at Montesano and secured, or tried to secure, their testimony. Van Gilder's method of approach was suave but forceful. He always boasted that he "knew his stuff." And it was the smooth stuff that Van Gilder was supposed to put over. When this method failed to make the right kind of an impression on the witness other agents would follow him up with a different line. Threats and intimidation were indulged in and the witness would be informed in unmistakable language as to what their future in the community would be like and what would happen to him or her in case the testimony they were about to give would be found to be objectionable by the prosecution.

Upon the arrival of the defense witnesses at Montesano, Lieut. Balcon's forces took up their work at once and every effort made to interview those who had escaped Van Gilder's attentions. These men, in various attires intended to make them look as much like workers as possible, tried by confidential means to secure prospective testimony. Some defense witnesses were openly threatened in the court room immediately following their testimony. The arrest of two defense witnesses for perjury was part of the plan to intimidate other witnesses waiting their turn to go on the stand for the loggers.

### High Speed Espionage

As the defendant's attorney, George Vanderveer, neared the conclusion of his case the espionage machinery of the prosecution was already operating at high speed to manufacture the rebuttal witnesses to impeach all of the important testimony of the defense. Assistant State's Attorney Christiansen was the man selected to put the polish on these 'made' witnesses. The testimony itself was 'framed' by Lieut. Van Gilder or his associates, before the witness was brought to Montesano. The finishing touch was put on by Attorney Christiansen. Then the witnesses were taken before special prosecutors for approval.

The above is merely a brief review of the many means used by the lumber trust to defeat the ends of justice at the Montesano trial Even then there would of necessity be many angles of the sordid story still untold. The fact remains that at Montesano convincing proof was offered of the truthfulness of the statement that a workingman has no chance in an American court, especially if the workingman be a member of an unpopular and misunderstood labor union like the IWW. But the Centralia case proves more than this. It proves beyond the shadow of a doubt that until the workers gain economic power to match the power of the organized business interests labor prosecution will continue unabated. All power, then, to the class conscious and militant workers of the IWW who are determined to put a stop to such outrages against themselves and their class!

### Outweighs All Cases

In the meantime we must not forget that the Centralia case outweighs all other IWW cases in importance. Not only are the sentences longer but the effect of the case as it stands on the other cases is harmful in the extreme. It is said, for instance, that President Harding's stubbornness in refusing to consider the federal IWW cases was largely the result of his firm belief that the IWW loggers in Centralia fired without warning or provocation into a parade of marching ex-service men in uniform. It may be said, of course, that the foibles of a mere politician do not matter. If we had industrial power this statement would be far more true than it is today when we have such power only to a limited extent. President Harding's frame of mind is indicative of the frame of mind of the entire country. The capitalist newspapers, by poisoning the sources of public information at the head waters have made the hideous lie about our fellow workers in Walla Walla "stick."

It is up to us to undo their dirty work by convincing the entire country of the truth about the Centralia Conspiracy that sent the men who defended their hall to prison for from twenty-five to forty years. We owe this to the boys in Walla Walla and to our other imprisoned fellow workers whose cases will be affected by the Centralia case. In reality the Centralia case is the key to the entire IWW defense. Next in importance come the California state cases. These have a unique organization character that differentiate them from the Centralia case. The federal cases, on account of being the first and biggest IWW persecutions have had a large amount of publicity—perhaps more than their share. Strategically they are in a better position than any of the others as far as a general release is concerned. The federal cases have already cost hundreds of thousands of dollars and are costing great sums every year. Once these are disposed of the work of liberating the Centralia and various state cases will be greatly simplified.

### Realizing Acts

Compared with the Centralia case the charges against the men in the federal and state cases seem trivial. Sooner or later (we all hope sooner) the various jails and prisons of the country will all give up their prey. But back of it all and overshadowing all is the stern, awful and inescapable fact that the Centralia boys are doomed for twenty-five to forty years in prison and for the gravest charge on the calendar of law—murder. The realization of this fact should bring to our minds the necessity of starting a real drive for the release of these fellow workers. Fundamentally the cases are all the same. It was for the crime of being members of the IWW that all of the men are now in prison. Different pretexts were used to land them there, that's all. Had the Centralia men not been IWW's they would never have been convicted. The Centralia case deserves all the support that can be given it. It deserves far more attention than has been given it. Nothing should be permitted to stand in the way of a united drive to liberate the victims of the lumber trust who went to prison for daring to defend their union hall.

# Christmas Conditions in Cleveland

By EDWARD LLOYD

BY the time you are reading this magazine the nations of the earth will be getting ready to celebrate, perhaps have celebrated, the birth of the "First Rebel." On all sides you will hear the time-honored expression, "Merry Christmas," and the inevitable reply, "Same to you and many of them."

The tinkle of the bell in the hands of "Santa Claus" as he stands besides a pot admonishing the public to "Keep the pot a-boiling" for the Salvation Army will be heard. "Volunteers' 'will be out in full force to cajole what money they can from an easy going throng, in fact, all in the mission field, big and little, will be out to get theirs while the getting is good.

Papers will appear with big head-lines about this and that organization, and the "charity" they have dispensed. Big, fat, pot-bellied heads of corporations will head the donation lists to relieve the poor, relieve the poor whom they have systematically robbed for ages that they may live in luxury. This will be the "Merry Christmas" of the exploited wage slave.

### Capitalist Generosity

The boot-licking press will write columns about their generosity, and everybody concerned will have a good time except the poor, for after the milk of human kindness has passed thru the separator of organized charity, very little is left except the skim, the cream has gone for "overhead," most of it into the coffers of the $57,000,000.00 (fifty-seven million) corporation, that helper of the outcast, that blatant follower of the humble Nazarene, The Salvation Army.

We will hear about the kindness of the boss and the interest he takes in his employees, his magnificent "gifts," his high standing as a citizen, and his "patriotism."

But not a word will be printed of the sordid condition of the slaves who have to toil from morning to night that he might gather his ill-gotten millions. Nothing about the foul-smelling, rotten ventilated places they have to sweat and toil in that they may get the means to keep life in their bodies, nothing about the children who are being bled in their sweatshops, children in years but old in experience. Children deprived of their right to play, poor, worn-out, wizened, under-nourished and tubercular specimens of humanity, children sewing on buttons in tenements till the early hours of the morning to help get a pittance that will keep a shelter over their heads. Poor, cold, blue-looking children whom an ordinary man wants to take to his heart and love, the children who help provide the means for the "Philanthropist" to head the donations lists.

Nothing will be said about the packing house worker as he toils in the slime and filth of the "sanitary" packing plants, out of the route of visitors, nothing about the toiler in the fertilizing plant, among the stench and filth, a stench so horrible that in some towns he must walk home after his day's work as the street car operators will not allow him to ride on a car, he smells so foul. Oh no, nothing like that will be printed.

### What of the Steel Worker

Nothing of the steel worker as the sweat gleams on his body before the hot furnaces, and then drags his weary body home too tired to sleep even. Do you wonder we have drug addicts. You may hear something of the "eight hour" day Judge Gary has granted them, and which seventy-five per cent of them have NOT got. Yes, it is possible that you will hear of the eight hour day, but you will hear nothing of the majority who are working ten, twelve, and even fourteen hours a day.

The steel magnates claim they have the eight hour day, and yet you hear them singing, "Yes, we have no eight hours."

Cleveland, Ohio, is one of the largest Steel cities of the East. A few of the departments such as the machinists and mechanics are on an eight hour basis, but not one mill has the straight eight hour all through.

The steel trust may tell you about the eight hours they have on their boats on the Great Lakes. True, they have it in some departments where they were COMPELLED to install it, but the look-out and wheelsmen do a twelve hour day. The engineers also do twelve hours, only the oilers, firemen and coal-passers get the eight hours.

Down by the Central blast furnace on Broadway, the writer was talking to some of the residents of that district, and one house was pointed out to him—it looked big enough to house two families in a pinch—and was informed that SEVEN DIFFERENT FAMILIES WERE LIVING IN THAT HOUSE, and from the number of children seen emerging from it, they must have to hang them up on hooks at night.

Yet we send missionaries to Africa to "civilize" the "savages."

The Otis Steel, The American Steel, and McKinney Steel are nearly all ten and twelve hours. The Atlas Car Shops and various other machine shops are also on the ten hour basis.

### "Home Brew" Interest

A great number of the employees of the steel mills are of European extraction, and appear to be very interested in "Home Brew." In the residential section around the mills the writer saw wagon loads of grapes being unloaded at various houses. This can have but one meaning.

Most of the small store-keepers are boot-leggers; this is not hear-say but the result of a personal investigation.

In certain parts of the city in the late hours of night and in the early morning the smell of a cooking mash is wafted to your nostrils. All the dry law

# We'll Run the Works

By FRANK S. MEYERS

THE shops, mills, mines and faetories, no longer now are paeked, and ever as the days go by, the rebel ones get sacked. Time was, when a fellow, that walked and talked and slept, eould get a job most anywhere, if he had a little pep. But after counting up the profits, and the need for "slaves" grew less, the greedy "master elass" did ery, We'll give these dogs a rest.

A few years back, the slogan was, we'll have to do our "bit" if not the "German Hun" will eome, and he will use the whip. To get a job was easy then, the highest wage was paid, and as the "war clouds" gathered, the "Profiteers" did rave: We're in this war for freedom, we know we're in the right. We have no time for "slaekers"; all must work or fight!

But things have ehanged sinee that time, no longer are we sought, for fighting in this army, or producing for our salt. To find a job you're lueky, that pays a living wage, to feed the wife and kiddies, is mighty hard these days. Now we do not have to work or fight, victory has been won,—for the "Capitalistie Parasite"—for the "Workers" there was none. But listen to the bugle, of the one big union grand. It is the eall to workers to eome and give a hand. Let's organize together, the "One Big Union Way" "Industrial workers" everywhere, must see the light of day. Vietory for the "toilers" in this and every land, will only be aeeomplished, when we united stand. For united we are standing, divided we will fall, let's get together, in the "One Big Union Stall." Craft unions and their leaders, today are out of plaee, industrial unions everywhere will have to take their plaee. For the "motto" of the grafters in the AFL divides up the workers, and makes their lives a hell. A fair day's work, for a fair day's pay, keeps you breaking even, the longer that you stay.

The world for the workers, this "motto" ean't be beat. Those that do not work—neither shall they eat. Stop! producing for profit, for in that there's nothing fair; working for yourselves is better, where eaeh and all get equal share. There'll be no "Capitalist masters" let's drive them from this earth; we'll need no labor "saviors" we'll then get what we're worth. "Wage workers," heed our warning, "Let's get the whole damn works," more pay and shorter hours, don't do away with "shirks." Come gather round our standard, we'll show you how to fight, not with bullets or maehine gun,—but the weapon "General Strike." There won't be any "Parasites" after we are done, we'll run the "works" to suit ourselves, we'll all have lots of fun.

---

enforeers must have bad eolds and be unable to smell, as very few arrests are made.

This suits Mr. Steel Trust O. K. It keeps the slave eontented, he can work for less money, and has not got time to think about organizing. Commereialized viee is rampant here as it is in all Steel towns. Wild orgies have been exposed in one paper, but nothing is ever done about it.

A sad dreary sight ean be seen any night on the West side when the Steel mills release their slaves for the day. On leaving the mill in the flats the workers climb to the high level bridge to eateh the ear for home. This takes four or five flights of stairs, and by the time they arrive at the top they are all in, and fall asleep on the pavement waiting for the car. Men with all their energy ground out of them, listless, almost lifeless, no hope ahead of them, Robots in embryo.

This is the class of people the IWW is now working amongst. Controlled papers are foaming at the mouth about the IWW. Perhaps some of us will have to eome to an end as did Frank Little, but, WE ARE HERE TO STAY.

The tide of Industrial Unionism is surely rising, and will soon flood the land. The boss is beginning to see the handwriting on the wall and it is not expeeted that he will give up without a struggle. The battle will be long and fierce but when the workers realize their economie power, when they destroy a "union" that separates them, and pits one set of workers against another employed in the same industry, when they unite in the true ONE BIG UNION, when they earry the "red" eard, the eard of the Industrial Workers of the World, then we will be able to say as the season eomes round, and say it from the bottom of our hearts:—

A MERRY CHRISTMAS.

## YUMPIN' YIMINY!

Ole Olesen had been working as an engine wiper and his boss, a thrifty man, had been coaehing him for promotion to fireman with sueh adviee as:

"Now Ole, don't waste a drop of oil—that costs money. And don't waste the waste, either—that's getting expensive, too."

With these faets of eeonomy pounded thoroughly into his head, Ole went up to be questioned on his eligibility as fireman. The last query propounded was:

"Suppose you are on your engine, on a single traek. You go around a curve and see rushing toward you an express. What would you do?"

"I grab the dam' oil can; I grab the dam' waste —and I yump!"

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# 1924 Is Beginning

## Amid Industrial Depression—World In Chaos As 1923 Ends.

By EDWARD LLOYD.

**THE old year, 1923, has passed into history. 1924 is beginning, ushered in with trade depression, due as the boss' mouthpiece, the press will tell us, to the fact that this is the year of the Presidential election. We will be filled with the time honored bunk to be careful of our money till trade conditions are "normal" again.**

**Never in the history of civilization has the world seen such chaos as we have just passed through. European countries are on the verge of starvation. Germany is starving. The Ruhr, (by the way, Ruhr stands for Coal, Iron, Ore and Steel), is the bone of contention between England and France. "Lady" Astor, (Nancy Hanks) wants to drive radicals to the last ditch, "and leave them there." "Nancy" knows that her day of robbing the worker is past when the workers are in control of the industries, so to the ditch the English radical must go. "Nancy" has so decreed.**

As it was in the beginning. From the time that man learned to produce more than he needed himself, he has been the prey of leeches, who sought to obtain what he had produced to further their own ends. Monopolies were evolved. Each vied with the other in devising means to rob the producer of the fruits of his toil.

Matters went on in this manner all through the time of the feudal lords and the baronial period. Man was the slave of the landed lords. They, the lords, created their own laws, and kept the slaves crushed. The clergy were hand in glove with them. Religious, racial, color, and craft hatred were inoculated into the workers. The poor deluded slaves were kept too busy flying at each others' throats to think of bettering their own conditions.

### Craft Unions Appear

Finally came the time when the workers realized that they must band themselves together in order to protect themselves from the existing conditions, which were now unbearable. From one form of organization to another they evolved, until finally came into existence the American Federation of Labor.

Banded together according to the craft they followed, or to use an up-to-date expression, organized around a monkey-wrench or trowel, they were able, in a measure, to hold their own, **as long as the hand period of production was in vogue.** But, came the time when machines commenced to take the place of the "skilled" worker. Men who formerly owned the tools they worked with had to leave these tools at home. **The boss owned the tools now, he had a machine to do the work.**

He did not require so many men now. Men were laid off. One machine would do the work of ten,

HIGH LEVEL BRIDGE, CLEVELAND, O.
In District Hit By Unemployment.

or even more men. A surplus of labor was thus produced for that particular form of craft. The warehouses and store-houses were quickly filled. **The boss was in a position to dictate to the union.** Men with families to support were now out of work and ready to under-bid their fellow craftsmen in the labor market in order to provide for their children. The craft union was helpless.

### Enter, "American Plan"

With the advent of machines to displace hand labor was born the germ of the present "American Plan." Production, unlike the existing form of unionism, is not "as it was in the beginning." On the contrary, it was advancing with rapid strides. Combines were formed, huge fortunes were being made out of the blood of the workers. More fortunes must be made. The owners of the job are money-mad.

**All the big operators are now welded together in ONE BIG UNION OF THEIR OWN. All other unions must be crushed. Seeing the success of a**

**One Big Union of themselves, they fear for themselves in case the workers should adopt the same idea.**

Consequently, when the slaves of the various trusts and combines did revolt, when driven to desperation by long hours of toil, low wages, and rotten working conditions, they tried to get a little of the good things of life which they produced; their masters were ready for them. The offal of society was enlisted to beat and kill the workers, thugs and gunmen from the depths of the slums were there to do their masters' bidding. The latter had their own permanent police force to back up the thugs, and when the workers were beaten, these thugs, these gunmen, these hundred-percenters went back to their profession of hold-up, robbery, pimping and murder.

### The Railroader's "Big Cheese"!

During the past year you saw the break-down of a large number of strikes. The most notable one was the railroad shopmen's strike. These men were organized **around the railroad shop,** and we saw the spectacle of union engineers with their union firemen, brakemen and conductors, busily engaged in hauling car-loads of the advocates of the "American Plan" into the shops to break the strike of their brothers in the railroad industry. The Big Cheese of the railroad engineers has become a great banker, also as the operator of a coal mine on the "American Plan", is himself a robber of the working class.

The coal miners have been whipped, the soft coal miners scabbing on the hard coal miners, helpless because of "contracts." Reminds one of the definition of union scabs which appeared a few years ago, it is old but worth repeating. Here it is: "UNION SCABS:—My dear brother, I am sorry to be under contract to hang you, but I know it will please you to hear that the scaffold is built by union carpenters, the rope bears the label and here is my card."

### The Lake Seamen Whipped

The International Seamen's Union was whipped to a stand-still on the lakes, the strike was postponed from 1922 until 1923, but it never materialized. Andy and his fellow pie-card artists are a thing of the past.

The summer of 1923 saw the workers treated as well as they ever will be under the capitalistic system. There was a boom in certain parts of the country, they were working long hours with a hundred-percenter behind them to tell them to "hurry up". Perhaps they were working to machine. Then was the time they should have seen that the speed-up system, this "hurry-up" fortune making for the boss is the very cause of hundreds of them being out of employment today. Then was the time they should have studied the situation and made preparations to protect themselves from danger.

In the face of such evidence, fellow workers, do you, can you, expect any benefit from a craft union? Can you, members of a union with a banker-mine-owner at its head expect that he will have your interests, the interest of the workers at heart? Has not the labor leaders' treason to the working class been exposed hundreds of times? Craft unionism has, and always will, fail.

### Spread of the IWW

Now, have you ever studied the teachings of the IWW, the Industrial Workers of the World? Originating in 1905, and composed of a small band of workingmen, its ideas soon spread to the five continents. Especially in the west, where the migratory worker, the harvest hand and the lumber jack work, did its teachings appeal to the exploited wage slaves. These men, exploited at every turn, proved what solidarity will do. The filthy camps were made fit places to work and live in, cots were provided for the workers to sleep on instead of the double-decker, two-occupant bunk. Clean bed linen was provided.

No longer was it necessary for a clean, healthy young lumberjack to sleep with another person who was probably infected with syphilis or tuberculosis. No longer was it necessary to pass half of the night fighting lice. All that was a thing of the past. The IWW was here. The lumber workers united in one union, (not a union of sawyers, swampers, skinners, skid-men, etc., but a union of **lumber workers**) soon told Mr. Lumber Baron where to head in at. The Agricultural workers had the same experience. Then the movement spread to all parts of the country, in fact, to all parts of the world.

The building construction workers, the oil workers, workers in all industries soon followed suit. The boss was quick to recognize the danger such a union meant to him. Why, since the IWW came into existence, his slaves were even neglecting to tip their hats to him; some of them had actually told him to go to hell. He tried firing one of them, but, Lord, the whole works quit. This never happened with an ordinary "union" man. Something must be done about it, and that something, quick.

### Persecution a Failure

Persecution of these workers was started at once. They were thrown into jail, tortured, lynched. Men were dragged behind autos with ropes around their necks, imprisonment up to forty years imposed upon them. The press, at the bidding of their masters, were publishing the most damnable lies about them, and every effort was put forth to prejudice the public against them, but the movement seemed to thrive on persecution and prosecution. Its membership grew by leaps and bounds, until today it is a power to be reckoned with.

Every effort was made both during and after the war to break it up. Everyone knows of the Armistice tragedy at Centralia, Wash. California is famous, or infamous, for its criminal syndicalism law. Men are forbidden by court injunction to

(Continued on page 10.)

# The Vision of The New Day In California

By ARCHIE SINCLAIR.

SAW-MILL AT SCOTIA.

IN the preface of his wonderful book, "Les Miserables," Victor Hugo said: "So long as there exists, by reason of law and custom, a social condemnation, which, in the face of civilization, artificially creates hells on earth, and complicates a destiny that is divine, with human fatality; so long as the three problems of the age—the degradation of man by poverty, the ruin of women by starvation, and the dwarfing of childhood by physical and spiritual night—are not solved; so long as, in certain regions, social asphyxia shall be possible; in other words, and from a yet more extended point of view, so long as ignorance and misery remain on earth, books like this cannot be useless."

This in some measure explains the reason why men will go to prison for an ideal. The great writer and humanitarian saw a social vision; he knew that the social and economic system under which we live was wrong. Perhaps he did not clearly understand the remedy—at least his writings do not indicate that he knew the cure for the disease. Perhaps he did not recognize the industrial nature of the struggle as clearly as we of the Industrial Workers of the World. But he did recognize that poverty is the cause of all misery; and recognized also, that while poverty exists protest will be made.

The Great World War gave the industrial and financial masters a plausible excuse for persecuting men and women who held beliefs that were inimical to their interests. In the ante-bellum days it was difficult for them to make wholesale arrests and convictions of industrial rebels. It is true that they could single out individuals and even small groups and send them to prison on trumped up charges, but even the masters must adhere somewhat to the rules of the game which they themselves have made. With the entrance of the United States into the murderfest the rules have been discarded, and to date have not been resumed. In some parts of the country we are slowly returning to "normalcy," the hysteria of the war period and the Bolshevik scare that followed is subsiding, in other parts of the country the intolerance is as rampant as ever.

### Persecution

California, today, leads the world in persecution of workers who refuse to pay homage to the Oligarchy; and California also leads in men having the courage to go to prison for their ideals. Persecution breeds a fanaticism that will not, cannot submit to arrogance and greed. History is being written today in California that will amaze future generations. Our children will read with astonishment of the blind cruelty of the present day rulers, and of the stupidity and apathy of the workers who tolerate the persecution of their fellow-workers. The Criminal Syndicalism law will be kept as a relic for the barbarism of this benighted age.

### The Lesson

When Labor's history is written, as it will some day be written, when men and women learn the bitter lesson that only through their industrial solidarity can they accomplish their emancipation, the reason for the persecution of union men will be made clear.

The list of men sent to prison for violation of the Criminal Syndicalism law in California steadily grows larger. Each succeeding month adds the name of some worker who loves his ideals better than bodily freedom, who believes in social redemption, rather than in individual gain. At the present writing there is going on in Sacramento a Criminal Syndicalism trial. Three men, Homer Stewart, Pete Wukusich and J. C. Driscoll are being tried for treason to the Industrial Feudal Barons. Like their Fellow-Workers who are in San Quentin and Folsom they were organizing the workers into the One Big Union of the I.W.W. This is treason in California. In the Golden State the fact that workers have no rights, but only privileges is forcibly brought home to us. The judiciary and prosecuting attorneys are at the beck and call of the industrial masters. They wear the scarlet livery. While posing as saviors of the community, they are working for their masters, the owners of industry. How the trial at Sacramento will result remains to be seen. There are indications that the citizens of that county are at last beginning to realize the danger of

allowing workers to be sent to prison at the behest of Big Business, but the result of the trial cannot be foretold.

**Liberty Never Dies**

One thing is certain, that while the persecution of workers continues, while men choose prison to industrial serfdom, the fight in their behalf must be kept up. Already ninety-seven members of the IWW have gone to San Quentin and Folsom and more will undoubtedly follow. The spirit of Liberty cannot be quenched by steel bars and walls of stone. While social and economic injustice prevail men will protest and their protest cannot be stifled by persecution.

The men in the penitentiaries of California—sailors, longshoremen, construction workers, oil workers, harvest workers, loggers, have seen the vision of the New Day; they have learned the lesson of Industrial Solidarity and are paying the price that all rebels were forced to pay, because of the indifference of the rest of humanity. The twin hells of California hide these men, and the masters think that they have stifled the voices of the malcontents. But the walls of San Quentin only echo the sound of their voices and increase the volume of protest. Never in the history of the world was the voice of social protest silenced with the clang of a cell door. The men in the bastiles of France shouted their defiance to the Bourbons and their cry was taken up by the peasantry and surged through the land to the tune of "La Marseillaise":

Oh, Liberty! can man resign thee?
Once having felt thy generous flame,
Can dungeon's bolts and bars confine thee?
Or whips thy noble spirit tame?
Or whips thy noble spirit tame?
Too long the world has wept bewailing,
That Falsehood's dagger tyrants wield;
But Freedom is our sword and shield;
And all their arts are unavailing."

The voice of the men in the salt mines of Siberia re-echoed through Holy Russia, Tsarist Russia:

"Arise, ye prisoners of starvation!
Arise, ye wretched of the earth!
For Justice thunders condemnation
A better world's in birth."

The voice of the men in prison for their unflinching loyalty to the cause of the working class of the United States and of the world will yet be heard. Ours is the task to bring the message to the ears of the workers. It is our duty to arouse the men and women of the working class to the need of unity and solidarity. We must make known to all, the reason why men go to prison for an ideal.

Ninety seven members of the working class are in prison in California because they would not renounce their beliefs. They will remain there until the workers demand, by the power of their economic might, their release. What is your answer, workers?

# French General Converted

General Percin, French Officer and Artillery expert, who was in command in the Lille area when war broke out in 1914, writes in L'Orde Nateral, says a correspondent in Foreign Affairs, for November, as follows:

"I was brought up an ardent patriot, not to say jingo, and in 1865 entered the army as a professional soldier. I was twice wounded in the 1870 war, and for the next forty years detested the Germans, and ardently prepared a war of revenge. Now, at the age of 77, I have become an uncompromising pacifist, a keen internationalist, and a strong partisan of Franco-German rapprochement.

"The war of 1914 to 1918 has shown me the fallacy of believing that war is an unavoidable evil, the only method of settling international disputes. . . . The wrong side is as likely to win as the right. War must be replaced by a real League of Nations, from which no one is excluded, not even Germany. The fundamental error of the Treaty of Versailles was to negotiate without Germany, to extort from her a confession of guilt, and to make her solely responsible for war damages.

"The war mind must be destroyed by educating people as to the fallacy of the alleged glory of the war and the supremacy of so-called national interests; by inculcating into children the idea that there is nothing more 'noble' about the profession of arms than about that of the scavenger; by remoulding the teaching of history; by no longer giving soldiers and weapons as toys; and by refusing to perpetuate in street names either battles or soldiers, replacing such names by those of real benefactors of humanity. In short by making pacifism as fashionable as "bellicisme" is at present."

Lastly, General Percin advocates "the suppression of the chief cause of war by the internationalism of the wealth of the sub-soil, such as the coal of the Ruhr, the iron of Alsace Lorraine, and the oil of Mosul."

## WHERE MILITARISM STOPS

A great and complex industrial mechanism cannot be effectively operated by soldiers, least of all by foreign soldiers.—From editorial, "A Welcome Change on French Policy," Chicago Daily Tribune, December 6, 1923.

## THE FARMER'S "STRIKE"

The farmers are on strike! They are decreasing acreage sown to wheat—up to 2,500,000 acres in last two years in Kansas alone—in order to exhaust reserve supplies and boost prices. This "strike" affords material for overpopulation theories, but otherwise no one complains against it. It's sabotage, a la capitalism, and so all right.

# California Holds the Key

Bulletin No. 47, of the Agricultural Workers' Industrial Union No. 110, IWW, contains the following:

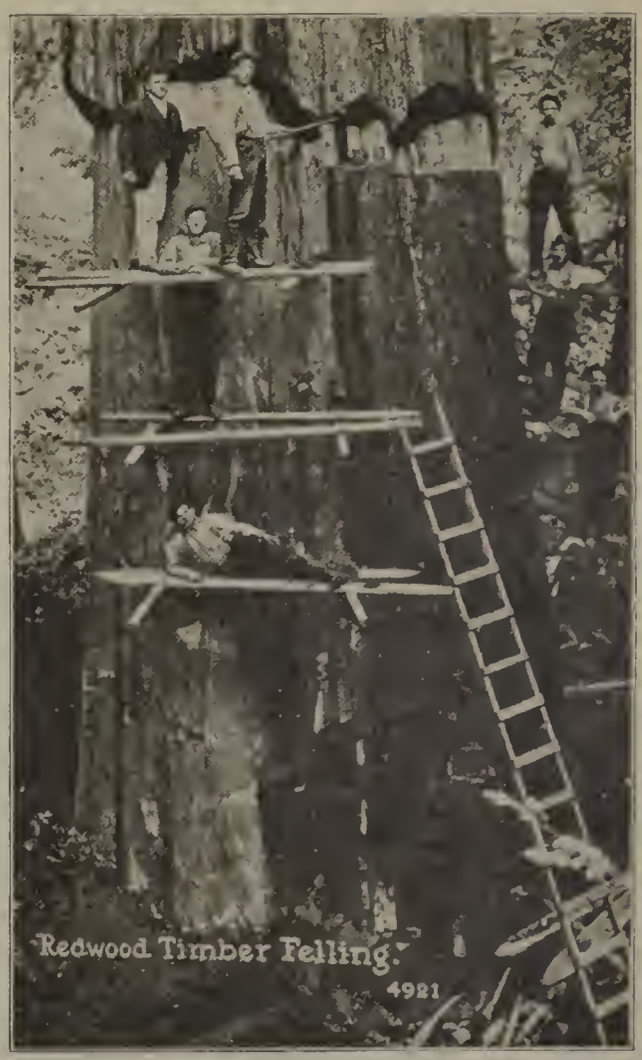
IN California the situation is pregnant with possibilities for the IWW, and if we are equal to our opportunity there our organization will establish itself to a degree where other organizations will be won over by its effectiveness.

In the persecution of the IWW in California, all labor and every labor union, is being attacked. It is being demonstrated in that state that law is not administered but taken advantage of to supply means for serving the desires and ambitions of privilege. The densest and most prejudiced are seeing that in California the scale is discarded for the whip, and that so-called "sanctuaries of justice" are but portals to the penitentiary when accused workers enter them. Even those who have been most unwilling to see are now compelled to admit that the courts do not function socially and impartially but stand ready to defy law in the service of the interests that hold California and its workers by the throat.

With the growth of an opinion that refuses to support the unjust decisions of the courts, the IWW pushed forward its organization plans and men and women devoted to it go voluntarily to defend the ground that labor cannot afford to relinquish. To hesitate now would be to imperil the prospect of success, or to delay its realization. Every attack must be resisted as every previous attack has been resisted. We must press on until we have established organization to an extent and to a degree which even the most hard-boiled of judges and industrialists will respect. For, when we are powerful enough to embarrass the employers, farmers or trust magnates—preferably the latter—we shall have reached a stage where these will call their legal puppets to heel, from J. P. to supreme judges.

The battle in California will result in many legal casualties and the work of defense will be necessarily heavy. That this has not been overlooked nor neglected vouches for the thoroughness with which preparation for the drive has been made. The General Defense Committee proposes to allow 50 per cent of the proceeds derived from the sale of defense stamps to the California branch of the General Defense. This should operate to augment the revenues of the California branch considerably.

In the present emergency, every dollar for defense is a dollar for organization. In California the IWW has an opportunity to win the attention and support of the workers throughout the United States and Canada, even of the world. For labor, in that state, the time has come to make a choice and take sides. The line-up in California will determine the line-up of labor in North America.



IN CALIFORNIA'S FORESTS.

The AWIU in deciding to assert the right of the workers to organize into unions of their own selection has been guided by the true spirit of labor that governs every industrial union of the IWW. A failure to pick up the judicial gauntlet thrown down by the employing class would be tantamount to a confession that labor lacks the intelligence to organize and the courage to establish its rights.

California holds the key to the conquest for the emancipation of American labor.

## PLUMB OFF

Samuel H. Barker, financial writer for the Philadelphia North American, declares,"Economic Forces Have Fallen Out of Balance." That's a way they have under the present crazy capitalist system. Its a wonder there is sanity enough left, under this insane social disorder, for even the Barkers to recognize its lack of stability.

# Organizing the Central Lumber Region

THE lumberjacks in the central lumber region are pushing a big organization drive there. At a mass conference, which was held at Rhinelander, Wisconsin, on November 11th, plans were perfected and activities started to this end.

The central district comprises Minnesota, Wisconsin and Michigan.

Moonshining and illicit selling of liquor has become practically a legal traffic in this lumbering region. This is a very effective way for the boss to fight organization work. Keeping the workers drunk and broke will keep them from thinking for themselves, and they will become meek and servile slaves for the lumber operators. This has been a great drawback in organizing these lumber workers. But once more, a group of lumber workers have come together in conference and devised ways and means to organize these workers. Plans were formulated to circularize this whole territory with literature and a strong organization campaign in all the lumber camps.

**Call for More Job Delegates**

The conference decided that in order to make this organization campaign a real success at least 5,000 job delegates can be used in this territory. A motion was passed to send out a call for Finnish, Polish, Russian, Lithuanian, Swedish, Hungarian, Jugo-Slovak and Austrian speaking members to come to this region and act as job delegates. The conference also elected a travelling delegate, and asked the support of all who could possibly come to help with the work of organizing these lumber workers. The conference decided that in order to make this organization drive materialize, education must be promoted on a large scale—camp meetings must be held—publicity and propaganda committees must be started and organize themselves in such a way that the whole territory could be reached with said propaganda.

With a live bunch of job delegates stationed in various camps and constantly promoting the organization, holding educational meetings, distributing literature, gathering data on the lumber industry, and co-operating with the various branch secretaries in this district, Lumber Workers' Union 120 would soon be on the map in the central lumbering region. Job delegates are what is needed, and needed at once.

# Eliminating R. R. Unionism

THE latest thing in railroad unionism is the scheme of Wm. H. Johnston, president of the International Machinsts' Union, by which the railroad shopmen's unions will become efficiency auxiliaries to the railroad companies, promising the corporations greater profits from union labor than can be squeezed from non-union labor.

This scheme, called a "Co-operation" plan, it is believed, will end the days of militant unions among the railroad shopmen and make them mere adjuncts of the administrations of the various roads. It is detailed in the railroad workers' weekly, Labor, of November 24.

The scheme is being tried out on the B. & O. railroad. The unions are hiring efficiency experts to show the roads how to get more work (and, incidentally, more profits) out of their members.

"The idea underlying our service to the Baltimore and Ohio," said Mr. Johnston, "may be compared to the idea which underlies the engineering services extended to railroads by large supply corporations, which have contracts with these railroads to furnish, let us say, arch-bricks, superheaters, stokers, or lubricating oil."

In other words. the International Machinists' Union will become a supply corporation to the railroads, supplying cheap, efficient union labor in competition with expensive inefficient non-union labor. That is, it will engage in the business of selling labor just as the other corporations may sell lubricants. It will compete in the market like any other commodity-selling organization, and engage to deliver more work for less cost than non-union labor can deliver.

Thus will the railroad corporations capture the railroad shopmen's unions and make profit-increasing appendages of them. And thus also will unionism be eliminated on the railroad. No wonder the railroad executives hail Johnston's plan as "statesmanlike"! Anything that defeats labor is "statesmanship" for them!

## TIME RIPE FOR NEW UNIONISM

The trade unions all over the world are losing membership. This is as true of England, France, Italy and Spain as it is of the U.S.A. There is no doubt that post war depression, open shop drives, fascism, disruption, practiced by conservatives and communists alike; and reaction generally have contributed to these results; though lack of industrial solidarity and industrial unionism should not be forgotten. The latter most likely, more than anything else, made possible the membership decline of the labor movement the world over. Without them resistance was impossible.

But there is no use lamenting this decline. The thing to do is to offset it by a membership drive in behalf of a newer and better form of unionism. There are many workers awaiting such a unionism, as the reception given to industrial unionism well proves. But industrial unionism needs to be pushed. It needs compact, well-sustained and organized efforts in its behalf. And when the reaction against reactions comes, as it always does, industrial unionism will win out.

Hasten the day!

# The Potteries

**Stoke-On-Trent, England**

Photos sent by

WILFRED S. BRADDOCK.

"Don't, for God's sake," writes Braddock, "say that Pittsburgh looks worse than this!"

Hundreds of low, bottle-shaped potters' ovens or kilns, with 15 to 20 fires in every one of them, pour out smoke. And so the fame that once was Pittsburgh's is now no more.

Just now, the potteries are not going full blast, owing to the business depression. Otherwise the photos would look even worse than they do. Potters won't be frightened by smoke when they go to Hell—if they ever do!

The workers in the photo above are dippers at work glazing the ware.

# On With Organization!

The war prisoners having been granted unconditional amnesty, the thanks of the I. W. W. are due to all who helped to achieve this end.

Now, then, on to Centralia, with its conspiracy, and California, with its injustices. Better still, on with the industrial organization of the working class everywhere, so that oppression may be no more!

# 1924

(Continued from page 4.)

join a labor union, and yet there are more members of the Industrial Workers of the World in California today than ever before. Mr. Capitalist has tried every trick to crush the I. W. W., but failed. He has failed because it is **One Big Union, a union of all the workers,** and as such it is invincible.

"An injury to one is an injury to all," is their motto. One for all and all for one. On the land and on the waters its membership is increasing; members are bringing in new members. **The I. W. W. has kept up with the times.** "As it was in the beginning" does not apply to the Industrial Workers of the World. Its members are progressive, they are ever studying how best to better their conditions, the majority are able to discuss the labor question either from a craft union, industrial union, or open shop point of view. They are ever on the watch to better the conditions of the working class, not just interested in a pie-card.

### Looking for a Messiah

The working class is looking for a Messiah. Every age has had its messiahs and every age has crucified them. Mankind will not attain to the golden age of universal peace, justice and truth if it fails to inspire some men in each age to receive the annointment of messiahship and the crown of thorns.

The I. W. W. has worn the thorny crown for many years. Mocked, derided, spit at, crucified, still there are men with ideals high enough to be willing to wear that thorny crown. They are now languishing in prisons, and only because you, you wage slaves, have not got the guts to say "They must be freed." You are one who follows from afar. You are more to be despised than a Judas.

Get together, workers, get into the One Big Union, the only Messiah the workers can ever hope for, the Industrial Workers of the World. Perhaps you will have to endure cricifixion, you may be compelled to wear the crown of thorns.

We will not reach Industrial Emancipation on a smooth road, our feet will be torn and bleeding. how long the journey will take depends on YOU. Have you the courage of your convictions?

### Begin the New Year Right

Will the commencement of this, the new year, see you shouldering your share of labor's cross? Will you be in the front rank of the fighters, or will you follow from afar? Will you help make the battering ram which will break down the prison doors and free the workers, or will you cry, "Crucify Them"?

Be a man, take out a card in a union of your class; link yourself with the I. W. W., and hasten the day of Industrial Emancipation when the workers will enjoy ALL the fruits of their toil, when wars shall be no more and peace shall reign, good-fellowship will prevail, and a universal people established on earth, "world without end."

# Fear, The Modern Malady

IN New York City the Protestant Episcopal Church of St. Mark's-in-the-Bouwerie is conducting a clinic for the cure of "unbearable physical and nervous ailments." An article in the December Current Opinion tells of the more than two thousand cases treated therein. It contains these startling statements:

"Young men who looked as if they had never known a day's sickness have made the most amazing confessions. The word on most of their lips has been 'fear'—fear of responsibility, fear of insanity, fear of crowds, fear of the open."

This is symptomatic of bad nervous conditions. They, in turn, are symptomatic of bad social conditions. Men and women are harrowed, worried and oppressed, with bad results. We live in an age of war, panic, bankruptcy, starvation, revolution, crime, murder and suicide, such as was never known before. On top of it all, is reaction, more hideous in its White Guards and Mussolini's, its militarization, threats of greater wars and collapse of civilization, than all the evils already named.

Under the circumstances, is there any wonder that men become neurotic and afraid!? With society hanging in the balance, is mental unbalance impossible of explanation, an illogical phenomenon? Why should men assume responsibility amid such affairs? Why should they not fear for their own mental and personal safety, and know not which way to turn in such a society? Especially, when they have been taught heretofore to look to the many brilliant genuises of capitalism who have led society into this awful mess, for guidance and salvation?

These are times that need MEN, lion-hearted, iron-nerved and big-brained men; men of great social vision and international determination. There are such men all over the world, sick, not of the victims of a bad order of society, but of that society itself. They make plain that, if a complete social physical and mental breakdown is to be avoided, the present capitalist system of production for profit must be destroyed. This system is basically the cause of war, worry and all the other unsound phenomena that find relief, but never cure, in the new churchly clinics.

## THE COAL "PROBLEM"

The coal problem is again before the house. This problem consists in advancing prices more than wages and getting away with it. There is talk of a strike, but the real "strike" is that of the operators against all concerned, miners and consumers alike.

# Economic Background of the Ku-Klux-Klan

By HUBERT LANGEROCK

THE KKK is with us and, while industrialists do not share in that crude pragmatism which stays satisfied with the stupid formula that everything that is is right, it will not do to dismiss its existence without a sober scrutiny of its background. As a social phenomenon, the KKK is too bulky to be referred to one single cause. The reasons for its existence are many and more or less uneven in their potentiality. Roughly they may be divided into economic and non-economic causes and the latter being secondary in their importance can be briefly mentioned before we attempt to bring to light the main economic reasons.

### Fraternalism

First, the Klan is a lodge and, as such, it is not an isolated phenomenon but must be considered as one more term in a series called fraternalism.

To the shallow mind who fails to see what lies behind fraternalism, economically and psychologically, the cheap mystery and mummery of the lodge appeals in the very proportion that it becomes more uncanny. The simpleton who enjoys that kind of claptrap will always fall for something more weird than what he has known before. So, after the comic opera uniforms of the older orders have lost their attraction, the bedsheet regalia of the Klan appears as a decided innovation. Besides in that domain, fashions are the order of the day. There is a steady demand for a higher degree of silliness after preceding stunts have grown stale.

Not only is the Klan in line with the institution of fraternalism, in its array of titles and costumes but also in its attitude towards the political state.

### State Supremacy

Our professional Americans and those who limit themselves to repeating their vaporings have a good deal to say about the necessity of maintaining the supremacy of the state in the loyalty of the citizen. Loyalty to the state, they claim, must be supreme and above class loyalty. Unfortunately for them, the day has never been when the lodge did not try to infringe upon the state. In spite of their funny dress parades and their financially unsound benevolence, lodges would not be the power they are today if they had not effectively and successfully deprived the political state directly or indirectly of some of its authority and compelled it in many instances to approve the decisions taken in the secrecy of the various lodge rooms.

In both these domains, the Klan has not created something new, it has merely accentuated an already existing tendency.

### A Selling Campaign

Another reason for the success of the Klan was its selling campaign. In its early days fraternalism was strongly critical of the middlemen of commerce. Today lodge memberships are sold by as rabid and noisy men and methods as any wildcat stock promotion.

When Mr. Clark set out to sell the Klan at its bargain rate of ten dollars a head, he conceived a plan of campaign which took in every available prospect in the country and he created an organization to carry out his scheme. Organization properly carried on will accomplish anything it sets out to do. Let me perfect an adequate organization and I shall fill huge auditoriums to listen to a Billy Sunday or to look at an African baboon. Regardless of the nature of the attraction, organization will fetch the crowd.

The Klan was well sold. Its organizers knew their business. If colored strikebreakers were brought into a town, the AFL membership were canvassed and they generally fell for the talk of white supremacy. If white strikers put the commercial middle class to some inconvenience, out went the familiar Ti-Bo-Tim postcard stating one of the purposes of the order to be: "Preventing unwarranted strikes by foreign labor agitators."

These high power campaigns by conscienceless salesmen who are after the fee and do not care for the organization or its principles carries its own penalty.

### Claims Big Membership

The Klan claims two and a half million members and that number is fairly accurate if we limit ourselves to the applications received and accepted; but only one-fourth of the initiated stay with the organization as active members. For various reasons the rest drop out.

Some people are anxious to become members of the Klan. Bootleggers who want to cover up their tracks vie with professional politicians to get on the Klan band wagon. The professional politician is about as contemptible an individual as we are able to discover in America. He switches his allegiance every time he expects a funeral at the state house. In his private life, he may be a libertine or a degenerate but, before the crowd, he must parade his allegiance to all the tenets of conventional christian-capitalist morality. If some gang achieves power for the time being, he must try and join it. Some of the highest officials in the federal and state governments have applied for admission to the Klan on their own motion.

From a nationalistic point of view, the Klan may be said to have fallen heir to one of the main traits of middle-class Americanism, the tendency to mob action.

### The Mob Spirit

The mob spirit which went together with the westward expansion of American capitalism was always dominated by the puritan spirit of intolerance and bigotry. As long as a large geographic sweep made it possible for groups or individuals disagreeing with their neighbors to move on, as they were usually encouraged to do, no immediate clash resulted but things came to a focus when the free land was exhausted and native-born and recent immigrants had to live together in a limited space.

Haunted by the possible competition of the newcomers, the middle class sought to hide its will to power under a kind of moralistic cloak directed against anything or anybody who laid claim to more intelligence and culture than the native-born citizen of Main Street.

To bring about that apotheosis of its own mediocrity, the middle class was willing to form psychological crowds acting in violence to all forms of established legality.

Again, from this point of outlook, the Klan did not innovate, it merely emphasized an existing tendency.

The same is true about the clericalism of the Klan.

### Rampant Clericalism

America is today one of the worst clericalized countries in the world. The intolerant spirit of the early puritans is still alive and has only changed its outside appearance.

All our constitutional dispositions as to religious freedom are a dead letter. There is no religious freedom outside of organized Christianity. Let those who doubt this statement consider what happens to a non-christian who tries to run for office. The constitutional disposition prohibiting appropriations for sectarian purposes is daily violated in letter and in spirit. State and Church overlap in their functions and attributions. American life is dominated by an ecclesiasticism of which, as Mencken states, the country has no reason whatever to be proud. All official civic gatherings open with prayer. No official commission is complete without a churchman in its membership, although the latter is nearly always absolutely incompetent. Religious tolerance is on the decline. The Billy Sunday revivals forced members of certain denominations to sell their property at a loss and move to other localities. Here again the Klan took one more step forward in an already existent direction.

### Anti-Catholicism

Ever since the earliest immigration into the U. S., there existed a prejudice against Roman Catholics whose basis is economic. Protestantism is a form of Christianity adapted to the mentality of the self-employed and the commercial middle class. The primary economic character of that class was the use of competition. They were individualists and, as such, could not agree on anything positive or constructive. Their moral life was like their economic life, broken up into competing fractions. In religious matters, they scattered into over two hundred sects. The latter, being unable to agree on any positive common rule of conduct, soon learned to use a kind of rule of thumb. They might not be able to agree on what to do but whatever the Catholics did, that was the way to be avoided.

For many years the middle class socially ostracized the Catholics to such an extent that those of the latter who landed in the middle class economically changed their religion as well.

A change in this condition of affairs was brought about by the Taft administration. Political socialism reached its high water mark about that time and the President and his Attorney-General, Mr. Wickersham, were led to believe that the Catholic church could stem effectively the rise of political socialism. The church at once launched its campaign and one of its features was a confidential interchange of information between the Knights of Columbus and the Department of Justice.

Conscious of their new found usefulness to the cause of capitalism, the Catholics began at once to claim their place in the social sun. They had a strong organization and made decided inroads on an economic domain which had so far been practically monopolized by the Protestants. Thus a new organization faced the merchants and the professional men and the latter resented it.

We can thus notice that underneath the religious prejudices of the middle class there lurks an interest which is of a decidedly economic nature. Let us now consider the causes for the existence of the KKK which are of an openly economic or material nature.

### The Economic Causes

These causes include mainly the right to exploit the foreigner and the scramble for the liberal professions, especially law and medicine.

The frame of mind in which the hundred per cent American emerged from the patriotic jag of war hysteria can be traced directly to the attitude of the South towards the negro. The nativist carried over into his treatment of the foreigner the psychology of the dominant race. His purpose was to hide capitalistic exploitation under a cloak of racial superiority.

The negro has in reeent years adopted a poliey of direet eeonomie aetion by withdrawing his labor power from the southern market and the very men who for years had bemoaned his presence in their midst were the first to protest and to try to stop the exodus. The south never wanted the negro to leave. It merely wanted to seare him into aeeepting low wages, half of whieh could be paid in worthless store orders.

The nativist, after the war, intended acting on the same lines. The Wall Street Journal gave the whole show away when it stated editorially: we must keep the alien influx down, not out.

The vested right which the nativist wanted to establish in his favor failed to materialize. The soealled foreigners knew that they constituted the industrial proletariat of machine industry, the personnel of the leading form of production. They were eonseious of their rights, they had tasted some of the fruits of organization here and abroad, they knew that in international law, they were entitled to the status of the most favored nation under existing treaties and their refusal to sanetion the vested right whieh the nativist was trying to establish eaused the attempt to eollapse. The nativist had to back up and to aeeept the faet that he eould not exploit the foreigner eeonomieally on national grounds.

One of the reasons of this failure was the fear of large scale industry that sueh an attempt might jeopardize its own exploitation of the foreigner on merely eeonomie grounds. They eould see their privileges endangered by the attempt to earry into foree mainly to the advantage of merchants and professional men, a seeondary form of nationalistie exploitation.

### Big Capital Uses KKK

Big eapital used the middle elass organized in the Klan to do its dirty and lawless work, to form the pickhandle brigades and the eitizens' eommittees and the paeked juries but, when it eame to material rewards, the Klan had to be satisfied with hollow words of praise, a eheap monkey money whieh buys nothing in the market.

Still, in this ease, experience has not been a teaeher. Some of the vietims of the Klan are still aetive at the game and the expeeted rewards are still as far away as ever.

It takes a middle elass bourgeois fighting for his eeonomie existenee to feel and understand the power of eapital and that is the reason why, if he manages to survive or aehieves a modieum of sueeess in business, he does not want his children to follow his line of work. The dream of the middle elass father is to land his son in the liberal professions. The latter are exceedingly overerowded to such an extent that many of their members are not earning a decent living. It is a constant practiee today that a boy in order to make a start, as a doetor or a lawyer, must have besides his education, a small independent ineome. In case of sueeess, the ineome may not be longer needed but the vast majority never reaeh the stage where they ean do without it.

HIS NEW DECORATION
—The Industrial Worker.

We ean now fathom the disappointment of the bourgeois father who finds out, after all those saerifiees, that the members of an alien raee are able to eome along penniless and through sheer ability, outstrip the eoddled offspring of the American bourgeois. Four or five generations of Ameriean shopkeepers work up to the grand elimax where a seion of the family is going to be a lawyer and when the lad reaehes college he meets a Jewish boy on whose trunk you ean still find the steerage labels that were pasted on it when his folks came over from the old country.

### Anti-Semitism—Its Origin

Twenty years ago, any Ameriean would have been ashamed to speak in an intolerant way about the Jewish raee. Today, the vast majority of the Ameriean middle elass is anti-semitie for the same reason that makes anti-semites of the middle class all over Europe, viz., because the Jew, through his native qualities, outstrips the nativist in the professions and fills them with larger sueeess and in numbers far greater than the quota to whieh he would be entitled if it was based upon the numerieal strength of his raee in the general population of the eountry.

Another reason for the presence of the Klan is somewhat more intrieate.

At the bottom of the opinions and eonvietions of the radieals of all schools, there lies a question of survival. Class consciousness is not only a dissatisfaction with existing eonditions which leads to attempts to overthrow them, it is also a philosophy of life, a regulator of human eonduet. The elass eonscious proletarian tests the dietates of his capitalistie masters, their teaehings from the point of view of their praetieability and their bearing on his own chanees of survival. To be elass eonscious is to be wise to the stale and bewhiskered platitudes peddled by capitalistie hirelings. By the results of such an attitude, the proletarian is able to regulate his behavior in a way where he ean manage to survive by the expense of a minimum of energy. Class consciousness in every-day life means the saving of energy, that energy whieh the eapitalistieally-minded worker dissipates in the aets

that are to the master's liking but have no usefulness to himself. To put the whole thing in a nutshell: there is survival value in class consciousness and a social behavior based thereon.

### Copy Master's Moral Code

Nobody realizes this better than the simpletons who accept capitalistic teachings as economic gospel. Those fellows practice all the virtues of the master's moral code and the majority of them wait for their reward in vain. They are thrifty, some of them give of their substance to keep up the master's pet schemes, they ape their economic overlords in their silliest poses and attitudes without a sense of personal satisfaction or a consciousness of reasonable behavior. They are unable to defend themselves against their own emotions cleverly played upon by the efficient specialists whom the master maintains for that purpose. There is bound to come a day in their lives when they realize that they are the victims of a fallacy, that they have been squandering their energy in valueless pursuits. But they do not acknowledge their mistakes. It takes a man to admit a mistake and to change his attitude accordingly. Their spite remains, they are compelled to admit the survival value of class consciousness in the practical things of every-day life and it becomes their purpose to force the dissenters to abide by their own rules, not as a matter of moralistic fervor but because such an act puts others by compulsion in the unfavorable position in which they realize that they are themselves. Thus they try to establish in their own favor a leveling down towards an equality in mediocrity.

That function is now being fulfilled by the Klan. As an organization, it is interfering with the private morals of outsiders, meting out punishment for acts which the law fails to condemn, theoretically in the name of a moral principle, but in reality to deprive the more advanced thinkers of the benefits of their wisdom and force them back with themselves in the ranks of those who accept as gospel truth all forms of capitalistic humbug.

The reader may verify the accuracy of this general statement by applying it specifically to any concrete issue of his own choice.

### A Middle-Class Affair

In conclusion we may state that the Klan is a middle-class affair but that it is not likely that that class will in any way be allowed to derive any kind of benefit from all the cowardly outlawry hidden behind its regalia.

Capitalism has got the drop on the Klan through its economic power.

The Klan practically controls the state of Oregon. Middle-class votes put it in power. Yet it has nothing to show in the line of achievement that could be considered as favoring the interest of the farmer or the small merchant, but its leadership is closely in alliance with electric light and power corporations, and it is generally admitted by those who are in a position to know that the main result of Klan control will be the transfer to private ownership of nearly all the available water power in the state.

Wherever the Klan may achieve political power it will by the very logic of things as they are and the predominance of the economic motive be compelled to strike the same attitude.

## Who Wrote "The Awakening"?

ANENT the poem, "The Awakening," attributed to Rudyard Kipling, and appearing in our November issue, the Pioneer has received some letters questioning its authorship; and claiming that it is not in accord with Kipling's imperialistic views; nor is it to be found in his published works. As a Dartmouth college student puts it:

"The fourth stanza, beginning—

Dividends, rent and interest
Chicanery, lies and brag—
These are the gods of Empire
Their symbol—the British flag—

is great stuff, but not Kipling's usual line."

However, we refer this reader and all others to Upton Sinclair's anthology, "The Cry for Justice." Therein will be found data going to show that Kipling has been guilty of indiscretion, in that he has, once or twice in his lifetime, written proletarian poetry, now suppressed.

But, all this notwithstanding, let it be said candidly, The Pioneer really doesn't know whether Kipling wrote "The Awakening" or not. The Pioneer got it, through a free use of the editorial shears, from another labor journal or magazine. Its name can't even be recalled, such is the Pioneer's haste to give its readers something stimulating to read—with a success that was entirely unexpected.

However, the question remains, who wrote "The Awakening"? If Kipling didn't, who did?

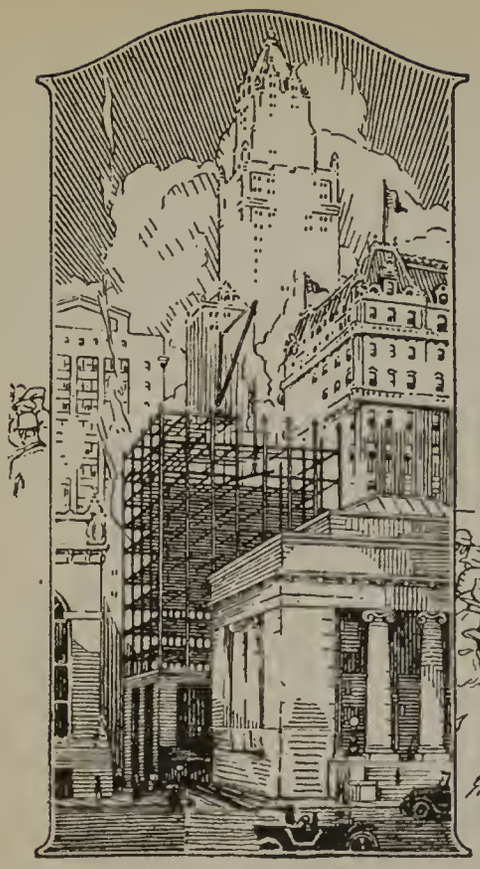
## Read and Act

DIRECTED reading requires a constant effort of will and develops character. There is hardly a more difficult task than reading with care and application. He who can read and understand that which will benefit him has the power to free himself from those who enslave him.

Let us apply ourselves relentlessly to the task of reading those things which will do us good.

If we would free ourselves from our masters we must learn to become masters of ourselves. Emancipation will come but slowly to those who do not pave the way by strengthening their character through restraining their impulses and directing their energy into fields of constructive thought.

Let us read, relentlessly, resolutely, alertly, those things which will teach us how to take and hold that which is ours. Let us understand what we read and act upon it! As we act upon it we become men! **(TR-1354.)**



## BIG CITIES TO GROW BIGGER

**The drift of population is from the country to the city. There are now more workers in the factories than on the farms. And the prospects are that in the future cities will grow ever larger; so will the need of industrial unionism to make them fit places to work and live in. Spread the gospel of industrial unionism in the big cities, as there is where the big armies of converts must be made, if labor is to win in the struggle with modern giant capitalism, which the big city symbolizes.**

# The Wonders of Modern Science

**Their Possibilities Surpass The Dreams of Man And Presage, For The Future, Revolutions Of A Startling Nature.**

JUST before his late lamented death, Dr. Charles P. Steinmetz created something of a furore by predicting the coming of the four-hour workday in the century just ahead of us. The prediction served to call attention to the marvellous possibilities of electricity, which, according to its devotees, is only at the beginning of a career full of extraordinary industrial changes; among which a superpower capitalism is only one of the most prominent. The prediction also served, for the time being, to overshadow great achievements and great possibilities in other fields of science; in chemistry particularly. But now that Steinmetz is dead and the perennial 10-days' wonder has somewhat worn off the novelty of his views, it is possible to take a glimpse at these other phases of science and to speculate upon their bewildering tendencies and outcome; to the benefit of all concerned.

First there are the experiments to "burn coal twice," with which the name of Henry Ford is linked as promoter and financial backer. This is a process evolved by Emil Piron, a chemist, and V. L. Carachristi, a consulting engineer. In it soft coal is partly carbonized with a gentle heat, with the result that the usual "coal-tar products" are recovered, so it is claimed, in greater quantity than when fully carbonized with great heat; and yet leaving some of the "life" in the fuel thus treated to be burned again.

By this new process, it is claimed, cheap gas, cheap gasoline, cheap fuel oil, cheap fertilizer and cheap coke are possible. The gas will be suitable for illumination, the gasoline for automobiles, the fuel for engines, the fertilizer for farms, and the coke for furnaces.

### A Revolutionary Thing

This new process is claimed by Ford engineers to be such a revolutionary thing that power plants all over the country must come to it; and as gasoline is derived from this method of distillation at a cost of only six cents a gallon, an inexhaustible source of cheap gasoline will be established.

It is said of Ford himself that, with the new process in use at his own plants, "where he is making 8,500 cars a day now he will be able to make 15,000. Instead of an expensive coal he will be able to use a cheap coal. And the coke that will result from the first burning will be of such a character that he will be able to make his own steel."

Ford has already spent more than a million dol-

lars in assisting experimental work. He is putting his money in the new process, and his technical staff is helping to perfect it. He is now spending $5,000,000 to establish the process in his River Rouge plant at Detroit.

"Burning coal twice" appears to have many economic revolutions involved in its general adoption. First, it will act, together with electricity, in reducing the need for miners. Second, in its creation of cheap gas and gasoline it will affect the light and oil monopoly and industry, undermining the first and displacing labor in the second. With it a success, the dependence of national commerce and welfare on oil will vanish and with this dependence will go one of the greatest causes of war. Third, it also threatens the supremacy of hydro-electric power, just as the latter threatens the existence of steam as a motive force. Thus "burning coal twice" forecasts more unemployment for miners and oil producers, while menacing mining, oil and electricity, in general. It also does away with the struggle for petroleum and thus contributes to world peace. Its many possibilities are revolutionary, indeed!

### Chemical "Insanity"

Now let us turn from "burning coal twice" to other phases of chemistry and engineering, as expressed by Irenée du Pont. He says that it seems like insanity to predict the coming achievements of chemistry; after which he proceeds to make a few very interesting predictions himself. According to him some of the possibilities of the future in the chemical field, include among them, synthetic food, artificial wool, the conquest of disease, the entire or partial abolition of sleep, storage of solar heat, heatless light, cheap fuel and greatly prolonged mental and physical vigor in the course of human life. Now that surely looks like an insane man's ravings. But so did the possible achievements of electricity before the days of Steinmetz.

If we speculate upon the possibilities of chemistry these "ravings" seem insaner than insanity. Imagine, if possible, the tremendous economic revolution involved in so feeding man that the results of eight hours sleep will be accomplished and the active existence of man will change from 16 hours to 24 hours a day! Then we will have not only perpetual insomnia but also perpetual human motion. The result will be to increase the labor supply 200 per cent at the most, when reckoned on an eight hour basis. Talk about unemployment! It will be ever with us then, overwhelmingly so!

And then reflect on what is likely to happen if "a vehicle which will absorb the heat from the sunlight and carry it to the point of production" is invented. This simple storage and transmission of solar heat will destroy mining entirely, do away with the necessity for burning coal twice and relegate super-power electricity to the scrap-heap! Phew! the possibilities of stored solar heat, staggers the imagination!

### Arabian Nights Outdone

And synthetic food! "Made of mountains of limestone and waterfalls that supply the chemical raw materials and energy required to make sugars and starches" it does away with vegetation and farming! What will become of the farming class then? What reason for existence will the farmer-labor party then have? They will all then be replaced by revolutions—not bloody but chemical ones. Talk about the genie that were released from the bottle in the Arabian Nights, they are not in it with those that modern chemistry promises to let loose.

Of course, it will be argued that these are only the dreams of a scientist and, as such, not yet realized. But it is of such dreams that human progress is made. The possibilities of today are the actualities of tomorrow. This is especially so when they are of scientific origin and development. With such factors in their favor, their success seems assured in advance.

Great as man's progress has been in the past it promises to be still greater in the days to come. In fact, just now it appears to be gathering momentum for a great leap forward. With it should go a greater industrial organization of the working class, for without such an organization the subjugation of nature in the interests of mankind, as Steinmetz labored to make it, will redound only to the benefit of the few instead of the great majority.

There are great changes coming. Let us organize in anticipation of them.

## Oil and the Germs of War

INDUSTRIAL SOLIDARITY and Industrial Worker have both rendered the working class and the cause of peace a great service by printing serially Scott Nearing's "Oil and the Germs of War." Too long have works of this important nature been the reading of a few interested students. Too long have they reposed uncirculated in the libraries and book collections of their original buyers. It's time the workers knew the facts about the great monopolies that cause the pursuit of imperialist policies and result in the destructive worldwide wars of modern society.

Industrial Solidarity and Industrial Worker, in laying the fruits of the investigations of an accomplished scholar before common ordinary every-day working class stiffs have done them and the working class internationals a great service.

Buy "Sol" or, better still, subscribe for it and get all the issues containing "Oil and the Germs of War," besides a lot of other good material. $2.00 a year or $1.00 for six months. Address, 1001 W. Madison St., Chicago, Ill. Or send $4 per year, or $2 for six months, to Industrial Worker, Box 1857, Seattle, Wash. Tell them to start you off with the Scott Nearing serial.

We'll have more to say about "Oil and the Germs of War" in future issues.

# Chicago

**Hardin Wallace Masters**

I had not known you before—
Squalling giant of the West,
With muscular toes dug deep
Into the verdant prairie,
Until the day your buildings,
Like a great cabbage,
Unfolded before me, leaf by leaf,
And your running streets of people;

A discordant hum of many bees,
The thunder of heavens upheld by trees
Of steel; rushing holocryptic waves of seas,
The loom of tragic faces weaves.

All of this, and more,—
Fenced in by perforated stone,
Grand Canyons of Cement.
Seemed to be a holocaust of souls,
And having in their fury spent
A futile rage upon their captors.
Departed, resorted to this mask-like face
Of stone, the open windows cadaverous eyes,
Leering with imperturbable intent.
Small tongues, flickering in the light;
Imprisoned hands, waving at the sun.

# The Widow

By HENRY GEORGE WEISS

TWO babes to feed, two little girls, one two the other three;
I got my eats at the restaurant and ten bucks salary;
I paid five for my housekeep room, and with the other five
I hadda buy food, clo'es and gas to keep my kids alive.

Two babes to feed, but I did it, honest and straight as a string,
But, as you might well imagine, I never laid by a thing.
Two kids to leave every morning alone in that room till night
With a casual peep from a neighbor to see if they were all right.

Slaving and scrimping and pinching, I kept myself free of "tick,"
But the measles were making the rounds and my little Molly got sick.
I hadda stay home and nurse her, and Sally she took it, too,
With dope a dollar a bottle—and nothing to see us through.

Say! have you sat in the gloaming a-praying as hard as you could,
With kids dying for lack of medicine and the cupboards empty of food?
When the druggist refused to trust you and the neighbors ceased to lend,
And in all the wide, drear city you hadn't one real friend?

With the rent due in an hour, and strictly in advance,
And a fiend who showed how to get it 'neath a painted smirk and glance?
With the light a-growing dimmer, and a child's moan in the gloom?—
—Well! what is the use of talking . . . I paid the rent for the room!

They needed the dope and I got it; the best of doctors, too;
With the help of the de'il and his dollars I tried to pull them through;
But the curse of lust seemed with me; I waged a losing fight;
And I stood bedecked in my paint and shame and watched them die last night.

I am a thing attainted, accursed and alone,
Never a virtuous woman but would cast at me a stone;
Never a man that bought me but holds me a creature vile—
Yet I sold myself for my children, and cloaked heart-break with a smile.

Yea, I knelt in my agony and prayed to God up above;
Ah, sure if the angels could see my heart, they read my mother-love;
But never a sign to help me, never a body came—
And tonight I kneel beside my dead, a woman of ill fame.

**BOOST THE INDUSTRIAL PIONEER**

# Other People's Kids

By EVA PILLSBURY

YOUNG Tom Evans had to quit school and go to work at the surface of the mine as a "breaker" boy. His father, Old Tom Evans, worked down in the mine. Young Tom was only thirteen, but he had to say that he was fourteen in order to get a "work paper." He got by all right, for they don't bother to investigate these matters.

Young Tom didn't get on in school anyway, for there was never really enough food on the Evans breakfast table to satisfy a growing boy, and of course, a hungry boy can't study well.

As a breaker boy, one picks out the chunks of coal with slate mixed in them, from the mass of crushed coal rushing past down a moving belt, from the top of the breaker towering overhead. Not dangerous work but unpleasant, for the coal dust gets into one's eyes and lungs, and the slate is sharp and makes one's hands bleed.

When young Tom got home that first night and told his mother that he had earned $2.00, she only looked at his bleeding hands and cried. Women are queer that way.

After a few months, Young Tom got a job down in the mine as "trapper boy." The work was not hard and paid a little more.

All he had to do was to stand in the darkness or semidarkness, opening and closing doors, for the coal cars to pass out and back.

Sometimes the dampness made him shiver. Then he thought of the warm supper that would be ready for him when he got home.

But his mother was thinking of her boy down in the dark damp mine where no sunshine ever is, and often she cried. Young Tom didn't know that, though Old Tom suspected it. But what can a man do with six hungry children to feed?

Young Tom proved so reliable that by and by the foreman gave him a job in the "robbing section", and then he was indeed proud though somewhat nervous about it. The robbing section is where the last of the coal is cut away from the pillars and walls. Sometimes the roof falls in before the miners have a chance to get out. Of course, the laws of the state say positively that no boys under sixteen can do such work; but the foreman didn't ask Young Tom anything about his age. The boy was useful and he needed him.

The Evans family had more to eat now. They managed to catch up on the grocery bill, and Young Tom's mother got him some warm underclothing to keep him from shivering down in the reeking darkness of the mine. And then—the "irony of Fate."

Between the choking coal-dust that would get into his lungs and make him cough, and the darkness and dampness of the mine, Young Tom presently got into a bad way. He lost his appetite, and though his mother piled his plate high with potato and meat and gravy, he just sat silently and wondered why it made him sick to look at the stuff.

When he had crept off to his bed in the little windowless attic where he and his three brothers slept, his mother listened to his coughing and the corner of her kitchen apron got damp with tears.

One day Young Tom fainted in the mine; dropped like an old man who is worn to exhaustion. They brought him up and sent him with his father to the company doctor, who looked at him, felt of him, tapped his chest.

"Mustn't work for a while," he said. "Take him home and take care of him. Feed him up with eggs and milk. Plenty of sleep in good big room with lots of fresh air. He'll come out all right. Trouble has only just started."

Then he gave them a prescription to have filled for Young Tom. The medicine cost Old Tom $2.50.

Young Tom stayed at home two weeks. Said he felt better and so returned to work. His mother watched him from the window that morning, and when he was out of sight she crossed the room, and dropped on her knees by the old bed lounge, clutching the patchwork cover in her two work-calloused hands.

"God," she said, "why do little boys like that have to work till they drop? Only just the other day he was my baby! Isn't there any other way but this? Oh, God, isn't there?"

But God didn't answer, though He must know just where the trouble lay.

Young Tom worked a month and then came home, knocked out.

One can't hope to do much for a tubercular case in an environment that welfare workers would term "higly unsatisfactory."

So things didn't get any better.

One day a district nurse came to investigate. "All wrong," she said, "all wrong!" and went away. Then a welfare agency sent its representative. "Hospital," she urged.

"No," said the mother of Young Tom, "I'll take care of him myself; he's mine."

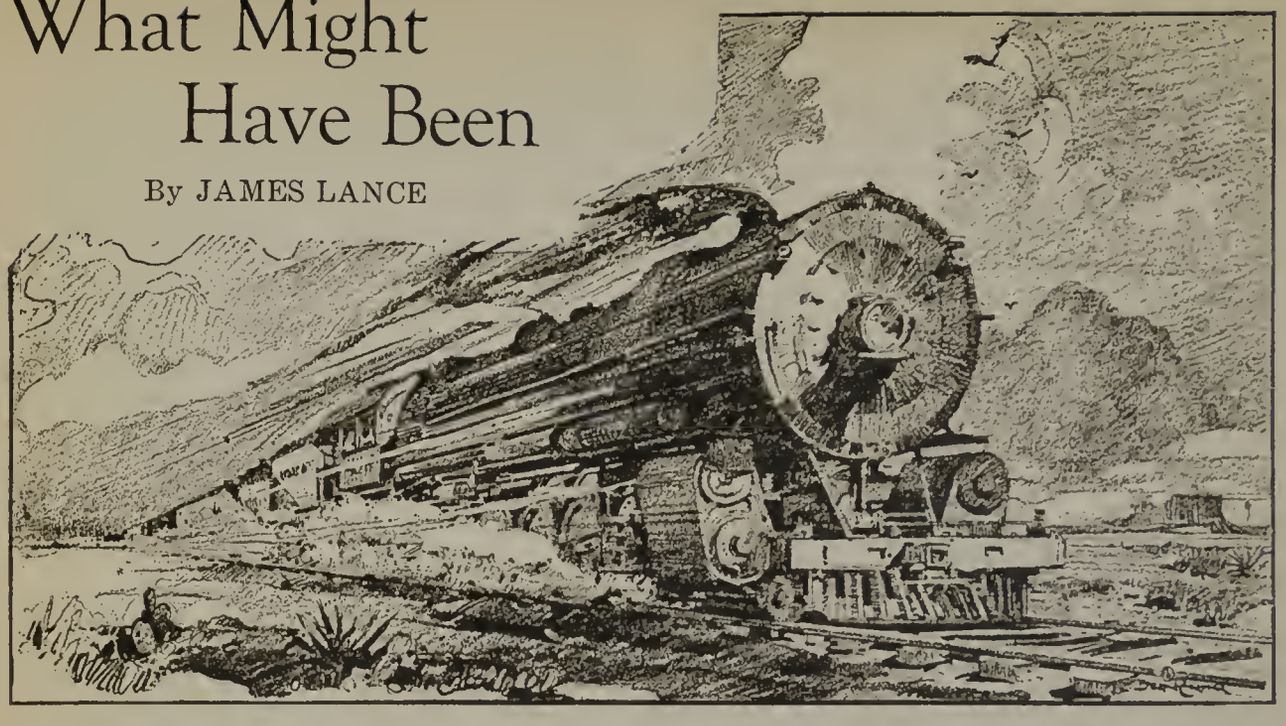
A committee went to the big mine-owner,—the man whose millions had come out of that black hole in the ground—where Young Tom and his father and thousands of others had wrought their bitter task for their pittance of bread. They found the man in his splendid suite of offices, at his mahogany desk.

"Can't you do something for the boy?" they asked. "He broke down at the mine. Probably it isn't too late yet, if he could have the right treatment."

The big man straightened back in his chair. He pounded on his desk.

# What Might Have Been

By JAMES LANCE



**Foreword: The following story is the writer's conception of the consequences which might have followed the refusal of the train and engine men of one of the transcontinental railroads to take the trains out of a certain division point in the Southwest during the shopmen's strike in 1922.**

**Everyone familiar with the incident around which this story is written will agree that marvelous things would have resulted had the rails of the rest of the country shown the solidarity the writer has credited them with. You may not agree with the writer's conception. However, here is the tale.**

GREAT excitement prevailed in the little town of Cuchara. There were more people in town that day than in the memory of the oldest inhabitant. He—by the way—had only been there a few years, for Cuchara was of recent growth and existed solely because the Pacific and Gulf had to have some place to change train and engine crews.

Necessity was and could have been the only excuse for locating a town in such a region. Midway of the great southwestern desert, a hundred oddfeet below sea-level, blistered by scorching sun, never knowing that fresh, lively feeling which follows a shower, isolated from the rest of the world, except when a train stopped for a few minutes, Cuchara represented the absolute zero in places to live.

Its population was less than two hundred—only those who were absolutely necessary to the operation of the railroad. Tourists never broke their journey there, no wave of wild excitement such as follows the discovery of oil or gold, ever awakened its inhabitants from that peculiar lethargy which is to be found in desert-dwellers everywhere. There was even a dearth of cowpunchers and sheepherders, those sons of the West who are to be found in nearly every town of that great open space; even a prospector was hardly ever seen prodding his burros along the dusty street—no one except the slaves of the genii of steam.

But today the scene was different. Everywhere could be seen groups of people, people who by no stretch of the imagination could be made to fit into such a picture as Cuchara presented. Women—dozens of them—children, scores, little and big—men—not railroaders—oh no, no one could think that those well-fed, immaculately dressed specimens of the male sex had ever pulled a pin, thrown a switch, washed a boiler or tamped a tie; no railroaders, these. They were tourists—tourists who had been rudely awakened to the fact that their creature comforts were dependent on the men who lived in Cuchara and who until now had been to them merely cogs in the Great Pacific and Gulf machine that was carrying them across this inferno of heat and desolation to the shady forests and laughing brooks in the snow-capped mountains which rimmed the western horizon.

On all sides could be heard the hum of angry conversation, these people were angry, more than that they were exasperated. To think that they who had been assured of a delightful journey should have such discomfort thrust upon them was almost unbearable. First-class passengers on the De Luxe Special, people who had paid extra fare to insure themselves of every attention, marooned in such a

---

"What is that to me?" he thundered. "I'm not responsible for what goes on at the mine!

"If the men there can't live on their wages, it's their own fault. I don't ask anybody to help me support my children!

"If a man can't take care of his own kids, he's got no right to have them! That'll be all today."

And the committee was waved away by a white hand adorned with a magnificent diamond, the price of which would have saved a life.

God-forgotten place—it was unthinkable—nevertheless, it was a reality.

They were here, forced against their will to endure the blistering wind and scorching heat just like common people—railroad slaves.

Never a thought for the men who had to endure this sort of thing every day. Never a word of commiseration for those whose lives were passed in these miserable surroundings that they and their like might be sped through the desert on upholstered seats, cooled by electric fans and attentively served by white-coated porters. Oh no, these people were giving voice to but one thought—the audacity of such men in forcing THEM to share for a little while the discomforts which were the usual routine of the railroaders.

One individual, a portly male, clad in a golf suit, checkered stockings and tweed cap, was particularly annoyed. He was, as he let everyone know, Judge Barnstone of the Supreme Court of New Jersey and he was sure—it was his legal opinion—that the railroaders were breaking every law that had ever been written around that interesting subject known as interstate commerce.

To stop a transcontinental train out in the desert and refuse to take it on its way again was a crime far worse than murder, piracy or arson. He knew—he told everyone—that this was the worst, the very worst crime ever committed in that region, long famous for its lawlessness of every description.

For that was what had happened. When the De Luxe Special had slid into the little desert division point early that morning and come to a stop in front of the Mission style depot there was neither crew nor engine to take it westward. The men had gone on a sympathy strike with the shopmen who had walked out a month previous.

They declared that the equipment was no longer safe and that furthermore their lives were threatened every time they went through the yards by the gang of plug-uglies the company had imported to protect the scabs who were trying to take the places of the shopmen. Daily the situation had grown worse, the engines and cars were falling to pieces, the scab-herders were becoming unbearable and, at a meeting the night before the train and engine crews had voted to take no trains out of Cuchara until these grievances had been righted.

As a result Cuchara was a beehive of excitement. The number of angry tourists was increased by the arrival of the Californian, another crack limited, and later another one had rolled in from the east and added its cargo of joy-seekers to the disgruntled multitude who were wandering aimlessly around the little desert town cursing the men responsible for their predicament.

The indifference displayed by the railroad men seemed to them the worst feature of the whole matter. The rails acted as though people who rode on trains during a strike were not entitled to any consideration. Down at the Darby house, the hotel and dining room operated by the railroad company, one of them had told Judge Barnstone that he might as well get used to it, because he would be there long enough to vote unless the company came through with the strikers' demands.

He had intimated that the Hon. Judge would have been a better citizen if he had known enough to stay in New Jersey. He called on everyone within hearing to observe the fat frying out of the Hon. Judge, and to wonder with him, whether the judge had ever done a useful day's work. Why, the man actually told the judge that what was good enough for him was good enough for anybody, and added that he had been there three years and it hadn't killed him yet. Also he opined the judge was healthy enough—just fat and lazy—and that the experience wouldn't kill him.

Meanwhile, the officials of the Pacific and Gulf were frantically trying every means to get the trains out of Cuchara. Messages had been sent to the officials of the brotherhoods and finally word came that two of the "big men" of the unions were on their way to Cuchara to end the strike. Naturally, this news trickled out to the men, so when Number 5 pulled in they were not surprised to see Brown, of the Trainmen, and Sargent, of the Engineers, alight.

These officials immediately called a meeting which was attended by every rail in Cuchara. It was a riotous session. Brown made an eloquent speech calling on the men to forget their grievances and to protect the sacred contract. He declared that the battle of the shopmen was no affair of the trainmen, engineers, conductors or firemen. But to his surprise it fell on deaf ears. Even the local officials failed to support him in his plea. Everyone seemed to think that a limit had been reached and that this was no time to protect contracts, or scabs either, as they expressed it.

One man, a brakeman, told Brown and Sargent that their time was wasted in coming to Cuchara as the men had decided to get along without official interference and that for once in the history of railroad strikes in America, the rank and file were going to do the thinking.

Another man, this one a fireman, made an impassioned plea for solidarity, and, as this word was a new one in the vocabularies of most of those present, it required some explanation. When he got through it was decided that "an injury to one was an injury to all" and that this motto was applicable here and now.

Cries of, "We've had enough of scabs and scabbing," finally drove Brown and Sargent from the hall to telegraph the sad news of their failure to division headquarters at Alpine.

The division superintendent wired the president of the road and he took matters up with the governor of the state. The machinery of law was put in motion. Next morning six men who were pointed out as "ringleaders," among them the audacious "shack" who had razzed Judge Barnstone, were arrested and placed in the local calaboose. Still the men remained firm in their determination to get their demands, which now included the settlement of the shop strike.

Then, like thunder from a clear sky, came word

# A Railroad Center

that Aguas Calientes and Alpine had taken the same stand—no trains until the guards are removed and the equipment made safe. The news spread like wildfire along the entire system and before the dawn of the third day all the men in the train and engine service were out.

The entire Pacific and Gulf was tied up—not a train moved on its three thousand miles of track.

Far away in Washington the President of the United States was notified of the "revolt," for that was what the walkout was termed by the newspapers, and after a hurried session of the cabinet he ordered federal troops to entrain immediately for active service in the strike zone.

Then the real strength of united railroad labor was demonstrated.

When the soldiers marched down to the yards at Kingsville, the largest army post in the southwest, they were politely informed that they'd have a hell of a time getting anyone to pull a train of soldiers on that road. Frantic, the commander sent word to Washington and a brigade was ordered from another fort. These met a like answer. No trains would be run to carry soldiers to the scene of trouble on the P. & G.

The American Legion volunteered to work the

trains, and this so incensed the railroad men that strike votes were taken on all the roads in the west and before the middle of the fourth day the entire western part of the country was paralyzed by the refusal of the men to run trains of any description until the shop strike was settled.

The sword had fallen. The day which the railway magnates had dreaded for years had arrived. Railroaders of every description laid down their tools and the General Strike on the railroads was on.

The fifth day saw the entire country tied up. Milk, mail, passenger, fruit, stock, coal and merchandise trains, fast trains and slow ones, main line and branch, were a thing of yesterday. The mole-hill of Cuchara had grown into the mountain of a complete railroad shut-down all over the entire country.

At first everything was quiet. Even in the larger cities there were scarcely any disturbances. Here and there some soldier or special detective stirred up trouble with some of the quicker-tempered among the strikers, but these outbreaks were like ripples on the surface of a placid pond. Everywhere the men sat tight and waited. Everywhere they seemed to realize that history was being made and the feeling seemed to subdue them.

The immensity of the situation struck terror to the hearts of the weaker ones but they were kept in line by those who saw that, united, the railroad men held the winning hand in the greatest game ever played in the New World. Never before had the like been witnessed, it was a magnificent hour for railroad labor. United they held the destiny of the nation in their calloused hands and at last they had awakened to the strength of unity.

The great railroad barons were holding conferences daily in New York City. Plan after plan was proposed and discarded. None of the oft-tried methods of ending a strike could be used in this instance. Each and every means successful before was useless now. "Divide and conquer," would not work this time because the men refused to be divided. Unity was the only issue the magnates could not meet. Well they knew the strength of unity.

For years they had fostered division among the men through the different brotherhoods and craft unions, for they had seen that united railway labor presented an unbeatable problem. Now they were face to face with the most dreaded and most feared —and helpless. The officials of the unions had failed them in the greatest crisis which had ever arisen, for the men had at last awakened to the fact that their officials were the tools of the masters and consequently refused to allow them to turn them from their purpose. So ended the fifth day.

Now the pinch of interrupted industry made itself felt. The large cities were the first to suffer. None of them had perishable foodstuffs sufficient to last long. Meat they expected to receive every day, likewise milk. The cessation of train operation made delivery in quantity impossible. Motor trucks and horse-drawn vehicles were requisitioned, but these fell far short of supplying the need. The mills and factories depended on the railroads for fuel and raw material and the removal of their finished products.

On the sixth day of the strike, millions of workers were laid off. Industry in general was paralyzed. Still the railway magnates refused to acknowledge defeat. They were hopefully waiting for the first sign of weakness on the part of the men. Hourly the situation became more ominous. Idle throngs packed the streets of every city in the land, and everywhere people wondered how it was going to end.

Another conference of all the railway officials and directors was called, and the President was invited to attend. He came—not by train—even he could not make wheels revolve on rails then—but in an airplane. After a lengthy discussion at which nothing was accomplished, the conference adjourned to the Palace, one of the newest and most palatial hotels in the city, for a banquet.

Then was the power of the movement which had started in the little desert division town in the southwest revealed to them in one of its most significant phases. They had felt no matter what happened they need not suffer. The great "public" which their kept press howled about until the supplies of paper were exhausted was undergoing great hardships, that they knew, but they felt secure, exempt.

But when they filed into the great hotel they were met by the distracted manager and informed that, desolated though he was, he could not serve the banquet. In some mysterious manner the supplies had vanished; there had been a riot just at dark and he imagined that under cover of it the store-rooms had been looted.

As they were digesting this doleful news in lieu of the delightful meal they had expected, the magnates received another jolt. Every light in the building was snuffed out.

Even on the streets absolute blackness prevailed.

A hurried telephone call elicited the information that the fuel supply at the stations serving that part of the city was exhausted, and while connections with another one which had "white coal" was being made, there would be no light or power.

Aghast at this demonstration of the far-reaching effect of the withdrawing of railroad labor power, the magnates held another conference in the ballroom of the Palace. Candles and kerosene lamps shed a ghostly light on the scene, and the shadows cast had their counter parts in the hearts of those assembled.

Like snarling wolves they snapped and fought. Berryman, the president of the Pacific and Gulf, made a bitter, denunciatory speech anent the misery those "damned revolutionists" were inflicting on the country and demanded of the President immediate action. "Send cavalry, airplanes, dirigibles, tanks, gas-bombs—anything—only get those trains running again!" he cried. "One more day

## IWW GENERAL CONVENTION GOT BEHIND CAMPAIGN TO ORGANIZE STEEL WORKERS

of this and we shall be forced to admit defeat. And, gentlemen, you all know what it means to be defeated in a struggle like this!

"This is the beginning of the end. There will be no holding them! We must win or tomorrow will be that dreaded day we have been fighting against for years. Labor will know at last that it is the driving force, the motive power, and we—well, I think you all know where we will be."

Others including Beechman of the Stone Island and Gipley of the Transcontinental, had spoken alike, and when Dillard of the Delaware and Ohio had made his speech the President arose and said:

"Gentlemen, I agree with you. We all seem to think alike. This is a momentous day for America. Something must be done, and at once. But this is a fearsome thing and I am afraid our airplanes, dirigibles, tanks or bayonets will not win this battle. This is something bigger than even the World War. Labor power alone can end this catastrophe, and those who possess that power seem disinclined to use it.

However, every precaution will be taken. I have ordered General Cursing to place the entire nation under martial law and to get as many army men as possible to run trains. Tomorrow we shall know! This state of affairs cannot continue! It means revolution. God himself can only tell where we are headed, but rest assured that I shall fulfill to the utmost the trust the nation has imposed on me. No stone shall be left unturned to end this calamity and return our fair country to its normal condition."

"Tomorrow we shall know!" So had spoken the president. And the events of the next twenty-four hours proved him correct. When the next day's sun was low in the western sky, they did know.

That brief span of time had shown even the most aggressive and domineering among the rail magnates that this time they had met a force which is unconquerable. Solidarity of Labor, used for the very first time in the history of American railroading, had shown itself to be an impregnable fortress against which dirigibles, gas-bombs, tanks or bayonets were as useless as slingshots against Gilbraltar. Behind this barricade— one of folded arms—labor was safe, and all the force that all the magnates could muster was as impotent as an attempt to sweep back the tides.

General Cursing and his army were check-mated; every city in the country was in a state of revolution; wild-eyed mobs tore through the streets breaking open warehouses containing food. All business was at a standstill. Eloquent soap-boxers held forth on street corners advising the workers to take control, not only of the railways, but of all the industries, until torn off their impromptu platforms by the soldiers.

In Chicago, a terrible conflagration had destroyed nearly the entire "Loop" district while the fire department stood helplessly by, unable to fight fire without water and lacking water because the power stations supplying the pumping plants were without fuel.

It was a day to be remembered till the end of life by those who shared its lurid moments. "Tomorrow we shall know!" Aye, that was a prophetic utterance.

That night another conference of the magnates was held and those who attended seemed not like the domineering masters of yesterday. They came with terror clutching at their hearts, with fear tracing its finger marks on every lineament of their faces, aged, broken, almost pitiable they seemed in their realization of defeat.

They came not to dictate—their day of dictatorship was over—none knew better than they that a new dictatorship had risen on the railroads. They were there in defeat and humiliation, there to offer almost any terms the victorious rails might demand. Only one thing they asked: That the men return to work and the railroads resume operation so that the system itself would not topple and carry them with it into oblivion.

Strong and ruthless in their hours of victory, these men were wise and shrewd in defeat, and they knew that as the cards lay they were beaten —for the time. Their foremost desire was to get industry into operation again. Delay meant final, irrevocable defeat, seizure of the industries by the working masses and abolition of private ownership,

# India's Emergence: Its Inconsistencies

IN November Industrial Pioneer, an item appeared calling attention to the fact that "The Industrial Review for India" "for promoting India's industrial development and foreign relations,"published in English in Berlin, Germany, had reprinted in its September issue an article on labor banks that originally appeared in the August Industrial Pioneer.

The fellow worker in Berlin, Germany, an Indian, who brought this to the Pioneer's notice, now sends the Pioneer the following paragraphs from "The Industrial Review for India" in explanation of its policy:

"It is unusual for an industrial magazine to champion the cause of the working class, yet this Review has announced this as one of its intentions, and has begun to carry out this resolve in an article in the September issue on 'India's Industrialisation,—and some connected social problems.' The Review has a very direct and definite tendency; it is national; and within its national vision the peasants and the working class occupy a position of pre-eminent importance.

" 'We believe,' one of its articles states, 'that no real progress is possible in our country without a thoroughly enlightened working class; we shall pay special attention to the question of organization and education of industrial and agricultural workers, with particular reference to vocational schools, co-operations, etc.' "

Our Berlin-Indian fellow worker goes on to say:

"Some of the nationalist organs in India occasionally give space to revolutionary labor propaganda even when they may not like the principles. For example, the **Indian Nationalist,** weekly of Bombay, gave the program and principles of the "Communist Workers' Movement" — the anti-Moscow (called 4th) Communist International "All Workers' Industrial Unionism"—as given in **The Workers' Dreadnought** of Sylvia Pankhurst of London.

"Not only that the **Indian Nationalist** (Oct. 13, 1923) gave it a place in the 'publicity' columns with definite address for further information of the movement. **I believe that one of these days you will hear from India of some 'capitalist' firm republishing IWW literature and some Indian journal reproducing your articles with approval.**

"That is possible in India because not only the working class but also the business classes are not quite class-conscious and strongly divided on political party principles there yet. The self-defensive national movement still keeps certain synthetic virtues which are long ago lost in the aggressive nationalism of governments in the western and other so-called 'Independent' countries. This is due to the fact that in India there is as yet no 'national self-government' and no 'parliamentary party-political rule.'

"Moreover, there are so many other divisions of long-established character, such as racial and religious divisions, which owing to the weakness created in all sections of the population—the bourgeoisie as well as the proletariat—are very much shunned, feared and abhorred by both today in India. And the national movement in India even more than in Ireland, is attempting—even if wrongly—to be the element for the abolishing of these divisions.

"Of course, the class nature of the Indian struggle for freedom will assert itself even earlier than the political class-cooperation nature of it will achieve anything like success. There is, and will increasingly overshadow, in India the class-struggle against the British imperial order.

"I believe also from my experience with the Indian movement for political liberation, that the break-up of the British empire and the liberation of the working class from politics and government will synchronize in India more than they will in any other country. Hence the two ideas or movements work together side by side without much friction in India."

---

wage slavery and all the concomittant attributes of the system they had built up on the blood and tears of labor.

This they realized and their actions were dictated by motives of self-preservation. "Give them anything now—later we may find means of dividing and subduing them—but now, refusal means revolution, the loss of all the industries, and the overthrow of the entire scheme of things."

So had spoken Berryman and so it was decided. The great railroad strike was over. Solidarity of Labor had won as thinking workers had always known it would.

The effect was almost instantaneous. Engines were fired up, cars began to move, power houses received fuel, newspapers had their stock delivered, and before morning the news was broadcasted from every radio station, sent ticking over every telegraph, blazoned on the headlines of every newspaper and when the morning of the eighth day dawned the De Luxe Special slowly moved out of Cuchara into the mocking wilderness of the desert with a much wiser, thinner and more thoughtful crowd of pasengers than had arrived there a few days before.

Judge Barnstone leaned over the brass railing of the observation car and angrily cursed the rails who waved him a derisive farewell. "Damned Reds" was his final comment. "I'm going to have a law passed in New Jersey to prevent a repetition of this outrage."

# Scandinavia and Its Labor Movement

By C. G. ANDERSEN, Stockholm, Sweden

WHEN speaking of Scandinavia we must bear in mind that we are dealing with three countries, three different peoples, three different political entities. They differ primarily because of a different natural environment, combined with a slightly different economic and social development.

The Scandinavian people are generally slow and conservative. The climate in Scandinavia is, on the average, cold and vigorous during the larger portion of the year, (allowing for some difference between Denmark, the southern part of Sweden and the northern part of Norway and Sweden.) Due to that fact alone the inhabitants have been forced to wear heavy clothing practically the whole year around.

Any being, whether human or animal, is greatly hampered in its movements by its covering. As the brain processes are only a result of the external environment, and the physical action that it imposes upon us, then it naturally follows that, when a cold and rigorous climate only makes it possible to perform slow motions that the brain process also is slow or, as we say, conservative. That this is the true explanation of this phenomena is proven by the old sayings and jokes about the farmer, i. e., the hoosier, as compared with the city worker.

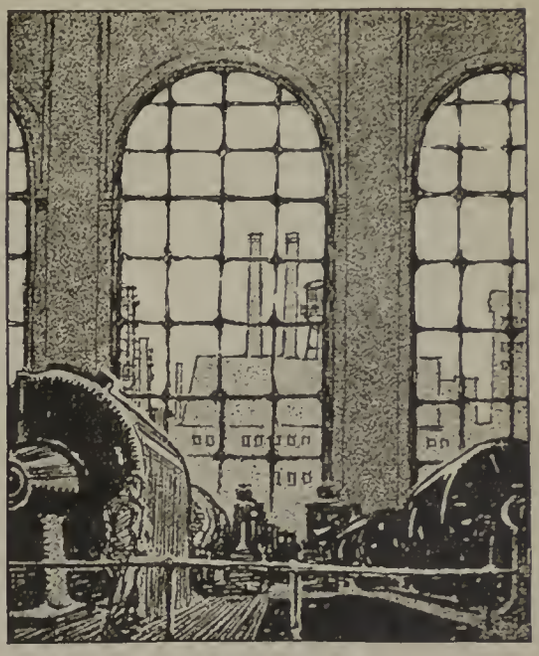
### Conservatism Blocks Development

The conservatism of the Scandinavian people explains the reason why, up to a few years ago, Scandinavia was, in comparison to Germany and England, for instance, very backward in capitalistic and industrial development. The rising, young and vigorous capitalism of the last century could not stand for an out and out conservatism, not even in Scandinavia. A number of individuals of different nationalities, consequently, were impelled, by that great motive force, profit, to invade the three countries and assist in exploiting them. The English built the first railroads and supervised their running until the Swedes learned how to run them themselves. The Poles and kindred nationalities came and developed the steel industry, while the Germans and Scotch started to do business.

Evolution does not allow pure races, and least of all evolution under capitalism. Hence we find that the Scandinavian of today is not a pure race. In some localities it is actually diluted up to 60 percent by other races. The typically tall, blond, blue-eyed type is disappearing.

### The Danish Labor Movement

Denmark has about 25 percent of the Scandinavian population. The latter today, numbers about 10,000,000 people. Denmark has no other natural resource than agriculture. The whole country is, practically speaking, a large dairy farm. It produces an immense amount of dairy products such as butter, milk, fresh and condensed, and cheese, the greater portion of which finds a ready market in England. Big capitalism has not yet been forced to enter that field, so the land and dairy owners have organized co-operative associations for their mutual benefit. Denmark is the land of co-operation.



SWEDISH SUPERPOWER.

As Denmark does not contain any other natural resource than the soil, it also follows that Danish capitalism has not offered any great chances for individuals of other nationalities bent on profit-hunting. This in turn would mean that of all the Scandinavian people, the Danes are the purest. Such is the fact, barring the city of Copenhagen, which is the only industrial, and consequently, cosmopolitan centre of any importance in the country.

### Copenhagen Big Center

The city of Copenhagen, which today numbers slightly more than a half a million inhabitants, is also the centre of nearly all transportation. Through that city the dairy products are exported and from there the imports are distributed. Hence we find that a large percentage of the industrial workers are marine transport workers, numbering approximately fourteen thousand. These are evenly divided into shore working marine workers and sea-going marine workers, or seamen. In this regard, Denmark is more evenly balanced than either Norway or Sweden, in which latter countries the sea-going marine workers outnumber the shore-working force.

The Danish workers are mostly organized. The Danish craft union federation boasts a membership of somewhat more than 100,000 members.

This includes a portion of the argicultural workers.

The Danish labor movement is a true miniature of the German labor movement as it was before the war. The whole membership is subject to the dictatorship of the social democratic party, which, through the labor officials in the craft unions, dictates the policy. In Denmark this is done with less opposition than in either Norway or Sweden. The party rules supreme.

Of course, both the communists and the syndicalists have tried to "buck" the party, but with no result. Today there is plenty of dissatisfaction amongst the workers against the social-democratic party dictatorship, but no organized move to overthrow it.

### History of Danish Movement

The Danish labor movement has its own little history. It is about 35 years old. It was started by the more enlightened workers who labored practically on the economic field only. The craft unions thus came into existence. They, in turn, furnished an opportunity for the ambitious sons of small bourgeoise. The latter saw a chance to secure a fairly decent living by becoming socialists and joining the party that grew up to fight for the interests of the working class.

We talk a lot nowadays about the Bolsheviki, but to any close student of the labor movement there is very little difference between the social-democrats and the Bolsheviki. It is all a difference in degree, not in kind. The Bolsheviki is a governing party as well as an executive party. In time of great economic pressure, as for instance in Russia, the party may have to do the whole governing job. As the pressure grows less, it will have to divide the governing of the workers with the industrial and financial capitalists everywhere.

In Russia today the communist party is only formally the all-governing body. In reality it is perhaps as much the international trusts that dictate under what economic and social conditions the workers shall live. So it is with the Social-Democratic party, even in Denmark.

### Denmark's Storms

Denmark has been, at least lightly, buffeted by economic disorders and social storms in recent years. During that time the social democrats have been given the power to govern. That party has been able to govern the workers more efficiently than any other party. And why not?

The workers live on traditions. The members that are now secure and at ease as integral parts of a well-running machine, were at one time the champions of labor. Their voices are still listened to by large masses and as there is no other party of the workers representing a better idea and a better form of industrial organization in existence, of course the governing is easy.

True enough, the now senile federation and party had at one time its youth. The economic organization, under the guidance of the executive party, the social democrats, once fought by direct action for the eight-hour day. The party made it a political issue. The eight-hour day was won and became a law. Minimum wage scales have also been fought for, won, and become laws. The politicians have worked hard to get power, now they are working hard to retain it.

Of course, all these laws are broken time and again, due to the fact that the economic life is too fluent in comparison with the workings of more primitive political aparatus.

### Unemployment High

Denmark has, in normal times, about 230,000 industrial workers. But during the last few years unemployment has been so high as to affect 60 percent of them. At the present time, however, the percentage is fairly low.

The wild speculation of the Danish financiers was, to a great extent, the cause of this unemployment. The Danish capitalists had heavy investments in Russia, when Russia collapsed. They tried to prevent the Bolsheviki from getting in power, with the result that their capital was put into unprofitable undertakings, such as backing up Denekin and Kolchak and others.

These financial moves could only bring one result: unemployment in Denmark for the workers there, while giving the white generals and their gangs lots of work. A bum investment solely!

Due to such actions, Danish finances are not very sound. The Danish crown is still very much inflated, and no doubt the more powerful English and American capitalists are trying to get at Danish resources. The latest move in that direction is the building of a large assembling plant for Ford automobiles. This plant is at present being erected in Copenhagen, from where the cars will be distributed all over the countries having access to the Baltic sea.

As a result of the inflation of the currency and unemployment, the Danish workers' standard of living has sunk considerably during the last two or three years.

### Sweden, Foremost in Scandinavian Capitalism

Sweden is, geologically, entirely different from Denmark. The southern part of the country resembles Denmark, in so far that it is a plain, with fertile fields capable of raising good grain crops and sugar beets as well as tobacco. Some spots are gravelly and rocky where there are a few small forests.

The middle section contains mostly inland water bodies, small patches of land fit for cultivation and forests, while the northern part is practically all forest and waste land.

But the northern part contains also a vast deposit of high grade iron ore, mountains of it! that is mined by surface mining!

Besides these two natural resources is the long coastline, that provides the basis for the fishing industry.

It is due solely to these natural resources that Sweden ranks foremost in the capitalistic and industrial development of the three Scandinavian countries.

There is yet another factor to consider, namely the super power inherent in the many falls and rivers of the country, a large percentage of which is already harnessed and put to work furnishing motive power and light to municipalities, factories, farms and railroads. The main line of the government-owned railroad, running between Stockholm and Gothenberg, is now under process of electrifition. This is about 360 English miles in length. This is Sweden's greatest natural resource of all, this super power is.

### Most Important in Industry

The most important industry is the metal and machinery industry, including all manufacturing, steelworks and iron ore mining.

The total number employed in this, as we term it, two industries, is 126,000 workers. No exact figures are available for each industry.

The lumber industry comes next. The number of workers in the woods will not come up to that figure, nor are the workers in the woods working the year round as in the States. But most of the lumbering in the woods is done in the winter when the sleighing is good, as all the logs are hauled to the rivers by sleighs. Consequently, this is a seasonable work, performed partly by migratory labor; but also just as much by agricultural workers, renters and small working farmers, as all of them are unable to work the farms in winter.

The forests and lumber industry gave rise to another important industry, namely, the manufacturing of woodpulp for paper, wherein thousands of workers are employed.

Another industry that gets its main raw material from the lumber industry is match manufacturing. Match manufacturing in Sweden has developed into a World trust. Only a few days ago the press mentioned that all the important match manufacturing concerns had merged into one large corporation, including American and Canadian concerns.

The next two industries of large size, are railroad transportation and marine transportation, which employ 50,000 and 25,000 workers respectively. In the last named, there are a little over 10,000 shore-working marine workers; while the rest are seagoing, including officers.

### Swedish Evolution in Capitalism

In order to give the reader an idea of capitalistic and industrial evolution in Sweden we will quote the following figures:

In 1870, that is, 52 years ago, the people engaged in agriculture made up 72 per cent of the total population of the country, while at the present time, that percentage has sunk to only 43.8 per cent.

In other words, the industrial workers have increased in number over 100 per cent in the last fifty years. The above is the relative standing of the two groups. The number of people engaged in agriculture at present is about the same as it was fifty years ago, while the productivity per worker has increased nearly 100 per cent.

The yearly surplus of labor power in the industry of agriculture has been absorbed by the other indus-

TALKING ORGANIZATION.

tries, not, however, in Sweden alone, but in the U. S., where a million have entered the industries during the same period.

Of Sweden's 500,000 industrial workers, about 340,000 are organized. Close to 300,000 are organized in the old craft-union federation. Some 10,000 are organized in independent craft-unions; while the syndicalists number about 30,000.

The craft union federation resembles very much the old German movement and the Danish movement. It is a federation of craft union federations, the latter subdivided in locals. In structure, it is somewhat like the American AFL, with some deviations. For instance, during the last few years the leaders of the craft unions having a membership in the sawmills and a small percentage in the woods have been forced to alter the form of organization from craft to industrial. It is now called The Woods and Saw mill Workers' Industrial Federation.

The same has been done amongst the miners. They are now members of the Industrial Federation of Miners, while the metal and machinery workers are members of the Industrial Federation of Iron and Metal Workers. (The name seems to imply that iron is not a metal in Sweden: The Author.)

### Reasons for Change

The reason why the workers in the above named industries have turned from the craft union form of organization to the industrial form is fundamentally the necessity for concerted action on the part of the workers in at least two of the industries, where we find a strong combination of capital. The syndicalists may have been a contributing factor in turning these federations from the craft into the industrial form, as they have kept up a strong agitation for a class instead of a craft organization of the workers.

However, on closer analysis, we find that the change is only in form, not in spirit. The officials still rule; the workers still recognize the sacred agreement. They will sign agreements in districts. They, in fact, resemble for all the world, the United

Mine Workers of America, with its district scabbery; the only difference is their smaller size.

The third and largest of the three industrial federations mentioned is the Industrial Federation of Iron and Metal Workers.

### Queer Conceptions of Industry

The craft unionists' conception of industry is, to say the least, queer. This "industrial federation" has its members in practically all industries. They are working in the shipbuilding industry, in the manufacturing industry, in the metal and machinery industry, in the railroad repair shops; that is, in the transport industry, as well as in the mining industry. Still it is called an "industrial" federation. Well, it may be that, but it is, most surely, not industrial unionism.

Having in mind their conception of industrial organization then, the motion that was carried at the last congress of the whole craft union federation, providing for a reconstruction of the whole craft union federation from the craft form to the industrial form, same to be accomplished by 1925, is of very little value. It is simply passing the buck.

The Swedish Social-Democratic party, that actually governs the federation, has not had as easy sailing as the Danish party. As the life of a social democratic labor politician is easy, compared with the life of the rank and file worker, the result has been a strong competition for place. Hence we find a number of aggressive individuals, mostly non-workers, using all their power to get in on the pie-card. The Russian revolution gave them a chance. They formed the left wing party, later called the communist party. They challenged the power of the social-democratic party. They charged the party with reactionary tendencies. They worked up quite a following, recruited from the rank and file of the craft unions who all joined the communist party as individuals.

### Political Sophistry

These politicians told the workers to demand industrial organization instead of craft. They established "cells" within the craft unions that agitated for shop committees and job committees, but amid all their activities they never forgot to mention that, of course, parliamentary and political action was of no use to the workers; but, they insisted, it was nevertheless necessary to elect a few politicians to office in order to show up the capitalists and carry on the propaganda. Some half a dozen managed to get elected on that proposition and they are still there. Everything is lovely, they got their cards.

During that process the social democrats had to hustle. They drove through the eight-hour day in no time, as a law, and that law is now enforced with plenty of loopholes as all political laws are. However, the workers have an eight-hour day, in spots. Some of the employers can yet dispense with the law if they can show just cause for such a demand (the law provides for such exceptions), and a great number have availed themselves of that opportunity.

The Social Democratic party has had the reins of government twice, and, paradoxical as it may seem, it was during its terms of government that the greatest reduction in wages took place for the workers. Altogether wages have sunk on an average for all workers about 45 per cent since 1920.

So much for the old craft union federation and its two political parties. We will now proceed to the left, to the syndicalists.

### Swedish Syndicalism

The Swedish syndicalist organization (Sverges Arbetares Central-organisation), was founded in the year 1911. The founders were mostly young men, inspired by anarchist ideas and theories. They were members of the anarchist association, or party, in Swedish it was called, until this year, "Ungsocialistika partiet,"—(the Young Socialist party.)

What they sought was an organization on the economic field that would be free from the despotic rule of the political party, as well as the labor fakir. They rebelled against the conservative spirit and the reactionary ideas of the craft unions that were satisfied with a "fair day's pay for a fair day's work," leaving the social democratic party to realize the new society by capturing the state machinery.

### Syndicalist's Breed

The Syndicalists, being extremists, went to the extreme. Everything that sounded like centralization was denounced. To them centralization meant another state. Consequently they advocated extreme de-centralization. Every local must have absolute autonomy in regards to all of its actions. No power must be left in the hands of the officials, all decisions and all control must rest with the rank and file.

The economic organization that, to them, seemed to correspond with their ideas was the French syndicalist Confederation Generale du Travail. The French syndicalist organization became the model for the Swedish anarchists, and the Swedish syndicalist organization is the result. The anarchists may be sincere rebels but, as a rule, they are too much individualists to be good organizers. Such we find to be the case even here.

The Syndicalists denounced the long drawn out strike and advocated the short lightning strike. They advocated the use of sabotage and the strike on the job instead. They advocated that initiative of action must come from the rank and file. They put special stress on the solidarity of the workers and had as their slogan, "An injury to one is an injury to all." They were against the craft unions' sacred contracts, and reserved the right to put forth new demands whenever they saw fit. Further, they advocated that the workers' economic organizations should take over and run the industries and constitute the new society; they were, in short, a revolutionary economic organization.

We will now try to analyze the Swedish syndicalist movement and see how it jibes with the anarchist theories of extreme de-centralization.

The movement grew, in the beginning, at a fairly fast rate. It got a foothold amongst the migratory railroad construction workers that were numerous

at that time. One local after another sprang up, short snappy fights took place, a lot of small strikes were won for higher wages and shorter hours.

In time, the movement embraced nearly all construction workers in the country and as there was then a boom in railroad construction it had quite a number of members. These migratory workers became building workers when the railroad boom subsided and the organization followed them into the towns and cities, into the building industry. Consequently, the syndicalists have the largest membership in the construction industry and in the house building industry amongst the unskilled or laborers.

During the last few years considerable members have also come in from the lumber industry as well as from the metal mining industry. Outside of these four industries the membership is small and scattered.

As we mentioned before, the syndicalists were against the long drawn out strike and advocated the strike on the job instead.

### The Piece Work System

However, they forgot one important thing that practically puts a stop to their tactics, namely, the piece work system. As practically all members nowadays work at piece work, the strike on the job is an impossibility. In order to use that tactic, piece work must be abolished, but as the organization never took a decided stand against it, abolition is out of the question. The members reason this way, being to some extent imbued with anarchist ideas, that it is preferable to work piece work because then you have no slave driver to set the pace, the worker is free to set his own pace.

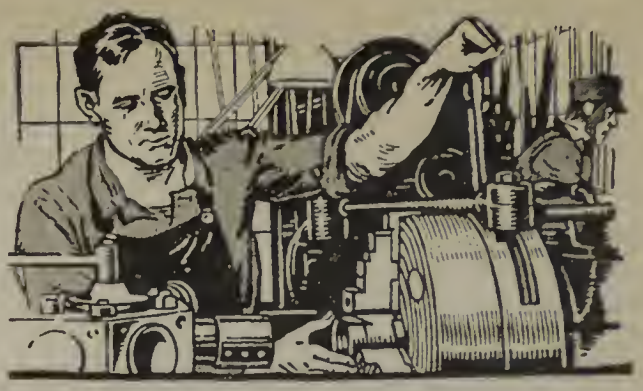
The only tactics left in case the workers need an increase in prices of the piece work is the strike off the job. A strike off the job nowadays means usually a long strike, if the workers' demands amount to anything and as the locals all have full autonomy, being, in theory at least, independent of all the others, each local can strike as long as it likes. The result of such tactics is easily imagined. The workers are usually beaten and forced to go back at the terms of the masters.

But someone may ask, what about the principle of solidarity? Why don't the other workers back them up? Simply because the principle of solidarity is an abstract principle with them while they are working. They are busy trying to make as much as possible at piece work. Seeing that there is no organization that can put the principle of solidarity into practice the members have only one course open as they see it, namely a strike fund to be built up with a compulsory assessment for all members. This last action, which has just been decided by practically the whole majority and sanctioned by the leaders, has just been arrived at. This puts them in the same position as the craft unionists.

### Anarchist's Attitude

The anarchist leaders are against Industrial Unionism, it's "too much centralization."

The leaders of the syndicalists are anti-Marxian. They are against discipline. This is the result: One



THE MACHINE AGE.

agitator, who has been nothing else for the last ten years, firmly believes that the workers can emancipate themselves very easily if they will only practice birth control. At least, that is his subject when speaking to the workers. And it is called syndicalism.

Another professional agitator believes that guild socialism, as it is practiced in England, will give the workers the control of industry. That's syndicalism, too.

Another professional thinks the only solution lies in a movement "back to the land," and as the only land available in Sweden is located up in the northern part of the country, in the arctic circle, and consisting only of morasses, it is a mighty hard job to cultivate it. Nevertheless, quite a few took that awful chance last year on these people's advice and now they will be lucky to get away from there with their lives.

Another professional, by the way, the editor of their daily organ, "Arbetaren," is using all his power of persuasion in trying to prove that the abolishing of piece work is of no value to the workers.

All this is syndicalism. Most of the agitators have been doing nothing else for the last ten years, and most of the editorial staff has been there just as long, or have come from the anarchist paper.

Of course, the organization is not poverty stricken, like the IWW. It owns a fine four-story structure, where the printing plant and headquarters are located. Everything is well furnished and, to an IWW, it does not look very different from the craft unions' headquarters, with their swivel chairs.

### Answering Some Questions

The question is, can the syndicalists do anything for the workers? Look at the above and you will be able to answer the question yourself. We have mentioned before that they are strong de-centralizers, that all the power must rest in the rank and file.

Well, due to the anarchist theories that abhor all laws and strict constitutions, their constitution does not mention how long an official shall hold office, nor how long an agitator shall be on the pay roll. Not only are those important rules lacking in the constitution, most everything else of value to a revolutionary organization is also lacking. As a result the officials can stay in office forever, the paid

# New Light on Civil War and Lincoln

Review by J. E.

SOME there are who believe that the Civil War in this country was a holy crusade in behalf of negro emancipation. It was a war, so we are told, free from gross materialism, that reflected the moral awakening of the North and that appealed pre-eminently to its puritan idealism and sense of justice, as a consequence.

The Civil War, thus conceived, had many aftermaths. One of these was a letter said to have been written in 1864 by President Lincoln to Wm. Elkin. In this letter, Lincoln foresees a time coming when, as a result of the war, corporations and the money power will have been enthroned and the republic destroyed.

Everybody of intelligence knows that that time has actually arrived, that it is already here. We all know, who know anything, that "the power of the people" has been supplanted by that of a small group of industro-financiers, with offices principally in Wall St., New York City. They, through their control of the strategic capital and credit of the nation, are now its real rulers. Their motto is, "The people be damned."

Nevertheless, there are some who would deprive Lincoln of the fame due a seer. They claim that the Elkin letter is not characteristic of Lincoln; that it is, intrinsically, non-Lincolnian in style and thought; and therefore a fabrication.

And here enters a recent biography, Lincoln, by Nathaniel Wright Stephenson. It throws considerable light on the real causes of the Civil War and the trend of Lincoln's mind regarding inherent economic tendencies.

We read, for instance: "A later age (than 1850) has accused the Senate of the United States of being the citadel of Big Business . . . Certain of our historians today think they see in the fifties a virtual slavery trust, a combine of slave interests controlled by the magnates of the institution, and having as real, though informal an existence as has the Steel Trust or the Beef Trust in our own time. This powerful interest allied itself with the capitalists of the Northeast.

"To be highly profitable it (the slavery trust), required virgin soil, and the financial alliance demanded high profits. Early in the 'fifties, the problem of Big Business was the acquisition of fresh soil for slavery. The problem entered politics with the question how could this be brought about without appearing to contradict democracy? The West also had its incipient Big Business. It hinged upon railways . . . . a transcontinental railway was a Western dream . . . Here was a chance for great jockeying among business interests in Congress for slave holders, money lenders, railway promoters to manipulate deals to their heart's content." (PP. 73-74.)

Here then was the beginning of a titanic conflict: the slavery trust wanted more soil for slavery that the railway interests also wanted free for their own grabbing and development purposes. From this embryonic condition ensued a great contributing cause of the Civil War, in which the railroads, headed by the Pennsylvania, particularly, were a decisive factor.

Now comes Lincoln. He, according to the present biographer, "had sensed the fact that money was becoming a power in American politics. He saw that money and slavery tended to become allies, with the inevitable result of a shift of gravity in the American social system . . . The rights of man were being superseded by the rights of wealth. (P. 77.)

"It was because of these views, because he saw slavery allying itself with the spread of plutocratic ideals, that Lincoln entered the battle to prevent its extension." (P. 78.)

This recognition of the growth of plutocracy was practically the turning point in Lincoln's career. He returned to politics and entered on the highroad that took him to the presidency and to martyrdom. It is safe to say that events subsequent to those of the 'fifties tended to broaden and deepen his original ideas on the power of wealth and its supercession of the rights of man. His biographer, while professing to see in Lincoln's career the unfoldment of a mystical personality, largely dependent on its own individuality, actually reveals a great man, born of and moulded by his environment.

Chapter VIII, "A Return to Politics," in this recent Lincoln biography, is a real contribution to the data of economic determinism. It also indicates plainly the probable nature of Lincoln's psychology when he was writing letters in the White House a decade later than the period of which it treats.

The book is also worth reading for its other phases. It is good literature; and, in a simple story, makes personal and real a great subject that tends to become legendary and mythical.

**(Lincoln, Nathaniel Wright Stephenson. Bobb-Merrill Co., Indianapolis, Ind.)**

---

agitators the same, as well as the editorial staff. The founders were satisfied when they established the rule that no official shall have a vote at the meetings of the members, only the voice. But where does that lead to?

We know by experience that those who are in a position where they can control the means of expression, namely the press and the public speaking, have also the power to mould the opinion of the body that uses it. The officials and agitators are in that position and consequently they actually dictate the policy of the organization in just as large a degree as the craft unions' leaders do. By analyzing this, we find that the anarchists' theories have led to a centralization of power in the hands of the few, to the same extent in reality, as any other centralized system of organization would.

# A Sentimental Theory of Value

REVIEW By VERN SMITH

JOHN FREDERICK BROWN is a man of considerably greater intelligence than any of the college economists I have ever had a chance to read; certainly his criticism of the marginal utilitarians and the classicists in the science of economics, are evidence of keen analytical ability, and a considerable habit of study, combined with what is in many instances, a happy turn of phraseology.

But the book he wrote is a baffling thing, because just when you find Brown on the track of an elusive economic truth, and you are leaning over the saddle and enjoying the hunt, Brown suddenly calls off his dogs, shifts his coat, twists his collar around in front, and you have to listen to a sermon from a Unitarian preacher, one of the liberal sort, yes, not opposed to labor unions nor to birth control, but a sentimentalist, and an incurable optimist, urging with you at great length as to what the method of distribution of the products of labor shall be, in the New Society, or as he calls it, "The New Era."

Sometimes it seems as though Brown realizes this fault, and attempts to defend himself. At any rate, whether for protection or not, he insists that economics is not a science, and gives the strangely contradictory evidence of the modern economists to prove his point. He presents in a sort of deadly parallel definitions of value by one after another of the great school men of modern times, who call themselves teachers of economics, and are recognized as such by the capitalists. It is really ridiculous to see how badly they agree. Then he says, in effect, "If these authorities fail to create any common basis for their 'science,' how much of a science can it be?"

### Value Theory Basic

It is understood by all that the theory of value is at the basis of every system of economics. It was the beginning of the discussion, so to speak, and the last word has not been spoken yet, and will not be, as long as it is in the interest of some ruling class to obscure the issue. The question that must not be answered if capitalism is to continue teaching economics, is, "How much of my possessions shall exchange for a given quantity of thine?" The whole matter of rent, profit, interest, wages, working conditions, standard of living, even population and social institutions will depend on the answer which the great masses of the people make to the problem of value.

Well, this is alright, and even true, as far as it goes. It is proper enough, so far as I can see, to get together a lot of speculation as to what men should have in return for their labor under a future society that includes, so Brown says, a strict classification of all workers into apprentices, on part time pay, journeymen on full time, masters

or foremen on time and a quarter, perhaps, and veterans, on part time again.

We are all interested in such things, therefore it is good to point out that in the present time of injustice, there is great disparity in the pay of workers, all of whom work equally hard. It is worth while to be reminded that the unions have some of them become job trusts, and that they insist on higher pay for their members than can be obtained by the unorganized, even those whom they refuse to permit to organize.

It is not a bad thing to occasionally read long historical accounts of the way in which agricultural and unskilled work in general was forced into degraded and lowly paid categories, while the craftsmen, who may really not have any greater ability or knowledge than the farmer, nor any greater strength of back or mind than the mucker will get higher wages.

### A Protest

But I, for one, do protest when all this is used as either a theory of value, or the proof of such a theory. It is nothing of the sort. It is general information, and possible as speculation, and it may be all right as part of a code of ethics, but it does not lead to an answer to the question: "For what part of your product, or possessions, shall one unit of my product exchange?"

I do not wish to be misunderstood as attacking the Brown conclusion. Wherever he got it (it is far from being original), there is no serious fault in it, as such. I think this is because it does not mean what Brown thinks it means. Here is the theory, in his own words: "Equal compensation, hour for hour, for all kinds of useful work, of

standard efficiency, male or female." This, says Brown, is the absolute truth, "true under private ownership of capital as under collective ownership; true along with the existence of private property in land or without; true irrespective of interest, and rent."

It is only fair to state that this must not be interpreted as meaning that Brown thinks that goods actually do exchange this way, under capitalism—a manifest absurdity—but only that they ought to so exchange. That is exactly what is the trouble with the Brown theory of value. It is not an explanation of why goods exchange in certain proportions, but a program, a proposition, a plan for the exchanging of goods, when men are better, as Brown says, quoting Tennyson, when they

"Move upward, working out the beast,
"And let the ape and tiger die."

Much of Brown's argument is Marxian. He even uses such terminology as "exchange value," and "use value," and even more so, when defending his use of the word "useful," he says such things as, "Utility explains value as a quality, and labor cost explains it from the quantity side," a very characteristically Marxian expression.

### A Nasty Stab

It is therefore surprising to find him, usually so sweet and good-tempered, taking a nasty stab at Marx, on page 178 of his book, on which he declares, " . . . he (Marx) certainly has not given us a theory of value that is rational and consistent with facts. Marx starts with the assumption that all commodities exchange in the everyday market at their true values; while I start from the exact opposite, that the world's value estimates of both the commodities and the labor that produces them are false and cruelly unjust, and that this constitutes a fundamental cause of all economic evils. If it were true that commodities exchange at their just values, then economic reformers would be without a cause, for there would be nothing economic to reform, and we could sit down, fold our hands, and say: "God is in his heaven, all is well with the world."

This of course, is a sheer misstatement of the Marxian position. The Marxian definition of value is that it consists of the amount of socially necessary labor time required for the reproduction of the articles in question. The words "socially necessary," as explained by Marx, include all that Brown and the moralists, the marginal utilitarians, the cost of production group, the psychologists and the whole Hedonist school have to say about the necessity of the work's being useful, or standard quality, exercised under given technique, male or female, man or child, etc., some of which Brown thinks he has discovered by himself.

But Marx is very careful to say that goods do **not** exchange at this value. They exchange at a price, which is based on exchange value, and that, too, may differ at times, though not enormously, from value. The Marxian value explains why an automobile costs more than a wheel-barrow—because it contains more labor. But it does not say that the automobile must or should sell on the market at its value. Marx himself points out that if demand exceeds the supply by, say ten percent, then while that condition lasts, and on the average, goods can be sold for ten percent above exchange value—which is the secret of monopolies and monopoly prices—and the answer of another question which bothers Brown.

### Beauty of Marxian Theory

The beauty of the Marxian theory of value is that it provides just what Brown's theory does not, an adequate measure for the exchange value of goods in the present society, and the proof of it is that the prices of goods, average prices that is, are actually calculable variants from this exchange value based on labor time.

Neither is the second jibe correct, that we have nothing to do, if goods exchange at their just values, or as Marx would say, when not oversimplifying, "near their values." There is still the enormous gap between the value of labor, which is the concrete product of human toil, and the value of the labor power, which is what the worker gets paid for. The worker gets wages enough to live on, that is the price of his labor power, something near the value of it. But he produces much more than this, and that the employer takes. The IWW is going to considerable trouble to do something about it.

So much for value. And as for the rest: well, the author shows his good will toward mankind, and takes a commendable interest in the welfare of laboring men. He believes in "a growing spirit of democracy," believes we have "political equality," believes in "the greater mental alertness of modern young people, with the general all-round increase in intelligence."

On my part, I continue to feel skeptical about these things. And I am still more doubtful as to whether the future society will take any orders from us. If it be really true that there is a constant growth in intelligence, then we are exceedingly presumptuous if we tell this next generation of supermen how to order things, and if the contrary is true it won't do any good to tell them what to do next, for they won't do it.

### "Every One According To His Stocks"

Nor do I mean that there should be no discussion of Utopias. Man when he is not driven or fleeing, is running towards an ideal. It is stimulating and encouraging to consider all the various possibilities of the future, even the method of distribution, as for instance, true communism (let every one take all he wants, as long as it lasts), and the various modified communisms (to every man according to his needs, or to every man an equal amount, and Brown's theory, to every man equal pay by the hour), also the theory, let each man take the value of his products, with its variations. But it is unnecesarry and it leads to error

# Out of the Mouths of Others

## THE LAWLESS RICH!

PLEASE remember that a very large and influential portion of the American Nation is against Prohibition and also that it would be perfectly impossible for goods to enter New York if the Authorities were seriously concerned to prevent such entry. **Yet over 1,800,000 cases of whiskey were landed last year in New York and spirits and wines are served openly at bars and restaurants.**—Lt. Col. Sir Brodrick Hartwell in a London circular inviting contributions to his Whiskey Export Business.

## UNION LABOR, IS THIS TRUE?

IN 1917 the sheriffs of Pennsyvania appeared as a body before the legislature of Pennsylvania to ask for a large numerical increase of the force, and for a raise in pay for every man on it—and a strong union labor vote, backing his appeal, triumphantly carried the measure. Union labor at that time had the I. W. W.s fresh in mind, from whose assaults the ever-ready state police had, at their call, come times without number to save them.—Farm and Fireside, Dec., 1923.

## ONLY BEGUN?

"WE have not yet begun history in capitalism," Premier Mussolini said in an interview printed in the Giornale d'Italia. "Capitalism still is in its prehistoric stage. When it is considered that there are only a few nuclei of capital in England, France and Germany and some embryonic evidence of it in Italy, while there are vast regions in the Balkans and Russia untouched by modern capitalism, it is easy to see that the real history of capitalism has not begun."

## CONSCRIPT PROPERTY!

**THE CHRISTIAN SCIENCE MONITOR, in its issue of November 15, advances editorially its proposal for ending war, or at least greatly lessening its likelihood: "The adoption of a constitutional amendment substantially as follows: In the event of a declaration of war, the property, equally with the persons, lives, and liberties of all citizens shall be subject to conscription for the defense of the Nation, and it shall be the duty of the President to propose and of Congress to enact the legislation necessary to give effect to this amendment.**

**The Monitor does not consider its plan a panacea for international troubles but believes that wide discussion of it would be fruitful.**

## BLASPHEMY

IN Lancaster, Ohio, in the year 1826, some railroad and telegraph promoters requested the use of a school house to bring the proposition before the people. The school board replied: "You are welcome to use the school house to discuss all proper questions in but as for such things as railroads and telegraph lines, they are impossible and rank infidelity. If God had intended that His intelligent creatures should travel at the frightful speed of 15 miles an hour by steam, He would have foretold it through His Holy prophets."

## COMMONS ON LABOR BANKS

"IT'S too bad that the labor banks seem to be making a success," said Professor John R. Commons, author of the History of Labor in the United States, when he visited Brookwood Labor College on November 6th. "Labor surely will fail if it competes with business in the field of business, for the psychologies of labor and business are fundamentally different. Labor unions depend upon a spirit of sympathy and solidarity, while business depends upon an ability to say 'No' to one's best friend. The real business of labor is to lay down the rules for capitalism as it affects industry.

"Company unions?" said Professor Commons with scorn. "Oh, company unions have nothing to do with trade unionism. They are just labor management."

---

to try at this time, to decide just which one of these the commonwealth of toil will adopt, if not something else altogether. They are all better than capitalism, which operates on the theory of, "to everyone according to his block of stock."

(**New Era Economics.** John Frederick Brown, B. S., Indianapolis, Indiana.)

## THEIR NOBLE OBJECT

THE National Security League, the American Legion, the Better American Federation of California, the Sons of the American Revolution, the National Chamber of Commerce—are all using their utmost influence in the schools in the name of patriotism, but in reality for the purpose of staving off any change in the present social order that would interfere with their own privileges, says Henry R. Lenville, President New York Teachers' Union.

**Study the Principles, Objects and Methods of the IWW by Reading Industrial Pioneer**

# Our Paternalistic Press' Health Hints

GENEROUS beyond description is the daily press of the country. All sorts of departments are furnished for the consumption of the Robot. Besides the regulation thought moulding bunk that they dish out as literature, philosophy, and general culture, they also have "health and beauty" advice.

As to beauty, well, ours is perfect and so we'll leave that to some less fortunate creature; but the health hints, for instance, are a treasure. Here is one quarter column that is chuck full of any thing but the mean contempt they hold the workers in. We quote:

**"Bother the Butcher"**

"It is wasteful for working people to eat meat (or fish or eggs or fowl) more than once a day in cool weather, and injurious for them to eat it more than three times a week in hot weather."

"Working people," you see, are a different specie. The same as work horses, for example.

"The abuse of meat eating is not only harmful to health but unpatriotic."

The worker must be kept patriotic and he must be shown where he is more patriotic than the rich brute, whom the above paper "despises" so terribly.

"A fat, overfed, underworked person who has the temerity to sit down to eat meat twice a day or meat and fish at the same meal, ought to be fined heavily for each offense"—and he is, as you know.

Just now we come to realize why the courts are so overcrowded with all kinds of law suits. 99 percent of them no doubt are "fat, overfed, underworked" persons who had the "temerity" to sit down and eat meat "twice a day" or meat and fish at one meal.

"A worker can endure longer without meat in his diet than with it. He can withstand high temperature much more easily without meat than with it."

A mule can work much better on a certain sort of hay than on others. A machine should be fed a certain kind of lubrication in preference to some other kind, etc. The high esteem they hold the workers in, is second to none.

**The "Best" Yet!**

And the best is still to come:

"Macaroni, spaghetti or noodles cooked in broth and served with mere dabs of gravy or meat; stews of a hodgepodge of vegetables just flavoured with a chunk of the cheapest cut of meat, are worth while"

The "cheapest cut of meat" is rich. You mustn't get the best as is prescribed the rich lady, but the cheapest. Of course if you'll persist in buying the cheapest of every thing, you'll not note the deficit in your accounts so much each week and if you are underfed and pale and sickly looking you can cover that up by a "dab" of rouge or powder but you can still work. And if you should become sick and incapacitated for a time, there are plenty of "free" institutions supported for your sake where you can receive treatment according to your worth.—A work horse.

But the best is yet to come, Ponder over this gem.

"The evening meal should be the substantial meal of the day for all who work in daytime and rest at night. Mid-day dinner is wrong for busy people. In fact, people who take breakfast at about 8 a.m. are often more healthy and efficient if they take no more food until 6 p.m. dinner, then a light lunch at bedtime if desired."

That's just what we say, why not skip a meal? What's the good of eating three meals a day any way? Two are plenty and then maybe it can be reduced to one and then to none. It will be cheaper in the long run and then one would hardly need have any lunch hour at all. Just keep on working all the day long and don't worry about eats at all. A certain farmer of international fame, tried the same method on his horse at one time. Well the horse, very nearly, got used to it, when he took a foolish notion to play a prank on the astute farmer and one morning he decided to die, and die he did. The thrifty farmer had the shock of his life, but perhaps he has had better luck in other similar attempts, the story does not say.

**Some Recollection!**

However, as humans go, it seems to work out differently. We recall the time when we were a shrimp of a worker and we began to work early in our young life; well, we used to eat breakfast as usual and somehow the noon hour never came around early enough.

At about 10:30 there used to appear a certain mysterious rumbling in a certain part of our anatomy and before long, we used to notice ourself munching away on an apple or two, or so. Nor were we alone in the enterprise, the entire table of faces would very soon be set in motion, and small quarters of fruit and even of plain coarse bread would be traveling the rounds and be devoured in due course of time. And strange to say, at noon we were just as famished as at 10:30. Well, guess we weren't the right kind of animals, we evidently didn't have the proper psychology of things, and we just kept on indulging ourselves to our heart's content.

We are however, inclined to commend the idea, it would certainly prove beneficial in one way; workers could then work for less pay and work the whole day without a break and naturally, for less pay. Fine idea, no doubt. But then, perhaps the worm may turn some day and put paternalistic masters where they would like to see us, i. e., starving, submissive slaves.

J. D. C.

# The Political Situation in Italy

By M. DE CIAMPIS

THE Faseists' dietatorship that has followed the crisis of the bourgeois regime in Italy has been so far suceessful only in creating more politieal and economie chaos, in persecuting relentlessly with a reaetionary high hand all those that disagree with it, in giving a free hand to all Labor baiters so that they might more easily enjoy the blessings of a government that came to power in behalf of the war industries' eaptains and finaneiers.

It is hard to tell how things in that country are. Very few people are outspoken in what they think and feel about the present state of affairs. Furthermore, a striet censorship covers up all the news of every day social life, so that only that sympathetic to Faseism is eireulated. Who ever dares violate the rulings of the gang of marauders that keeps Italy under the iron heel of ultra-reaetionary capital is sure to get his or her head split open. Justice is a thing of the past. What Mussolini say or does is right; because in his madness and self eonceit, he assumes the pose of a demi-god—a malady very eontagious in the Eternal City where many of his like in ancient times thought of themselves in like manner.

This Fall Italy has gone through the so-ealled faseist "celebration of vietory" at the end of a year of fascisti rule. In many eities, Mussolini and his henchmen have paraded the streets and shown the skeptic populace the strength of his dietatorship. In a few places the workers remembering what has been done to them, have given the faseist' chieftains a signifieantly silent and cold reeeption. In Turin, for instanee, though starving, they went even so far as subseribing many thousands of lire to a radieal publication in protest. In others, they didn't give a hang for the "eelebration" and stayed at home rather than give homage to a bitter and deelared enemy.

Force, violenee and eorruption have been the things on the order of the day of fascists' misdoing in the land that only a little more than 3 years ago was in the throes of a soeial revolution. Where the elub of the White guards eould not work sueessfully, corruption has been applied. Many weak souls, thus bought, are now doing what they ean for their new masters. But, notwithstanding all this, the whole Italian politieal situation is far from being eheerful. The turncoats, who, with the excuse of the war, betrayed the working class, dare not ask the people for its judgment.

Thanks to Fascism, the bourgeois has regained its faith and power. Its aseendaney over the workers has been established anew. Wages have gone down and working hours lengthened in factories and work-shops. Better working eonditions have also been lost. Workers nowhere are anymore proteeted by their unions. No Labor organization, the skeleton of what remains, dares challenge all this state of things. One of those that could challenge Fascism had they the number and the authority of all others: the Syndicalist Union, have its membership either in jail or scattered to the four corners of the World. Nevertheless, cases of open rebellion often oeeur. Where the working class lose its patience, it goes on strike and these strikes are frequently suppressed by the use of the army and squads of mischief-making fascists. The revolutionary spirit that flared up so well among the workers right after the war cannot be suppressed and may, who ean tell? at any time do things that now perhaps are unlooked for.

The Faseists elaim that they have organized 2,000,000 of workers in their "eorporations." This is a lie; the figures are far below those given. One thing is sure and that is that half the amount of those that have been indueted into these "eorporations" are employers, business men and politieians. Peaee is far from being aehieved in such organizations. I have heard of eases where the workers so organized have united themselves and made war;—elass war, on their employers. In many instanees employers have been mereilessly beaten by the workers organized in the faseist "corporations." Forbidden to strike, these workers had the only escape in maintaining somewhat better eonditions on the job by making threats and beating their masters. But these are exceptions and prove that it will not do to cow people into submission and have the upper hand over them. Somehow or other they will take revenge!

The political parties offer a sad spectaele of impotency and naivete. All radical parties seem to have lost themselves in splitting hairs. They foster and ereate dissension and bad feelings among the workers. It seems that the Soeialist party, more than any other, is hopelessly divided. From it have come many new factions, namely: the social-unitarians, the maximalists, the so-called third-internationalists apart from the communists, and finally the yellow soeialists in sympathy with Faseism and headed by that most shifty of men known as Enrico Ferri. So, among the soeialists of all shades there is no such a thing as unity of thought and action. Every faction is bent to ridicule and nullify the other. Many old time socialists in disgust have retired from the movement and hope sincerely that some time in the future some sanity may show its face. The fact is that the entire political soeialist movement has utterly failed to do its duty towards the working class, as it has many times promised. It rests now upon the workers to organize themselves on the economic field to brandish, without fear and with steadiness and intelligence, the axe of Labor's revindication.

The country has gone into the hands of the

war profiteers garbed as fascists and nationalists. What they say and do is law, and anyone that does not like things as they have been made, are lost. Many times press dispatches have brought us the news how this or that politician or statesman has been assaulted in the streets or at home. We can, therefore, imagine how hard the lot of the workers is. Here is a document that speaks for itself. It is quoted from The Nation for December 12:

**"Italys' Terror Goes On**

"Little is heard of disorder or dissatisfaction in Italy but occasionaly an article is published like that printed below, indicating continued resistance to Fascist rule.

"To the Workers and Workers' Organizations of all countries:

"As reaction in Italy proceeds with its work of destruction, the breaking up of surviving syndical organizations continues along with the persecution and murder of workers, while the prisons are still being crowded with victims. The courts are overrun by comrades involved in cases which have been forced to trial by the police and judicial authorities during the last three years of close cooperation between the courts, the police, and Fascism. . . . .

"Even in these last few days the Arezzo trials against the Valdarno miners and the Minervino Murge peasants have both resulted in outrageous verdicts against our comrades, who were insulted with impunity in the courtrooms by the lawyers, the press men, and the Fascist caliphs, who in some cases even attempted to lynch the condemned men. During the last few days the comrades of Valdarno, Minervino Murge, and Cerignola have been sentenced to terms amounting altogether to more than fifteen centuries. The sentences vary from 10, 20, to 30 years, very few being granted easier terms.

"Comrades! . . . .

"Think of the victims in these life and death struggles; think of these comrades who may perhaps never leave their cells, because they refuse to ask for pardon from the judges of bourgeois reaction.

**The Central Committee of the Italian Syndicalist Union."**

So goes the sad story! . . . .

## Co-Operation on Great Lakes

THE Spring season is likely to see an extensive campaign in the cities along the great lakes. The lake cities are great ore-unloading and steel and metal manufacturing centers, like Chicago, Detroit, Cleveland and Buffalo, for instance, not to mention Lorain, Ashtabula and Erie. Both the Marine Transport Workers' and the Metal and Machinery Workers' industrial unions, find them places for recruiting and upbuilding; and both are acting in co-operation with each other to obtain the best results.

A spring conference to crystallize the various activities is suggested by the more active members interested. It's a good suggestion and should be pushed.

## Don't be an Airplane Poet

THE poet sings:

The city's hands are lean and gray
The city's hands are strong;
They wind about your throat by day
They strangle all night long—

So he'd take an airplane and fly away from it all—thus symbolizing man's triumph over things earthy.

But the city worker, if he's intelligent, does not go up in the air, but stays on the earth. Realizing that there aren't enough airplanes to go around, he organizes industrially to break that strangle-hold and make the city a decent place to work and live in.

## SUBSCRIBE FOR THE PIONEER.
### Here's What One Subscriber Says Of It.

Oakland, California.

Enclosed is money order for year's subscription to your magazine. Have been buying it at hall, 8th Street, until now.

**The latest number, November, is a gem. Ellis' poem, "San Quentin," is a splendid thing. "The Loop" came a close second.**

By the way, I see the long poem on the same page, after the manner of Kipling, is attributed to him. This must be in the nature of satire, is it not? as Kipling is too imperialistic to write such radical stuff. However, it's a cracker-jack poem.

**I have read all the leading magazines, Bookman, Harper's, Scribner's Liberator, etc., and none have as good poems as contained in your latest magazine.**

Chaplin's biography of Hill is a well written, interesting article. The drawing I especially liked.

Start my magazine with the December number.

# "Tired Radicals"

By JAMES MORRIS

WHEN a "revolutionist" of ordinary ability and average intelligence settles down to the every day life of a blasé radical he begins to display a nonchalant attitude toward important questions of the day.

His reading matter is carefully (and sometimes prayerfully) selected and opinions offered with an air of condescension. The slave class is viewed from a lofty altitude and the contempt he holds for the uninitiated finds expression in a vicious denunciation of all things he once held worth while.

Although he may be ever on the alert to contest an error or correct a mis-statement the continued repetition of accepted principles palls upon his mind and leaves him indifferent to the latest contributions to the already voluminous literature of the labor movement.

He is already drifting out of the radical movement and is merely stepping carefully, providing himself with a justification for his "falling from grace" as he goes along.

### Self-Sufficient

In time he becomes an entity in himself, an ex-radical and an authority upon all questions relating directly and remotely to the labor movement. He knows too much to associate himself with any party or group. He is satisfied to remain freezingly neutral. The slave class becomes his pet anathema and upon their unsuspecting heads he pours the vials of his wrath.

We can all agree, of course, that the workers are ignorant, mentally lazy, and all that our ex-radical charges them with being but it might be as well to suggest that "people who live in glass houses shouldn't throw stones."

It has been mighty hard for us to understand or explain the docility and backwardness of our class and while we may in extenuation offer for them the excuse of ignorance we find it extremely difficult to account for the actions of those who are presumed to be "educated." Samuel Johnson once said that some men are "blinded by the dust of knowledge."

Can this be said of the ex-radical and must we therefore, revise our ideas on what constitutes "ignorance" and "knowledge"? Before we attempt this however, it would be well to give some attention to the ex-radical and see if we can understand him. Because the ex-radical is relatively unimportant and has very little influence on the trend of the labor movement, very little attention has been paid him.

However, on one of my not too frequent visits to the public library, I stumbled across a small volume with the hopeful title of "The Tired Radicals," by Walter Weyl. Upon examination I found that this book was not devoted exclusively to a consideration of tired radicals, being rather a collection of short papers on a variety of subjects. But notwithstanding the extreme brevity of the author on the subject of worn-out rebels, he has penned his protest in a particularly brilliant manner.

### His Dream

"If I were the United States of America," says Mr. Weyl, "I would give a few acres, an agreeable wife, two or three children and a sufficient tale of kine and swines to every discouraged radical .... I would make him sovereign over these acres and leave him there and forget him. For progress is halted by the tired radicals who do not know they have ceased to be radicals." Mr. Weyl understands the tired radicals well enough to know just what they desire most of all. It is not that farming is unusually attractive to them but in their desire to remove themselves "far from the madding crowd's ignoble strife" anything that promises relief is satisfactory. Could anything be more grotesque than a worldly wise ex-radical going the hoosier one better and trying to out-bourgeois the bourgeois?

"Now they decline," continues the author, "into feeble dwarfed enthusiasms, the pale ghosts of their former ambitions." The poor creatures are burnt out. The movement has, to them, become a sordid, hopeless thing but "there is no use crying over those who are graduated out of radicalism, for young trees grow where the old trees die."

And with this optimistic tilt Mr. Weyl leaves the tired radicals to the tender mercies of approaching disillusionment.

It is to be regretted that Mr. Weyl has seen fit to generalize and deal with the tired radicals as a whole. We, of the IWW are more familiar with the ex-wobbly than we are with his prototype from the various socialist or communist groups. The ex-wobbly is however, as an ex-radical, somewhat different from the remainder of the tribe. He is, usually, a radical by environment although there are any number of ex-wobblies who, like Varney, "came into the IWW on a wave of emotion," and quit when the emotional urge drove them up against the brutal realities of the class struggle. With these latter we are not unduly concerned as they choose "a philosophy to suit their nerves, as one chooses a wall paper. Give them a war or some other excitement and the emotion is deflected and their radical ideas cease upon the midnight without pain."

### Bucking Capitalism Alone

But why should a worker, claiming to understand the labor movement, quit and turn a cold shoulder upon the only thing that can destroy a system that enslaves him and his class. The teachings of the IWW coupled with the every day experiences of the workers is surely enough to convince any intelligent slave how futile it is to buck capitalism alone. Slavery is everywhere and do what we will we cannot possibly avoid it. The ex-wobbly has heard this argued out before and considers it "old stuff" unworthy of further consideration.

Our "educated" ex-wobblies hate to be called "ignorant" but at the present moment I cannot think of a more appropriate term. If ignorance means anything, it means a lack of knowledge and our ex-wobblies certainly do not know that victories are gained by those who persevere and not by those who quit because the fight is prolonged. How many of us vociferously cheer the Russian Peasants for pulling their little affair. And yet it took close to three hundred years of effort, of failure, before success finally came.

Most ex-wobblies will tell you they are "well read" and for your edification will quote chapter and paragraph from Marx, Dietzgen, Hegel or any philosopher extinct or extant but rarely do they read to learn. They are like the tired business man who wants to be in with the boys by going to the right kind of plays and by reading the right kind of books, not because the plays and the books are good or bad but because it gives one the outward appearance of refinement. It is, however, much easier to conform than to create though not so gainful.

### Small Relief

If the knowledge of those who "fall by the wayside" permits them to suffer in silence a grave social injustice we feel impelled to say that time will show that they are, as Tom Moore has it, "beholding heaven and feeling hell." The relief the ex-wobblies feel in withdrawing from the struggle is of short duration and our wise friends will learn to their sorrow that capitalism is no respecter of persons.

The hell of capitalism is for all of us and the only way out is over the corpse of the system itself.

Capitalism is like a ship wrecked far out at sea. Those who would survive must bend to the oar and no amount of "logic" could justify a refusal to help because the shore was a long way off. It is this phase of the question that doesn't suggest itself to the ex-wobblies. Of what use is there then in a "knowledge" that so strangely resembles "ignorance," in a "wisdom" that savours of foolishness, in a "shrewdness" that has the taint of cowardice.

But a curse upon the ambiguity of language. Mr. Weyl has started us upon an excursion of understanding and every radical wobbly or otherwise can read his refreshingly original criticism with enjoyment. We are learning to take this labor movement seriously, satisfied that it is big enough to be worthy of a life's concentration. To hold out a hope of immediate relief is chimerical. Capitalism is too strongly entrenched and the workers too work-worn and weary to render possible a sudden transformation.

The system has to develop some more and the workers have to assimilate knowledge, partly from books but mainly from experience before we can even think of ushering in the new order of things. And if we are to be real rebels we must attain a sense of proportion, neither rushing to the heights of a hectic enthusiasm nor sinking to the depths of despair and dejectedness.

## What Unions are Interested In

"RECENT Developments in the American Labor Movement," written by Harry W. Laidler, as "a syllabus for discussion groups," is a ten-cent pamphlet that every hide-bound orthodox worker would do well to read. It will cause him to realize that the organized workers of this country are interested in more things than are dreamt of in his own very limited philosophy. The bibliography attached to each of the six chapters will further admit him to "a far-flung" field of fact and speculation, such as will shake his orthodoxy and cause it to loosen up some.

These six chapters are headed: 1. Towards A Labor Party; 2. A Program of Nationalization; 3. Co-operation and Labor Banking; 4. Workers' Education; 5. Labor Journalism, Research, Health; 6. Further Features.

We are told in the summary of the final chapter: **"The union must make every effort to supply all the needs of its members, material, social and spiritual."** This will hit hard those who believe the union is solely a pork chop institution. It also goes to show that some union ideas of the functions of unionism are expanding.

In the "Introduction," under the sub-division "Groups in American Labor," we find the following:

"The IWW advocates an industrial rather than a craft form of organization and among its stated aims is the abolition of the wage system and the forming of 'the structure of the new society within the shell of the old.' Its membership—small in proportion to its influence—exists chiefly among migratory workers on the farm, in the lumber camps and on the seaboard. Government persecution during and after the war has greatly interfered with its activities."

This will give an idea of both the tone and the contents of this pamphlet.

**(Recent Developments in the American Labor Movement, Harry Laidler. League for Industrial Democracy, 70 5th Ave, N. Y. City.)**

---

I can find no better advice to offer all radicals than that of Francis Bacon who says:

"To spend too much time in study is sloth; to use them (studies) too much for ornament is affectation; to make judgement wholly by their rules, is the humor of a scholar. They perfect nature and are perfected by experience, for natural abilities are like natural plants that need pruning, by study, and studies themselves do give forth directions too much at large, except they be bounded by experience. Read not to contradict nor confute, nor to believe and take for granted nor to find talk and discussion but to weigh and consider."

As T-bone Slim might say "sufficient unto the day is the evil thereof."

**BOOST THE INDUSTRIAL PIONEER**

# WOBBLES

## RIGHT WHERE IT BELONGED!

"Cockey" was on the bum and hungry in the town of Ontario, California. He selected himself a house and broached it from the back door for a bite to eat. Getting no response to his persistent pounding he tried the front. A lady came to the door and asked what he wanted. "Cockey" stated his wish.

After a lengthy wait she reappeared holding at arm's length two crackers with a sardine between them. She handed this tiny sandwich to "Cockey" saying with a big smile:

"Here is some fish for you, and, you know, fish is good for the brain."

Quick as a flash "Cockey" reached for the sandwich and extracting the sardine he handed it back to the smiling lady with the words:

"Ma'am, I thank you for the bread, but I can positively not accept the fish—you need that yourself."

Her smile gone, the lady (?) slammed the door.

## GOT IN WRONG DRAFT

Mike—Say, Clancy, did you hear about Pat having pneumonia?

Pat—Sure, and that's tough luck; how did he get it?

Mike—Oh, working in an open shop.

## OUR KIDS AT SCHOOL

Teacher—"Willie, have you whispered today without permission?"

Willie—"Only wunst."

Teacher—"Johnny, should Willie have said 'wunst'?"

Johnny—"No'm, he should have said twict."

## REAL EDUCATION

"An educated person is a man who can read a newspaper without being humbugged by it."—**St. John Ervine.**

## CHANGE

"We never will live to see it,"—But the boss is afraid it will come in his time.

## SELDOM SEEN

**Freight Agent** (to applicant for a job): "You know how to read?"

**Applicant:** Yes, indeed, I'm good with 'ones' and 'twos'; the 'fives' and 'tens' bother me a little; the 'twenties' got me stumped.

I. W. W. AGITATES EVEN THE SCISSORBILLS IN THE TENEMENTS.

## Somebody's Boy

By VERA MOLLER

Into the shadow of grated walls
Where a dreary blackness lay.
Into a cell thru the long cold halls
Somebody's boy was brought one day.
Somebody's boy and God help him now
For that very touch of girlish grace,
And the youthful bloom on that boyish cheek
Shall be his curse in that hellish place.
Somebody's boy and sick horror reels
To picture the fate that before him lies.

You may weep and curse at the hissing whip
But must breathe some things with averted eyes.
Somebody's boy and he was not bad,
Just weak and headlong—a loathsome breath
Shall blast that body, and better far,
That it were the food of the worms of death.
Somebody's boy is dragged today
Down thru foul depths, the perverts prey,
In the place where they sent him to be **reformed?**
Somebody's boy and who shall pay?
Oh, it matters little who pays the price,
They can't give back what is clean and best
To somebody's boy—But, ho, workers, rise,
There are other boys and we'll save the rest!

# The Workers' Press: How to Develop It

IN a recent issue of Industrial Solidarity (No. 266, Dec. 8, 1923) there appeared some correspondence from Westfield, Mass., telling how a meeting of railroad workers there, went on record to boycott "The Springfield Union" because of its false reports about wages and conditions in the industry.

"Some of the men," writes the correspondent, "suggested the IWW papers. Industrial Solidarity, Industrial Worker and Industrial Pioneer, as proper sources of information."

And he continues: "One man said, "For a long time the capitalist press poisoned our minds and for a long time we had no place where we could tell the truth or read the truth. Now the workers' papers afford such an opportunity."

This is at once a most striking expose of the nature of the capitalist press and an encouraging recognition of the value of the labor press. It ought to stimulate activity in behalf of the latter, not only in behalf of circulation, but improvement as well.

It should be recognized at the outset that the workers' press is not only deficient in circulation but also in technical and intellectual equipment. It is at best but a crude rudimentary beginning that needs to be more largely developed before it can be the great agent for working class liberation that it is bound to be.

The Workers' Press needs to build up its own news-gathering and distributing agencies. Consider, for instance, the Associated Press, with its 2,600 agencies all over the globe. For such agencies, the workers' press needs to train working class reporters and specialists in every department of industry and life. It needs also highly perfected printing plants, in modern up-to-date buildings, with telephone, telegraphic, radio and airplane conections. The workers' press needs, in brief, the many-sided organized and specialized intellectualism and technique of the capitalist press, in order to make the many-sided appeal that is characteristic of the latter in its struggle for the mastery of the minds of modern men.

This means years of training, experience and growth. It means the giving up of the belief that editors of labor papers can be made every six months, by taking some worker from "the point of production" at such intervals. Industrialisti, the Finnish, working class daily at Duluth, Minn., has found even a yearly term very unsatisfactory. Besides editors, because of their many sources of information are more at the "point of production," that is, know more about industrial affairs in general, than does the average worker. Every great strike, with its portrayal by trained reporters in modern newspapers, demonstrates the superiority of trained, specialized workers over amateurs and bunglers,

Further, where are editors, if not at "the point of production," that is, where newspapers are produced!

The workers' press further must be a workers' press. It must not be the press of a faction, set or caste. It must represent all the workers, with all their fads and follies, in a real, sympathetic and helpful, not a narrow, destructive or warning spirit. Reserving, at all times, of course, the right of constructive criticism, it can be at once representative and progressive, indeed.

Such a press will defeat the capitalist press by replacing it with a better one. It will win out in all the big industrial centers. It will spread real working class, industrial union organization where none now exists. It will be a great factor in real working class liberation! And the IWW has the **nuclei** for the development of such a press. Will it rise equal to the promise therein embodied? With such a press, victory will be the IWW's.

**Alois Sennefelder, Jr.**

# The Moral of the Mule

A poor mule got disgusted with the same old feed of hay;
And tried to kick the stuffing out of Si.Ball yesterday.
The Marshall tried to save Ball and gave the mule whacks
Now Si.Ball and the marshal are flat upon their backs.
A streetman saw the fracas and to the mule he said:
"Be lenient with the farmer but, cave in the marshal's head."
The mule then told the streetman, how they treated him for years
Which drew the pitchman's sympathy, and filled his eyes with tears,
"But" said he to the mule, "our fates in common strike.
Tho I'm what they call a man, some treat us both alike.
But never mind the ups and downs, on your next trip back to earth.
You may be born a marshal and, that marshal vice-versa".
"In that case," the mule then said, "I'll be a long time dead.
For I'd rather be a measly mule and live on hay instead."
The little tale above set forth, may not be true on earth.
But there's a moral to it all, take mules for what they're worth.

**From Card No. X-81674.**

# General Convention Most Important Yet

THE most important convention ever held in the history of the organization, such is the verdict pronounced on the 15th general convention of the Industrial Workers of the World, held in Chicago, Ill., November 12 to December 3, 1923.

The convention had many difficult problems to contend with and it is believed the delegates solved them in the best manner possible under the many circumstances involved.

These problems had to do with revenue, changes in structure of organization, future organization campaigns, grievances, and international and domestic relations with other working class organizations. Only the most salient are dwelt with in this review.

### Many Fraternal Greetings

Many economic organizations sent fraternal greetings and wishes for success of the convention. The floor was granted to J. Cannon and Robert Minor, representing the Moscow Red International of Labor Unions and the Workers' Party, both of whom urged affiliation and the united front.

The convention voted down affiliation with the Moscow Red International of Labor Unions.

It sent a message of encouragement to the Workers of Italy, in their struggle with fascismo.

### Composition of Delegates

The convention was composed of delegates from the agricultural, lumber, coal and metal mine, general construction, building construction, metal and machinery, railroad and marine transport workers' industrial unions. Also one delegate representing the small industrial unions.

The general officers' reports, which followed the preliminary sessions, covered minutely every phase of the organization's activities. They showed gains not only in finances, but membership as well. The many publications are today in a healthier and better condition than that of a year ago.

### International Question

On the question of international relations, the general secretary-treasurer said:

"Our position on the international question is that of absorption and not of affiliation. We are out to organize the workers not into groups that engage in political intrigues but into a mighty disciplined organization on the economic field, along industrial lines, and in conformity with our preamble."

He pointed out that during his term of office, worker's delegations from European as well as Asiatic countries, have visited the General Headquarters, with the desire to learn more about the Industrial Workers of the World.

"From Mexico, South America and Australia the mighty voice of the workers calls to the IWW. They want autonomous administrations, and it is up to your delegates to this convention to bear this in mind when you deal with questions concerning the working class as a whole."

Henry Feinberg, Secretary of the General Defense Committee, made a lengthy report, giving in full the details of the committee's activities.

### Press Doing Well

The editors and business managers of the various publications reported. All of the latter are doing well. Especially interesting was the report of the Spanish paper, Solidaridad.

Announcing a circulation of over 10,000 per week, the report dealt with many questions concerning the organization of Spanish-speaking workers in this country and elsewhere. The editor made many recommendations about literature in Spanish, for domestic consumption, about competent organizers, and the great possibilities of the IWW in Mexico and South American countries.

### California Situation

Tom Connors, Secretary of the California Branch of the General Defense Committee, gave the convention a detailed outline of conditions existing there.

### Sliding Scale of Initiation and Dues

Many resolutions dealing with a change in dues and initiations were presented. Some favored a flat initiation and dues while others varied in their amounts. The Resolution Committee's substitute was adopted providing for an initiation fee from one to five dollars and the dues from fifty cents up to one dollar.

The convention felt that only the workers in their respective industries shall determine their financial affairs and that it tends to violate the principles of industrial unionism should we continue to force universal initiation, fees and dues.

### Industrial Union Autonomy

Industrial unions will no longer be bound to uniform laws as at present if measures adopted by the convention are approved by the membership. These measures grant greater industrial union autonomy.

By industrial union autonomy the convention does not mean it to be understood that a union can do as it pleases, only in so far as each industrial union shall determine its affairs relative to organization. At the present, the bulk of IWW membership is Western in character, coming from industries that demand a certain fixed policy that perhaps cannot be applied sucessfully in the East. Therefore it is the sense of this proposed measure to remove any and all barriers that may be encountered in organizing the workers in Eastern industry.

One of the provisions in the above measure is that any industrial union if it so desires and expresses it by a referendum vote, may have the privilege of putting its branches on a per-capita basis. This will assure the branches a certain amount of revenue to expand their local organization work and above all place greater responsibility and initiative the convention feels, on them.

### Changing the GEB

Another important structural change was in the composition of the General Executive Board. In the past, the GEB was elected from the 7 largest industrial unions. The result was a sort of detached body without concrete organic connection with any of the industrial unions. Under the new plan adopted by the convention, the chairmen of the industrial unions' general organization committees will make up the personnel of the new executive body. They will have an organic connection with the industrial unions, be more conversant with their respective needs and opportunities and also prove more economical and convenient than the old GEB—which cost over $10,000 annually in salaries and expenses,—in that they will be paid as GOC chairman by their own industrial unions and be always at headquarters ready to act as often as occasion demands.

In addition to the new GEB, the General Administration will consist of a General Secretary-Treasurer, assistant secretary and general organizer. The executive power remains in the hands of the G. E. B.

Many clearing house plans for headquarters were also passed on by the convention.

Plans providing for general strike preparations and an international boycott of California products were adopted.

A monthly general office bulletin for internal complaints, criticisms, views, controversy, etc., was continued.

### Compulsory Assessments Defeated

The minority report of the Ways and Means Committee proposing that the convention go on record for compulsory assessments was defeated by a large vote.

A partial victory however was scored by the supporters of compulsion when the convention went on record to strike out Art. 8 Sec. 5, of the General Constitution, which reads: "The GEB shall issue a 50 cent assessment stamp to all industrial unions, which shall use the entire amount thereof."

This will give the right to any industrial union to issue such assessments as they may in their judgement see fit without any interference on the part of the general organization.

### Textile Union Gets Attention

The convention instructed the General Executive Board to send a competent organizer to the textile and other industrial centers in the East.

Albert Anz, manager of the printing plant, rendered a very interesting report upon its development. The financial condition of the plant today is better than it ever was.

### Behind Steel Drive

The entire support of the general organization was pledged behind a campaign to bring the steel workers into the fold of IWW.

The convention realized that in no other industry is the class struggle more fierce, more bitter and brutal, than in the Steel Hells of Gary and his fellow stockholders.

The convention also voted to promote organization among the foodstuff workers.

### Biennial Conventions

If ratified by the membership yearly general conventions will be abolished and a general constitutional convention held once every two years. Conferences may be held with legislative power in regard to organization plans, but no part of the constitution can be amended.

### Better Headquarters Urged

Upon recommendation from the Ways and Means Committee instructions were issued to the GEB to secure a more suitable building for headquarters. The present building is unfit to house the printing plant and integral parts of the organization.

### Commutation Controversy

After a thorough investigation the Grievance Committee brought in a report on the commutation controversy that has been the theme of discussion among the membership for some time. On the question as to whether solidarity was broken the committee's findings are: "In regards to Solidarity, which is one of the basic principles of the IWW, every question is decided by the majority of all those whom it concerns, in all business meetings, by referendums, or a verbal agreement where the foregoing cannot be taken or held." The committee found that a majority of those offered commutation accepted it. Its findings were adopted by the convention.

At the concluding session, officers were nominated, according to both plans. These two tickets will go to the membership, along with the proposed new plan, and the vote on the plan will decide which set of officers are actually installed.

The convention reporter for Industrial Solidarity Fred Mann, says of the delegates and their work:

"This convention dared to question the advisability of tradition and to cast aside tactics and policies it believed were worn out and to replace them with others that will make the organization keep in line with the march of progress and evolution."

## NOTICE TO THE MEMBERSHIP

**THE General Referendum Ballots are now in the field. Members may secure ballots from Branch Secretaries, Traveling Delegates, Delegates, Industrial Union Headquarters and General Headquarters.**

**Ballots must be in General Headquarters by February 10, 1924.**

**Send all ballots addressed General Office, Ballot Committee, 1001 W. Madison St., Chicago, Ill.**

SAM FORBES,
**Gen. Sec'y-Treas., Pro Tem.**

# The Wall Street Wolves and the Wobs

By OPTIMIST

AS I watch the actions of the conglomeration of more or less human animals that make up this great American population, the words of the immortal bard are brought forcibly to my mind:

"What fools these mortals be."

If one looks beneath the surface, he, (or she), is struck with the evidence of primal instincts—the mark of the beast. The same passions which ruled our stone axe ancestors, rule our modern civilization. Scratch the surface of our polish and education—and you find the cave man just beneath. Our natures are a strange combination of Wolf and Ape. By virtue of the Ape in us, we are constantly trying to mimic those who are a little higher in the social scale than ourselves; without a question as to whether they are right or wrong, foolish or otherwise. This monkey trait is not only extremely foolish, but prevents us from bettering ourselves, or our conditions.

### The Wolf Nature

Wolf nature is the really deplorable and dangerous part of us, it is part of ALL of us, to a greater or less degree. It is the wolf nature that makes men rob widows and orphans, so that their wives and daughters may have monkey dinners, poodle banquets, and put $10,000 collars on useless lap dogs. It is the Ape in the working people that causes them to permit this condition to exist, year in and year out. The workers not only permit this outrageous condition to exist, but actually place their tormenters on a pedestal to be worshipped.

It is the Wolf that causes the financial "kings" to use machine guns and gas bombs on hungry workers, and it is the Ape that causes the workers to submit.

It is the Wolf in the hearts of a few that causes them to appropriate to their own use, those things which were meant for all, and it is the Apes, judicial and political, and the uniformed jackals that uphold this system.

The ignorance and apathy of the working people is beyond belief. Some talk of what the next generation will do. Take the young man raised in the city, with his sideburns, bell-bottom pants, et cetera. The young man from the country with a vacant stare, and reverence of power. The little flapper with **bobbed** hair, and her face painted in modernistic art; great barbarous ear pendants, that make one naturally look for a nose ring and ankle chains. If these are the fathers and mothers of the next generation, we are due to get on the job in this generation.

Let us hope that the types above referred to, represent a small minority; a few morons and Robots. In that case we may pass it up as comedy; but remember there is, also, tragedy.

A great mass of people shorten their lives by burning up their nervous energy, in a vain search

ARE WE STILL IN GORILLA AGE?

for an elusive something. The hard worked person on a vacation, indulges in something which is simply hard work. The person who does next to nothing in his daily life, takes a **vacation**, and does still less. Many people take vacations, not because they need, or really want them, but because they are in search of that elusive something.

The dope fiend, the common drunk, the tramp, the persons of some degree of mentality but afflicted with the wanderlust, are all victims of this vain search.

### Restless—Dissatisfied

Ninety-five per cent of the population of the world is restless, dissatisfied. They do this or that, ostensibly for pleasure. As a matter of fact, what they mistake for pleasure is quite often an evidence of dissatisfaction—a hazy feeling of something missing from their lives. This mysterious, elusive something is happiness; contentment.

The question naturally arises, "Why do so many people go through life, without ever finding happiness or contentment?"

The answer is very simple. We all live unnatural lives. No one who lives unnaturally, who suppresses all natural inclinations, who defies nature by refusing to permit themselves the fulfillment of natural impulses, can ever be happy or contented.

Man is an animal, governed by the same natural laws as any other animal; therefore, the man without home, wife and children, no matter what his surroundings or financial circumstances, cannot possibly be happy or contented. For every condition, there is a reason; for every effect, a cause. The reason, the cause, of the unhappiness and discontent of the great majority of the people of the world—is the system under which they live. A system which refuses them the pursuit of happiness, allows them no possibility of contentment.

Young men and women of the working class are advised to get married; to settle down. When a

normal young man marries a normal young woman, the natural result is a family of children. The young man of today, realizing how hard it is to earn living wages, how uncertain is employment, is afraid to take the responsibility of a family. No man has a right to bring children into the world unless he can see something better than ignorant slavery ahead of them.

**Married Slaves**

Under the present system, when a working man has a wife and family to support, he ceases to be an independent, thinking human being. He becomes a slave to this great (?) system, a cog in the wheels which grind out "Civilization." A link in the chains which bind the working class down in their degradation and misery. The average working man loves his wife a thousand times more than the average millionaire loves his, because he (the worker) hasn't the time for affinities, nor the opportunities for wrecking other men's homes that the millionaire enjoys. The worker loves his children infinitely more than the parasite does his, because they are his life; while the "Representative Citizen" has so many diversions.

How often these poor devils have said to themselves (few have the backbone to say it to others): Oh! if we only had a system which would take the excess, and unearned pleasures and opportunities from the parasites, and give them to those who have really earned them. A system in which a worker controls his job, and could live; not merely exist in misery.

The opportunity to join a movement with this end in view, has been offered the American workers for many years, but they are so imbued with the psychology of the boss, so dead mentally as a result of their miserable condition, that they refuse to even listen to a word of explanation. The majority of the workers are like the Italian people who stoned Columbus, and drove him from the country because he voiced a theory, which they, in their ignorance and narrow mindedness, could not comprehend. Columbus proved his theory, and the whole world was forced to accept it as fact. The Italians of today are proud to remind you of what a great man Columbus was.

**Nothing Equals It**

Considering the education, and so-called civilization of today, there is nothing in history to equal the persecutions heaped upon the IWW. Members have been tarred and feathered, hanged and beaten to death. Business men and prominent citizens in this marvelously civilized country have mutilated members of the IWW in ways that would shame the worst savage that ever roamed the jungle. Members of the Industrial Workers of the World have been thrown into prison, and though admitted to be model prisoners, treated worse than the most refractory. The only thing charged against these men was being members of the IWW and yet, with all the greatest powers of the country, trying with all their might, no one has ever been able to prove the IWW an unlawful organization.

Some day, in the not far distant future, the Industrial Workers of the World are going to prove their theory, and the whole world will accept it as fact. When that day comes, all the weaklings will tell you, "No, I never had a red card, but I always believed in the Wobblies."

Doesn't Marx say something about "every system containing within itself the seeds of its own destruction"?

When the "Wolves of Wall St." are tearing their hair and calling on their gods to save them, the Wobs will be on the job with red wheelbarrows, gathering up the remains.

# Fascism: Reaction of Big Capitalism

WHAT is fascism? The Workers' Dreadnought of London, England, answers "Fascism is the politics of the bruisers." Or as we Americans would say, it is government by strong arm men and with strong arm methods.

But fascism is something more than a reign by terror. Back of fascism, whether in Italy, or in this country, is big business. It is Judge Gary and Mr. Julius Barnes, President of the United States Chamber of Commerce, who praise fascism abroad and proclaim its desirability here.

Big business fears the legal course of political and economic development resulting from the world-war. Big business uses force to abort such development as detrimental to itself. Just as in pregnancy violent abortion is resorted to in order to avoid birth, so does big business proceed by force to prevent the birth of a new era detrimental to its profit and preservation.

Thus, in the last analysis, fascism is the terrorism employed by big capitalism to save itself from the revolutionary aftermath of the world-war and the dawn of the new era. In other words, fascism is the reaction of big business to its own revolutions.

## BIG INDUSTRIAL GROWTH

Production in the United States in 1921 was valued at 56 billions of dollars, according to the statistics compiled by the bureau of census. The products of industrial establishments reached a value of $43,672,785,000. Agricultural production during that year was valued at $12,402,000,000.

These figures reflect the great industrial development of the country. Where agriculture once predominated, it now contributes only approximately one-fifth of the production of the country.

**INDUSTRIAL PIONEER**
**TWO DOLLARS PER YEAR.**

# Readers Praise the Pioneer

Pittsburgh, Pa., Nov. 18, 1923.

The Industrial Pioneer is a first-class labor magazine; one of the best.—E. F. C.

Milwaukee, Wis., Nov. 16, 1923.

The Industrial Pioneer is the best goods in the market.—I. R. J.

Calder, Idaho, Dec. 13, 1923.

I will not miss it again, as it is the best reading we get.—V. N.

Detroit, Mich., Nov. 29, 1923.

**The December issue is a work of art and is certainly worthy of congratulations.**

**The Pioneer ought to have a circulation of at least a thousand copies in Detroit; and it will, if any efforts can be made to count for anything.—C. M.**

Franklin, Pa., Nov. 26, 1923.

If we'd had such literature from 1905 to 1917 we would not have been in the big war, and by now we would have been in full control of the industries.

Keep up the good work and the day of Industrial Democracy will be here before we hardly realize it.—L. L. M.

San Pedro, Calif., Nov. 28, 1923.

**Well, we're off! Received the Pioneers about two hours ago and sold about 45 copies already. Don't forget that extra 100 I ordered a few days ago.**

**That makes it 500! Keep up the fine goods in the December issue and I'll plug for 750 by March!—L. S. F.**

Denver, Colo., Nov. 23, 1923.

I have been watching for a long time the steady improvement in the I. W. W. press and literature, but this latest achievement of the Industrial Pioneer (the Amnesty Special) should be an eye-opener to even the most skeptical, as to what the working class can accomplish.

**Congratulations to all those who have helped in the work of building up our literature.—B. G.**

Brooklyn, N. Y., Dec. 1, 1923.

The Christmas Amnesty Number is a knockout. Chaplin's cover page is a thing to be proud of. It reaches right out from the news stands and grabs one.

**Considered from a standpoint of magazine construction alone, the entire contents will stand up without apology in any company.—M. J. C.**

Buffalo, N. Y., Dec. 1, 1923.

Just finished reading article on Modern Industrialism in December Pioneer. It brings out much information that is needed. It certainly shows up the inter-relationship of industry. Like the threads in a piece of cloth, one industry is not more important or less important than the other.

**Many of the members in the field express very favorable comment regarding the magazine with its present make-up, and I am sure that it will be rewarded with a steady growth with the present good work it is doing in the field of education and propaganda.—F. W. B.**

Jamaica, L. I., N. Y., Dec. 3, 1923.

I have read "The Lynching of Bud Williams" twice. It is a well-told and thrilling story.—F. C.

Cleveland, O., Dec. 3, 1923.

Received the December Pioneer but cannot find words to say what I think about it. Perhaps if I repeat a few remarks heard from others it will do:

**An old gentleman of eighty who always pays for two papers of each edition of all English papers published by the I. W. W. ("One for me and one to give away") said, "Whynll don't a paper like that come out EVERY DAY."**

Mrs. Radis, 2700 Wade Ave., "The best I ever saw."

A fellow worker in the hall, "That editor guy of the Pioneer sure knows how to make a book."

But why go on. I suppose you are receiving congratulations by the hundreds.

I am all sold out, so am sending the enclosed order for more.—E. L.

Detroit, Mich., Dec. 8, 1923.

**The Amnesty issue was superlatively good. "The Lynching of Bud Williams" and "The Wreck of the Silk Special" were a pleasant surprise. More of that stuff will definitely establish our magazine at the same time emphasizing the fact that within the working class we have brains and literary ability that measures with any creation of the literary elite.—J. M.**

Carneiro, Kansas, Nov. 29, 1923.

**Sample copy of December Industrial Pioneer received, and thank you very much for the same. I was agreeably surprised at make-up and contents of the same.**

I read the magazine from cover to cover and like it. That's a nice little cartoon of slippery Sam Gompers, the biggest labor fakir that has ever been on exhibition, judging by the reports of the late A. F. of L. convention. I noted the vast decrease in membership, which pleased me very much. But with the aid and abetting of the U. S. Chambers of Commerce and other like institutions, the A. F. of L. will never lack for dupes.

**This is the first time I ever had the pleasure of reading any I. W. W. publications. I note by the slip enclosed in "Industrial Pioneer" there is the "Industrial Worker" and "Industrial Solidarity." Would you please send me an old copy of each to read? I want to send in a subscription for some one of your valuable publications — more than likely the "Pioneer," as it seems to be a husky infant.—J. C. M.**

# The Pioneer and the Postal Clerks

JUST a line or two to let you know how the Industrial Pioneer is accepted among Uncle Sam's Postal Clerks.

For several months I have carried on a little educational program of my own, aided by "Sol" and Worker. Things went along very nicely but no remarkable results were obtained. For some unknown reason I had neglected to introduce the Pioneer.

However, after having placed several December Pioneers in reliable hands and given them a week to read them over, I asked for their true opinions. The answers were as expected: "Splendid," "very good," "it hit me just right," "fine; it doesn't seem to contain such bitterness as your weekly papers."

I did not ask in just what manner "bitterness" should be interpreted. I realize the truth hurts and sometimes our weekly editions are rather "blunt."

Mail clerks, as I find them, are an intelligent group of workers, and we need them, I'm sure! Discontent reigns supreme among them, one way or the other.

They represent every class, religion and organization; even the much loved IWW are in evidence among them, and we hope to send to the next convention a mail clerk to represent Industrial Union No. 500.

This will be all for the present. Hoping we may increase the circulation of the Pioneer among many more "unpatriotic" mail clerks, I remain,

Yours for the IWW.—F. W.

Chicago, Ill., Nov. 24, 1923.

Only about three times a decade I come to eulogize someone for commendable service, and this time the Editor of "Industrial Pioneer" receives my words of appreciation and praise.

By the December, 1923, number I am moved to say that this issue is the most interesting labor magazine that I have read since certain copies of "The Masses"—years ago,—and I consider it an accomplishment of proletarian editorship and education.

A splendid variety, the careful selection and the high quality of this copy should attract intelligent readers and thinking workers everywhere to the Industrial Pioneer and incidentally to the organization.

Trusting that you will maintain this standard of excellence in the future, I remain always

Yours for Working Class Education.

**H. R. J.**

# 60 Per Cent

TO speak in figures and facts is the language of our age. For the sake of uniformity, starting and working point, we use the percentage scale. Our language is full of such expressions as: 100 per cent American, 99 per cent pure, 1 and 1-2 per cent (?), 2 per cent organized, 10 per cent plus cost and 50|50 or 50 per cent propositions.

At 30 Irving Place, New York City is located a corporation known as American Chamber of Economics. A school board composed of representatives of banks, houses of financiers and foundations, manufacturers, and a former member of directors of our invisible government U. S. C. of C. (United States Chamber of Commerce).

Not a mass growing organization, but a clique bent on making such words as "efficiency," "business," and etc. real passwords instead of framed wall mottoes. It is the latest development in the evolution of our "lil' red school-house on the hill." Changing lil' to large, color red to black or gold and from the hill to New York.

They, the school-board say that "60 per cent of the factors governing successes" of business are economic factors not understood by an average business man regardless of how much of an expert he is in his line. This fact is endorsed by their, "typical subscribers" or students among whom are Mr. Carver of Dept. of Economics of Harvard University, executives from well known concerns ranging all the way from soup makers, railway supply manufacturers to modern banks and U. S. Steel Corp.

Furthermore they class these economic factors as: credit inflation, industrial disturbances, transportation tie-ups, international complications, wage rates, purchasing power of large bodies of the population, etc.

The "public" or the working people would call or class them: strikes, strikes and some more strikes and boycotts such as are carried on against California made goods.

These economics courses are offered at about $100 to all men not earning livelihood by honest work to protect them in the 60 per cent class, with aims in changing the ratio from 60 per cent to as near 100 per cent as possible. The best thing under the sun for grafters is just such a course in American Chamber of Economics, and they should be and are interested in it.

But WORK PEOPLE'S COLLEGE at Duluth, Minn., is offering also a course in economics in which we ought to be interested. Not a cut-up and dried or suppressed study of few facts which even the business men are asked to know, but a thorough study of the subject which we workers must know in order to properly apply our economic power to produce the best results in our class-war.

Our education must be as good as theirs and one better in fundamental subjects such as economics before we can reverse and keep the per cent of successes to our credit.

EX-TUSSARI JUSSISKI.

# Editorial

## What Means this Unemployment?

AGAIN is "retrenchment" the slogan of capitalism. Again is a "business recession" upon us. Again are the workers facing unemployment. From all sides come reports of employees laid off. Railroads, textiles and steel mills, metal and machine shops,—all industries are decreasing their forces and curtailing output. With the passing of the holiday season the unemployed will undoubtedly be still more increased. Then will the big department stores and mercantile establishments also lay off their employees. The working class outlook for the immediate future, is as a result, not an encouraging one. With prices increasing in height and employment vanishing, it is probable that 1924 will witness much poverty and destitution among its members.

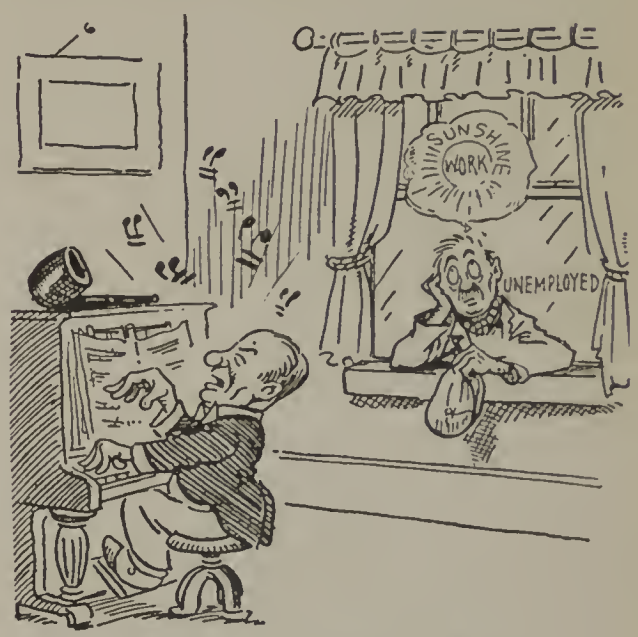
Nor will the farming or the middle class fare much better. The statistics of failures among manufacturers and merchants during October and November show big, sudden excesses over normal; while it is freely predicted that at least 2,000,000 more farmers are doomed to bankruptcy, because of their inability to meet their mortgage indebtedness. In fact, none but the more highly capitalized corporations seem likely to survive the present slump.

It is said that the recession will last only three months. But will it? Who knows?

Much discussion generally attends the recurrence of these conditions. Why these periodic cycles of prosperity and panic? Why these "business fluctuations" with almost clock-like regularity? Some say they are due to sun-spots which affect the weather, cause bad crops and subsequent bad conditions generally. But crops are more abundant now than ever before; too much so, as the constant decrease in wheat acreage too plainly shows. Some say they are only states of mind: that is, they are due to psychological causes, which create unreasonable fears and precipitate panic. But as business is growing ever more statistical, and as the first indications of recession are accordingly "forecasted" as a result of carefully tabulated conditions, this theory may be dismissed as untenable. It won't hold water, especially in modern business calculation.

Of course, there are the labor unions; like Hamlet, the play is impossible without them! It is their unreasonable wage demands—never the unreasonable profits of their employers, oh, no!—that cause recessions in business. Labor unionism, so we are told, boosts wages up so high as to make industry impossible of continuance. And so it must stop! How simple!

But, as there is no such dominant unionism in most of the industries closing down, this argument is amusing to say the least. In textiles, steel, railroads, autos, etc., there is practically no unionism



"YES, WE HAVE NO EMPLOYMENT!"

and, consequently, no grounds for the "exorbitant unionism" argument. Besides, as a result of the open shop drive of two years ago, and the decline in union membership resulting from it, there are less strikes—less manifestations of labor's "exorbitant methods"—now than ever before. With business the best in two years, last summer witnessed, in contrast to 1921, with its big coal and railroad strikes and one million strikers, only 44 strikes throughout the nation, all so small as to prove relatively insignificant indeed! As a wage factor, labor unionism is, accordingly, practically nil! And any argument blaming depressions or panics on it, is without any basis in fact.

The European situation and legislative uncertainty are also held to be responsible for this current unemployment and bad prospects for labor. Undoubtedly, Europe is a factor. The internationalism of modern industry is such that European conditions cannot fail to react on those of American labor in the long run. But curiously enough there are some who contend that export trade is relatively so small, only about 6 per cent of all production, as to prove comparatively unimportant as a decisive factor in domestic conditions, which, they also contend, tend to the natural development and creation of home markets wherein to absorb production. And curiously enough, again, exports showed a decidedly favorable upward turn during September and October. Nevertheless, October was the first month of the present recession, as reflected in the sudden increase of failures. With exports on the increase why

this slump in the midst of it, and at a time, too, when the fate of Germany looked more unfavorable than at present with the change in French policy?

As to legislative uncertainty, who believes that? The industro-financial hierarchy that rules this country has the latter's legislative powers so tightly sewed up in their vest pockets as to make legislative uncertainty impossible! It doesn't exist for them. And they are the country!

What then is the cause of these recessions, depressions, panics, etc.? Like the Biblical poor we have them always with us. War or no war, big crops or no crops, bad export conditions and good, they always come periodically to plague us. Why? Is there no balm in Gilead—no relief from this inevitable monstrosity? No solution to the enigma that it apparently presents?

Before answering, let us present some figures. They are all drawn from safe, sane and reliable sources—if such a thing is at all possible under this most unsafe, unreliable and insane of systems, the capitalist system.

"The Americas" is the official organ of the National City Bank of New York, the biggest financial institution in the United States. Through this mouthpiece, the statistician of the bank, Mr. Austin tells us that in 1919 the total wealth produced in the United States amounted to $62,500,000,000, and that in the production of this vast amount of wealth the wages paid amounted to $10,000,000,000. As will be seen at a glance the average wage of 1919 was less than one-sixth of the value of the workers' product. That is, the workers were put in the position of being enabled to buy back one-sixth of what they produced. Is it any wonder that, since the workers and their dependents are the majority of the population, the wealth produced is not consumed, with the result that "overproduction" that is, underconsumption ensues and recessions, et al, become necessary?

Some economists are beginning to see the mathematical impossibility of 10 billions buying back 62 1-2 billions and thus keep the wheels of production and distribution perpetually turning. One of these is John Hobson, the Englishman. He has, in his book, "The Economics of Unemployment," developed the underconsumption or over-saving theory of crises. This theory is couched in technical language. But translated into plain language it means that the rich, i. e., the income receivers, otherwise known as the capitalists, cannot spend their incomes. Dissipate, debauch—"promote art, science and civilization"—as they will, they cannot spend that 52 1-2 billions. So they save it and convert it into more capital than is required in production.

This policy has many bad results. One is the overbuilding of plants (in America the "excess capacity" of various industries ranges from 25 to 50 per cent). Another is the periodic piling up of unsalable goods, with the consequent cutting of prices, shutting down of factories, unemployment, and all the well-known phenomena of the business crisis. Still another series of results are the ceaseless struggle for markets, the constant growth of selling, as compared with the making of, commodities, and springing out of the belief in limited markets, the reduction of acreage, the ca canny policy, the restrictive policy of the trusts, and the national policies of protection and imperialism, with their war and unemployment. Here then are the domestic and foreign evils of underconsumption and oversaving: in other words, the evils of which recessions, depressions and panics are born. Such are the basic facts. But what's the remedy?

Plainly, the way to stop the recurrence of all these things is to stop underconsumption by the workers and oversaving by their exploiters. Hobson would do this, in part, by so increasing the worker's share in production as to absorb some of the income of the rich. In other words, he would increase their ability to consume more and thus do away, to a greater extent, with the unsalable pile of goods, and all that grows out of it.

But more wages alone are not sufficient. The capitalists will even then continue to under consume and over save. **The workers should get all that they produce. Otherwise the mathematics of production and consumption will never harmonize.** Not until Labor gets all it produces will the possibilities of more recessions, etc., be entirely removed. Nor will the abnormalities of selling, imperialism, etc., disappear either.

In the capitalist exploitation of labor will be found the cause of all the modern social ills. And only a working class, conscious of the facts, and industrially organized, can end such exploitation, with its vast social consequences, forever. Slowly, tediously, is such consciousness, such industrial organization, growing. Help it along, O Labor! Help it along, ere it is too late!

# His Name!?

**By Archie Sinclair**

I go into the lumber camps,
And log drives on the river;
In camp and mill, I'm never still,
My message I deliver.
In mining and construction camps;
To migratory workers;
I preached my creed, the crying need
To do away with shirkers.
In sweatshop and in crowded slum
I'm restless as the ocean;
I am not dead, I raise my head,
Where'er I take the notion.
Although oppression weighs me down,
I'll never, never perish;
In every clime, through endless time,
I'll live and thrive and flourish.
Perhaps you wonder who I am,
I'm known to every nation;
Each tribe and race have seen my face,
My name is AGITATION.

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# The Present Business Slump

## Analyzed in a Lecture Before Chicago Open Forum

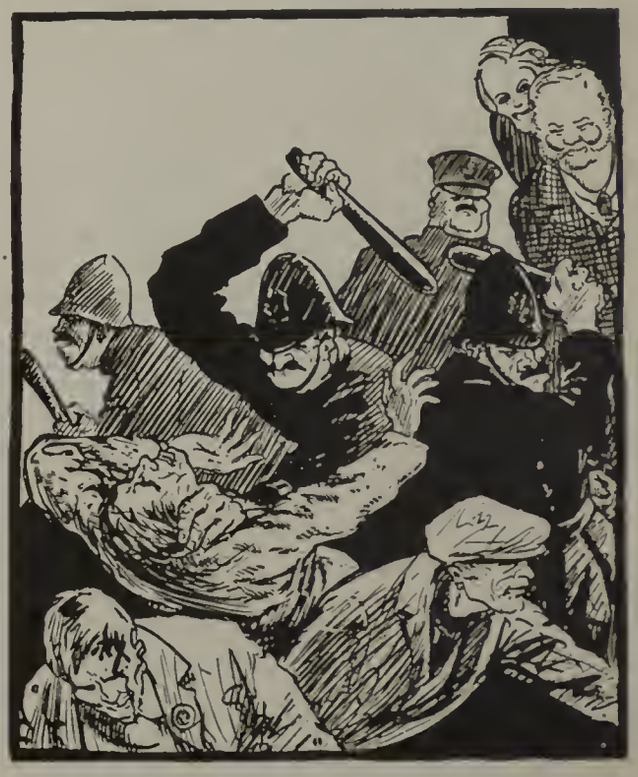
By JUSTUS EBERT

**YOU are all familiar with the popular song, "Yes, we have no bananas." Everybody has been singing it. Just now the capitalists of the country are beginning to sing another song, with a similar refrain, one that will not be quite so popular, viz., "Yes, we have no employment." Its singing will be confined to them, exclusively.**

**In November, according to the Illinois State Employment bureau, there were 131 job hunters for every 100 jobs. The Chicago Tribune, of Sunday, December 16, told, in a brief news item, of the suicide of a Canadian machinist in the La Salle street railroad station. He was unable to secure employment.**

**"Yes, we have no employment," the capitalists are singing—with tragic results to the workers.**

Why this tragic refrain? Why have the capitalists no employment now, with the result that there are over 30 per cent more workers than jobs, and workers commit suicide because of lack of work? The newspapers tell us it is due to "the business recession." But what "the business recession" is they sayeth not. All that we workers know is that the Illinois situation is not an isolated one. In all the states, railroads are laying off men, shops are cutting down their working forces, mills are abolishing shifts, putting out blast furnaces, and otherwise slowing down production, so that there is no employment for those who want it and must have it, with the dire results, in some cases, already noted. A "business recession" means to many of us, no work, no wages, starvation and "hard times" generally.



CLUBBING LONDON UNEMPLOYED

### Recessions Periodic

A peculiarity of the "business recession" is its periodic recurrence; that is, it takes place at regular intervals, but with increasing frequency. It is known by various names, such as business depression, financial panic, economic crisis, and so on. We had one each in 1907, 1913-1914, 1921, and now again in 1923. Had it not been for the world war, there is no doubt that we would have been in the midst of a continuous panic from 1913 to the present time. As it was, the world war bestowed prosperity upon us. True, it was a ghastly, bloody, inhuman prosperity, involving the slaughter of tens of millions of human beings, and the near-destruction of human civilization. But then that seems to be about the only way to achieve prosperity in this highly Christianized capitalism, namely, by gigantic murder and territorial plunder.

But that is aside from the subject; let's go back to "the business recession" and the causes of its frequent re-appearance in modern times. Perhaps in so doing we'll find out why prosperity and wholesale murder have become synonymous in modern times.

Now there are many reasons given for "business recession," all more or less superficial. We are told, for instance, that the business recession is due to overproduction, overexpansion and overextension. By this is meant that there is more produced than can be consumed; that industrial plants are expanded and extended beyond actual requirements, with the result that credit is like-

wise expanded and extended; that is, to an overnecessary degree. Of course, there are limits to this sort of thing. As soon as they become apparent, the "recession" sets in, as it inevitably must.

### Light on Subject

An article published in the "Magazine of Wall St.," by Dr. Julius Klein, director of the Bureau of Foreign and Domestic Commerce, throws considerable light on overproduction, overexpansion, etc. Therein he points out that the productive capacity of the country is so great that even an abnormal demand for articles of consumption can hardly remain long unsatisfied. He shows, for instance, that the makers of pig iron can turn out ten million tons per year in excess of the maximum consumption since 1916. The boot and shoe factories have a capacity of 400,000,000 pairs per annum, but the American people have never yet purchased more than 300,000,000 pairs. The automobile factories are now producing at the rate of 300,000 cars a month, but Dr. Klein doubts if anyone expects that the country will buy another three million cars in 1924.

It stands to reason that, with boot and shoe factories, for instance, producing per year 100,000,000 more pairs than can be consumed even in abnormal times, that boots and shoes are going to pile up, with the inevitable result that boot and shoe factories will have to shut down and "hard times" will be the lot of the boot and shoe workers in general. And what applies to boot and shoe workers applies also to pig iron, automobile, and all other workers. For as their excess products pile up, the furnaces, works, factories, mills, etc., in which they are employed, will also shut down and unemployment will be their lot, too. Thus the whole working class is hit and made to suffer because they have produced too much, i. e., because "overproduction" is rife throughout the land.

### Overproduction View Superficial

As was said before, this view, while most likely in accord with the apparent facts, is nevertheless, a superficial view, because it fails to deal with the most important phase of the causes of the busines recession, namely, underconsumption, for there would be no overproduction if all the products produced were or could be consumed.

Surely, no one will contend that there are too many boots and shoes produced, so long as there are millions of workers and their dependents in this country without boots and shoes. Nor will anyone contend that though auto-ownership is growing among workers, there are not still millions upon millions of workers with whom such ownership is impossible. Further, it is said that there is need for 8 billions more building in this country. Think of how much steel and iron products that would absorb and how many steel and iron mills it would keep agoing! And "our" railroads: how about their equipment and rebuilding; are they not both necessary, at this time?

Turn where we will, here in Chicago particularly, we find a poverty-stricken, dirty,shabby civilization, especially in working class districts, that cries aloud for the products of industry, art and science—and yet we are told that what ails us is overproduction! What an absurdity!

Even Dr. Julius Klein, the director of Bureau of Foreign and Domestic Commerce already quoted, finds the "overproduction" problem to be one of underconsumption; for he is intent on seeking more consumption. He believes that export trade must be developed, that is, that more markets and consumers must be found abroad, outside of the boundaries of this country—so that production will not run ahead of consumption. In his opinion, it's either more export trade or idle factories.

### Another Angle

As the poet would say, let us stick a pin there. That is, let us abandon this argument in favor of foreign trade and take up another angle of overproduction, though, at the same time, keeping the need for exports well in mind. It's an important modern factor, as we shall later see.

According to figures prepared by the statistician of the National City Bank of New York, production in this country in 1919, amounted to $62,500,000,000. Of this vast amount $10,000,000,000 was paid in wages.

Ponder on the relative size of 10 billions as compared with 62½ billions. Then ask yourselves how can 62½ billions be bought and consumed by workers with only 10 billions in their possession? After you have done that perhaps you will realize that what causes the business recession is the robbery of labor, through which the workers are rendered unable to buy back all that they have produced. In other words, overproduction is due to underpayment of the workers. Unless the workers get all that they produce, production will continue to exceed consumption and the business recession, together with all that it implies, will be always with us. But let us pursue the subject a little further and more fully.

### Hobson's Theories

Recently, an Englishman, John A. Hobson, has published a book entitled "The Economics of Unemployment," which throws considerable light on the cause of industrial depression and the lack of work that is its main characteristic. This book restates and develops the underconsumption or oversaving theory of crises. According to this theory "under a fairly equal distribution the growing pressure of wants would keep a balance between the immediate satisfaction of spending and the postponed satisfaction of saving." In plainer English, if wealth were more equally distributed, there would be more to spend and less necessity to save, resulting in more consumption, thus keeping production agoing better, because of the greater harmony between the two.

But with the workers getting in wages only 10 billions of dollars, and the owners of industry 52½ billions, no such harmony is possible. Do what they

(Continued on Page 47)

# Three Letters, Full of War

By BARAJEMES.

O-I-L, oil. Just a little word of three letters; yet it is a word to conjure with. It is a word of magic potentialities for it is the name of a commodity, which perhaps above all others, is necessary to civilization as it is carried on today. And, the probability is that in the near future o-i-l will mean w-a-r.

The ability of oil to supplant coal in the industries of the world has been well proven in the last few years and the possibility that the next great war will be fought because of it is daily becoming more evident to those who make a study of world affairs.

The IWW holds no brief for those who own the oil resources of the world, whether they be American capitalists, British capitalists or those of other nations. On the other hand, the IWW is vitally interested in the working class of the world—those who drill the wells, lay the pipe-lines, toil in the grimy, sooty refineries to produce the "black gold" which is at present the predominating fuel in countless industries and which bids fair, unless some unlooked for discovery is made in the next few years, to supersede coal in all of the industries.

On this account this article is written—that the workers of the world may see the power behind the scenes and realize that when the clarion call to arms resounds within the next few years it is **oil** and not **democracy** that the masters have been struggling for and that they are but pawns in a game that is world-wide in its ramifications, and has profit possibilities beside which Midas with his "golden touch" would be a small town piker.

Most authorities on the subject, whether they be advanced thinkers who have accepted the materialist conception or those who still cling to the "great man" theory agree that a new war, world-wide in its scope, is very likely to be the result of the mad struggle for oil which is going on at present. And most of them will agree privately that that war will be fought between the U. S. and our late ally, Great Britain.

Ten years ago no one would have thought that Great Britain (or British capitalists) were at all likely to become the dominating figures in the oil markets of the world. At that time American capital had 60 per cent of the oil production of the world safely in hand and John D. and his other greasy associates seemed more than likely to continue to control the industry.

Events march apace, however, in this modern civilization of ours and today sees the American oil barons as second fiddles in the industry which has come to play such an important part in world affairs. Facts are facts; American capital has lost out in the battle for oil mastery.

"Imperial self-sufficiency," to use a term of one of the best posted men, was no doubt the outstanding motive in British capital's move into the oil game. Another reason is that Great Britain, next to the U. S., is the greatest consumer of oil in the world. The greatest British export for years has been coal, but with a changing civilization it has become necessary for British capitalists to adapt themselves to the new order of things and maintain their commercial supremacy with a more up-to-date and wanted commodity.

In their effort to accomplish this British capital has inaugurated an oil offensive which reaches into every quarter of the globe. Persia, India, Mexico, South America, Africa—every place which offers the slightest opportunity for oil discovery has been included and today British capital has reached a point that insures them of nearly the total product of 70 percent of the known petroleum fields on the globe. Who can say that such a situation does not augur ill for the working class?

Lacking petroleum reserves of their own—only about two percent of the world's production lies within the British empire—the British capitalists have carried the fight into other territories regardless of their nationality. This coupled with the fact that concessions have been so worded as to exclude capital of other nationalities has already made the oil barons of the U. S. very uneasy; so much so that they threatened to make the "closed door policy," formulated at San Remo, by British and French interests working together, an international issue.

The Anglo-Persian Oil company is the king-pin of the British companies. The British government has a share in it and closely watches over its welfare at all times. At the present time it has 60 subsidiary companies and operates in 27 different countries. Did I hear some one mention internationalism?

It controls the oil potentialities of Persia, with the exception of the five northern provinces and has control of about 500,000 square miles of country which is rich in oil prospects—this territory is about 600 miles long and constitutes the largest oil field in the world.

In the five northern provinces, also rich in oil potentialities, an interesting fight is on at present between the Anglo-Persian Co. on one side and the

Standard Oil Co. of N. J., and the Sinclair interests on the other. The Anglo-Persian will probably win out because of government influence. They already have a great number of producing wells, a pipe-line 145 miles long leading to tide-water on the Persian Gulf, and an immense refinery near the mouth of the Karun River.

This company profited largely by the war as it acquired control of several enemy companies under the British equivalent of our Alien Enemy Act and was also lucky enough to gain large holdings in Rumania which Germany formerly held but lost through reparations. They also added materially to their tanker fleet through the seizure of enemy vessels.

In France they have formed a company, in co-operation with French capitalists, for marketing oil both in France and French colonies. They are also constructing a large refinery in France. American capitalists thought they had the inside track in France but the San Remo conference proved otherwise.

Transylvania, formerly a part of Hungary, but now within the confines of Rumania, has added to their supply of oil. Greece, Spain, Norway, Denmark, Belgium, and Jugo-Slavia have also been included in this corporations' march for supremacy in the oil markets of the world. Only one European field of importance has escaped—the Galician one, which the French control.

Asia, however, is the bulwark of this octopus and all concessions are securely nailed down, with the exception of the five Persian provinces previously mentioned. The A. P. also controls the Mesopotamia potentialities, but American capital has succeeded in getting a small share there. The A. P., however, holds the whip hand there by reason of their absolute control of pipe-line and railroad building in this field. In India another British company, the Burma Oil Co. controls the entire output and in combination with the Shell Co. dominates the orient.

To sum up, British capital, through the A. P., the Burma Oil Co. and the Royal Dutch-Shell interests, has gained an almost total monopoly of potential oil-bearing territory all over the world. Industrial imperialism, the most fascinating and most dangerous game in the world has effectually sewed up the world's future oil market for British capital. The A. P. as a monopoly exceeds the wildest dreams of Standard Oil. S. O. never had an organization remotely approaching the scope, authority, and possibilities that the A. P. has after less than ten years' battle.

Figures prove that at the present rate of consumption American capital will be forced to import 500,000,000 barrels of oil a year, unless something like Henry Ford's scheme of "burning coal twice" displaces petroleum in American industry. With 70 percent of the world's known oil territory in the hands of the British it is easy to see where they will have to go for it. I wonder then will "blood prove thicker than water," or will the greasy fluid which means billions of dollars to those who control it tip the balance and throw the world into another carnage of murder for "patriotic" reasons.

When it comes to matters of profit, workers, thinking workers at least, can guess the answer. American capital only controls about 18 percent of the known oil fields of the world. About 16 percent in U. S. territory and about 2 percent in Mexico. Eighty percent of the world's oil bearing territory means wealth beyond the dreams of avarice and with American capital, the largest consumer of oil in the world on one side, and British capital in control of 70 percent of the known fields on the other, the probability is that something will happen—something of far-reaching consequences to the workers of the world—the ones who always slave and suffer, fight and die that capital may be glorified.

How many oil workers give a thought to the immensities of the grease game? Do the American "grease-cats" as they plow through the mud at Mexia or Burkeburnett, or freeze in the rigorous winter climate of the Wyoming and Montana fields, as they plod disconsolately from job to job in the Santa Maria or Santa Fe Springs fields out on the Pacific coast, or as they put in their shift under the eagle-eye of the "push" in the refineries at Whiting, Paulsboro, Wood River or Bayonne ever stop to look beyond the horizon—across seas, deserts and mountains and see the international nature of the game that only rewards their bitter toil with a pittance? Does anyone think that unorganized, individualistic workers have any place in such a proposition as the petroleum industry?

Wake up, Workers—Oil Workers particularly! Strike the scales from your eyes! Look around you and realize that to battle international masters an international union is absolutely necessary. Join the only union which recognizes the immensity of world affairs and their bearing on the lives of the workers. Organize to wipe out forever this unholy system of profit which is never content unless it is grabbing natural resources and sweating profit out of them through the blood of labor, and which is never above sending labor out to fight and die for these profits if there seems any danger of losing them.

Join the IWW and let us end forever "Industrial Supremacy," "Industrial Imperialism," "Imperial Self-Sufficiency," " Economic Penetration," and all the rest of the high-sounding excuses the masters use to explain the murder of the working class. Let us put another slogan into the mouths of the world's workers. Let's substitute "Industrial Unionism" for the catchwords of our masters, for as the masters have organized to grab and hold so must we of the working class. Industrial Unionism is the answer of the workers to those who have robbed and slaughtered them since the beginning of things.

**DON'T MISS COMING ISSUES OF INDUSTRIAL PIONEER**

**GOOD STUFF!**

# "Woe to the Cause that Hath Not Passed Through a Prison!"

By ARCHIE SINCLAIR

CALIFORNIA is today making history of which it will some day be ashamed. Insane persecution is rampant in the Earthquake State. Blind Greed is striving to stifle the voice of protest. Intolerance and Arrogance are in the saddle. Liberty lies crushed. The once fair name of the Golden State is besmirched and befouled. Courts have become market places where the liberties of men are bartered. It can truly be said in this state that:

"Justice is a harlot upon a throne of Gold
Where Liberty is auctioned and Truth is bought and sold."

The story of the persecution of the members of the IWW in California during the past four years is amazing. The cruel, inhuman treatment accorded men who were organizing the workers into the Industrial Workers of the World for the purpose of gaining better economic conditions, is almost unbelievable. The slavish submission of the courts to the financial and industrial interests of the state has made California a byword among the legal fraternity. In a country notorious for the prostitution of its courts to Big Business, California easily outranks her sister states. State and county officials, prosecuting attorneys and judges flaunt their scarlet shame in public. Brazenly they admit, by their every act, that they are the retainers of the Industrial Overlords. Shameless, perfidious California!

### Brief Account of Persecution

The history of the IWW persecution can only be understood when details or separate battles are considered. It is impossible to recount all the struggles that the members have undergone, but we will give a brief account of the number of Criminal Syndicalism trials since the enactment of the Criminal Syndicalism law in 1919.

At the present time there are in the twin Hells of California—San Quentin and Folsom—ninety-seven men serving from one to fourteen, and in some cases from two to twenty-eight years, for violation of the criminal sydicalism law. All of these men in the two prisons are members of the IWW. And it might be well to say in passing that in all the trials under this barbarous law, no attempt was made by the prosecution to prove an overt act against any of the defendants. They were not charged with murder, rape, arson, burglary or vandalism. No attempt was even made to prove that these men taught anything unlawful. Their only offense was that they were members and organizers of the IWW. Because they protested against the exploitation of the workers by the owners of industry they were hailed into court charged with Criminal Syndicalism. **The only possible conclusion that one can arrive at is that these men who are in the twin hells are being persecuted because they preached a message of Industrial Solidarity to the workers of California.**

### Magnitude of Campaign

The magnitude of this four-year campaign in the Class War, the sacrifices made by our fellow workers in California and the persistence with which the Masters egged on their minions can be seen in the number of arrests and convictions under this inhuman law. There have been seventy-nine trials involving 292 persons, all but three of whom were members of the IWW. Of these 97 are in prison at the present time, eight cases are being retried, twenty-four were dismissed without trial, eight during trial and ten after trial. At the present time six are awaiting retrial, twenty-six are awaiting trial and three are on trial.

This is a record of cruelty and ruthless persecution unrivaled by any state or country in modern history. Nowhere in the civilized world can we find such tyranny manifested by any ruling class. It is unparalleled. The masters of California are drunk with power and arrogance.

In exact proportion to the insensate cruelty practiced by the oppressors do we find in the ranks of the IWW in California the unquenchable spirit of Class Solidarity, that intangible something that distinguishes the rebel from the common herd. Man after man, in ones and twos, in groups of tens and twenties have they trod the road that leads to prison and others have taken their places in the vanguard of the battle. The beacon of Liberty has never been dimned for want of someone to hold it aloft. Precursors of the New Day have gone into

the industries and told the workers of the way out of economic bondage. Scores have been sent to prison, but still others have stepped into the breach and carried the battle to the enemy.

### Labor-Baiting Los Angeles' Share

Liberty hating, labor baiting Los Angeles has sent forty-one of our militant members to San Quentin and Folsom. Sacramento, the Wall Street of California, is responsible for the incarceration of thirty valiant fighters in the cause of Freedom. Eight have gone from Quincy in the Sugar Pine region. Eureka, the Capital of the Redwoods, deprived seven fellow workers of their liberty because they would not pay homage to the Lumber Kings. Oakland tried to retard the advance of Labor's cause by imprisoning six of our fellow workers. Three were sent from Marysville, the Hate Town of California. Susanville and Woodland each are responsible for sending one member of the working class to prison because they loved truth better than personal liberty. All these men are in prison at the present time.

The fight in Darkest California still continues. Others will undoubtedly follow the men already in the prison camps. The masters are not beaten. But we can truthfully state that the persecution is abating. It is becoming increasingly hard for the ones in the pay of the industrial rulers to convict men under the Criminal Syndicalism law. The people of the various localities where persecution has been carried on are beginning to see that they have been the tools of the Oligarchy. The truth is at last being made known to all, with the result that Criminal Syndicalism prosecutions are becoming rare. But still there are ninety-seven victims of this atrocious law behind steel bars and walls of stone. They must be released. It is not enough that there will not be many more convictions under the Criminal Syndicalism law. It is not enough that persecution is abating. The men who went to prison in the interest of workers must have their freedom. We must compel the masters of industry who sent them to the penitentiaries to unlock the door and release these Soldiers of Freedom.

### Way of the World

It seems to be the way of the world that those who have a message of hope for humanity must be vilified, persecuted, imprisoned, crucified. In all ages it has been the same. The only answer that the rulers have ever given to those who voiced social protest was the jail and the gallows. "And I saw within the jail those deliverers who in each age have saved the world from itself and set it free, and gyves on their wrists and ankles." It is the only answer that rulers **can give** to those who question their right to exploit and plunder. And the only way that the lovers of justice and truth, the men who desire Industrial Freedom for the workers of the world can make their protest heard is through the criss cross bars of prison windows. "And I saw within the jail them that gave liberty to the slave, and them that unbounded the mind of man, and them that led onward to Freedom and Justice and Love. Woe to the Cause that hath not passed through a prison!"

Ninety-seven victims of the Criminal Syndicalism law are in the prisons of California. While we do not protest against their imprisonment we are guilty of aiding and abetting the masters and their retainers in a crime that has made California notorious among the peoples of the world. This year must see the release of the last victim of this barbarous law. Let us give to this cause the same enthusiasm that they, our imprisoned fellow workers gave to the cause of Industrial Unionism.

# Organize

H. GEORGE WEISE

ON bread and water diet men are languishing today,
It aint no use to cuss the boss, it aint no use to pray,
It aint no use to trust too much to public sympathy
And hope that guy "Opinion" will have strength to set them free.

YOU are the only hope they've got, YOU are their one best bet.
You've done your damndest? I say no! You haven't started yet.
When every ship upon the sea—you bet I'm quoting Hill—
When every train and factory wheel has quit, is standing still,
When this broad land of sweat and toil is solid coast to coast,
When "all for one and one for all" is more than empty boast,
When Money Captains trembling plead before the Workers' might,
When you have economic strength enough to win the fight,
When you can swing the dungeon doors, demolish prisons vast,
THEN only have you the right to say you've done your best at last.

On bread and water diet men are languishing today,
It aint no use to grit your teeth, it aint no use to pray
For God's sake, Fellow Workers, all the world before you lies,
Go out among the toilers—educate and organize!

## OLDER AND WISER

Father—"When I was a young man, I worked twelve hours a day."

Son—"I admire your youthful energy, dad, but I admire still more the mature wisdom which led you to stop it."

# The Lumber Monopoly Exposed

## LaFollette Lays Bare the Conspiracy that Robbed the Government and the Workers.

SENATOR Robert M. LaFollette has rendered lumber workers a great service in describing the nature and ramifications of the lumber monopoly. He calls it a hydra-headed monster, with a body known as the National Lumber Manufacturers' Association, and with tentacles known as regional associations, of which there are eleven in number. They control all the principal sources of supply and, unitedly, form the powerful national association.

They are named as follows: (1) Southern Pine Association (manufacturers of southern yellow pine). (2) West Coast Lumbermen's Association (manufacturers of Douglas fir lumber). (3) Western Pine Manufacturers' Association (manufacturers of western white and yellow pine). (4) Northern Hemlock and Hardwood Manufacturers' Association (manufacturers of hemlock and hardwoods in Wisconsin and upper Michigan). (5) Michigan Hardwood Manufacturers' Association (manufacturers of hemlock and hardwoods in lower peninsula of Michigan). (6) Northern Pine Manufacturers' Association (manufacturers of Minnesota and Wisconsin northern pine). (7) North Carolina Pine Association (manufacturers of yellow pine lumber). (8) Georgia-Florida Sawmill Association (manufacturers of yellow pine lumber). (9) Southern Cypress Manufacturers' Association (manufacturers of cypress lumber). (10) California Sugar and White Pine Manufacturers' Association. (11) Redwood Manufacturers' Association (manufacturers of California redwood).

### Control Home Building

Senator LaFollette shows that these lumber associations comprise substantially all the manufacturers of lumber, large and small, in the United States, as well as those individuals and corporations that control nearly all the privately owned standing timber from which the homes of the American people must be built in the coming generation.

The national association, as well as the regional associations, is in turn controlled and dominated by the great lumber corporations, which have virtually a monopoly grip upon all branches of the industry. Ownership of standing timber insures the domination of every branch of the industry. The ownership of the standing timber and the large areas of land upon which it grows has long ago become concentrated in the hands of a relatively few powerful holders, who are in turn closely bound together by interlocking directorates, identical policies and general community of interest.

Senator LaFollette quotes Report of Bureau of Corporations—Lumber Industry, showing that "the concentration already existing is sufficiently impressive. Still more impressive are the possibilities of the future. In the past 40 years concentration has so proceeded that 195 holders, many inter-related, now have practically one-half of the privately owned

timber in the investigation area (which contains 80 per cent of the whole)."

As in the case of other monopolies, the railroads are in close and intimate relations with the lumber monopoly. The three greatest owners of standing timber in the United States are the Southern Pacific Company, the Weyerhauser Timber Company and the Northern Pacific Company (including their subsidiaries). Other railroads are also owners of immense tracts.

**According to Senator LaFollette, the lumber monopoly was not founded upon superior ability, self-sacrifice, enterprise, or any other similar qualities, but upon bribery and theft; and, above all, upon corrupt corporate control of the machinery of government. Investigation by the Federal Trade Commission reveals enormities committed by this sinister monopoly which stagger even the most hardened student of corporate crime.**

During the war, according to the statement of its own officers, it brazenly robbed the Federal Government of more than two hundred million dollars a year in taxes, and fraudulently arranged to write off between two and three billion dollars of its property in order to dodge taxes.

**It conspired to raise lumber prices to the government outrageously in the very midst of the war, conspiring to restrict the production of lumber at the very time when the President of the United States and every cabinet officer were declaring that victory depended upon maximum production of lumber and other basic raw material.**

**It, further, robbed its workers of wages which it had agreed with the government to pay as a condition of fixing high prices for its products.**

It has used its great power and every artful device in order to prevent the government from reforesting the enormous tracts of land which have been made barren by the wasteful and unscientific methods which it practices in order to enhance the future value of the huge areas of standing timber which it still controls.

It engaged in petty theft by conspiring to rob every lumber user in the United States of half an inch on the width of every board by the barefaced theft known as "scant sawing."

**It conspired to raise the price of every kind of lumber to such unconscionable heights that the more decent or timid lumbermen characterized the prices as "anarchistic" and "incredible," thus forcing the housing shortage which in 1919 and 1920 was responsible for the deaths of thousands of men, women and children, acording to leading medical authorities.**

These sensational charges are proved conclusively by documents taken from the files of these lumber associations and corporations and reproduced in the reports of the Federal Trade Commission to the Congress of the United States.

Senator LaFollette, in further exposing the lumber monopoly, shows that it conspired to place one of its own stoolpigeons in the office of the Commissioner of Internal Revenue so that he might interpret the law for its benefit. The value of this stoolpigeon's service is given by Secretary Compton in a letter dater July 2, 1919, in which he stated that they had resulted in saving "certainly not less than several millions of dollars to the lumber industry and other owners of timber properties."

Senator LaFollette also pays much attention to Mr. Edward Hines, as one of the leading lumber men who repeatedly conspired to raise the prices of their products to the government. Hines has his offices in Chicago, the scene of the war trials against the members of the IWW, some of whom were lumber workers prominent in the lumber strikes of 1917.

The extortions of the lumber trust properties are also exposed by Senator LaFollette. He also shows how "Government by Private Monopoly" was pursued by the lumber interests in the investigations against them, in Texas, Missouri and Kansas. Furthermore he intimates that a member of their secret society, the "Concatenated Order of the Hoo Hoo" occupies the White House!

In view of Senator LaFollette's exposures it behooves the workers everywhere to back up the industrial organization of the lumberjacks and to aid in the movement to secure the release of the Centralia and all other victims of the lumber interests.

# The State Swayed by Lust

By JOHN McRAE

(Now in one of California's county jails)

THE golden state that bounds Pacific's shore,
With graft and greed and vice is festered o'er.
Democracy and Justice are forgot,
And laws but ever grind the ever starving poor.

A land of peace, for those beneath the dew;
A land of plenty, for the chosen few
Who LIVE by theft and subtle trickery,
And RULE by force as employers used to do.

A land where gold will balance Justice' scales;
Where men are taxed to build more spacious jails
To lock themselves in, should they dare protest
The masters' profits or the slaves' travail.

O! Shameful California! Ever swayed by lust
For gold and power, you shall thrust
Your poison sword through Labor's heart no more;
Your Idols soon will fall and crumble into dust.

The workers now have started to unite
In one strong band, they will not lose the fight
For Freedom and Equality, they will break
With ease the chains that bind them now so tight.

# The Switchtender and His Job

By A CIVIL ENGINEER

HIS name does not matter because there are many like him in all the large railroad yards of the country. On the company's payroll, he was put down as a switchtender and, as he walked by with his slow, regular gait, his tools carelessly resting on his shoulder, on his daily rounds from one switchstand to another, the first impression which a casual glance conveyed to the onlooker was a guess that he was a crank and pretty hard to get along with.

Upon closer acquaintance, the impression proved correct. He was exceedingly officious. Even the roadmaster and the superintendent, whose favor he was always courting, made fun of his good intentions and excused him on account of his age or the length of his service.

He had know better days. Once he had been rated a shop mechanic and he still kept that individualistic psychology which sticks to many former craftsmen, even after some mechanical invention has reduced them to the ranks of the industrial proletariat. During his heyday, he belonged to the machinists' union. Like many AFL-ites, it was not a sense of duty that made him join but merely a desire to defend his job against outsiders. The meaning of solidarity he could or would not grasp. At one time he excelled as a gear and diemaker and, in that capacity, he had practically sacrificed his life to the company. Some general superintendent once had written him an official letter of commendation and he had it framed and hung up in the sitting room of the clumsy little wooden box that he was trying to buy on the installment plan and never ceased to boast of as his home.

### Big Heartedness!

Of course, his hard and delicate work had prematurely impaired his eyesight and thus his skill had vanished. Then the big-hearted company had handed him a job as switchtender, cleaning lamps, lighting them at dusk, sweeping the snow away from between the switchpoints. Day in and day out, he paced from the east to the west end of the yard carrying with him at all times his bundle of tools and his everlasting grouch.

His pet aversion was the hobo. Voluntarily, he acted as a stoolpigeon for the yard bull and occasionally he would get into a chewing match with a gang of box-car travelers and jobhunters waiting for an outbound freight at either end of the yard.

It was great fun to hear him glibly repeat the old capitalistic catchwords of individuality and loyalty and pride of craft and when someone reminded him of the new economic conditions brought about by the onward sweep of the machine process in industry, he would flare up and proudly walk off with the blatant retort:

"No machine process can ever hurt a good man."

* * *

There are hundreds of thousands of switchlights on the railroads of this country and there was a time when all were oil lanterns, cleaned, filled, lighted and extinguished by switchtenders. Any one tender had so many lights under his care that he was compelled to light some after dark and see that some others did not get extinguished until long after sunrise. There was waste and waste cuts into dividends and, besides, not all switchtenders were conscientious or reliable. So, in this little narrow domain of the switchlights, the great force, economic necessity made its appearance.

When some power plant could be found nearby, electric light bulbs took the place of oil lamps and all could be lit up at the same time by throwing a switch at the power house. But switchlights are scattered and thousands of them could not be thus connected and therefore economic necessity took the shape of an engineering problem.

Edison offered a solution by inventing a primary battery to take the place of oil. However a man had to be employed to switch the light on and his wages ate up the profit of the batteries. If the man was dropped and the lights allowed to burn day and night, the wear and tear of the batteries was more expensive than the cost of oil lamps with the switchtender's wages thrown in.

### Introducing Dalen

Now, let me introduce a Swede, Nils Gustaf Dalen by name. A professional hundred-per-center who had been smart enough to pick the US as his birthplace, would, of course, call him an ignorant foreigner. He is a spare, shy man, whose eyes are hidden behind dark smoked glasses. And yet, that man is one of

the most pathetic heroes of our epoch. That man has systematized the lighting of all the ocean highways and is himself today blind, as the result of an accident which overcame him in the course of his experimental work.

Dalen has indirectly written the next chapter in the evolution of railroad lights. He uses acetylene gas and, besides, his lamps begin to burn when the sun goes down. They switch themselves on and off automatically. This result was brought about by the invention of the Dalen sun-valve. The apparatus is composed of four metal rods enclosed in a strong plate-glass cylinder. Three of the rods are burnished and, for that reason, absorb little light but the fourth is of a large diameter and coated with lamp-black and absorbs so much light that it expands by daylight and the expansion lengthens the rod and closes a valve which controls the flow of acetylene gas. Heat does not affect the valve because the hottest fire will expand all the rods equally, while light only lengthens the black one.

The lights burn on the principle of the Welsbach gas mantle and Dalen even invented an automatic mantle-exchanger, so that lamps can be left to themselves and burn for a whole year without any care whatever.

The Dalen sun-valve was originally invented for beacons and coast lights but there has been placed on the market a smaller and cheaper type for use on railroad switchlights which requires about one inspection every three months.

* * *

In tracing the course of technical progress, as regards switchlights, we have met three different stages in a progressive series:

First stage: Oil lamp—hand labor.

Second stage: Electric lamp—machine labor, hand controlled.

Third stage: Dalen sun-valve—Automatic machine labor.

**Machine Process Unfolding**

This instance presents to us the unfolding of the machine process at a glance. Each and every invention brings us nearer to automatism, a technical condition where the machine does the larger part of the work and the thinking and the machine-tender only appears in a secondary way to offer those minor functions which technology has not for the present been able to shift to the machine.

When the railroad type of Dalen's sun-valve comes into general use, and that will be very shortly, our switchtender—good man as he thinks himself—is going to lose his job and the machine process will be the cause.

What is he, what are we, going to do about it? Pick up pebble stones from the roadbed and shy them at the valves or act as intelligent men?

I am afraid that our individualistic switchtender and all those who share with him the frame of mind of the craftsman are going to throw a few rocks.

When our switchtender was let out of the shop, he refused to join the maintenance of way workers' union. Did he not have a company pull and how could anyone imagine an ex-member of the machinists' union, a craftsman and skilled mechanic, joining a union of snipes and gandy-dancers?

I suppose other switchtenders will have more sense and less hollow pride and that they already belong to the maintenance of way laborers' outfit, but what good does it do them? That outfit is neither fish nor flesh, nor good red herring. It isolates section men and shop laborers away from the rest of the railway workers in a kind of organizational chop-suey made up out of the remnants of all that the brotherhoods and the shop-crafts did not want.

Such a union could not protect the switchtender's job if it wanted to. It is unable to cope with any kind of a technical improvement and its economic effects. Even a full-grown, narrowly specialized, jobtrusting craft union could not do it.

To handle a new invention, means from the workers' point of view, to take such a general social and economic stand that every invention is made to yield more leisure to labor and less dividends to the capitalists.

Only an efficient and scientific form of organization, like the IWW, can handle a new invention by the proper method. When it comes to face such a situation, craft unionism is powerless.

# A Study in Modern Industrialism

THE WESTERN ELECTRIC CO.

THE study of modern industrialism is the study of big corporations growing bigger, and of the individual workman in them growing proportionately smaller.

One of these corporations is the Western Electric Company. Little is popularly known regarding this company. But recently it has embarked on a campaign of self-advertisement as a benefactor of labor and the community at large. As a result, it is becoming familiar to newspaper advertisement readers and therefore a little more widely discussed.

The Western Electric Company is, practically, the manufacturing arm of the Bell Telephone Co. As such it possesses a monopoly of the manufacture of telephone equipment, telephones and telephone supplies. It specializes in these commodities, just as the General Electric Co. specializes in the manufacture of electric light and power generating and transmitting machinery and locomotives.

### Second Largest Industrial Unit

Its largest plant is situated at Hawthorne, a suburb of Chicago, Ill. According to the "Hawthorne Microphone," the company organ, December 7, 1923, **"Hawthorne is now the second largest industrial unit in the United States, being eclipsed by Henry Ford's Detroit plant. . . . . During the four weeks in November, the number of employes on the Hawthorne payroll has been increased to 38,358. This includes about 690 employes reporting to Hawthorne, not actually in the works."**

The employes in Henry Ford's Detroit plant are estimated at 45,000.

Most of the 38,000 employes at the Hawthorne works toil in solid blocks of factories, many stories high, all connected by bridges. Large numbers of women are employed in the assembling, armature winding and clerical departments; men, in the production department. Apprentices are quite numerous in the mechanical department. They are required to work not only at machines, but also to attend school three afternoons a week. Piece-work prevails to a great extent. Considerable automatic machinery is in use.

The Western Electric Company has all the paternalistic features of a modern industrial corporation, with its company newspapers, hospital, welfare, employment, restaurant, club, band and other departments that aim to control and direct all employes' activities in the interests of the company primarily. These companies are small communities within themselves, with similar departmental and social institutions and administrations.

Employes are all subject to company regulation. Labor unionism is practically non-existent among them. Union members are employed only when absolutely necessary, and are discharged upon displaying signs of union activity. Factory regimentation is very much in evidence. According to employes, applicants for employment must fill a very minute and voluminous application. And when employes announce their intention to leave they are interviewed as to their reasons at great length by a corps of interviewers.

### Output Increases, But Wages?

The Hawthorne Works of the Western Electric Company are expanding, not only in personnel, but output also. In eleven months the number of employes jumped from 27,000 to more than 38,000. At the same time, output increased by nearly 50 per cent. That is, with considerably less than one-third increase in the number of employes the company's output jumped almost one-half. The company, when making this announcement, says nothing as to a corresponding increase in wages, or decrease in hours. It appears there was neither. The company's employes, in other words, get proportionately less wages the more they produce. This is typical of all the big corporations. The more they grow, the smaller, judging from the pay received, become, relatively, the individuals who constitute its working forces and contribute to that increase.

However, the Western Electric Company's advertisement in the Chicago Tribune of December 27, 1923, tells how one of its employes also plays the trumpet at night in the pit of the Chicago grand opera orchestra. Here's the interesting information in full:

### "Doubles in Brass

"Shop mechanic by day; opera trumpet player by night! Such is the unique daily career fol-

lowed by Joseph Gini, a member of Hawthorne's working force. Mr. Gini, who is an expert with the trumpet, has just begun his third season with the Chicago Opera Company orchestra. Hundreds of opera fans at the Works got their first glimpse of Mr. Gini in the orchestra pit recently when they attended the presentation of 'The Jewess'."

It is to be hoped that Mr. Gini doesn't have to have two jobs in order to earn enough to live decently. Apparently, he is an ambitious worker who finds employment with a big corporation detrimental to the artistic temperament, and is, accordingly, trying to get away from it.

The Chicago Tribune advertisement referred to above, has much information of another character, that will also interest the student of modern industrialism. It tells how the expansion in the manufacturing personnel has made it necessary for C. G. Stoll, the Works' Manager, to appoint two assistant Works' Managers, C. L. Rice and S. S. Holmes, respectively. And it goes on to say: "Mr. Rice, who was formerly Superintendent of Production, will be in charge of the Clerical, Production and Inspection branches, with 9,000 employes, and Mr. Holmes, who was General Superintendent of Installation, will direct the Operating and Technical branches, with 14,000 operatives.

"Mr. Rice has been with the Western Electric since 1902, while Mr. Holmes started with the company in 1900."

### Promotions Extraordinary

The latter is an unconscious bit of humor. While it is meant to spur the workers on with the hope of promotion, it shows that every 20 years, 37,000 employes have two chances of getting jobs as assistant Works' Managers. It also shows that regimentation is really a fact. These officials have more power than a major general in charge of an army corps. Their subordinates have no ownership or voice in the means or methods of their livelihood. They are ruled from above by an industrial hierarchy. Nevertheless, to hear Hoover tell it, we live in a land of individualism and democracy; and the big and growing corporation is its epitome.

The Western Electric Company advertises the fact that its company newspaper, The Western Electric World, is published for "the information of OUR employes and their families in Chicago—a group as large as the population of Aurora and Peoria combined"—or 120,000 persons all told.

This is further evidence of the new industrial reign inherent in modern industrialism.

The Western Electric Company's plants are not all located in Chicago. There are two in New York City, one on Hudson street at Houston, being comparatively new and among the very largest in the metropolis. A new $20,000,000 plant is being built at Kearney, N. J., and will eventually employ 30,000 workers.

Take another look at the Western Electric Company. It is, indeed, an interesting study in modern industrialism.

# Labor Turnover

THE fact that more than 9,000,000 workers change their jobs each year, is displeasing to the American Management Association. It costs the capitalists of the country $100 for each change, according to the association. And, of course, the workers are to blame; they are restless and are only happy when changing jobs frequently.

Why should they be otherwise? With work conditions bad and labor organization barred, what can the millions of workers do, but shift about from place to place as often as necessity demands and opportunity allows?

With work becoming more and more seasonal and spotty, workers have to hunt around for more than one job a year in which to make a good year's pay. And with no means of remedying evils what can they do but fly from them to others that they know not of—only to repeat the same performance over and over again?

Why complain of labor turnover? Why not consider the evils of bad management and union oppression?

# Where Big Industry Reigns

INDUSTRIAL unionism, in order to be successful, must enter the big industrial centers. To think it possible to emancipate the working class without an entrance into this field is to indulge in empty dreams.

With the farmers being driven into the cities and industrialism extending ever westward into growing communities, the necessity for industrial union agitation and organization where the big industries are, grows ever more imperative.

The advocates of industrial unionism, if they are ever to succeed, must follow the lines of big industry. They must recognize that where it lies there are also the battlegrounds of labor and the working class hosts that are to make industrial democracy a success. Hence it is there the greatest work must be done.

It will not do to say that industrial unionism has not succeeded there and to opine that the industrial workers are either dull or cowardly. It would be better still to examine into the defects of industrial unionism and, having found them, to revise it accordingly.

The workers in the big industries are practically unorganized. It's up to industrial unionism to organize them!

## CAUSE FOR MERRIMENT

Koretz was no "cheap skate." He went after and swindled "the brains of the community." And now the proletarians chortle out loud, for never did a mountebank, or three card man, take them in as easily as Koretz did these wise men,—these men of "unerring judgment and intuition," appointed by Divine Providence to lead and rob the working class.

# I Sing the Song of the Big City

## A RHAPSODY, A LA WALT WHITMAN

I SING the song of the big city, with its Wrigley Tower and Woolworth Building, raising its Gothic beauty high amid the clouds and illuminated at night by another radiance than that of the stars—the radiance of the electrical genius of Franklin, Edison and Steinmetz—of Man!—making a grandeur that, seen from afar, is an inspiration to things lofty and sublime; and is also a light that beckons not only the seamen on the great lake and great bay, but all other mortals to higher achievements still.

I sing the song of the big city, with its great dynamic throb and its great white way, its busy marts and streets, its temples of art, music and learning, its awakening reminders of the cavemen and lake dwellers with whom it first started on its journey of realization; its social life, wherein man congregates to labor, think, accomplish and enjoy; where boss' associations and labor unions thrive and the God of Property and Profit is most vile; and its colonies, wherein the variegated races of the world assemble and though diverging, tend ever to become as one; a big family, with all of its frailties and weaknesses, its conflicts and disputes and also its loves and possibilities of greatness.

I sing the song of the big city, with its railroads and subways, its darkening clouds of smoke and sparkling-white steam; its blue-electric sputtering and glare on the horizon in the ebony night; its clatter, rattle, bang and roar; its honk, honk! and auto speed maniacs and killings; its contrasts of progress and poverty, its luxury and destitution right next door and continuing to quite a few more doors beyond; its Bowerys and Madison streets; its mission bums, moochers, panhandlers, greaseballs, bootleggers and booze hounds; its gangsters, prostitutes, crooks and crime industry, not to mention its corrupt municipality and the big business that causes it; its myriads of workers, its producers of wealth, its industrious toilers, the salt of the earth, the cream of civilization, streaming from factories, and department stores, and office buildings, and plant yards, like giant ants coming from countless mole holes, overrunning the streets, cluttering up traffic, overloading the trolleys with crowds, sulphuric language and the need of ventilation; making of life one hell of a hustle and jostle, in which only the brawny and brutal get the seats and the women and children stand up, or hang on the straps, giving birth to a new race, as distinguished from the primates who hung by their tails in the primeval jungles.

I sing the song of the big city, where not only the congestion of population is big, but life itself is tremendous. Where man lives not in fear of nature's quakes, but the bombing plane that will wipe out his myriad greatness and make of his miles of blocks mounds of charred ruins and morgues of millions. Where terror is rampant, joy is piled high, and sorrow and suicide run deep. Where Capital is colossal and Labor more colossal still as, like another Atlas, it carries the burdens of both. Where the mettle of man is tried and

annealed in a roaring furnace of conflicting interests and only the weak and cowardly run away from its bewildering complexities and problems. Where the sun shines on shore roads and boulevards long and lovely, where, in parks, the verdure of the grass is often blotted out by the tired forms of homeless men; and the river's lapping, the lake's azure, and the bay's sweep, is music to the ears and a delight to sore eyes and sorer lives. Where the bridges tower, colossus-like, astride boroughs and suspend in geometrical symmetry, or open up like great giants yawning; while the passing boats below emit steam and energy that infuses one with a desire to do or be damned.

I sing the song of the big city, place of my birth, that often drives me, like a son disowned, from it; only to yearn to return to its devouring spaciousness. The idiocy of the country knows it not; it is the apotheosis of mental virility and intelligent restlessness. Monument to men descendant from the great Pyramid builders, it houses the master-constructors of the new society. Like a mammoth she-Pantagruel, it is pregnant with big problems pressing for solution. Its bosom rages with the conflict of classes; of the plutocrats against the masses; of the machine gun against the mind of the new era coming. Its brain divines the need for labor's realignment on industrial lines instead of political boundaries. And in its imagination there arises a vision of greater grandeur still—of a city truly beautiful, as beautiful as the poet's song and the innocence of childish laughter. A city in which man shall not only do and dare, but divine, without outraging his own noble mission and his own innermost happiness.

I sing the song of the big city, with all of its harsh realities and inspiring promises. It is a big song, as big as the city of which it sings.

J. E.

## A CITY INSTITUTION

**I. W. W. Headquarters in Minneapolis, Minn. On Nicollett Ave., one of the most prominent thoroughfares, it is conspicuous for its white enameled front and big literature display.**

# Two New Steel Branches

**The steel drive of the IWW is still going on with unabated vigor! Two new branches, at Canton, O. and Gary, Ind., respectively, have been recently chartered. The 440 delegates behind the drive are renewing their credentials and getting lined up for 1924 organization work in a way that is encouraging.**

**Though the business slump has hit the steel industry, the work of agitation and education goes steadily forward, as it is believed that, with resumption, organization will be further effected.**

**Organizing the steel industry is no child's play. It is a gigantic industry with gigantic resources. But after all it depends on its workers. And when they organize, no force can stop them.**

**The steel drive has had a good effect on metal and machinery organization generally. Machine centers as far east as Massachusetts have been affected and branches of 440 have been organized in that state also.**

**One of the most encouraging features of the steel drive is the spirit of co-operation which it has developed between the metal workers' industrial union and the marine transport workers' industrial union. This is especially the case in the cities on the Great Lakes, where most of the transportation is controlled by the Pittsburgh Steamship Co., a subsidiary of the U. S. Steel Corporation, Harry Coulby, president; and better known as "Harry Coulby's "tin stack navy."**

**Another encouraging development is seen in the awakened interest in Eastern organization. The East is the location of big industry; and the steel drive is the wedge the IWW is driving into the latter. With Pennsylvania possessing more population than the eleven states west of Nebraska and Wyoming, with Ohio and Illinois pushing Pennsylvania a close second as the seat of big industry, the importance of the steel drive to industrial unionism cannot be overrated.**

**It will have a good stimulating effect on textile organization in the Keystone state, that's sure; for the textilers there have already got the organization fever, as well as the metal workers and the marine transport workers have. They declare their intention to organize the textile industry, no matter what obstacles are thrown in their way.**

**That's the spirit that counts; and it's that spirit that the steel drive has stimulated some; and that its success will help to stimulate some more.**

**The last general convention of the IWW distinguished itself by endorsing and getting behind the steel drive. It was a very wise move, as it shows that the convention recognizes a key industry and its importance when it sees one.**

**Forward with the steel drive! Let the whole East get behind, co-operate with, and make the most of, it.**

# Eugene Barnett, Cartoonist

THIS cartoon was drawn by Eugene Barnett. He is one of the eight victims of the Centralia conspiracy now serving from 25 to 40 years in Walla Walla penitentiary, Washington. This conspiracy was concocted by the lumber interests of that state. It consists in raiding the IWW hall with a mob, headed by American Legionnaires, and then fastening the deaths that occurred in defense of that hall and its occupants on the defenders.

The story of the trial at Montesano is one of the blackest pages in American judicial history. Armed men filled the courtroom daily and threatened the jurors. The General Defense has affidavits from six jurors saying that they were frightened into convicting men they knew had acted within their legal rights. Three other jurors have made statements to the same effect.

In addition to Eugene Barnett, the other victims of the Centralia conspiracy incarcerated in Walla Walla, are James McInerny, Britt Smith, O. E. Bland, Ray Becker, John Lamb, Bert Bland and Loren Roberts.

Among the IWW members who were killed by the mob that attacked the IWW hall, was Wesley Everest, an overseas veteran. He was mistaken for the secretary in charge of the hall, Britt Smith, and so was subjected to a series of intermittent and savagely vindictive assaults. He was kicked and beaten, dragged behind an auto, UNSEXED, and then lynched from a bridge of the Chehalis River.

Amid it all, Wesley Everest defied his defilers, and though suffering a thousand bodily agonies, never permitted a groan to escape his tortured lips. A man of great nerve, courage and fortitude. Wesley Everest died as dies a hero, staunchly asserting, despite savage opposition, his cause and personality to the very end.

Loren Roberts, his fellow worker, has immortalized Wesley Everest's death in a song, "The Tragedy of The Sunset Trail." Workers are beginning to sing it wherever they meet to advance their class interests.

All honor to Wesley Everest!

**The above cartoon and incidents reflect the humor, intelligence and heroism of these eight lumber trust victims. Will you permit them to remain in durance vile without striving for their release, with all the energy that you can command?**

An American inventor predicts that in twenty years television will be in common use. Instead of seeing motion pictures some time afterward we shall be able to sit in a theater and actually see, as if on the spot, instead of many miles away, and at the same time hear.

# A Smoke Screen

THE war between the fundamentalists and the modernists in the denominational churches will not serve as a smoke screen to hide the fact that, no matter how much they may divide on dogma, both factions stand, nevertheless, for capitalism, with its exploitation of labor, wars, and menace to so-called civilization generally.

Man may have been divinely and spontaneously created, or he may have been evolved from the gorilla or the ape; that is a matter for churchmen to settle to their own satisfaction; with others it is no longer a mooted question. Nevertheless, capitalism is offensive to labor and to mankind generally, and until all churches get "hip" to that fact, and withdraw all support from the monstrosity, intelligent workmen and women will continue to regard them as being arrayed on the side of the worst forces in human life, and as such to be opposed as inimical to the progress and development of the race.

Intelligent workers do not care about the dogmatical basis of theology; they are interested in its capitalism, pure and simple. Until the churches call capitalism heretical and atheistic, they will find intelligent labor regarding them as a foe to labor and an enemy to the race. If they would cease to be suspect, the churches must cast out capitalism and the private property on which it is based.

# A Misplaced Award

By SAM HIGGINSON

INDUSTRIAL conditions peculiar to the Pacific Coast and the west generally, cause men of ambition and integrity to be thrown from time to time in company with a vicious and criminal element. The casually employed do exercise a considerable thrift in order to tide over the unemployed periods; hence are many times forced to hobo from job to job. In other words they wait at railroad terminals for a chance to catch a freight or passenger train and ride without paying their passage in many times hazardous and exposed positions.

At the outskirts of nearly all western cities can be seen a group of rough appearing men, including in their number boys still in their teens as well as gray-haired men and crippled adults. This is a conglomerate mass of human derelicts and from them many tales of hardship and exposure can be heard when time hangs heavy on their hands. Old refuse gathered from behind stores and along the tracks constitutes the fuel for their camp-fires, which many times are never unattended for weeks and weeks.

### A Movable Social Stratum

This human drift could be termed a movable social stratum for there is present certain ethics and morals as well as castes. Many pride themselves on their records for globe-trotting,—others on their successful evasion of capture by officials of the law and still others boast in a modest way of their seemingly sacrificing acts of philanthropy.

Of one thing these men are the very best informed along industrial and geographical lines of any group the writer has ever met. Instantly a question is asked regarding either a job or the location of a city and many ready answers are forthcoming. Authentic in every detail. Some going so far as to name the dividends paid by certain corporations and amounts invested and extent of projects.

Had the good fortune to listen in on a discussion between two members of a "Jungle gang" on the merits of awards for heroism. One of these men was able to offer an experience of his own for proof that awards for heroism are sometimes misplaced and his story follows:

"One windy night on Market Street in San Francisco I found myself in possession of a ravenous appetite and no means to appease it. A portly looking, well dressed man smoking a large cigar was looking in a jeweler's display window and when I approached him and related my plight he turned back the lapel of his top coat and displayed a badge and informed me that he would take me where I could have a regular boarding house. This was a disappointment to me but I had no redress. Along with many others I was sentenced the next morning to six months in prison.

### The Tobacco Smugglers

"This was for committing no crime and my company for the next six months was to be with hardened criminals. However, I watched my chances and became a model prisoner. This gave me a few liberties not accorded to the others; such as sleeping on a cot in the corridor and not being locked in a cell, as well as the occasional liberty to the freedom of the grounds.

"In this institution the use of tobacco was prohibited. That is, you were not allowed to have any tobacco in your possession. This is really a severe punishment to one who has become accustomed to its use. Many measures are used to smuggle both tobacco as well as the material for kindling fire into prisons. Attached to this prison was a rock-pile. Jocularly the activity of breaking rock is known as 'making little ones out of big ones.'

"This was one of the means of obtaining material for making fire. The flint-like rock was selected and pieces small enough to conceal about one's clothing were smuggled into our cells. By gathering lint from blankets, caps or other cloth and placing it in a partly open magazine we were ready to strike the flint together and thus generate a coal which, when blown upon by the mouth would glow and light the balance of the lint.

"This magazine would find its way from cell to cell with its warm message. It is presumed that some prisoner was surprised in the act of smoking and suddenly deposited his cigarette or lit pipe in the wooden ventilators that were a part of each cell. This prison was a firetrap to begin with, having been built a number of years ago and of wooden material.

"I was at this time allowed to sleep in the corridor of the north wing on a cot. Was awakened about ten o'clock on a Sunday night by a cry of fire in the corridor where I slept. I hastily spread the alarm to the main office for the warden to hurry and release these prisoners from their cells into the main corridors. In the meantime the place had become a madhouse of enraged humans. Imagine being locked in a cell in a burning building.

"At night each cell is given an iron cup with about a quart of water and some of the men in their fear and excitement had reached through the bars of their cells and hurled these iron cups at the windows; thus letting in a draft of air which only added to the intensity of the flames. When the warden arrived on the scene he commenced to unlock cells

# Open Shop's Cloven Hoofs

THE Open Shop advocates in Chicago are showing their cloven hoofs. While pretending to be the only protectors of American standards, they are really their underminers and destroyers. They deny the rights of organization to their employees, while organized themselves. They plan to subject the individual workers thus placed at their mercy to increased hours and lower scales of wages, accordingly, than are granted by closed shop employers in agreement with labor unions. And they call this Americanism, illustrating once more what crimes are committed in the name of liberty.

The proof of the foregoing in to be found in "Open Shop News," published by the Open Shop Employing Printers Association of Chicago in the interests of those in the Printing and Allied Trades in the Chicago Industrial Area who operate their shops on the American Plan. In its October issue this sheet contains the following:

**"Get Twelve Months Out of 1924.**

"Did it ever occur to you that some shops are only working eleven months of the year?

"Figure it out for yourself.

"Take a shop running on the 44-hour a week basis and another on the 48-hour basis.

"Compare them.

"44 is to 48 as 11 is to 12.

"It doesn't seem much when you think of the difference in terms of weeks.

"But cut one whole month off your production (and that is exactly what the 44-hour week does) and see just how much you lose.

"Is it really fair to yourself to throw away a whole month of production time?

"If you have a 44-hour shop—and consequently lose a month a year—can you compete with the fellow who produces during that extra month?

"Not much!

"You lose—and lose plenty.

"Another thing: the open shops could afford to close down entirely for one whole month and still be ahead of the game as compared to the closed shops which are restricted in their output by the unions.

"Make 1924 a TWELVE instead of an eleven-month year.

"Be fair to yourself and get the returns from your shop that are rightfully yours."

It will be noticed that nothing is said here about what is rightfully the individual worker's who must toil under these conditions.

He has no rights, except to be explolted as the interests of the open shop employers demand. That is, he is one lone individual, pitted against a combine formed to exploit him to the limit and to get 12 months' labor out of him, where other employers who permit him to combine ask only eleven.

And this pitting of the individual worker against a combination intent on increasing his hours of toil is called Americanism!

If this is Americanism, what has become of the American sense of fair play and decency? Of pitting men against one another on a basis of fairness?

But enough of this. What is necessary is for individual workers to realize what the open shop means and to revolt against it by organizing industrially. The open shop is a means of exploitation of the worst kind that uses Americanism as a disguise to hide its despicable purposes. Organize against it. Join the IWW Printers' and Publishers' Industrial Union and overthrow it.

---

right away but where there was no one suffering from the heat and where there was the least danger to him.

"I told him in as forcible terms as I could command that he should unlock the cells at the farther end of the corridor where the men were really suffering from the smoke and heat. I accompanied him to the other end of the corridor and after he had unlocked one cell he bolted.

"He was too slow. I had grabbed him by the shoulders in no gentle manner and in stern tone declared that if he did not unlock every cell there and then that he and I would burn with the prisoners. Under the threat of my ultimatum he did unlock every cell although we both suffered from the intense heat and smoke. This entire wing was destroyed before the fire department came on to the scene. The main building was saved.

"Now I was only a prisoner and no longer a human. The man I forced to act heroically was given a great deal of praise by the newspapers and the state later on decorated him with a medal. He wears this decoration to this day, but how he can feel proud of it is what beats me. I think you cannot help but agree that this was a misplaced award."

# Reversing Farm History

THE industro-financial policy of sacrificing agriculture to industry is reversing the trend of agricultural shipments. For the first time in history, the imports of agricultural products into the United States exceeded the exports during the year ending June 30, 1923, the department of agriculture announced recently.

This result was reached by a large increase in imports and a slight decrease in exports.

Imports, including forest products, for the year ending June 30, were valued at $2,315,000,000, while corresponding exports were set at $1,927,000,000.

Excluding forest products the imports were $1,903,000,000 and the exports $1,799,000,000.

# Live Wire

By ARTHUR PEEL

**THIS story is more fact than fiction. It is original and published here for the first time. Some will claim that it more properly belongs in a magazine of success, or a management magazine. But it is printed here instead, as it affords an interesting insight into the real nature of management.**

**According to current capitalist economics, management is something apart and separate from labor—a quality and function peculiar to capitalists only, and, therefore, entitling them to the greater share of production stolen from labor.**

**"Live Wire" explodes this fallacy. It makes vivid the fact that capitalist management is dependent on and inseparable from hired labor. True, this labor is high-salaried. It commands social respect on account of its responsibilities. That, however, does not alter its wage-exploited character. Managerial labor is hired and, what is more degrading, fired as is all other labor, just the same—that is, according to the degree of exploitation demanded by dividends and profit. And it is this labor that constitutes "Management" of the real capitalist variety.**

**Technicians of all kinds are beginning to recognize their real status under capitalism. And the day is coming when more of them will be arrayed, together with the Steinmetzs, Polakovs, Woodruffs, et. al., on the side of the great working class, where they belong. Even accountants are leaning our way; hence the appearance of this story here, instead of elsewhere.**

GEORGE ROBINS was no Conan Doyle, Carolyn Wells, or O. Henry; he was only a hard-boiled prosy accountant, with about as much imagination as a setting hen who has no idea of what she will hatch from the bunch of eggs she is sitting on—it may be ducks! When Robins extracted figures from his ledgers, journals and cash-books and mechanically made up statements every month, semi-annually, and annually, he never allowed his imagination an airing, no, not even to the extent of even wondering what the ingredients of his omelet would be. But for once in his life, he had managed to produce a story, which, though expressed only in figures and stereotyped phraseology, was of such absorbing interest that the cigar which Mr. Calvin Chilcott, the president of the Chilcott Wire and Cable Company, Incorporated, had tightly clipped between his teeth, had gone out. Now if there was one thing Calvin Chilcott abominated it was a burnt out cigar, therefore we are justified in assuming that there was something in Robins' statement which had hit him hard. But the strange thing was that Robins saw nothing unusual in the balance sheet which he had just presented to his chief.

Calvin Chilcott had just returned from an extended tour through Europe, where he had been seeking new markets for high grade wires and cables, such as are used by electric lighting and traction corporations. During his absence from the States, the general manager of the Chilcott Wire and Cable Company had died suddenly. When advised of this, Chilcott had cabled Harvey Simpson, the vice-president, to superintend things until his return. Harvey Simpson, an easy-going, sport-loving man, with an ample private income, took immediate steps to rid himself of the responsibility thus thrust upon him. He called a meeting of the chief executives of the Company and from their number he appointed a committee of five

to manage the affairs of the plant, pending the return of the president. Now, in this, he showed considerable wisdom, though we can hardly put this to his credit, for, hating responsibility of any description, Harvey Simpson had taken the easiest way out and it was not from any quality of keen foresight, or insight, that he had placed the conduct of the business in the hands of better men than himself.

This committee consisted of Barwick Evans, the sales manager; Henry Floyd, purchasing agent; Warren Stokes, production manager; Alfred Burstall, secretary-treasurer; and George Robins, chief accountant. Their administration was now on trial, and had they been witnesses of the storm clouds gathering on the face of the chief, they would not have felt easy.

Calvin Chilcott was frankly puzzled. Out of the mass of figures there loomed one item which eclipsed everything else in the statement—"Inventory . . . . . $1,550,948.80." There was a sharp "buzz" in the chief accountant's office, and Robins, who had learned to interpret the moods of the Chief by the length of his "buzz," knew, before he reached the president's office, that the temperature was rising.

When Robins entered the private office he found Mr. Chilcott violently chewing the end of the still dead cigar, while his eyes were burning holes in the sheet before him.

"Robins," he said, looking up sharply," what the devil does this mean?"

"What does what mean?" replied the unperturbed accountant with the familiarity of an old and privileged servant of the Company.

"Why, this million and half dollars, of course! There's nothing else of interest to me on this balance sheet compared with **that!**" the chief answered impatiently.

The accountant shrugged his shoulders, as he said, "It means that we have that much money tied up in raw material, work in process, and finished product."

"Don't be a d——— fool, Robins," the irritated man replied. "Though I am no accountant, I know **that** much, I hope. What I want to know is, have we overbought on raw material? Has there been over-production in the factory? Or, is the stock not moving? Now then, which is it?"

Now George Robins was an accountant—a good accountant, we may add, but, he was only an accountant in the most limited meaning of the word. Had he been a bigger man, he would have considered it his business to make himself acquainted with many things, which, though not strictly in his province as accountant, were nevertheless vitally related to his records. In other words, instead of being a keeper of records and a figure juggler, only, he might have been an advisor and consultant—a sort of human barometer, we might say. By relating his knowledge of what was reflected on the books of the company, to a knowledge which he might have gained of conditions in the factory, and in the stores, he would have been the one man in the factory to issue a note of warning at the right moment. As it was, he was unable to give a direct reply to the president's inquiry. He knew that he could dig it out from the books, but Jackson was the factory ledger keeper, and Robins had never considered it necessary to make himself familiar with the details of Jackson's ledger, especially as Jackson's trial balance was always in order. This he explained to Mr. Chilcott.

"Then get it!" snapped the chief. "Break the darned thing up! Pull it to pieces! I must know what it means! Between the bunch of you, you are going to ruin the concern!"

With that utter disregard for detail which is characteristic of so many big executives, Calvin Chilcott had little idea, if any, of the system by which the accounts of the company were being kept. Had he possessed this knowledge it is just probable that George Robins would not have been filling the position of chief accountant of the Chilcott Wire and Cable Company.

Robins left the president's office and went at once to Jackson's desk.

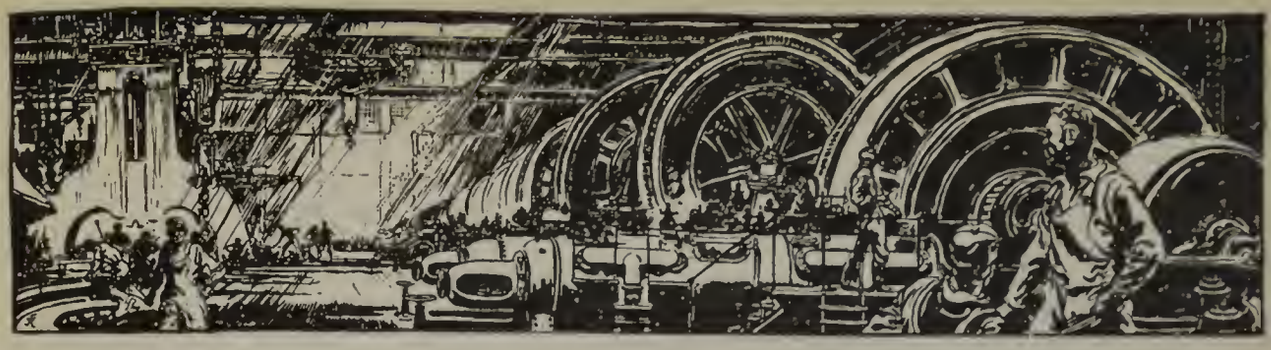
"Give me a copy of your last trial balance, Joe. The chief's all up in the air over the amount of inventory we are showing."

Jackson took a private file from a drawer in his desk and took off a copy of his last trial balance.

"I'll get the girl to type you a copy," he said, as he handed it over to his stenographer.

"Alright, send it in to my office as soon as possible," answered Robins.

Joe Jackson was a young man of some imagination, and, moreover, he had obtained his experience in a different school to that in which Robins, his chief, was trained. Robins had been with the firm for thirty years, and saw things only from one angle, which happened to be the slant which was very common to bookkeepers of a generation ago, but which modern acountants have discarded as being too limited, thereby raising their vocation to the dignity of a profession, and vastly increasing their efficiency and value. It was not surprising therefore that Jackson was entirely out of sympathy with his chief's ideas and ideals, which had created an artificial barrier between the accounting department and other departments. Unostentatiously, and without a sacrifice of loyalty to the chief accountant, Jackson had determined that he would do his part towards breaking down this wall of division, which, while it excluded the interests of other branches, prevented those on the inner side from obtaining an intelligent view of the operations of those branches which, with the accounting department, made an industrial whole. Because he had adopted this policy, Jackson knew a whole lot more about his work and the operations of the factory than his chief had any idea of; but



he was too wise a man to give his knowledge away in a quarter where he knew it would not be appreciated. He was just waiting patiently for an opportunity of capitalizing his information.

When Robins had asked for his trial balance, he knew that something interesting was going to happen, and he had a shrewd suspicion as to the principals who would be involved.

* * *

Five men in addition to the president, sat around the handsome board table in Mr Chilcott's office. These were the men appointed by Harvey Simpson to conduct the affairs of the business during the absence of the president.

Calvin Chilcott lit another cigar, tilted himself back in his chair, then started a rapid fire of questions, addressing each man in turn. Jackson's trial balance was before him, showing the inventory under three captions: "Raw material," "Work in Process," and "Finished product." This was supported by schedules in which the detailed values were shown in support of the main statement.

While the chief was putting his executives through a kind of "third degree" examination, there was a tap on the door. His secretary answered it and returned a second later with a neatly bound set of charts, graphs and curves, which she laid on the table before the president.

"What's this?" he asked sharply.

"Mr. Jackson, the cost accountant, asked me to give it to you. I thought probably you had asked for it."

"Don't know anything about it!" and he pushed the charts aside impatiently, but in so doing he inadvertently pulled back the top cover, and a neatly printed title caught his eye—"Comparative chart of Sales and Production for the twelve months ending September 30th, 1921." He was interested and studied the chart for several seconds, then turning to Robins, he said, "Why haven't you shown me these before?"

Robins looked blankly at his chief. "First time I've seen them."

"Humph!" grunted Chilcott, "the boy's got ideas."

"Now," he continued, "I see from this chart, Evans, that sales have been steadily decreasing for the past six months. Of course, we knew that, but somehow I was not able to visualize it in the manner in which it is shown here. I notice that the ratio of decrease has increased every month since May. Worse than I thought!"

No comment was offered to this.

Turning to another chart, he looked up suddenly and again addressing the sales manager, said:

"How do expenses in your department this month, compare with April's expense?"

Evans hesitated, then replied:

"I can't give you actual figures, sir, but we have two men less on the road than we had in April: that would mean a saving of approximately $1,800 a month."

The president looked again at the chart before him which was titled "Comparative departmental expenditure for twelve months ending September 30th, 1921," then said:

"I can give you some information which may interest you Mr. Evans; your expenditure has actually increased. By that I mean that it cost you $7,000 to sell $100,000, as against $9,000 to sell $160,000 in April. Now don't think that I am criticizing your administration, there may be a legitimate reason for this, but what I want to point out is that you men should have this information at your finger tips."

"We never knew it was available," answered the sales manager.

"Then you should have asked for it!" was the laconic reply.

Calvin Chilcott turned to another sheet, then his face became grave. Looking up from the chart, he said:

"It appears, Mr. Stokes, that notwithstanding the unsatisfactory state of the market, you have not cut down production, with the result that we are seriously overstocked. The market is still falling and the Lord only knows where it will end."

There was a painful silence in the room. Evans and Floyd looked relieved, while Robins was as unperturbed as ever. Whatever happened, it wasn't **his** funeral!

Then the president added, "Of course, Stokes, I can't judge you on this chart alone, it may be all wrong. What do you think about it yourself?"

"There is no mistake, Mr. Chilcott, the chart is quite correct. I saw it a few days ago and told Jackson that his figures agreed with mine."

The chief rose, saying as he did so, "Thank you, gentlemen. I will not detain you longer, except Mr. Stokes who must have a lot to explain."

After a lapse of half-an-hour, Warren Stokes, the production manager came out of the president's office, looking serious, but showing no evidence of nervousness or fear.

* * *

That night two young men sat in the office of the production manager, busily engaged on various statements and books. A junior was pounding away on an adding machine while yards of paper ticked off the roller as he worked.

"Joe," said Warren Stokes (for it was he and Jackson who were holding a night session), "our great chance has come, and we have got to show the old man that we are bigger than our jobs. I could not defend myself this afternoon because the decision of the union is not known yet; and as to the other matter about which I spoke to you, I am still without confirmation. In these circumstances I just had to make the best of a bad job and asked him to defer taking any action until tomorrow night. But say, boy, it's a marvel he didn't fire me on the spot."

"Well, as you know, Mr. Stokes, I'm with you, but I'm darned if I know how you get in on all this dope. Our competitors would give thousands to know what you know."

Warren laughed, as he said, "Because, I'm like you, Joe; I go after it and don't wait till it comes to me—too late!"

Jackson looked at Stokes admiringly; he was almost a boy in appearance, though five years Joe's senior, which would make him thirty-one. His genial disposition and consideration had won for him the goodwill and respect of all his colleagues, but one, though he was a newcomer in the firm.

"You took some risk in keeping up production when the market was dead, but by Jove! I believe you'll make the grade," Joe said with enthusiasm.

The next morning at seven o'clock, a sinister figure appeared at the factory gates; it was that of the "walking boss." At nine o'clock, a committee headed by the walking boss presented itself at the office of the president. After waiting for a quarter of an hour, they were ushered into the office of "the old man."

Half an hour later the door opened and the committee emerged; some serious, others visibly angered. Inside the office Chilcott strode up and down chewing viciously his unlit cigar. Then stopping suddenly he pressed a button at the side of his desk. A few seconds passed and then a tap at the door.

"Come in!"

It was the factory manager, John Everett.

"Close down at noon, today, John, and have your payrolls made up at once."

John Everett looked at his chief, at first too dazed to make a remark, then finally said: "Is it a lock-out, sir?!"

"Yes!" answered Chilcott, shortly. Then, as if realizing that some further explanation was necessary, he added:

"If we wait, the men themselves will call a strike by the end of the week. I am going to beat them at their own game, that's all."

As soon as Everett had left the office, the president picked up the inter-departmental phone on his desk and connected with Robins.

"Everett will have the payrolls ready by noon. Get the money and pay off today."

Without waiting for any reply or comment, he hung up the phone, only to pick it up almost immediately and connect with the factory manager.

"Forgot to tell you to tell Tom to bank the fires at noon. We'll teach 'em a lesson and will close down for several days."

Quickly the news spread that the old man was going to fight. Among the executives the general opinion was that the advantage was all on the side of the Company, since they were carrying such large stocks of finished wire and cable which they had very little chance of unloading under the existing state of the market. But two men were silent . . . and watchful. One was busy checking statements which his stenographer was turning over to him every few minutes, her fingers flying over the keyboard in her race with time. The other was sitting at his desk waiting . . waiting anxiously for the telephone bell to ring.

There it was! Eagerly Warren Stokes picked up the receiver:

"Hello! . . Good! . . . . Thanks, old man. Goodbye!"

That was all, but the clouds which had flitted across his usually bright face, were effectually dispersed by the message he had just taken.

He picked up the phone again and connected with the sales manager's office.

"Hello, Evans! Are you alone? . . No? .Well, I must see you alone, at once. I wonder if you would mind coming over to my office? . .Thanks."

The feeling between Stokes and Evans had never been cordial. There existed between them that peculiar mental antagonism which is often to be found with men of strong personality. When Evans walked into the office of the production manager, it was evident that he was not in the best of humor.

Stokes motioned him to a chair, and producing from his desk a box of cigars, he offered it to Barwick Evans, then without any preliminary skirmishing he launched immediately into the matter which had made it necessary for him to arrange the interview.

"Evans, you and I have not been what one might call, a sympathetic team. Perhaps the fault is as much mine as yours, but somehow we haven't hit it off together as well as might have been desired in the interests of the business. However, we have now arrived at a sort of crisis in the old firm and I want to turn over to you some information which I have every hope and reason for believing, will save the situation. There is no particular reason why I should give this information to you except this, that you are sales manager, while I am production manager, but I have been rooting round picking up some dope which should come to you, only you

weren't alive to it. I don't want to hurt your feelings, but that's the plain truth.

"You know what happened yesterday in the old man's room," he continued; "you other fellows slipped from under while I had to take all that was coming. Now I could probably square myself at once with the old man, by going to him with the news which I am about to give to you, but this would be against my principle, and moreover would not be sufficient justification for my alleged bad judgment in not cutting down production when things were looking bad: I have other strings to my bow."

He was silent for a few seconds, while Evans drew hard at his cigar, ill at ease.

Warren Stokes was about to continue when the door softly opened and Jackson stood on the threshold.

"I'm sorry, I thought you were alone, Mr. Stokes."

"It's alright, Joe. Excuse me a minute, Mr. Evans."

Jackson gave him a sheaf of neatly typed statements and some more graphs and curves, remarking as he did so, "I'll swear by these, if necessary." He then left the two men alone.

* * *

Calvin Chilcott was dictating rapidly to his stenographer when someone knocked at the door of his private office.

"Hello! Come in!" he shouted.

The door opened and Warren Stokes and Barwick Evans walked in.

"Can't see you now, gentlemen, too busy. See you in an hour . . I'll ring for you."

Evans made a move as if to leave, but the production manager checked him, as he said:

"Mr. Chilcott, I'm afraid you **must** see us now. What we have to say is of greater importance than anything else you may have on hand at this moment."

The president looked up and stared at Stokes in amazement. "What the devil . . . . !" he commenced but Warren interrupted him.

"Chief, we're responsible officials of the Com pany, and we wouldn't be here now if it wasn't for the fact that we have some information which vi tally concerns the business, and therefore—you."

Calvin Chilcott was struggling with himself; he hated to be bearded in this way, yet something in the young man's attitude impressed him.

"Get it out, then, and be quick about it!"

"Thank you, sir, Mr. Evans will tell you what it is."

"Mr. Chilcott, I have just heard that China is in the market for large quantities of copper wire and cable and is getting bids in this country. The terms are for immediate shipment and we are the only people in the States with the stock on hand."

"How much will they take?" inquired the president.

"More than seventy-five per cent of our stock," replied the sales manager.

Chilcott looked at him keenly, then said:

"Where did you get this information?"

Evans hesitated, but only for a second, then said:

"Mr. Stokes has been following the thing for some time. He made a valuable connection wi'h the Chinese Trade commissioner in Washington, and from what he tells me, the order is practically ours. He took me into his confidence this morning. If we can put through this deal, Mr. Chilcott, here is the man to whom the firm will be indebted."

Calvin Chilcott looked from one to the other—there was something about the whole business that puzzled him—then addressing Stokes, he said:

"Is this why you have been accumulating a large stock?"

"It is one reason, sir, but there is another. I knew three months ago that a strike would be called; I knew also that the cost of production was as low now as it would ever be, and with an increase in labor cost and the prevailing market price of wire it would just mean that we should be out of luck. I assumed therefore (and my assumption, sir, was correct) that you would refuse the demands of the union. Relating this to information which, as Mr. Evans has told you, I secured on the China proposition, I thought it worth while to take the risk and increase the stock while I could, especially when I discovered that all our serious competitors

were reducing their stock as rapidly as possible."

The president stared at Warren Stokes, who returned his gaze unflinchingly. After a long pause Mr. Chilcott said:

"Mr. Stokes, we need a general manager. The job is yours."

Warren flushed slightly for this was beyond his expectations. For several seconds he didn't know that the president was standing before him with an outstretched hand; as soon as he noticed this, he grasped it, but could say nothing.

"Well, what do you say, my boy?" Chilcott's tone was kindly and fatherly.

"Pardon me, sir, but this took my breath away. I deeply appreciate the confidence which you are placing in me and do not think you will have any cause to regret it."

"That's alright, I nearly fired you yesterday!"

"By the way," continued the chief, "this young man Jackson seems particularly on to his job; do you think we ought to encourage him?"

"We owe a good deal to him, sir, already, and I hope you will recognize his value in some way which will enable him to still further increase his scope of activity here."

When Evans and Stokes were outside, the sales manager extended his hand to Warren and said:

"Stokes, no congratulations which you will receive will be more sincere than mine. You have taught me a great lesson and I thank you. From now on you may count on me as your most loyal supporter."

* * *

Mr. Chilcott picked up the phone and connected with the chief accountants' office. "Come to my office, Robins. I want to have a chat with you."

George Robins sat opposite his chief, and for once he was really perturbed. Mr. Chilcott was talking quietly, calmly, and sympathetically!

"Yes, we older men have got to recognize that there are some things that we don't know; the younger generation are ahead of us in many ways. Now there's Stokes, a young man, who has saved the firm at a crucial time—saved it by what you and I would say was the most foolhardy risk any man in his position could take. But the boy was right, and he had nerve and common-sense. Then there's your man Jackson; he has the faculty of being so darned intelligently inquisitive that he goes ahead and visualizes everything that is going on in the factory in a manner which has proved of considerable value. I am going to appoint him chief accountant in your place."

Robins' face went ashen gray, and in a moment, he had aged ten years.

"After thirty years!" he said weakly.

Mr. Chilcott smiled.

"Yes, after thirty years' good faithful service, Robins, you are entitled to a soft job, so I am going to give you Burstall's job. He is resigning next month. I think you will make a good secretary-treasurer."

The cloud passed from the face of Robins. He was a philosopher in his way and notwithstanding the veiled impeachment in the decision of the president, he accepted it with good grace.

That evening two young men accompanied by their young wives, dined at the most exclusive hotel in the city. It was their celebration of another step up the ladder of success.

Stokes was standing with an uplifted glass of ginger-ale.

"To our wives!" he said, "who have never begrudged us the hours we have spent preparing for this day!"

Solemnly the two young men drained their glasses.

Evelyn Stokes filled her glass and that of her companion, Kate Jackson, then lifting her glass, she said:

"To our husbands! the best husbands in the world. God bless them!"

# The "Newsie" Critic

By JEAN WADSWORTH BROWN

BEAUTIFULL Snow?" Who doped out dat bunk?
Some misguided "coke" "nut"? Or jist a plain drunk?
Or mebby de coal man, went Ravin (like Poe),
When he saw de first signs, of de "beatifull" snow.
"Beautifull" snow? Why de mut what sprung dat,
Had a tankfull of doodlebugs under his hat,
For if he wasnt "dippy" he surely would know,
**There aint no such ting,** as **"beautifull"** snow.

Dye spose dat chap ever bunked in a box—
Wit de " b-e-a-u-t-i-f-u-l-l " snow **sneaking in thro his socks,**
Or snoozed on de gratin around de bake shops,
With de "beautifull" snow frappay on his chops?
Oh it may be allright for the upholstered jay,
What rides in his Limoseen, on de White Way,
But take it from me Bill, **its us kids dat know,**
And its hell, to be shiverin, **out in** de snow!

"Beautifull" snow? Well take it from me,
Dere aint nuthin to it, as what I kin see,
An it aint de fifth avenoo stiffs as should know,
But us kids—what are shiverin—**out in de snow!**
From early each mornin till way late at night,
We peddle our papes, and yell wit our might,
While de wind from de Battery's fifteen below,
An de holes in our "kicks" welcome—" b-e-a-u-t-i-f-u-l-l " snow.

Oh it may be allright for de upholstered jay,
What loafs in his Limoseen, up on Broadway,
But take it from me Bill, its us kids dat know,
An dere aint no such ting, as "beautifull" snow!

# Memorials and Mellons

By EDWARD D. LLOYD.

ARTHUR Brisbane declares, "Moving picture people, among other qualities include speed and generosity." The occasion which caused the remark was a paragraph in his daily column dealing with the Harding Memorial Fund.

Chas. M. Schwab, who is so considerate of the working class that labor in his steel mills is paid forty-one cents per hour, was the guest at a luncheon engineered by Mrs. Zukor for the purpose of getting the moving picture magnates together so "Charlie" could beg them, or to quote Mr. Brisbane again, "To ask about a little contribution for the Harding Memorial Fund."

He was very modest about the "little contribution" all he asked for was ten thousand dollars. ($10,000.00). He stated he wanted another ten thousand dollars from the New York newspapers. W. R. Hearst had already contributed $1,500.00, which left $8,500.00 to be raised by the other papers.

Schwab was very careful to inform them that **Secretary of the Treasury Mellon, the late President's friend, was deeply interested in the Harding memorial, and added that American business men should be glad to oblige Mr. Mellon.**

**Ten thousand dollars was subscribed while Mr. Schwab was talking.**

Let us see. Who is this Charles M. Schwab. Is he a worker in the employ of the steel corporation, or is he part of it? And who is this Mrs. Zukor person who organized this "come across" luncheon, is she one of the "supes" or maids at Hollywood, or is she some kin to Adolph Zukor, the millionaire "movie" magnate?

And W. R. Hearst, that name sounds familiar. Can it be Wm. Randolph, the millionaire publisher?

And just why was Charlie so careful to inform these film magnates that "business men should be glad to oblige Mr. Mellon." Who, what, how, when and why is Mellon and what can he do for them?

**Mr. Mellon is father of the Mellon-Bill or so-called Taxation-Plan.**

Remember that little song of a few years ago, "Every little movement has a meaning all its own?"

Senator Simeon D. Fess has also made public extracts from a letter sent out by Malcolm Jennings of Columbus, Ohio. Mr. Jennings is the executive secretary of the Ohio Manufacturers' Association. This letter was sent out to the members of his organization on January 1st, 1924, "instructing members what must be done."

Jennings reminded the Ohio Manufacturers that in the event of the Buckeye Congressmen not complying with the wishes of the manufacturers that "we have a chance to displace all of them but the Senators this year if they are not amendable to reason."

In his instructions to the members of the Association as to what must be done, Jennings suggests "Whatever your views are upon the need of retrenchment and tax-revision downward, your Congressman is entitled to them. But he will pay no attention to you unless you make him understand you are in earnest about it, and will hold him to account and get others to help you do it. He pays no attention to stereotyped letters. Put your thoughts in your own words, see him personally if possible, and also write him and get others to do so."

A rumor was current in Cleveland, O., that the Fisher Body Co. had their employees sign a petition to Congress urging the passage of this bill. It was a case of the employees signing this petition or losing their jobs. The job losing part was denied by the Fisher Co. through the columns of the Cleveland Press, and they stated that their employees signed it voluntarily. "Nuff said."

The Mellon-Bill would be a nice little "Melon" for "Big Business" to cut. Mr. B. C. Forbes in his Finance and Business Column tells us that nothing would help business as the adoption of the Mellon plan for lowering taxes. It would increase the demand for labor, and not less important, this country's ability to compete in the markets of the world with reviving European nations would be fortified."

Yet, after howling for lower taxation for the capitalists, (you will notice labor is not mentioned) he goes on to say: "Judging by the increases in dividend payments, the gain in railroad profits, the security markets condition, **the general wage standard in this country is not ruinously high.**"

Mr. Forbes does not state what the "general wage standard" is. Perhaps if he omits the "salaries" of the ex-dollar-per-year men, and strikes an average from the **ordinary workers wages,** (for instance, the forty-one cents per hour that the Otis Steel Co. pays its "common" labor in Cleveland) he will be of the opinion that the "general wage standard" is, of a truth, "not dangerously high" but "damned low."

Genial Charlie in his address to the film magnates

never once mentioned the working class, oh no, it was the "business men" who should be glad to "oblige" Mr. Mellon.

Business will oblige Mr. Mellon. Big business, like the Pennsylvania Railroad, which recently gave their "loyal" employees a ten-day lay-off at Altoona, Pa., **and at the same time placed on the pay-roll nineteen mechanics from England on the pretence that there was some "delicate" work to do, which the "loyalists" were incapable of doing.**

These imported men were working while the loyalists—I have heard them called scabs—were walking the streets just at the time they were figuring on a full pay envelope for Christmas.

Let us now sing the second spasm of, "Every Little Movement, Etc."

Yes! Big business especially, will be glad to "oblige Mr. Mellon." Every effort will be put forth to turn more money into the coffers of the money kings, but no effort will be made to relieve the sufferings of the poor slaves who are slowly pouring out their hearts' blood that these "business men" may accumulate millions.

No, nothing is done for them by "business" but let a worker try to improve the conditions of his class, and what happens? Those union men just released from the penitentiary at Leavenworth, Kan., have a story to tell, a story that chills your heart's blood. Men who were brutally assaulted for no other reason except that they were members of the Industrial Workers of the World. Men beaten by Negro convicts at the command of the Warden. Men were confined in isolation **without underclothing** and contracted T. B., and were then denied medical attention. **And Fellow Worker Magon who died in his cell at Leavenworth, he was a worker, not a member of "Big Business."**

C. W. Morse of Chicago, The Fisher Bros. of Peoria, Ill., Judge McGannon of Cleveland, O., they represent "Business". Did they die in prison? Well, you read "your" papers, so it is unnecessary for me to make any further comment.

The Harding memorial will be built, the business men will see to that.

The Schwabs, Hearsts, Zukors, Rockefellers and a few others will "oblige" Mr. Mellon, **but in the memory of the workers, Mr. Harding will not require any monument, as "we never forget."**

# The Hall of Dreams

A Fable

By HENRY GEORGE WEISS

IN the Hall of Dreams mused a maiden with a brow of alabaster and eyes of unswerving blue. Her raiment was of fire and her hair of unravelled rope; her feet curiously small, yet shod with brass. She had in one hand a scroll and in the other a scourge.

And after the maiden had mused a while, she came before the throne of the Master of Dreams and spoke thus:

"The time is on me for expression. Long have I pondered and now must I speak. Open for me the door of life; let me go."

But the Master who is beyond description reasoned with her, saying:

"Thy hair is rope and thy feet are brass; thine eyes without mercy and thy brow without seam; in either hand carriest thou the Book of Doom and the Scourge of Shame. Daughter, hast thou pondered well?"

And the maiden answered:

"My hair is rope to bind and hang; my feet brass to crush and bruise; mine eyes blue with the blue of the eternal skies. I point to perfection—wherefore should there be seams on my brow? Is my book the doom of the many? or my scourge aught save the spur of the rider? Therefore, Master, let me go."

So the Indescribable One opened for her the door of life and she went forth.

In a great city dwelt a young man. He was not a working man. His hands were soft and white and his linen of the finest, his clothes of the best. All the days of his life he had lived by the sweat of others in luxury and idleness.

Then one day fell on him an unrest.

Something was tugging at his brain, asking him questions.

He sought to overcome this strange malady with much eating, drinking and dancing, but it would not be banished. Always he thought, "Why should I be beyond want with millions starving? What have I done to deserve all this?" He spoke to his friends on the subject, and they tapped their heads one to another, voting him queer.

Finally the man gave up his old friends and took to walking much among the people who, because of his past life, regarded him with suspicion. He became a champion of the poor, poorly received by the masses and execrated by his old friends who wondered what axe he had to grind.

Years passed. The man lost his wealth. His social position went. Often he asked himself why he was such a fool, but the something in him drove him on. He was hounded and harried, driven from the land of his birth. Prejudices were ropes to bind him; lies were brass feet to bruise and to shatter him. Doomed to exile and scourged as a menace he died in poverty. But the book to which he gave his life did not die. It carried his name as a symbol of hope to down-trodden millions. The philosophy which it breathed became the standard of truth around which liberty rallied. The despised outcast became the intellectual light of the world.

Then in the Hall of Dreams knelt a maiden before the Master.

"Is it well, O Lord?" she asked.

And the Indescribable One, looking with unfathomable eyes into the future, replied:

"It is well."

# A Migratory Worker's Diary

By JAMES FOY

THE following is a year's diary which I have kept and whieh I believe is typieal of the average migratory worker. It is absolutely truthful. I give reasons for leaving jobs, together with loeation and names of employers.

1—Prosser, Farmer, Blaekwell, Okla.—Thirteen days, $1 per day and board and room. Quit; wages too low.

2—Bates & Rogers, Contraetors; exeavating for new railroad at Matfield Green, Kansas.—Four and a half days at $3.25 for 10 hours; $1.05 per day for board and room. Fired for not working on Sunday. Balanee, $9.37.

3—Roberts Brothers, Contraetors laying steel at Eldorado, Kansas. Eight days at $3.25 for 10 hours; 10 days board and room at $1.05 per day. Fired; worked too slow. Balanee, $15.50.

4—Powers & Jergens, Contraetors. Mucking, team outfit, 10 1-2 days; $4 for 10 hours; 11 days board and room at $1.05 per day. Cassidy, Kans. Laid off. Balance, $26.25.

5—Oklahoma Pipe Line Co., Newkirk, Oklahoma. Twenty-eight days, $4 per 9 hours; 33 days bed and board at $1.50 per day. Finished the job. Balance, $62.50.

6—Roberts Bros., Contraetors; track work. Lake Mills, Iowa. Eleven and one-half days; $4.25 per 10 hours; 16 days board and bed at $1.20 per days. Strike; blaek-balled. Balanee, $22.25.

7—Robert Bros., Contractors. Custer, Mont. Relaying steel. $4 per 10 hours; 6 days board and bed. Strike for shorter hours and more pay. Balanee, $13.60.

8—Thomas Donlan Lumber Co., Paradise, Mont. One day. $3.80 per 8 hours. Board and bed, $1,25 per day. Quit to keep them from taking $4 for tax.

9—Campbell & MeGrines. Ostrander, Wash. Labor, building new logging road. Three days, $4.50 per 8 hours. Four days bed and board at $1.20 per day. Fired for being IWW. Balanee, $7.50.

10—C. Lind, Auburn, Wash. Farmer and state senator. Pitehing hay. Four and a half days, $4.50 per 9 hours. Board and bed in town. $1.50 per day. Got through. Balanee, $12.75.

11—Clarence Dirks, Walla Walla, Wash. Farmer, making hay. Four dollars and board per 10 hours. Three and a half days work. Done. Balanee, $13.00.

12—Mose Burgman, Walla Walla, Wash. Staeking hay. Five days work; $4 yer 10 hours, board and bed. Done. Balanee, $20.00.

13—R. E. Burrows, Rulo. Wash. Hauling saeked wheat; $5 per 10 hours and board and bed. Quit. Wanted me to work more hours per day. 12 days work. Balance, $60.00.

14—John Turnbrow, Palouse, Wash. Threshing two and three-quarter days. $4 sun to sun. Quit. Bad eonditions and long hours. Balanee, $11.00.

15—John Vie, Harrington, Wash. Working with eombination harvester. Nine and one-half days, $6 per 10 hours and board and bed. Finished job. Balanee, $57.00.

16—Henry Wetter, Roeklyn, Wash. Harvest field. $5 per 10 hours. Job done. 14 days work. Balanee, $70.00.

17—Bonnel and Savage Paving Co., Longview, Wash., five and one-half days, $4.50 per 8 hours. $1.20 board and bed. Insanitary living conditions. Balanee, $15.25.

18—Morrison and Knutsen. Contraetors. Wetherby, Ore. Labor 3 days $3.82 1-2 per 9 hours; $1.20 board and bed. Quit; rotten eamp, low pay. Balanee $5.47.

19—Ranquist, farmer, Blackfoot, Idaho. Pieking spuds, some by sack and by day. This man is in the habit of beating his labor bills. Did not know this until I asked for some eash. Had a hard time getting this money. Balanee, $17.55.

20—Leroy Bevard, Idaho Falls, Idaho. Working at the spuds, pieking and grading; 17 days Amount, $54.78 and bed and board. Balanee, $54.78.

21—Calipatria, Calif. Cushing, Contractor, Paving streets, driving Fresno 17 days. $4.50 per 8 hours. It costs $1.50 per day to eat in restaurant, poor food at that. $3.50 per week for room, so that makes $2 per day board and bed. 18 days. Balance, $40.00.

I will not get more than 4 days more work at the most this year so you will have a complete diary for this year. I have these jobs all itemized in my day book. I thought it will be suffieient for information.

I have talked with a good many fellow workers and all seem to think this would interest Pioneer readers.

It is raining today and so monotonous here, so to have something to do, got busy on this. I have never written for a paper or magazine in my life so, of eourse, I did not try to write a story but if I eould express myself with the pencil I eould, I believe, write a very interesting and truthful story about this.

These figures amount to $549.82. There has been a good deal of argument about what a stiff makes going through the eountry, so here you have the faets.

I have been of the migratory elan for twenty years and believe a good many fellow workers make moves similar to these.

Calipatria, Calif.

# Chinese Seamen Rally to I. W. W.

**Threaten Economic Action In Resentment Against California Persecutions.**

THE Chinese Seamen's Union is a powerful organization. In 1922 it won a three months' strike that tied up the ports of China, abolished the 14-hour day and obtained large wage increases.

The Chinese Seamen's Union has sent the following letter to American capitalists and newspapers, especially in San Francisco, where its publication has created a sensation:

**Sir:—The members of the Chinese Seamen's Union have learned with no little astonishment and dismay that nearly one hundred American workingmen are in prison on account of the California Criminal Syndicalist Law and that the only evidence presented against them was membership in an organization known as the "Industrial Workers of the World." We of the Chinese Seamen's Union have always looked upon the United States as a free and desirable country, and we are very sorry to hear it alleged that our fellow workingmen in the United States are being subjected to such persecution, unparalleled even in the history of China.**

**If there is reason or justice in this state of affairs, please let us know so that we can present the case to our members. Unless a reply is received from you in a reasonable length of time, the membership of the Chinese Seamen's Union will understand that American workingmen are the subjects of a brutal and unjust persecution, and it is certain that our members will then demand that some economical action be taken which will bring your attention and also the attention of all American capitalists to the fact that the Working Class of the World will no longer permit without protest the persecution and imprisonment of workingmen anywhere.**

**Yours for a Better World,**
**CHAK HON KEE,**
**Sec'y for the Chinese Seamen's Union.**

# On With the Fight

**The So-Called "Criminal Syndicalism" Laws Must Go**

By M. De CIAMPIS

THE recent Christmas release of all our fellow workers from the federal penitentiary at Leavenworth, Kansas, ought not to allow anybody, who in the past ten or fifteen years has fought the battles of Labor, to give up the fight to force the further release of all others, national and state class war prisoners, IWW or not. None should rest upon the laurels that have crowned the long and energetic amnesty campaign of the General Defense Committee.

Many more are behind the prison bars of various capitalist bastilles. Members of the IWW have shamefully been arrested and persecuted in many sections of the country under the notorious "criminal syndicalism" laws. On the Pacific coast, notably in the golden state of California, our fellow workers have relentlessly been sentenced to jail with long years to serve on the mere pretext of holding true to their hearts a "red" union card. In so doing, the authorities in power in the judicial and state offices have abused their high position and have set aside all rules of fair dealing with their fellow beings; and, in order to serve the capitalist predatory interests, have denied the citizens of the republic the constitutional guarantees of freedom of speech, of assembly and of association.

Think of that—in California it is a crime to be a member of the IWW! Surely our god-blessed bourgeois rulers have lost or are beginning to lose their nerve. They cannot conceive that human progress has been forever endeavoring to better this world of ours for the brotherhood of man, because their thoughts are at a standstill!

Notwithstanding the unquestionable lessons of history—especially those that in such a great number flow from every human upheaval that has come forth to right the wrongs of tyrants and exploiters, American plutocracy has seen proper to persecute the rebels who dared and dare now, just as they will in the future, to challenge the soundness of capitalism to arrange and govern human affairs.

The **Land of the Free** should beware of things reactionary. The present day's rulers should bear in mind that at no time have their likes in the past ruled the people unchallenged. From times long gone by the battering rams of the proletarian class struggle have steadfastly pierced through the strongholds of the powers that be. We have witnessed the slow but sure advancing of the "low brows"—of those precious beings that toil and produce, while the greedy masters squander the riches and die, content to the core, in a profusion of undeserved wealth.

Reaction, be it whatever it may, should never make the mistake to believe that it can forever keep down the hardy fighters that have pledged themselves to the struggle for the emancipation of the working class. The Ancient Regime fell before the blows of the advance guard of the French revolution; the Czar, we may say only the other day, crumpled ignominiously likewise; truly the compelling hand of historical justice, at least, can-

# England's New Crusaders

By WILFRED BRADDOCK

**WELL, well, readers, look who's here! The world's greatest aggregation of ministerial performers—of transplanted Billy Sundays—ever got together under one circus tent—beg pardon—one tabernacle. Now appearing in the world's soul-stirring, thrilling acrobatic stunt, entitled, "Religion, the opium of the proletariat and the protector of the plutocrat." Now doing the grand circuit in England and billed for engagements in this country at an early date. Step right inside and get good seats from which to behold this wonderful consolidation of the world's greatest ministerial morality horizontal bar performers ever engaged at an enormous expenditure to their promoters. None like this circus to be seen anywhere else. Come early and be prepared to pull a solemn, sanctimonious face at the greatest moral twaddle ever performed under the lowly and well-paid patronage of the pious plutocrats.**

**Step inside! Step inside!! The performance is just beginning!!!**

HAVE you ever thought, fellow worker, of the effect of a brilliant searchlight? Directed away from you, how vividly it discloses all the dirt and squalor, the ugliness and drabness of the sector it illuminates. Directed at you, how it blinds, nay, paralyzes and though enveloped in its brilliant glare, yet you are in the midst of darkness.

Such is the weapon the master class is at present using in the potteries. The searchlight is, to give it its full title, "The Industrial Christian Fellowship Crusade." Its operator is a well-known comedian in this section of the globe, by name, the Rev. G. A. Studdert-Kennedy, better known as "Woodbine Willy." He is ably assisted at his gymnastic and oratorical displays by two other gentlemen of the reversed collar order known as Spring Heel Ted and Jumping Billy. Woodbine, let it be said, was supposed to have earned his psuedonym by proving his democratic sentiments to the soldiers during the war by smoking the famous Woodbine cigarette (beloved by the proletarian masses).

The objects of the Crusade are, as stated, "to state the case for the practical application of Christianity to industrial and business life." Evidently the bosses are accepted as God's chosen for the crusade is limited to the working class. Only rude guffaws are heard when it is mentioned in the select circles of conservative clubs, Chambers of Commerce, etc.

Peculiarly enough, the searchlight is directed at the working class and not at their conditions. Perhaps the mechanism has gone wrong for even the blindest of workers will agree that Christianity in the mines is impossible so long as the death rate of 1922 in the mines is as follows: Killed 1,114, injured 186,368. The ICF will have to work hard to wipe that off the slate.

### Ministers Conscious

The Crusade and the ICF mark a definite step in the awakening classconsciousness of the ministers of orthodox Christianity. It marks the development of the parsons from the role of "psalm singer" and "mother's friend" to conscious and active assistants of the Industrial Barons. The diminishing congregations, the apathy of the masses to the howls of the parsons, have had the effect of impoverishing the aforesaid purveyors of Christianity because the Boss will not tolerate any maligners in his cause. (You ask the nearest trades union leader if you don't believe me). The masses refuse to go to either churches, institutes or semi-church social clubs, and so the parsons have gone to the place where the slaves can't get away from them—the industries.

The great industrial struggles which are pending (500 strikes in 1923,) and the unemployment crises are the signs of the quickening spin of the vortex of the class struggle and so new tactics are adopted to meet and crush the rising opposition. The ICF is one of them.

Miners, with the coal dust obliterating their features, straight from the mine; potters, as white as Jesus' soul, straight from the "potbanks" as the pottery factories are called, black and white, all are urged by the low comedians to bring Christianity to bear in the industries, to bring love (which the Carpenter of Nazareth gave to them) into force and forever banish the devil's weapon of "strike." The broad red cross of the Crusaders is splashed across the fetid and smoke begrimed streets, it mocks the white drawn cheeks of the waifs; the underfed and the underclothed are

---

not fail to absolve those that have fallen for their ideals and socially to undo the wrongs of capitalist plutocracy.

In the jails and prisons of California and other states of the American Union scores of our fellow workers are rotting in filthy, lightless, unendurable cells. It is the duty of every lover of mankind, of every friend of Labor, of all those progressive and forward-looking souls to see to it that justice be given these men by freeing them all.

To forget them in prison is equivalent to condoning a crime against civilization. While resolving to carry on the struggle for the release of all the rest of the class war prisoners with more and more energy, it may be well to insist on the repeal of the infamous "criminal syndicalism" law.

All together, Fellow Workers! Shoulder to the wheel and let's go!

dazzled by its blatant vitality and its sole aim is to turn the searehlight into the faees of the workers in order that they may not see the squalor and misery of their daily lives.

In the opening of the Crusade (jointly under the auspices of the Crusade Committee and the British Pottery Manufacturers' Association) Mr. Bullock, President, BPMA, said he "had no faith in theories put forward by supermen or intelleetuals." Oh, ye of little faith, what of "directive ability!" Further he points out that our eommon law was built up by "decent ordinary people" and "no one man can lay elaim to it." He earefully avoids the same theory with regard to **his** pottery industry. But then, he makes no profit out of eommon law. Of eourse these hard headed men of business merely give the lead, the direetion, to the comedians and then leave the actual doping to them. The eelebrated trio, viz., Woodbine Willy, Spring Heel Ted and Jumping Billy (Ameriea has **not** the monopoly) are the main squeeze, and Woodbine is the star turn. Quoth Woodbine, speaking at a private session of bosses: "I propose to talk to you as I would to any of **your** working people (laughter). It is the most honest thing to do," and presumably the first he has done. Willy points out elearly "he is no Soeialist; he is a Christian" and takes pains to assure the honorable gathering that only two men out of fifty think, and of eourse, those two are either eaptains of industry or NCO's. Afterwards, while speaking to the slaves he told them that all progress depended on those two extraordinary men. He was out to abolish elass hatred, although he would say that this differenee in mental eapaeity was the root of elass and it was ridiculous to think it eould be abolished; God has made it so.

There we have the reason for the Crusade, the workers are beginning to disbelieve this extraordinary ability stuff and Woodbine has eonvinced the bosses that he can convinee the workers of the immutable inviolability of the Boss elass. Even the trades union leaders are bitten with the craze and wish to hearken to the Crusade of Woodbine. The loeal labor leaders are erusading even as the aneient ones of the twelfth eentury.

The secretary of the Pottery Workers' Ass'n. and other officials have given their blessing, for they reeognize that they also have fallen by the wayside. No more strikes, no more loekouts; nothing to do but draw the dues and grow fat. As the immortal Shakespeare put it

"'Ban 'Ban Caealiban
"Has a new master, get a new man
"Freedom heydey, heydey Freedom."

Woodbine has eomposed a ditty or a hymn as he ealls it, it runs "When through the whirl of wheels and engines humming" and he yells it forth with a great gusto, but without a doubt the engines hum a different tune to him.

To the workers they screeeh the song of Faster! Faster! Faster! but to Woodbine they sweetly murmur Fatter! Fatter! Fatter!

### New Allies to Fake Leaders

One ean pieture the sigh of eontentment that the trades union leaders will heave at the news of this new ally for the outlaw strikes are fast plaeing them in the eategory of "has-beens" so far as the boss is eoneerned

Speeial meetings for the youth, both male and female, speeial meetings for men only, for women only, all go to show the frantie endeavors being made to keep the working class in seetions by sex and age barriers. The loud-mouthed support of the trades union leaders gives this seetionalization another trend, but all the upholders of the Crusade are united, regardless of their sex, age, industry or social position.

The Crusade will not have the sueeess that Woodbine expeets, for already the workers are beginning to understand that Christianity in industry means industrial serfdom. The love that is preaehed does not counteract low wages, high priees and bad eonditions. Neither does it cure "potter's asthma," lead poisoning, miner's nystagmus, the aecidents from water, fire damp and roof falls in the pits. The aim of the Crusade is to blind the workers from seeing these things. The workers are growing restless under the high eost of living for in this district the prewar wage and the eost of living have risen so that, as the following table will show, the workers are almost 30 per cent worse off.

| | | Wages | C. of L. |
|---|---|---|---|
| **Miners** | 1914 | 100 | 100 |
| | 1923 | 146 | 175 |
| **Potters** | 1914 | 100 | 100 |
| | 1923 | 150 | 175 |

It will take more than the inane wittieisms and the droll antics of Woodbine Willy, Spring Heel Ted and Jumping Billy to dope the slaves into quietude this winter. The flaming red eross will not feed or clothe the impoverished workers, altho Willy and his satellites grow fat and unetuous under its influenee. The erueial moment is fast arriving when the workers will move out of the paralyzing glare of the searchlight and see for themselves the ignominy and shame that is the reward of our class for servitude. Then will the shaekles of the Labor Leader Crusaders be thrown off and the workers will mareh on to emaneipation united and strong in the Revolutionary Industrial Union.

## MICHIGAN BOULEVARD: CHICAGO

By Jun Fujita

The drizzly night silhouttes the buildings
Into a row of blaek tombs.
With vacant stare the boulevard lamps in rain
Amuse the green gleams they east.
Beyond the lamps, among the tombs,
Drip, and drip,
The hollow sound rises.

# Europe: Yesterday, Today and Tomorrow

By BLAIR

A LARGE section of Europe's bourgeois writers and philosophers are reacting to the world war and its aftermath like so many weeping Rachels. Running through most of the writings and public utterances of these self-constituted cultural leaders is a note of tragic pessimism and gloomy foreboding. These middle-class intelligentsia would have us believe that the sun of civilization had set and that we are now in a twilight zone separating the glorious sunlight of ante-bellum days from the darkness of a recrudescent dark age into which the world is recklessly plunging. They view post-war Europe as in a state of chronic chaos bordering on what they are pleased to term anarchy. A few lonely notes of optimism are occasionally heard but they are mostly drowned out in the general wail. The reactions of these emotional representatives of modern Europe culture reflect the general reaction of the European middle-class (using the term in the American sense), a large section of which is being liquidated by the ruthless and inexorable readjustments of European capitalism. These swan-songs and misereres are of no value to the world's proletariat in interpreting post-war Europe and adapting its class-war tactics and strategy to the new problems growing out of the realignments and readjustments of world industry. A true interpretation of the Europe of yesterday and today must be based on materialist concepts, and the world's middle-class is too perturbed to bring forth another Karl Marx. They would push back the hands of the evolutionary clock; they can never conceive of the world-war as a factor in setting these hands forward. The workers must henceforth provide from their own ranks the economists with visions clear enough to glimpse realities in the flux of changing world industry.

### The Recapitulation Theory

To interpret Europe in the turmoil of the great war and its aftermath we must first be conversant with her historical background. Radical writers and speakers have formed the habit of depicting social evolution in terms of a series of economic epochs or social systems. We usually think of evolutionary social change as beginning with a system of savagery slightly removed from animalism and passing through barbarism, chattel-slavery, feudalism and capitalism—each social system leaving off where the succeeding one began and apportioned a certain sharply defined period of time in the immeasurable lapse of time from ape-man with his primal economy to modern man with his mechanistic mode of production. But man has not progressed from monkey to Mr. Bryan in that way. In his economic and social evolution he has always carried forward into the present very much of the past. In all his slow changes from social system to social system he has retained all of the old that was of use to the rising dominant classes of the new. Man has in his own thinking economy many survivals of past ages and in his modern, social institutions—which we customarily conceive as social growths all sprung from the soil of present-day modes of production—he has survivals handed on from social systems that preceded capitalism. By closely observing man's psychology and his social institutions we are enabled to trace a certain rough recapitulation of his descent from the animal.

### Relics of Past Ages

Owing to certain causes which limitations of space preclude our going into, Europe presents the world's most classical examples of these sociological and ideological survivals. And it was these relics of past ages carried forward into the present that made Europe so ripe for war when a prince of the House of Hapsburg was slain in Serbia and unwittingly provided the match that started the conflagration. Much of pre-war Europe had reached a point in her economic development where it was vitally necessary to liquidate some of the old that the new might make further progress. To accomplish this purge of survivals no longer useful to the onward sweep of machine-driven industry the high gods of social evolution unleashed the dogs of international war.

Among the many survivals carried forward from the old into the new when European economy strove to change from feudal to capitalistic, the most important were: The political state with its psychological concomitants of patriotism and racial prejudices

—a social institution that had its economic genesis far back in the mists of antiquity; royal ruling dynasties and landed aristocracies with their ancient psychological concomitants; and ancient superstition tangibly expressed in cowled monk, veiled nun, towering cathedral and princes of the church with their hosts of communicants among the serfs, wage-slaves, peasants, commoners and lords. Into this complex maze of the old and the new, man introduced modern, power-driven machinery of production and it was like the charge of the proverbial bull into the china-shop.

### Classical Feudalism

The most classical forms of European feudalism always tended to expand over new agricultural territories in order to recoup the drained coffers of the spendthrift ruling classes; and modern machine-driven industry constantly tends toward centralization of ownership into the hands of the few and the expansion of its dominions out over all international boundary lines to embrace within its mighty grasp all sources of raw materials, means of production and distribution and the world's markets. Nearly all the nations of western Europe before the war showed both tendencies; with the industrial decidedly in the ascendancy. In Russia the feudal economy was more dominant.

In its constant trend toward trustification European basic industry always found itself hampered when it was not actually checked by the interposition of the many national frontiers which separated many raw materials of production as well as the European markets for finished products. While one country might have an abundance of iron and a dearth of coal for smelting, another would possess the coal and lack the iron, and so on through the list of basic raw materials; and always the frontiers of the political states and the many psychological barriers to trustification and socialization stood between. Industrial trustification strove to form with a geographical continuity as it had formed in America where there are no national boundary lines and national patriotism to prevent the wedding of most basic raw materials and where only the demagogic fulminations of trust-busting Teddies and the swan-songs of liquidated, independent producers marked the transition from primitive individual to corporate, trustified and socialized production. But such an integration of industry with its wide geographical continuity as America presents was impossible in Europe without some force to blast away the ancient barriers.

### Exceptions Pre-War Economy

There are two important exceptions to these general statements describing the pre-war economy of Europan nations. Russia, as we have noted, stood somewhat apart from the balance of Europe as regards her economic status. The prevailing Russian mode of production was what we should probably term pseudo-feudal instead of capitalistic. In the onward march of capitalist development of Europe, Russia was out of step and lagging behind. It required the blasting effects of the war and the revolution it brought on to change her backward economy and enable her to push forward more rapidly. With her great territory and wealth of raw materials Russia now stands economically about where America stood after the American revolution had liquidated English feudalism in the thirteen colonies with the very important difference that her agriculture and urban industry has the advantage of starting off in a world equipped with power-driven machinery of production. She should now travel through her capitalist evolution very rapidly and develop trusts similar to those of America. In the matter of juxtaposition we must also except England with her insular position.

### Maritime Commerce

Another important factor in the development of European industry, and one which had within it the germs of international war, was the growth of maritime commerce. With basic raw materials and continental markets separated by the many barriers we have been noting, and with the development of the machinery of production constantly tending to cause a saturation of the home markets of the respective countries, capitalist Europe was forced to leave home and travel across the seven seas seeking these very necessary concomitants of industrial expansion. While this sea-borne commerce tended to relieve the pressure of expanding industrialism for a time it finally developed such wide proportions that the commercial quarrels of Europe were made world-wide in scope and further complicated by the European maritime nations coming in contact with America and Japan in the general scramble for world markets, spheres of investment for export capital and sources of raw materials for home production. There was also some evidence of a world-expansion of the old feudal tendency to fight for new dominions to enrich imperial dynasties. The drive of Germany through the "Bagdad corridor" with the Berlin to Bagdad railway headed toward India, which had been made the treasure house of the British crown, was no doubt inspired more by Germany's royal caste than by the overlords of German industry. There was also the constant tendency of the Russian Romanoffs to reach out and grasp more contiguous territory to add to their far-flung dominions. It was this pressure of Russian feudalism deflected by English diplomacy away from the Indian border and toward Japan that was one of the chief causes of the Russo-Japanese war of earlier times. And it was these feudal tendencies toward world-expansion coupled with the world-wide competitive quarrels of world-capitalism which added quite materially to the causative factors of the war. Indeed it may be that the Berlin to Bagdad railway was one of the chief causes of the war.

### Liquidating the Old

During the war and through its aftermath we have been witnessing a liquidation of much of the old. The onward sweep of the revolutionary proletariat and peasantry has resulted in the throwing off of the feudal dynasties of Russia, Germany, Austro-Hungary and some of the smaller groups and the

liquidation of large sections of the landed aristocracy. Ancient boundary lines have been blotted out and newer forms of national political entities have been carved out of old empires. The straight-jacket of feudal and other ancient social and psychological survivals which retarded the free expansion and socialization of industry has somewhat loosened and industrial readjustment is the order of the day. France is rapidly shifting from an agrarian to an industrial basis and her expanding metallurgical industry is setting up puppet republics over central Europe while carving out the heart of German industry with her drive through the Ruhr valley. With the eclipse of the German political state and its resultant depreciation of the medium of exchange, German and French industrialists are enabled to crush out great sections of the German middle-class. Stinnes, Krupp and the Thyssens, overlords of German industry, are entering into "conversations" with the puppet political spokesmen of French industrialists and plans for the trustification of a large section of Europe's metallurgical and related industries take form, as the English lion stands impotently growling and the Spanish ruling class rushes in panic fear into a coalition with Italy. Thus the integration of powerful groups of European industrialists goes slowly forward and every day witnesses some new political alignment reflecting some under-cover readjustment of industry. Co-incident with these industrial tendencies toward international trustification there goes slowly forward a reflected movement of the workers to cast aside old forms of unionism and organize industrially. The workers of Germany in particular show marked tendencies in this direction and the workers of other countries are falling in line.

IN THE RUHR

### Purge of Survivals

But the purge of survivals is a long way from being complete. Europe is like a man who had taken a mild laxative when he really needed castor oil. The day when the European section of the Industrial Workers of the World will stand in solid array challenging the industrial overlords to the final conflict on the industrial field seems a long way off. The international overlords of integrating industry are striving to retain all of the old that will be of service to the new alignments and competitive struggles of the new groups. The puppet political state with its patriotic devotees and frontier barriers; the church with its ancient superstitions; the many racial barriers—all are being bolstered up and conserved in both fictitious and authentic form to prevent or retard the development of solidarity in the ranks of the European proletariat and in preparation for the next war.

The European war and its revolutionary aftermath present many phases of great import and significance to the workers of America. For those with vision clear enough to see there is a wealth of evidence to justify and vindicate the direct action program of the Industrial Workers of the World. A whole volume could be written on the instinctive actions of the revolutionary peasants and workers in seizing land and industry in the many revolutionary crises. There is also much of interest for American workers in the European development of aircraft and air transportation and its very obvious potentiality as a factor in the revolutionizing of the masters' technique of international and class wars. These bird-robots of the air which fly over all frontiers and laugh at all tariff barriers and provincialisms would also seem to possess great potentialities for the final integration and socialization of world capitalist production and distribution. The disinherited proletariat of the world may yet come into its own through the instrumentality of this new means of transportation and intercommunication.

The American section of the Industrial Workers of the World must overlook no opportunity for forming fraternal and organic bonds with the rising new industrial unionism of Europe. It should assist these struggling workers of Europe with every encouragement and material assistance that can be afforded. The IWW press, published in the language of the respective countries, should circulate in every corner of Europe and the European job-delegate should be a swarming reality of the near future. Proletarian "hands across the sea" clasped in the bonds of a common interest should be one of the chief aims of the IWW.

# Why "Red Communism" Failed

By NEIL GORDON

LOUIS Fischer, writing on "What Mr. Hughes Should Know," (regarding Russian state policy), in "The Nation," tells many things that workingmen should also know, especially when the very friendly attitude of The Nation toward Russia is taken into consideration.

According to Fischer, Mr. Hughes should know that the Soviet Government is no longer internationalistic and, as a consequence, no longer believes in nor foments a world revolution, as he charges. Instead, it has become nationalistic and intent on the preservation and development of Russia; therefore Mr. Hughes has nothing to fear from it.

Fischer shows that it was this change from internationalism to nationalism that made the spread of "red communism" throughout Europe via Germany impossible. He says: "An upset in Germany would at least temporarily have paralyzed its industrial life and thus interferred with the importation into Russia of large quantities of machinery and supplies which are indispensable to the process of economic rehabilitation to which the Soviets are bending their every effort . . . A word from the Kremlin would have started the revolt; but that word was not forthcoming. The only word to the German communists came from the Communist International's headquarters just outside the Kremlin, but that was not sufficient."

This change from internationalism to nationalism, with its non-world-revolutionary results, is the cause of friction in the Russian communist movement. Fischer assures us that "between these two points of view—the national and the international—there is a constant struggle in the Communist party." Thus far, apparently, the internationalists are on the losing side.

From other sources, not as friendly as those of The Nation, we learn that the communists of Russia are divided into many contending factions and that Bolshevism is facing its most serious crisis since it won control of Russia. Evidently, Russia is undergoing another phase of development nationalist and capitalist-ward.

This is inevitable. Russia, a country of extremely backward development, cannot be expected to do anything but rush through a period of quick capitalist growth, thanks to the world conditions which surround it. Apparently, not in bolshevism, but in the fruition of ultra-capitalism, can communism have any chance to triumph there.

## MUDDLED COMMUNISM

IN Industrial Pioneer No. 8, Neil Gordon has an article on Russia as the saviour of capitalistic Europe. All his argument is based on the fact that Russia is concluding an alliance with France and by doing so she is winning the full confidence of the capitalistic class of the world. He also says that the communism that was red died when NEP was introduced.

I sincerely think that Russia will never have the confidence of any capitalistic nation. They do not conclude peace because they love Russia, but because they are trying to gain something which they think will benefit them. But that is to be seen in the future, who will be the gainer; and I think the workers the world over will benefit by it.

As far as red communism dying and the capitalists having no more fear of it, that is out of the question. There were never more communists in Russia at any time than at present; and the international solidarity of the working class was never taught before in schools as at the present time. Nor were there as many theaters in which worker's plays are produced.

Red communism is nothing to wish for; at least the kind that was in Russia. It was necessary at that time. At least I do not want to see it return.

Russia signed peace with Kaiser when it was the reddest, and a lot of people shouted that that was treachery to the revolution. But we all know the results and that the Bolsheviks were right.

Russia signed peace with about six or seven nations before NEP was introduced. So I don't think that there is any fear that Russia has become the poodle dog of capitalist Europe. It still remains a mighty factor in the minds of revolutionary masses and the master class of Europe fear communism as California fears the IWW. Therefore, I would like to see less criticism of Russia but more organization in America.

San Pedro, Cal. ALFRED MARTIN

## SOUND POLITICAL ESTIMATES

During the Bryan campaign, years ago, Clancy, the mortar mixer, was asked by one of the Taft speakers what he thought of Mr. Taft.

Clancy ceased stirring the mortar for a moment and spat thoughtfully.

"Well, Mr. Taft is a moighty foine man—a mighty foine man. I heard him speak wance. He'd make a good prisident!"

The Taft adherent was pleased. Continuing:

"Mr. Clancy, and now what do you think of Mr. Bryan?"

"Mr. Bryan? Well, Mr. Bryan is a foine man—a mighty foine man. I wance heard him speak and he made a gud talk. He'd make a good prisident."

Such impartiality on the part of Clancy wasn't very satisfying to the Taft boomer. He persisted:

"And, Mr. Clancy, who do you think has the best show?"

"Begorra, I think," replied Clancy, "that Ringling Brothers has the best show."

# Scientific Unionism in England

By WILFRED BRADDOCK

MAYBE you "Wobs" think you have the world guessing in Unionism. Maybe you have, but take a glimpse at the way we do it in the "old country." I've been looking up a few figures, I'm a whale on figures. Anyway, the idea of the New Unionism is one union of the working class. Here in Great Britain we stand by the old flag and trades unionism. M'yes, even the horrible bolshies.

In 1922 we divided ourselves into no fewer than 1,190 unions, with a total membership of 5,579,739. And the slaves are proud of it—also the bolshies. Just imagine the vast throng of general secretaries, assistant secretaries, district secretaries, presidents, organizers, etc. It almost solves the unemployed problem. Yet with it all the workers don't seem satisfied—lot of grumblers. Everybody of importance assures them it's the best thing in unionism, from J. H. Thomas to Comrade Palme-Dutte, editor of the Communist organ. Still they grumble. Just imagine, disbelieving Palme—Dutte!

### Chinese Puzzle Unionism

Let us examine the reason as to why they grumble and how far this Chinese puzzle unionism has solved their problem.

In 1922 with regard to their bread and butter problem, the wages question, we find on investigation that the total increase of wages from January to September amounted to £11500 and that amount was divided and duly delivered at stated intervals to the palpitating slaves. But not all of them, only 75000 shared that little amount, which was, perhaps 4 shillings a week each. Then let us look at the other side of the picture. The decrease in wages amounted to £3,900,000, a little difference as one might say. However, the bosses, in order to offset their good nature over the increase, distributed the decrease with a lavish hand and so no less than 7,500,000 slaves shared it. "Everybody's doing it." That little item amounted to 10 shillings a week decrease. The work that the jigsaw puzzle did was to negotiate the **decrease**. Now, I ask you, in all fairness, could the IWW have negotiated a decrease of such a stupendous amount and got it? That's the rub, that's why you Wobs are jealous of us, we are so successful in our negotiations, don't you know. Wonderful, isn't it?

However, they did one good thing: they saw to it that the thousands of trades union officials didn't get a decrease, so that's something to be thankful for.

### A Little Enlightenment

It works out still better in individual industries. The clothing industry, for instance, in 1922 shows as an increase in the weekly wages of 1,000 of its workers, the munificent sum of £30. About ten cents a week each. All the rest of the workers —491,000—got a decrease amounting to £80,300 which works out at a dollar apiece. All that from knowing how to organize.

Now you IWWs can't understand the process properly, that is, as it's done in the **best** circles. Let me enlighten you a little. Take the textile industry for instance. We have cotton, woolen and worsted, linen and jute, hosiery, bleaching, dyeing and few other departments. Now you would say, "Good, one industry, one union." No, no, fellow workers, wrong entirely. Where will the good orators go to, where will the advanced real revolutionaries get their pie-cards then? Now we organize the textile industry into 285 (don't mistake the figures, Mr. Editor) separate unions, and the cotton trade alone has 168 of these. So, you see, we have created 285 good jobs for general secretaries, 285 for presidents and Lenine knows how many red organizers. In these 285 unions we have organized the stupendous mass of 299,083 slaves. Almost as many members as officials. That means an average membership of 1043 per union. Quite enough too! That's what I call the "go slow" policy. No more production there. Not too much work, plenty of time to do it in, and just enough slaves to keep the pie-card in a nice, juicy condition.

Did I hear Wm. Z. murmur "Dual Unionism?" Methinks Wm. Z. is living in the wrong quarter of the globe; he should hit the pike for Lancashire.

This is the kind of thing that the Red ones, the Red Realists tell us is our haven of refuge (if only we would give **them** the pie-card). They frankly admit that more unions would be a trifle monotonous, and anyway, there are enough unions already to promise jobs for the best Reds, so why more unions? No siree, the old ones are good enough for us. "Back to the Unions and down with Dual Unionism." Talk about drops of blood, it's mountains of graft and shoals of pie-cards here.

Could anyone who is endeavoring to uproot this social system even venture to suggest that the British Textile industry is sanely organized? It is logical to assume that those who bolster up this form of organization, be they white, yellow or red, have a definite interest in keeping the working class in subjection and thus are anti-communist. There are no more bitter anti-communists than these same Red Realists who cry "Back to the Unions." Fascism is at least open in its declaration while these unctuous hypocrites drag the name of Communist in the slime of their treachery. However, the upholders of this jigsaw unionism are rapidly showing themselves as anti-working class by their opposition of unofficial strikes and the workers themselves are realizing the quagmire that they are floundering in. May they soon reach the clean, safe foothold of the One Big Revolutionary Union.

# An Ex-Service Man Views

THE Industrial Pioneer is in receipt of the following letter from an ex-service man, teacher in a vocational training school, whose name and place of residence are, for obvious reasons, not given. His estimates of the IWW, conservatism, war, and kindred subjects will prove interesting to our readers, and are, accordingly, herewith published:—

The December number of the Pioneer was unusually attractive and interesting. The class of material and the evident intelligence of some of the writers who are members of your organization, are somewhat surprising. From occasional references in the papers and magazines I had formed the impression that the Industrial Workers of the World were a band of men, discontented, shiftless, and of low intelligence, determined to take by brawn and force what they cannot command by brain and ability. Of course there may be a few of that class associated with you, ignorant and selfish men who have failed to understand the significance of the radical movement and who have not yet caught its vision; but for this the whole organization cannot be condemned.

Selfishness and ignorance cannot be confined entirely to the radical movement. The more I talk with those of the so-called conservative element the more I realize that lethargy, inertia, comfortable respectability and selfishness, rather than conviction, are responsible for the stand many take on economic questions of the day. I am reminded of what Lecky said in his "History of England in the 18th Century," speaking of radicals and conservatives: "Each party draws its strength from some of the noblest and some of the basest of human qualities." I am convinced that you are trying to raise the level of the mass of workmen through education and thus eradicate the ignorant, violent, and selfish element from your organization. Your program necessitates unselfishness, high intelligence, education, and skill. It is plain to see that you are conscious of these requirements.

You see although I am an ex-service man, I am not one of those super-patriots you find in the American Legion. Personally, I hate war and have no sympathy with the man or group of men who say we cannot avoid it. No doubt they are right, we cannot avoid it so long as we have those two inhuman and obsolete institutions—Capitalism and Nationalism. But why reverence and maintain these? Abolish them. Establish group ownership and control in the development of resources and internationalism as a new link between the workers of the world. When this is accomplished I have an absolute faith that war will be eliminated. Politicians and statesmen have failed. Let's show them the workers of the world can succeed.

What is war? Well, Sherman has defined it as Hell and Scott Nearing calls it Organized Destruction. I have always thought of it as a dirty mess stirred up by diplomats and rulers. The soldier is the scavenger called out to clean it up. The workers do not want war. Their desire is to create and enjoy, not to fight and destroy But so long as mankind is divided into national units, each with its traditional patriotism to its own group, so long as these units are governed by the political state composed of men steeped in that patriotism; and so long as the resources of the earth are exploited by private ownership by individuals who have the sympathy and backing of the political state; just so long, then, shall we have war. I can conceive of no possible way to prevent it. Certainly the League of Nations cannot. Make it less frequent, perhaps; abolish it, never.

I have written more than I had intended. In addition to an explanation for my seeming indifference I have given you a declaration of my faith. Though not a member of your movement, I can see your grievance and sympathize with your efforts. Through a thorough understanding of your principles, objects and methods, I can clarify confused and cloudy opinions when I come up against them and in this way help to break down existing prejudices against the IWW.

## CRIME IN THE U. S. A.

According to a committee of the American Bar Association, in the twelve years from 1910 to 1922 the general population of the United States increased 14.9 per cent; the criminal population 16.6 per cent.

The largest proportion of crime increase was in crimes of violence. These are worse than in any other civilized country.

The committee of the American Bar Association believes law enforcement to be the remedy. This is like closing the stable door after the horse has been stolen.

It would be better still to shut down the private strike-breaking agencies, with their agents provocateur; the Ku Klux Klan, the Chicago Tribune, with its advocacy of Fascism and war preparedness; and all the other media for the promotion of lawlessness and violence.

Look not for crime among criminals; but in the high places of capitalism that find the criminal elements necessary to capitalist preservation.

## ROOM FOR GROWTH!

Craft organizations of labor are too small and restricted to organize the entire working class. They remind one of two old darkies, Uncle Luke and Uncle Mark.

Uncle Luke and Uncle Mark observed a little darky apparently in great pain. By the side of him were the gnawed rinds of a large watermelon eaten to the green. It had been a very large watermelon.

"Look at dat chile," said Luke, "He's had too much watermelon."

"Go 'long, man," answered Mark, "dey can't be too much watermelon; dey's too little nigger."

# WOBBLES

## UNDERWEIGHT UNDERPAID

It happened during a hard winter not so long ago. A large mail-order house advertised for men in their wall paper department and Jimmy answered the ad. Just ahead of him, in the line of applicants, was a young fellow who looked like a "white hope;" and the following conversation ensued between him and the employment director:

**Director**—"Have you ever had any experience in handling wall paper?"

**White Hope**—"No; but I'm willing to learn."

**Director**—"Do you weigh 175 pounds?"

**White Hope**—"Oh yes, I weigh two hundred."

**Director**—"I see—Now, would you be willing to start at eight dollars a week?"

**White Hope**—(After pause in which he was evidently thinking how hard it was to get work)—"Ye-es, I guess so."

The director then handed the new slave over to the application manager and turned to Jimmy with a huge smile.

Jimmy is one of those vest pocket editions of humanity and only weighs about 125 pounds with his "heavies" on, and the director thought he was going to let him down easy, so he said, rubbing his hands together, "You don't weigh quite 175 pounds, do you?"

"No," barked our hero, "and I'll tell you something else: "I wouldn't work for eight dollars a week if I DID weigh that much."

## SOME SEARCH!

Old King Cole was an optimistic soul,
An optimistic soul was he.
He called for a light in the middle of the night
To search for the W. P.

## VANISHING ANCESTOR

"How far do they trace their ancestry?"

"The grandfather, a City Bank Director, was traced as far as China; there all traces were lost."

## LAWLESS PROCEEDING

The teacher was giving the class a lecture on "gravity."

"Now children," she said, "it is the law of gravity that keeps us on this earth."

"But, please, teacher," inquired one small child, "how did we stick on before the law was passed?"

## A CHEERFUL BIRD!

The Dromedary is a cheerful bird,
Bearing burdens without a protesting word.
He's not the only grinnin' idiot in the Zoo,
For there's many a workingman like him, too.

## ANCIENT HISTORY

An Irishman and an Englishman, while digging a ditch, were discussing various phases of unionism. An old Hebrew passed during the argument.

"There, Pat," said the Englishman, whose non-unionism was being routed, "do you see that old fellow?"

"Indeed, I do," replied Pat.

"Well," said the Englishman, "he's one of them guys that killed Christ, the union carpenter of Nazareth."

"I'll remember him," said Pat. So the next day when Pat saw the old Hebrew again he knocked him down without any ado whatever. The old man protested.

"Never mind," said Pat, "you can't fool me. You are one of them fellows that killed Jesus Christ, the union earpenter."

"Why, my friend," replied the old Hebrew, "that happened two thousand years ago."

"Well, I can't help that," said Pat. "I only heard of it yesterday."

Moral: When discussing unionism don't be sidetracked by ancient history. Stick to the point; or innocent parties will get hurt.

# Winter in Prison

By RICHARD BRAZIER

THE storm broke in the dead of night,
And when we rose at dawn,
We saw by the morning's light,
A snowy Christmas morn.
The snow had cast a sheltering fleece,
O'er the cold, silent yard,
Had touched with hands that brought surcease
The earth so bleak and hard.

The ground we trod, so black and bare,
That bruised us foot and soul,
Where nothing grew, that sweet or fair,
Could help to make us whole,
Now lay beneath a mantle white,
That hid its bitter frown,
Even the walls, so drear with might,
Looked kind as the sun shone down.

Upon the wall the topmost height
Was one sheer, sparkling crown
Of crystals glittering in the light
As tho with jewels strown.
Like silver and gold, all things shone,
The earth, the walls and bars.
On untrodden snow, gleams of sun
Dazzled like golden stars.

Oh, but I knew it would not last!
And when the rain began to fall,
Earth once more would gape in the blast;
And lightning flash and thunder roll,
And wild storm beating overhead,
Will keep demoniac patrol,
When winter's beauty shall have fled.

## HELP REAP THE HARVEST!

### ADDRESSED TO THE "EX-WOBBLIES"

AWAKE! Ye slumbering rebels, from your gloomy dreams,
And throw your mournful garments in the fire.
Beyond the hills and crags, a new sun gleams,
And sheds its light above the muck and mire.
What though your former battles brought you naught but pain,
And left you broken on the wheel of Life?
You've sown the seed upon a fertile plain,
Now help us reap the Harvest of your Strife.

# Proletarian Insomnia

HEAVY eyelids, but sleepless eyes. Slowly from a distant clock four strokes are heard Several cheery voices passing: homeward bound from some carouse. Doleful, forboding clangs from a far off fire truck, in rapid succession. and the bare trees in the little park across the road whisper mournfully "bad time for a fire; little children may be in danger, old persons,—may be sick persons."

Sudden, breathless quiet, the only noise, that of the heart beat, the only sound, that of the clock. All's still. Heavy darkness descends.

A farmer's wagon is slowly scratching along the asphalt, a stray auto sends off its gas in slow, uneven combustions. Day is breaking, a fine mist spreads over the little park across the road and the tiny brook has a frosty look; a fine day is on the horizon.

Heavy eyelids and sleepy eyes. Gone is the sleepless, useless night. The workaday has begun

**J. D. C.**

## ENGLISH AS SHE IS SPOKEN IN THE LOGGING WOODS

While working on the "Gut and Liver" Line in Minnesota, "Big Jim" Sullivan met with a severe accident. Sullivan was a toploader and a French Canadian whom the foreman had hired that morning was sending up the logs. A huge white pine butt log was on the skids and Sullivan told the "Canuck" to cut his end of the log back, instead of which he pushed it ahead. The result was that the log swung around, hit Sullivan's feet, knocking him violently on top of the skidway and breaking four ribs. When Sullivan woke up he was in the hospital.

He was taken to St. Mary's hospital in West Superior, Wisconsin for treatment.

A few days after his arrival and after he had somewhat recovered from the smash-up Sullivan was visited by the Sister Superior of the hospital. After a few preliminary remarks regarding the state of his health, the Sister said:

"Mr. Sullivan, please tell me how the accident happened."

"Well, you see, it was dis way, Sister," said Sullivan. "I'm a skypiece, meself. We were short of a grounder one morning, and the push sees a groundmole danglin' down the main stem and he glooms him.

"We were sendin' up a big blue butt and I told him to give her a Sag and he gave her a St. Croix and she gunned on him and knocked me steps from in under me and broke four slats. The next thing I knew I was in the butcher shop. Dat's all I know about it."

"Dear, dear," said the Sister, "I don't understand it."

"Neither do I," replied the logger, "the son-of-a-gun must have been bughouse."

# The Stool Pigeon

A Drama in Two Acts

By PHIL ENGLE

CHARACTERS

Secretary of the Branch
The Marxian Philosopher
The "Friendly" Drunk
Jack Ward
Tom Little
Mrs. Weston } Members of the IWW
Mrs. Towser
Dick Towser, A Stoolpigeon
Dugan, of the "Bomb" Squad
Policemen, Wobblies, etc., etc.

***

TIME: During the "Red" raids of 1920
PLACE: A large city in the Middlewest

(Just before the curtain rises an IWW song is sung off stage. Just as the curtain rises the singing ceases. Curtain rises on

**Scene: An IWW Hall**

(Discovered. The Secretary is seated at his desk writing. The Marxian Philosopher is seated at a table with three open books in front of him, which he seems to be studying.)

***

Secretary: Well, I'm glad the songbirds are gone. Now, I will have a chance to make out my financial report and work in peace.

The Marxian: Yes, and now I will be able to study this second volume of Karl Marx's Capital. I want to clear you up, Fellow Worker, on the question of the Transformation of Surplus Value into Working Capital, and I want to say before I start that for a branch secretary of the IWW you are very ignorant on Marxian Economics. Why, you don't even know why the economic factor predominates; do you? No, you don't!—No you don't!

Secretary: Well, I might not know much about economics, but I know I must make out this financial report or there will be a kick from . . .

The Marxian: I know you must make out your financial report, but it will only take me a half-hour to clear you up and it is more important that I get you clear on this question . .

Secretary: You will get me "clear nutty" if you won't let me make out this report. After I am through, I will be ready to listen to your lecture on the "Sacred Whiskers of Karl Marx."

The Marxian: You dare poke fun at Karl Marx's whiskers? You, a secretary of a militant revolutionary union! You dare crack jokes about Karl Marx's whiskers. Why, when I was a member of the old SLP we expelled men for less than that.

Secretary: I am not poking fun at Karl Marx, God forbid, but I do wish you would let me make out this report. I ask this favor of you **in the name of Karl Marx!**

The Marxian: Go to the devil! I have tried to do my duty to you as a fellow worker. Now, if you wish to remain an ignoramus do so. (Begins to study over his books.)

(Enter The "Friendly" Drunk)

(The drunk is rather poorly dressed and walks very unsteadily.)

The Friendly Drunk: How do, everybody! (hic!) I am a strong sympathizer! I want to shake hands with everybody.

Secretary (annoyed): Well, look what Santa Claus brought us! What can I do for you?

The Friendly Drunk (hic!): I am a strong sympathizer. A very strong sympathizer. And when I (hic!) think of the poor (hic!) boys in the (hic!) jail—I almost cry. It (hic!) makes me want to shed (hic!) tears.

The Secretary: Yes, and if it depended on the likes of you the poor boys would stay in jail forever. Now take yourself and your jag and your sympathy to the headquarters of the Bootleggers' union.

The Friendly Drunk: (hic!) Now, why do you bawl me out, brother. I love (hic!) you. (Bursts into tears.)

Secretary to Marxian: Give me a hand and let us lead Mr. Volstead out so he can get some fresh air. (They both take the drunk between them and lead him slowly towards the door.)

Drunk begins to sing:

It's a horrible death to die,
It's a horrible death to die,
It's a horrible death, to be worked to death,
It's a horrible death to die.

The Marxian and Secretary together: We will take your word for it. This way out, please. This way out. (Exit Drunk.)

(The Secretary goes back to his desk. The Marxian goes back to his books.)

Enter from street: Jack Ward, Tom Little and several other members of the IWW. They break up into different groups, some reading papers, others playing checkers. Jack Ward and Tom Little sit down alongside of each other.)

Jack Ward: Well, there is no longer any doubt. We got the goods on the rat, but I'm sorry for his mother. If there ever was a rebel woman, **she is one.**

Tom Little: You said it. I think she would rather a thousand times have him dead than to have him turn out to be a rat. But there is no room for doubt any more, for when we asked him to come down to the branch and face the charges against him, he pulled a gun on us and ordered us out.

Jack Ward: He has not the nerve to use a gun, but just now he is full of dope and the dope in him may give him false courage. So I think the best thing we did was to beat it.

Tom Little: What else could we do? Well the next thing to do is to call a meeting and expel him.

Jack Ward: His mother just got back from a trip to Moline. She went up there trying to organize a branch of the Foodstuff Workers' Union. Got back just in time . . . .

Tom Little: To see her only son expelled from the IWW for being a stoolpigeon. Funny though, that she never seemed to notice the fact that he was a dope fiend. Everybody else knew it.

Jack Ward: Maybe she knew it all the time. She told me she was afraid he had lung trouble because he was so pale and had such a bad cough. (Enter Dick Towser.)

Dick Towser (tall, slim, wild-eyed and pale): Well, here I am! You boobs thought I was afraid of you, eh! Afraid of a lot of ignorant bohunks!

Secretary: Glad to see you have the courage to come down to face the charges against you.

Dick Towser: Face the charges? Oh, hell! I came down to find my old lady. I heard she had just left the house to come down here. As for the charges against me that you talk about, I am guilty and proud of it.

(Cries from all the IWW members present): You dirty stoolpigeon!!

Dick Towser: I am no stoolpigeon, damn you! I am a U. S. federal agent.

Jack Ward: What's the difference? You're a rat!

Dick Towser (drawing a revolver from his hip pocket): Be careful, you dirty anarchists, or I will let daylight through some of you.

Jack Ward: You rat, I will make you eat that gun!

(Jack Ward is about to make a leap at Dick Towser when Mrs. Towser and Mrs. Weston enter from street.)

Mrs. Weston: What's the matter? What's wrong here?

Mrs. Towser: Dick! Dick, what are you doing with a gun in your hands in broad daylight in an I. W. W. hall?

(There are a few moments of absolute silence. Everyone seems to be waiting for someone to speak.)

Secretary: Well, Mrs. Towser—I mean—I mean—Fellow Worker Towser, it means this: We suspected your son Dick and—

Mrs. Towser: Suspected my son Dick! Suspected him of what?

Secretary: We had reason to suspect him of being a stoolpigeon. So we—

Mrs. Towser: How dare you! How dare you talk that way of my son! Why I have a mind to—

J. Ward: Mrs. Towser, it is the truth. Six fellow workers signed the charges against him. I was one of them, and when three of us were sent as a committee to see him he drew a gun on us. Just before you came in he admitted he was a Federal dick.—Ask him yourself.

(During all this time Dick Towser stands with the revolver in his hand. There is a cunning leer on his face.)

Mrs. Towser (Turns to Dick): Is that true? Why don't you answer? Give that revolver to me. I said give that revolver!

Dick: Give you that gun, mother, and let this gang of dirty anarchists beat me to death? Not me.

Mrs. Towser: Who are you calling dirty anarchists? What sort of words are these I hear from the lips of a son of mine. Tell me, my son, that this is some horrible joke you are playing on the boys. Tell me that—

Dick: It is no joke, mother. They got the goods on me. I got nothing to be ashamed of. I have been working for the U. S. Department of Justice for three years. I am an American to the core and I hate these damn foreigners who are trying to destroy our government. I—

Mrs. Towser: Stop! You have said enough. Give me that gun!

Dick: No, mother, I will not! They will kill me.

J. Ward: No, you rat, they won't do anything of the kind and you know it. You are full of dope and afraid of your own shadow.

Mrs. Towser: I said give me that gun! (She makes a grab at his hand and secures the revolver.) Now, Dick Towser, answer me, for God's sake, answer me, is it true?

(Dick remains silent but nods his head.)

Mrs. Towser: So, the son of Richard Towser, the grand old fighter of the Knights of Labor days is a stoolpigeon. The boy I loved more than life is a dirty traitor to his class. (Turns to Mrs. Weston.) Oh, Mrs. Weston, you who lost your only son at the battle of Everett, Washington, you can go to the grave of your boy and weep there. You can have the pride of being a mother who gave her son's life for the cause of human emancipation. But I—I am the mother of a stoolpigeon!

(Dick starts for the door leading to the street.)

Mrs. Towser: Wait! Wait you traitor! Before you go listen to me. You are no longer a son of mine. Go, and never let me see your face again—and take with you a mother's bitter curse. (Exit Dick.) (Breaks into wild hysterical laughter) Ha, ha, ha, the son of Richard Towser, the grand old rebel, is a stoolpigeon. Ha, ha, what a joke! (She gives a loud scream and falls senseless to the floor.)

(Curtain Falls)

***

ACT II.

TIME—About a month later.

SCENE—Same as ACT I.

(Discovered—The secretary sits writing at his desk. The Marxian philosopher is studying a book. Several IWW members reading papers and a few are at the table playing checkers.)

Secretary: I am lucky this week. Got my financial report finished and mailed to headquarters on time. Now, I will read this pamphlet in peace.

The Marxian: An IWW branch secretary should be ashamed to be reading a pamphlet written for the A-B-C class. You should know Karl Marx's Capital by heart.

(Continued on Page 44)

# The Amazing Deportation Mania

A REVIEW By RICHARD BRAZIER

A READING of the book by Louis Post on "The Deportations Delirium of Nineteen-Twenty" must move all those fortunate enough to read this timely and interesting narrative of official tyranny to amazement.

One's first impression is: that for a long period of time one of the most important departments of the American government was in the hands of a lunatic, a man who was crazed with fear, and so hag-ridden by a phobia against all schools of radical thought that, in order to suppress them, he encouraged and permitted acts against them that would have shamed an Ivan the Terrible.

The nation-wide raids of 1919-20 against all those suspected of harboring thoughts repugnant to the frightened mind of this "Thought Censor," Att'y-General Palmer, have never been paralleled in the history of the American nation, and never duplicated elsewhere. For wanton disregard of all elementary rights; for shameless abandon of all semblance of justice and for sheer inhumanity towards a harmless and unoffending citizenry, these attacks by Palmer's "plug uglies" upon homes and liberties, rank high in the long list of outrages perpetrated against their suppliant subjects by autocratic rulers.

### Degenerate Recruits

Mr. Post makes it clear beyond all peradventure of doubt that the Department of Justice under Mr. Palmer's administration was simply an adjunct of the Burns Detective Agency, and that its secret agents were the dregs of that most despicable of all groups in society: the finks, stoolpigeons, gunmen and degenerates from which private detective agencies recruit their evil armies of crime.

Not content with capturing the Department of Justice, by playing the "Red" bogey to the credulous and frightened Mr. Palmer, and running it to suit themselves and serve their nefarious ends, this horde of detectives, defectives and ineffectives sought to control other government departments, and did, for a while, control the Department of Labor and its machinery for deporting aliens. It was during the control of these thugs that scores of members of the IWW were rushed across the continent from Seattle to Ellis Island and hurried out of the country to their respective fatherlands. without any formality of trial at all.

### Medieval Reminders

Some of the incidents of the "Red" raids, mentioned by Mr. Post in his book, make one hark back to medieval times for an adequate comparison. We read of secret prisons and dungeons on top floors of towering sky-scrapers; of some poor victims of official terrorism hurtling to death from dizzy heights—either driven insane by the tortures of his persecutors or else deliberately hurled into oblivion to hide some especially hideous act of injustice—and many people suspect the latter.

We find homes and halls of public assembly being broken into and despoiled; of families being separated, husbands from wives, mothers from children and girls from their sweethearts. We read with horror of the indignities heaped upon these innocent victims of a brutal despotism caught in what Mr. Palmer called his "rat-trap." Men by the thousands were held incommunicado for weeks and months, tortured, beaten and "third degreed" by atavistic savages masquerading as officials of the law, and were placed in jeopardy of disease and death by being crowded together like cattle in defiance of all the laws of health and sanitation.

To advertise their infamy still further, these Goths and Vandals dragged their captives, loaded with chains, through crowded city streets to furnish amusement and sport for pure 100 percenters, for all the world like a conquering army staging a triumph—a modern Roman holiday, all in the name of Democracy. Could hypocrisy be more hypocritical than this?

### Blazoning Palmer's Misdeeds

Mr. Post has done well to blazon to the world the misdeeds of the infamous Palmer and his cut-throat crew of dastards; he has rendered a great service in exposing the usurpation of powers not vested in them by Palmer and his hirelings, but there is danger that his book will lull into false security the liberty loving ones of America who are apt to conclude from a reading of Post's book that the whole disgraceful business of deporting innocent aliens is over and done with when, as a matter of fact, the aftermath of Palmer's "Red" crusade is still with us.

### Mania Still Survives

There is, for instance, the cases of the 15 IWW members—all of them political prisoners—who are being held for deportation under the amendment to the Immigration Act of 1920. This amendment, which makes all aliens convicted of violating the wartime laws subject to deportation, is a direct outcome of Palmer's "Red" crusade. These men are to be deported—if the government has its way —for violating laws that no longer exist, since most of the wartime laws have been repealed and the rest are in abeyance until a state of war exists again. Then again this amendment to the Immigration Act is an ex posto facto law, passed while the political prisoners were still in prison and two years after their conviction, yet the government which admitted its wrong in jailing the political prisoners by releasing them all before their sentences were served, due to the pressure of public opinion, still seeks to punish these men by deporting them to countries where some of them are in danger of facing a firing squad.

Mr. Post will not have done his duty until he has helped to arouse the American people to realize the fate that may await these men if they are

deported. He once had it within in his power to cancel the warrants against these men, as the original warrants were in his possession up till 1920. It would, perhaps, only have been a gesture of fairness, as his successors would, no doubt, have issued new warrants against these men, but it would have shown that his attitude of fairness towards aliens held for deportation, which he stresses in his book, was something more than a mere pose.

**Last Vestige Remains to Be Removed**

The last vestige of Palmerism will not be removed from the statutes of this country until the amendment to the Immigration Act of 1920 is repealed, and it behooves Mr. Post and all those who, like him, burn with indignation at the deportation outrages of Mr. Palmer to see to it that no one who was sent to prison for his opinions, or for mere membership in the IWW shall be deported. We wait to see if Mr. Post has the courage of his convictions, and if he will raise his voice as loudly in protest against the attempt to deport these IWW political prisoners as he raised it for the earlier victims of Palmer's "Red" crusade. Unless he does so protest, his book will remain a work of insincerity; unless he defends to the last ditch every victim of the war hysteria who faces deportation his task remains half done, and he will have assisted, instead of prevented the "Deportations Delirum" to continue.

**(The Deportations Delirum of Nineteen-Twenty, Louis F. Post. Chas. H. Kerr & Co., Chicago, Ill.)**

## THE STOOLPIGEON

(Continued from Page 42)

Secretary: I know nothing of Marx's Capital, but I have the marks of capital all over me.

The Marxian: So, you are repeating Bill Haywood's old joke. Well, if you want to remain an ignoramus that's your business. As for me, I just got through with Marx and am starting on Engel's.

Secretary: I hope you get the best of him.

**(Enter, a Friendly Drunk.)**

Drunk: I am a strong sympathizer. (Hic) I thought I would come (hic) and tell you—

Secretary: Why, here's Mr. Volstead again. I suppose you brought your usual jag with you.

Friendly Drunk: Yes, I got my jag (hic) with me. I am a strong sympathizer (hic) just the same. I am drunk, but I will be sober some day.

Secretary: Let us hope so. This way out please.

Friendly Drunk: Just a (hic) minute. I want to leave five dollars with you and when I (hic) sober up I am coming back to (hic) get a (hic) red card. Because I am a (hic) strong sympathizer. (Gives money to secretary and staggers out into the street.)

Secretary: Can you beat it. He did not even wait for a receipt. Chase him up and get his name.

(The Marxian rushes out, Secretary resumes his reading and Marxian returns after absence of a few moments.)

The Marxian: I think our friendly drunk is pinched. Just saw a bull leading him to the patrol box. I am sorry for the poor stiff.

(The secretary is about to reply when loud cries are heard from street (off stage.)

The Marxian: What's that!

(Everybody jumps to their feet as J. Ward and Tom Little enter. They are both visibly excited.)

J. Ward and T. Little: Dick Towser has been killed!

A Wobbly: How did that happen?

All: Yes, how did it happen?

J. Ward: A mob of drunken hoodlums had just wrecked the Socialist hall and were on their way here when one of the mob who recognized Dick Towser and had heard Towser speak on the street for the IWW, cried out: "There's one of the agitators. Lynch him!"—and before the stoolpigeon had a chance to explain what he had been doing while a member of the organization, they kicked him to death.

T. Little: Yes, and his poor mother asked me to take this message to you all from her. She said, "Fellow Workers, I want to forget how he lived. I only want to remember how he died."

Secretary: Spoken like a real rebel woman.

(Loud cries from without (off stage.)

The Marxian: The bulls are coming. A raid! a raid!

(Enter Dugan of the Bomb Squad and several policemen in uniform.)

Dugan: Line up you fellows. You are all under arrest!

Secretary: Have you a warrant?

Dugan: We don't need any warrant for you fellows. Come on! damn you, line up. Line up everybody! You fellows are lucky to be pinched. There is a mob on their way here now, ready to string you up. Come on! Get a move on you! Forward march! (The police surround the members present and they all march from the hall.)

(For a few moment the stage is deserted, then suddenly a large crowd of drunken hoodlums rush into the hall. They smash the book case, break the windows, upset the table and chairs. One of them takes a match and sets the hall on fire. The flames shoot up. The mob dances around the fire and sings Yankee Doodle as curtain falls. Curtain rises again and the hall is seen in flames, while from the distance comes the sound (off stage) of the workers singing the transport workers' song "Hold the Fort," and as they finish the chorus of the song

The Curtain Falls.)

**TO ENJOY LIFE MORE, SUBSCRIBE FOR THE INDUSTRIAL PIONEER**

**$2.00 A YEAR**

# Pioneer Praise Continues

THE Industrial Pioneer continues to receive many letters of praise and many favorable notices.

The Marine Worker, organ of the MTW, in its issue of December 15, declares, in big type,

**"The Industrial Pioneer.—The December issue is a corker. One of the best Labor magazines printed."**

The Branch Secretary, Construction Workers' Industrial Union No. 310, Portland, Oregon, writes:

"The Pioneer is getting to be a magazine of which the IWW as well as anybody else can be proud. At least everybody around Portland feels that way about it.

**"We are going to push the Pioneer in every respect, so as to raise the sale beyond all limits. It is no trouble at all to sell the magazine."**

Harold Allinger, writes from Manhattan, Nevada, on Christmas day:

"Just received the Amnesty number of the Pioneer, and very nearly missed turkey dinner as a consequence. I lost all track of time and could hardly lay the magazine down before I finished it.

**"I hardly know which of the fellow workers are to be congratulated most, the authors, the artists, or the editorial staff.**

"I have waited for years for a magazine to appear by, and for the workers. Once I thought I had found the things I sought in the 'Liberator,' but soon discovered that a group of 'parlor intellectuals' could not possibly furnish the mental food a class-conscious worker needs, while the Pioneer fills the bill to a nicety.

"Congratulations!"

Frank Rosenblatt, Rochester, N. Y., declares:

"I have read a few numbers of the Industrial Pioneer and like it very much.

**"The magazine has a wide field of usefulness, and I do my part in selling as many as I can. Send me subscription blanks.**

"I have sold working class papers before and wont stop to do my share until we gain our freedom."

Card Number X26019 writes from Butte, Montana:

**"Each month I have been thinking that this Pioneer is better than the last until now I have ceased to speculate on where it could be improved. I do say, however, that as it stands today it should be and is the world's best Labor magazine."**

"One of our friends from Casper, Wyoming, although not a card member, but a fellow worker just the same, writes that he misses the Pioneer newsboy and encloses ten dollars for Christmas. Enclosed you will find what the newsboy thought was a suitable present for such a friend."

**"Our New Year's wish for the Pioneer is, that it will be an absolute success and in the end will reach the four corners of the globe."**

**(Enclosure)**

"Fellow Worker:

"I am six years old and am paying my way to school with money I made selling Pioneers at Casper.

**"Please tell Santa Claus to send my friend Mr. Mote, the Pioneer for one year. I think this is a good present to give a friend.**

"We have the Pioneer in the top of our tree this Christmas.

"Let's boost the Pioneer.

**"Jack Garner."**

**B. Osuchowsky, New York City, N. Y., sends $2.73, his profit on the sale of the Pioneer, as a donation towards its development. It will be used to give subscriptions to workers whose names he has been requested to send in.**

P. J. Welinder, Seattle, Wash., sends this bouquet:

"I have a complaint to make in regards to the January issue of the Industrial Pioneer. It reached me last Thursday, but not before last evening, rather late, had I the time to look it over. **And here is where my complaint enters; it stole three hours of sleep away from me.**

"Being a Swede, and born close to the waters that separate Sweden from Denmark, I started out with Fellow Worker Anderson's article on Scandinavia. Only intended to glance it over, but I would like to see the Swede who could start on that article and quit before finishing. Say, that is great! . . .

**"Then there is Vern Smith's article. I don't know which I most admire, the masterly handling of the subject or the almost extravagant brilliancy in style. Perhaps it is so fascinating to me because I have a particular fancy for that kind of subtle satire which runs through the article. It is something like Strindberg, or Ibsen,—and Strindberg and Ibsen are my literary gods.**

"Although I hesitate a lot in attempting to write after reading such splendid works, I had to slip a few lines to the Industrial Worker urging its readers to secure a copy, particularly the Scandinavians. And also I felt it my duty to send you a line of thanks for a real, good issue of the Industrial Pioneer. They have all been great, but I can't help thinking that this is the greatest.

**"I hope you will be able to keep the magazine up to the same high standard. I know what it means to work with limited resources and limited support. But if my effort can help any I promise you, Fellow Worker, that I will do my best. I will soon be in the field again and I will not fail to carry that sub book and to boost the Pioneer as well as our other publications."**

# Maurer Nails State Police Lie

LAST month the Industrial Pioneer published the following item, which was sent in by a friend in Louisiana:

**"Union Labor, Is This True?**

"In 1917 the sheriffs of Pennsylvania appeared as a body before the legislature of Pennsylvania to ask for a large numerical increase of the force, and for a raise in pay for every man on it—and a strong union labor vote, backing this appeal, triumphantly carried the measure. Union labor at that time had the IWWs fresh in mind, from whose assaults the ever-ready state police had, at their call, come times without number to save them."—Farm and Fireside, December, 1923.

Following the item's publication, the below letter was sent to James H. Maurer, President State Federation of Labor, Pennsylvania:—

Chicago, Ill., Dec. 26. 1923.

James H. Maurer, President,
State Federation of Labor,
Harrisburg, Pa.

Fellow Worker:

Under separate cover we are mailing to your address a marked copy of the Industrial Pioneer for January. On page thirty-three appears the item marked: "Union Labor, is this true?" We hope it is not.

Shall be pleased to print your denial or statement in the next issue of Industrial Pioneer. We go to press about the 10th.

Thanking you for your co-operation and trusting to receive your reply, we are yours with best wishes for industrial freedom,

INDUSTRIAL PIONEER,
Per Justus Ebert, Editor.

**Maurer's Statement**

To all of the above, James Maurer, President Pennsylvania Federation of Labor, makes the following reply:

Mr. Justus Ebert,
1001 West Madison St.,
Chicago, Ill.

Dear Brother Ebert:

In reply to your favor of recent date, relative to article in Farm and Fireside Magazine, as copied in The Industrial Pioneer, on State Police, will say there is not a word of truth in it.

It is generally well known that I have, personally fought the Department of State Police ever since its creation and the same is true of the State Federation of Labor, of Pennsylvania, of which I have the honor to be president. As a matter of fact, I wrote many pamphlets and a book, "The American Cossack," describing the activities of the State Police and proving them to be nothing more than a legalized band of strike-breakers.

As to the legislature session of 1917. The very opposite of Labor's attitude is true. We fought the State Police bill every inch of the way in both houses but, due to the war hysteria which, at that time, gripped the People, the bill was passed, with every labor member in the legislature voting **against** it. I was a member of the legislature at the time. The legislative record for the past fifteen years will show that the only active opposition to the State Police, in Pennsylvania, was Organized Labor and "dirt" farmers. As to our fear of the IWW. The only time that I ever heard of anyone even throwing out a hint along this line before, was when we fought against the passage of the Governor's anti-sedition bill. Governor Sproul's spokesman, Attorney-General Shaffer, in his appeal for the bill, said it would protect organized labor against the terrible IWW. My answer to him, on this point, was that Organized Labor was not asking the Governor, nor anyone else, to protect it against the IWWs or any other group of workers; that whatever difference there might be between the two organizations, we could and would settle between ourselves, and that both groups resented interference by Labor baiters or legislators.

Thanking you for bringing this matter to my attention, I am,

Sincerely yours,

(Signed) JAMES H. MAURER.

# Amnesty Only Half Won

ON page nine of the January number of The Industrial Pioneer it is said: "The war prisoners having been granted unconditional amnesty, the thanks of the IWW are due to all who helped to achieve this end."

Permit me to call attention to the fact that "unconditional amnesty" has NOT been granted—far from it. As a matter of fact the fight for amnesty is only about half won.

We should not overlook, nor permit others to, the fact that release from prison, whether by expiration of sentence, parole or commutation of sentence is not amnesty in any sense of the word.

Amnesty is what we have been fighting for and what we must continue to fight for until we win. Amnesty is a general grant of pardon for political offense against the government and restores civil and political rights.

Until amnesty is granted political prisoners are felons still and considered morally unfit to exercise the civil and political rights which go with American citizenship.

Yours for Freedom,

**EMIL HERMAN,**
Seattle, Washington. **Card No. X6869.**

# The Present Business Slump

(Continued from Page 4)

will, the owners of industry eannot spend their income and thus keep the necessary balance between production and distribution. They may build sumptuous residences and estates, give extravagant dog parties, buy opera companies for their second or third wife, patronize the rising gland transplanting industry, endow public, religious and educational institutions, have a variety of "love nests" throughout the eountry—they may, in brief, dissipate, debauch and **squander** with a prodigality that causes that of the prodigal son to pale into insignificance indeed, and yet have tens of billions left, untouched.

Therefore they automatically, in the language of Hobson, "apply to the production of eapital-goods a proportion of the aggregate productive power that exceeds the proportion needed in aceordance with existing arts of industry to supply the eonsumption goods which are purchased and consumed."

### Piling Up Useless Capital

This means that they invest their surplus plunder in more eapital where too much eapital already exists; and where production already exceeds eonsumption. This, it will be recalled, is substantiated in the figures of Dr. Klein, already quoted. He shows us that boot and shoe factories are 25 per eent overbuilt. That is, they are required to produce only 75 per eent of their capacity. The same is substantially true of the pig iron industry, with a capacity 10 millions of tons in excess of industrial requirements.

Nevertheless, such is the need for investment on the part of the eapitalists, that they add to this excess capital, with its exeess capacity. They eontinue to overcapitalize and overbuild the industrial equipment, especially under the stimulus of so-called prosperity, when they expand their plants abnormally, only to find, when normal times return, that they are useless. This was the case during the war, when productivity was increased out of all proportion to subsequent needs.

Aside from the destructive competition and waste involved, many other bad results flow from this eourse.

### The Results

First, there is the periodie piling up of unsalable commodities or "goods," followed by a crash in prices, shutting down of factories, unemployment, failures, and all the well-known phenomena of the "business crisis," such as we are now partly confronted with and discussing.

Second, the ceaseless struggle for markets, here, there and everywhere. As Dr. Klein shows, the need for developing export trade beeomes imperative. The natives of tropical climes must be induced, cajoled or forced, if necessary, into wearing woolen underwear and putting in steam heating apparatus; while the Eskimos must be coerced

UNEMPLOYED!

into buying electrie fans and other machines for reducing the temperature! Where export trade is already secured by rival capitalists they must be driven from the field and their markets captured by any means, either fair or foul, peaceful or warlike. Thus we have come to have "economic penetration," "imperialism," etc.

Third, we also have come to possess, for the same reason, i. e., the struggle for markets, the abnormal development of retailing and its adjuncts, such as advertising. This gives rise to the extensive systems of ehain and department stores, big, bulky newspapers, special advertising organs, bill-boards, and other wasteful monopolies.

### War Ensues

On the other hand, the piling up of goods thru excessive capitalization and production, results in attempts to limit both markets and output. Tariffs, for instance, exclude outside eompetition, that is, the commodities produced in other countries. This leads to friction and demands for international free trade. Again, there is the custom of slowing down and otherwise attempting the restriction of industry, followed by all elasses alike. We see it in the reduced acreage of the farmers, the ca canny policy of the trade unionists, and the restrictive regulations of the trust magnates—all try to control production in order to insure prices, wages and profits.

Finally, from economic penetration, imperialism and protection come international friction and war, with their murderous prosperity and destructive, uncivilized aftermaths. Thus we find the basic cause of the business recession, so-called, together with all other modern evils, in the robbery of labor. The so-called evils of underconsumption and oversaving of the capitalist class grow out of that robbery and that robbery alone. As ex-Senator Pettigrew well says, "Capital is stolen labor. Its function is to steal more labor." We might add, its function is also to create war, reaction and all the other horrors of so-called civilization.

### The Remedy

Now how shall we end these so-called business recessions and all that thereby hangs? Some argue that hours should be reduced so as to give jobs to all. Instead of working 12 or 10 hours, we should work either 8 or six, thus increasing the labor forces required from 20 to 50 per cent. This may allieviate conditions, but it is logically no solution of the problem or problems involved. Plainly, the only solution is to give labor all that it produces. It will then be in a position to buy and consume all the commodities or "goods" produced. There will thus be no piles of unsalable goods in the face of existing poverty and shabbiness. There will thus be no urgent need for imperialism, protection, war and all that they have come to imply.

With labor getting all it produces, the cause of modern social ills will be removed, and social safety will be assured where now the destruction of the race looms up ahead of us, thanks to the diabolical thoroughness of modern scientific warfare.

John Hobson recognizes this necessity in two ways: he would absorb the income of the capitalists by giving the workers and the state greater shares in production. In both these ways, there'd be more consumption and, consequently, less dangers of either underconsumption or oversaving by the capitalists. Of course, both of these methods would have a certain degree of effectiveness. They would mitigate the evils complained of. Besides, the promise of more wages and increased employment embodied in the Hobsonian methods are not to be lightly regarded, or "sneezed at," as we moderns would say.

But with the capitalist's control of the state, and with his power to increase productivity out of all proportions to the wages paid, the final success of both of these methods looks doubtful. Apparently, nothing but the complete abolition of the capitalist exploitation of labor will do. And to this end, naught else but the industrial organization of the working class will do. With such an industrial organization perfected, labor will be in a position to regulate production during all times and give to society a social basis that will make the "business recession" and all that thereby hangs, impossible.

## Chicago

By John Drury

CITY,
Flaunting the iron of your strength
Across the prairies,
You have been cruel to me—
You have twisted my being
Into unreal shapes and attitudes.
But yet, O my city,
I have loved you
For all your masculine brutality.
I have watched a thin curve of moon
Lying in the smoky red behind your factories
And have seen the white reach of your skyscrapers.
Out of mist mornings.
My heart has been torn in your rude hands
But you have had me in a strange wonder,
O flaunting city.

## What Is Co-operation?

THE London Daily Herald prints the following item:

**"CO-OPERATIVE WAGES**

**"Scottish Negotiations for Increase**

"Good progress is being made in the negotiation between the Scottish Co-operative Societies and the Shop Assistants' Union and the Distributive Workers' Union regarding the claim for increased wages as from January 1.

"Certain offers have been made which will be considered at an early conference of the unions.

"About 20,000 employes are concerned."

Co-operation is said to be an abolition of capitalism and wage slavery. Is it?

# Preamble of the Industrial Workers of the World

The working class and the employing class have nothing in common. There can be no peace so long as hunger and want are found among millions of working people and the few, who make up the employing class, have all the good things of life.

Between these two classes a struggle must go on until the workers of the world organize as a class, take possession of the earth and the machinery of production, and abolish the wage system.

We find that the centering of the management of industries into fewer and fewer hands makes the trade unions unable to cope with the ever growing power of the employing class. The trade unions foster a state of affairs which allows one set of workers to be pitted against another set of workers in the same industry, thereby helping defeat one another in wage wars. Moreover, the trade unions aid the employing class to mislead the workers into the belief that the working class have interests in common with their employers.

These conditions can be changed and the interest of the working class upheld only by an organization formed in such a way that all its members in any one industry, or in all industries if necessary, cease work whenever a strike or lockout is on in any department thereof, thus making an injury to one an injury to all.

Instead of the conservative motto, "A fair day's wage for a fair day's work," we must inscribe on our banner the revolutionary watchword, "Abolition of the wage system."

It is the historic mission of the working class to do away with capitalism. The army of production must be organized, not only for the every-day struggle with capitalists, but also to carry on production when capitalism shall have been overthrown. By organizing industrially we are forming the structure of the new society within the shell of the old.

# History and Civics in Senior High Schools

By WILLIAM THURSTON BROWN

**THIS impressive and striking article is worthy of close perusal despite its length. It is written by a teacher in a conventional preparatory school and attacks "our" educational system on its own grounds. Its argument should be easily understood not only by the workers with whom it is largely concerned, but also by people outside of the militant labor movement.**

**Its plea for dynamic as opposed to the static influences in education can also be made in behalf of other branches of social activity. All society needs to be freed from traditional beliefs and institutions in order that further development may be possible. And in no branch does this apply as in labor unionism, where, as in education, attempts are being made to perpetuate dominant types indefinitely; all for the like continuance of the present anti-social system.**

**With this parallel suggestion in mind, we again urge a close perusal of the article by the reader.**

I. FOREWORD:

The writer of this paper believes that the problem of education is the supreme and fundamental problem of society; that clear understanding of this problem and resolute, effective action under the guidance of such understanding are the only hope of freedom and happiness for the individual or of real intelligence, conscience and will in the State; and that this understanding of education is inconceivable unless there shall be not only **unfaltering determination to penetrate below the surface of all social phenomena, all social and political institutions, and to submit these institutions to the severest scrutiny, but also unhesitating courage in accepting conclusions indicated by the facts discovered, regardless of consequences to any traditional beliefs.**

Further, since some criterion is necessary for determining one's methods and conclusions, the writer accepts what may be called the methods of natural science as the only methods that can be trusted in the task of finding the truth—or some approach to the truth. Moreover, in view of the vast and far-reaching human interests involved in the attempt so to reorganize the educational system of the United States as to furnish a citizenship conscious of or adequate for the tasks and problems of today and tomorrow, he feels bound to approach any and every situation and proposal with critical faculties alive and alert. In order not to dissipate his energies by attempting too much, he undertakes in this paper to discuss History and Civics teaching only as applied to boys and girls at the point of their greatest maturity, in the period of secondary education as forming, for the ends of citizenship, one relatively homogeneous unit. The supreme **motif** in this teaching is held to be that of **effective functioning of the**

**individual with others in a social process which has no meaning except as it is DYNAMIC,** and the two subjects coupled in this course are held to be subordinate departments of SOCIOLOGY.

In addition to other sources of educational information and stimulus, the writer desires to acknowledge his great obligation to the most painstaking, the most suggestive, the most inclusive, and the most courageous of all sociologists in the search for truth and in the effort to make social science the instrument of intellectual emancipation—and indirectly of social and economic emancipation—of mankind: Lester F. Ward.

## II. BASIC FACTS AND PRINCIPLES IN THE MIND OF THE TEACHER OF HISTORY AND CIVICS IN THE SENIOR HIGH SCHOOL:

"WE are educating today in the Secondary Schools the America of 1940."—Professor Williams, Univ. of California.

"This is an age of confusion.

"Another world war will destroy civilization."
—Professor Aikin.

"Another world war is inevitable under the stimulus of nationalistic patriotism and the domination of capitalist imperialism."—The substance of lectures by Prof. Hayes, of Columbia University, N. Y. City.

"Much depends upon the faith of teachers in the possibility of **a better social order than now exists."** —Professor Aikin.

"We are living in the **Stone Age of the Art of Government."** —Lester F. Ward.

The teacher who approaches the task of teaching history and civics in Senior High School—or anywhere else—lacking the clear, reasoned perception of certain basic facts and principles as the ground upon which to frame a program of instruction is in exactly the same condition relative to efficiency or worth as a ship at sea without rudder or compass or captain; **such a teacher is wasting public funds and constitutes a menace to the social structure.**

What are some of the basic facts and principles which the useful, efficient teacher will possess as the background of all thinking and the criterion of effective action? They are indicated in part by the above quotations, and some of them may be stated in the following propositions:

1. This is an age of widespread confusion of thought and action, **especially in certain strata of society,** due to the complete absence from our supposedly educational agencies, from elementary school to university inclusive, of frank statement and vigorous presentation of the findings of evolutionary and social science; and the further fact that no existing political state represents either a social intelligence or a true social objective.

2. Society, considered not as the sum total of existing institutions, but as **The Human Race Seen in Historical Perspective,** is not STATIC but DYNAMIC; not fixed, but changing, growing and OUTGROWING. A true idea of society is given to any individual only as this growing and outgrowing character of the whole social process is made clear and becomes a part of consciousness—and also, only as the basic factors which give the social process this quality are also made known.

3. Social evolution has thus far been—and is still—the product of forces **neither understood nor directed by social intelligence and social forethought.** Social intelligence in the sense of a social consciousness, a social will, and a social objective inclusive of the equal welfare of all the individuals composing society does not exist in America. **The Creation of this Consciousness and Will and Objective is the Supreme Task of Citizenship.**

4. The so-called social institutions, such as church, government, industry, and school **as they now exist** are static in their nature, regardless what high-sounding names or sanctions are formally given them, and are now the servants of a single class in society and in their present form cannot be the servants of all the people, nor the agencies of any society conscious of inclusive social functions.

5. The combination of that nationalistic patriotism which our schools, under the control of a capitalistically minded and organized State, have been and are still zealously fostering in the minds of our youth, together with our capitalist imperialism which has dictated the vast war-preparedness making what is called with rare irony "Christendom" not only one great army camp, but a mammoth powder magazine, exploding in 1914 in a four years wholesale slaughter of the flower of "Christendom's" young men for which there was not the smallest compensation except for munition makers, profiteers, and finance imperialists, and now preparing with feverish activity for the next world war—this combination is rapidly and effectively, **and by the admission of the very educators who are promoting this nationalistic patriotism,** carrying the world toward a disaster of almost inconceivable proportions.

6. The United States is not a democracy—never has been a democracy—but, like all the rest of the nations today, it is an ARENA in which is now going on a terrific and continuous struggle—blind though it be in a large measure as to ultimate objectives—for the ending of all exploitation of man by man, of the many by the few, and for the organization of one all-inclusive partnership for the conquest of nature and the harnessing of the social forces for the well-being and happiness of all. This is the only significant or worth while social or political struggle on this planet, and in its success the hopes and needs and fulfilments of human life are involved as they never were involved in any previous event or movement in all history. THE CENTER AND HEART OF THIS SIGNIFICANT STRUGGLE IS THE MILITANT AND THEREFORE INTELLIGENT MINORITY OF THE ORGANIZED WORKING CLASS.

7. An unvarying incident of society as a social process is the survival of customs, habits and institutions **having their origin in periods of practically**

**universal ignorance and by the agency of brute force or cunning,** which are no longer valuable; and one of the major obligations of intelligent citizenship is the elimination of these relics of ignorance and savagery and their replacement with institutions which owe their existence to the demands of awakening intelligence and the findings of social science.

8. The pupils of our High Schools and the vast mass of children in the nation to whom the High Schools have never reached or even tried to reach are to be the active, responsible citizens of tomorrow and to face the realities of this fluent, growing and outgrowing society.

9. Unless these pupils possess a clear knowledge of the meaning of the social forces, unless they are freed from the illusions and delusions imposed upon their childhood minds by the teachings of a church whose face is always and always has been either turned fixedly toward the very distant past of childish fancies or toward a non-existent future in the skies, they will become either slave-drivers or slaves or indifferent spectators of the operation of an industrial slave system: in any case unintelligent victims of a morally and socially meaningless process.

THE CLOUD OF CHILD LIFE—CAPITALISM

10. In this alleged democracy, the vast majority of the population are wage-workers and farmers: producers of all the wealth of the nation. The children of this alleged democracy's producing classes constitute the vast majority of the children of this nation. And yet, in spite of that law which sets the limit of compulsory schooling at 14—a law obviously dictated, even if unconsciously, by the requirements of our cannibalistic capitalism—it is well known to all educators that our public school system, alleged to have come into existence as democracy's supreme agency for ensuring its own perpetuity thru an intelligent electorate, is not enrolling more than a negligible fraction of these future citizens **During the Years when their Minds Would Be Most Open to the Knowledge of what Citizenship Requires** — and, more tragically still, has nothing to give these children or any others that can fit them for DYNAMIC CITIZENSHIP even tho its buildings and teaching staff were doubled or quadrupled.

11. Herbert Spencer, writing 63 years ago on education in England, declared that "if by some strange chance not a vestige of us descended to the remote future save a pile of our school books or some college examination papers, we may imagine how puzzled an antiquary of the period would be in finding in them no indication that the learners were ever likely to be parents. 'This must have been the curriculum of their celibates,' we may fancy him concluding. 'I perceive here an elaborate preparation for many things, especially for reading the books of extinct nations, but I find no reference whatever to the bringing up of children. Evidently this was a school course of one of the monastic orders.'"

Some future investigator of America's present school program would not only reach a similar conclusion from the complete absence of any explanation of the physiology, psychology, and ethics of sex-expression in marriage, but he would also note not the slightest evidence of any consciousness on the part of teachers and educators of the existence of that world-wide movement in the ranks of organized workers for the elimination of our war-breeding capitalism and the construction of a decent and useful social order: the only promise or hope of peace on earth and good will among men.

## III. THE PRESENT STATUS OF HISTORY AND CIVICS TEACHING IN SENIOR HIGH SCHOOLS, INCLUDING THE STATUS OF THESE SUBJECTS UNDER THE PROPOSED REORGANIZATION PROGRAM:

"American schools are not educating the mass of future citizens."—Cardinal Principles of Secondary Education, Bulletin 35.

"The School has been a follower, not a leader. "Home, government, church, school, industry and commerce, designed to be preservers of

racial experience, have become static, 'cold storage plants.' "

—Professor Williams, Univ. of Calif.

"It is a strange anachronism that the schooling mechanism for TRAINING MEN TO BE SERFS should have been passed down, **unchanged by tradition,** to become the schooling system of American democracy for the training of free-born, thinking, self-responsible, government-making citizens of the 20th century. YET THIS FACT STARES AT US COMPLACENTLY IN NEARLY ALL FORMS OF OUR SCHOOLING FROM THE KINDERGARTEN THROUGH THE UNIVERSITIES."—Frederic Burk, President San Francisco State Normal.

**NOTE: One of the tests used in Insane Asylums to determine whether a patient has regained sanity is to place the patient beside a tub into which water is flowing from an open tap, providing the patient with a pail, and directing him to take the water from the tub. If the patient closes the tap, he is regarded as sane.**

1. With exceptions so rare as to be negligible—by the admission of eminent students of our present school system—the status of this department of secondary education which is most potently related to the interests of an effective citizenship is STATIC—indeed, reactionary. Surely, no man who understands what citizenship demands as defined by the principles of sociology and by the challenging problems of world peace and a decent social ethics, can say that American youth are receiving in our schools any preparation at all for service in social reconstruction: THE FIRST NECESSITY OF TODAY AND TOMORROW. When such a reputed leader in education as Charles W. Eliot can extol the labor scab as a hero, and when American schools can send their students to act as strike-breakers, THE TORY OF ONE HUNDRED AND FIFTY YEARS AGO HAS COME INTO HIS OWN, and the men who achieved American independence are repudiated. For the men who are in the front trenches of militant labor are the only lineal moral and spiritual posterity of the American revolutionists of 1776, and the upholders of scabbery in industry and of political intolerance and persecution of the representatives of militant labor are the direct spiritual posterity of American and British Tories.

2. Further, it must be noted that America has no agencies for preparing teachers for this crucial function. With our colleges and universities paralyzed by such survivals of autocracy and mediævalism as Nicholas Murray Butler and his like; with nearly all agencies of information and instruction: churches, newspapers, magazines, schools—under the domination of a ruling class blind, ignorant, and indifferent to the need of a new citizenship and bent solely on imperialistic ends, the products of our schools are uniformly obsessed with the instinct of CONFORMITY and so sterilized of all progressive or revolutionary spirit. Our school system from kindergarten to university is an apotheosis of the "goose step."

3. The fact that our schools have never once taken the lead in overthrowing any sort of social or political oppression and establishing some new freedom—or even in seeing or realizing the existence of intolerable oppression and of the struggle for a larger freedom—is easily explained by the fact that a class-controlled society is always STATIC—a crystallization, not a growth—and that CONFORMITY PARALYZES the NERVE of ALL REVOLUTIONARY ACTION. The minds of teachers under such a system are static, not dynamic. The moment the mind of a teacher becomes dynamic, it inevitably becomes insurgent against this reactionary system, and the teacher with such a mind becomes a teacher without a job.

4. It should not surprise anyone, therefore, to find that the status of History and Civics teaching—indeed, of the whole plan of secondary education as outlined in the proposed reorganization of our school system—is still basically static, in no real sense dynamic, as may be seen in the following among many similar facts:

a. There is no real recognition in Bulletins 35, 28, and 23 (U. S. Bureau of Education) of the fundamentally fluent, organic, growing character of human society, and the only adjustment of our potential citizenship proposed in this series of documents is one that means CONFORMITY: the very essence of petrifaction and even reaction. How tragically sterile to the plain lessons of history these minds are, that with the example of the non-conformists of 17th century England who colonized America they cannot rise above a feeble conformity in the face of incomparably graver issues in this 20th century!

b. We are told in Bulletin 28 that the aim of social studies is to enable the student "to adjust himself to his present environment and conditions." "to cultivate good citizenship," which means throughout the whole discussion "loyalty and sense of obligation to his city, State and nation as political units"—as static a conception in the light of all the facts as can be put into words. Think. Did the makers of this plan have clearly in their minds that vast multitude of boys and girls whose inevitable lot under our capitalist industry is that of slaves of the machine in factory, mill, shop, mine, and all the other institutions of our modern slavery? Exactly as a simlar committee engaged upon the same task in our own South a century ago would have had clearly in mind the four million black chattels of the cotton fields, as a remoter spiritual ancestry in mediæval Europe would have envisaged the millions of serfs, or as a still remoter set of spiritual ancestors in the "democracy" of Athens would have considered the 350,000 slaves upon which that "democracy" was built!

On not a single page of either of these Bulletins is there a sentence that parallels the words of William Draper Lewis in his "Democracy's High School," where he says: "It is strange that we have been managing our High Schools as if our pupils were to be citizens of a despotism where the highest virtue

is unthinking obedience. THE HABIT OF RENDERING UNTHINKING OBEDIENCE TO A GOVERNMENT, NO MATTER HOW BENEFICENT, IS EXACTLY THE HABIT MOST FAVORABLE TO THE PARTY BOSS." Mr. Lewis's statement needs one correction: **It is not strange at all.**

c. There is no suggestion in this reorganization scheme that the problem of citizenship today is the preparation for and entrance upon A CREATIVE FUNCTIONING IN A CONSTRUCTIVE PROCESS aiming at such social reorganization of our whole industrial and political life as shall provide for all the members of society equality of opportunity and conscious partnership in purposes and activities which involve universal well-being. Why? Because that would mean revolution, and the only kind of revolution these men are interested in is one that occurred at least a hundred years ago. Membership in those pathetic jokes of modern American life: the "Sons of the Revolution" and the "Daughters of the Revolution"? By all means, for the only revolutionist any of these "sons" or "daughters" have any respect for is a dead one, exactly as the only "disturber of the peace" whom the galvanized brains of church members can pretend to respect is one whom their spiritual ancestors of long ago hanged on a cross!

When in this reorganization scheme the question of choice of vocation is discussed, the obsession of the authors with the psychology of a middle class view of social activities is evidenced by the fact that there is not a hint that any pupil of High School will or should choose the vocation of mine-worker, factory hand, or garment worker, but "honorable occupations" are named: the professions and such skilled and aristocratic trades as engineers and the like. There is no suggestion that a democratic society cannot and will not tolerate industrial caste.

d. These bulletins nowhere recognize the fact that we now have in America no democracy at all, but rather a farcical system of representation and with it an industrial autocracy with the political government always on the side of the autocrats. Nor is there any evidence that the authors possess any knowledge of social evolution as marked by a division into classes all the way down to and including the present, or of the struggles of oppressed slaves for freedom from enslavement.

There is reiterated emphasis of the static idea that patriotism is one of the primary and indispensable marks of the good citizen and that this patriotism means loyalty to our social institutions AS THEY ARE—not a suggestion anywhere that the only patriotism that is historically or ethically justifiable or ennobling is SUPREME LOYALTY TO THOSE ENDS AND IDEALS WHICH ALONE GIVE ANY SANCTION OR VALUE TO SOCIAL OR POLITICAL INSTITUTIONS.

f. An essentially caste idea determines this program: for example, there is oft-repeated emphasis on the necessity of PROTECTION TO PROPERTY as a high civic virtue to be diligently learned by our youth, but it is always THE PROPERTY OF ONE CLASS ONLY: the owners of real estate or financial investments. There is not from cover to cover of all these Bulletins any recognition that a tolerable government must afford ample and sure protection for the most valuable property in any nation, and the only property possessed by millions of mine, mill, factory, and agricultural workers: THEIR LABOR POWER. On the contrary, the makers of this reorganization scheme clearly and frankly treat that labor power exactly as it is treated by capitalists: by the Garys of industry, the Morgans of finance, and the Wilsons and Coolidges of politics: AS A COMMODITY LIKE COKE OR PIG-IRON. Indeed, suggestions for the study of this commodity, **which is the lifeblood of millions of workers,** as a commodity along with others, are made as elements in the education of our High School boys and girls.

The critical reader of this proposed reorganization will also note the limitation of civic agencies in which young citizens are to function, to such as are recognized by business men and made necessary by a capitalist control of industry: charity, social service, relief, etc.,—nowhere any suggestions of their taking part in labor organizations and activities: strikes, unions, agitation, and political solidarity for the control of industry in the interest of freedom, peace, and a decent chance for life, education and leisure. The proposal to bring into the High School this vast mass of boys and girls whose fathers are in steel mills or mines or shops, and many of whose mothers are in our factories, with a view of their getting the instruction planned in this scheme, could be made only by a group of men either lacking wholly in the sense of humor or else utterly ignorant of the basic facts in American social and industrial organization.

Nor is there anything in these Bulletins that could correct the universal impression now entertained in our schools by the mass of teachers and diligently fostered in the minds of pupils that labor unions are disreputable and anti-social bodies, that strikes are vicious and lawless and aimed at social well-being, and that all militant workers belong to the criminal class and deserve the penalty of our "criminal syndicalism" laws with their long prison sentences and their annulment of the first amendment of the Constitution. Truly, not only have the tories come into their own, but so have the Pharisees and scribes!

g. No estimate or examination of this proposed status of our schools would be complete without reference to the failure to suggest any adequate discussion of the problem of family life. There is no hint in it that family life in America today is impossible at all for hundreds of thousands of young people by virtue of an organization of industry which negates the idea of marriage for millions and dooms them to an existence destructive of the very notion of home. The need of

grappling with that problem finds no place in these documents. Nearly twenty years ago, Judge Peter S. Grosscup in a public address in Boston that was quoted far and wide in the press, declared: "In America today there are hundreds of thousands of men and women who possess no stake in the nation's property or welfare." He might have said "millions." That our commercially obsessed bosses should be oblivious and indifferent to this situation is not surprising, but that educators charged with the task of organizing an instrument for the promotion of efficient citizenship should not frankly recognize such a situation and demand its solution, is unforgivable.

IV. OBJECTIVES IN THE TEACHING OF HISTORY AND CIVICS IN SENIOR HIGH SCHOOL:

"The school's function is three-fold: to preserve the past, interpret the present and ANTICIPATE the future."
—Professor Williams, Univ. of Calif.

"Education in the United States must be guided by a clear conception of the meaning of democracy." —Cardinal Principles.

"We must teach a new patriotism."
—Professor Aikin.

"The greater weakness (of proposed curricula) is that they seek to fit children **to take part in life as it is today.** That is, they tend to ignore the demands of a rapidly changing society. We must equip our children to be constructively critical of contemporary social, economic, and political organization."—Professor H. O. Rugg, in 22nd Year Book of N. S. S. E., Part II.

"As doubt is the beginning of intelligence, so discontent is the impulse of progress."
—Lester F. Ward.

In general, the objectives of History and Civics teaching in the Senior High School must be determined by the facts and principles of sociology, involving a knowledge of the main stages of human evolution and of the forces that have operated in the social process, as well as of the status of this social evolution today and of the agencies and movements now actually operating for social reconstruction—also, of course, by a consideration of the individual and social functions and relations to which the efficient and intelligent citizen must adapt himself.

Anyone who is prepared for the job of teaching this crucial subject to boys and girls of the Senior High School age must know that not only the greatest social interests, but also the highest ethical possibilities of these young people require on their part a clear understanding that the big job which will challenge every finest capacity of their natures and make their lives dynamic, an inspiration to themselves and a service to the race, lies in no sort of conformity nor in any mere blind dissent or rebellion —though even that is better than conformity—but in entering upon citizenship as a task of evaluating the past's achievement in the light of sociology and of present need, and of employing those forces now active for industrial and political reconstruction in the task of building a societary home that will shelter and foster the many-sided activities of a conscious social partnership, and give freest rein to creative individual adventure.

Is this vague? Perhaps. But it can be made thoroughly concrete. If boys and girls at the age when their minds are getting impressions that endure are kept free from those silly illusions which make them the easy marks for cunning and self-seeking politicians and profiteers; if they are given a chance to see things as they are—to see, for example, that nationalistic patriotism is bunk of the worst kind—is a positive menace to every interest of a just society; that there is no more virtue in worshipping the symbols of American patriotism than "Deutschland ueber Alles!"; that there is no more virtue in starving to death under the American flag than under the Japanese or any other flag; that the Stars and Stripes can give no sanction whatever to industrial enslavement any more than the Union Jack or the Star and Crescent; that capitalist imperialism is exactly as great a menace when it flies the flag of an alleged republic as when it flies that of a monarchy; that "America" is not a whit more the synonym for "just" or "righteous" than France or England or Italy; in fine, that any and every government, party, program or policy is to be judged not by its flag, but "by its fruits": by what it does and what it is to do and for all its citizens—let a generation of young people go out of a school system with these ideas in their minds backed by unbiassed knowledge of the facts, and you will have here or anywhere a DYNAMIC, not a STATIC citizenship. AND NOT OTHERWISE.

So much in a general way. Specifically, a well-informed teacher with a modern mind AND A BACKBONE would, it seems to me, have at least the following objectives:

1. The development of minds capable of and insistent upon thinking for themselves.
2. The development of DYNAMIC individuals: of individuals who are as far removed in spirit and consciousness as possible from the ant and the bee—individuals incapable of any sort of docile co-operation as slaves or tools whether of individuals or of groups, but capable of the most energetic co-operation in behalf of interests involving the abolition of any form of slavery or the establishment and realization of an all-inclusive freedom and opportunity.
3. The development of minds which cannot be deluded by any kind of an appeal of nationalism or nationalistic patriotism, capable of seeing thru the fog emitted by the self-seeking puppets of profiteers who pose as statesmen in a government which shelters and protects economic despotism and slavery, or by the empty platitudes of a church which has not for 1,700 years at least taken its alleged author seriously—or even understood what that alleged founder was. In a word, the development of a distinctly revolutionary spirit, consciousness and will in

the coming generation are the only qualities that can be called DYNAMIC or that are remotely competent to see or deal with the social problems of today and tomorrow.

a. Consciousness of America as not a Special creation, a Chosen People, but in its historical and evolutionary setting and perspective, as one stage in the agelong struggle of the human race toward freedom: political, economic, industrial, personal.

b. Consciousness that no government or other institution can be regarded as an end in itself, but only as a means to some end which, rightly understood, gives to this means its only claim, if it has any, upon the respect or reverence of any one.

c. Consciousness that the end which alone sanctions any social or political institution is the achievement thru that institution of the well-being and happiness of all the members of society —or at least equality of opportunity according to their abilities.

d. The making of dynamic individuals—individuals sharing the spirit and capacity of all political and social pioneers, and conscious of the civic function as fundamentally a pioneering function.

e. The development of persons conscious of economic responsibility, of the duty of being producers, of directly contributing to the common wealth of society, and refusing to be parasites in any fashion.

f. The development of persons feeling it a primary obligation to construct a social order that leaves no room for parasites. The only serious effort in this direction may be seen in Soviet Russia, where no person may have a voice in government who does not perform useful service in a society organized for the benefit of those who work.

g. Knowledge of and membership in the militant labor organization and movement, national and international, as the only hope for the rebuilding of social institutions on a tolerable basis, ethically, industrially and politically, and the only assurance of putting an end to war between nations.

h. Scientific knowledge on the part of all High School pupils as to the origin of all social institutions and their history: church, government, industry, commerce, family, labor movement, etc., to the end of evaluating them correctly and so determining in a rational way their attitude toward these institutions. To make use of any sort of compulsion or to take advantage of childhood for the purpose of perpetuating any social institution or any creed, is a crime and will sometime be so regarded and treated.

## V. THE ORGANIZATION OF HISTORY AND CIVICS IN SENIOR HIGH SCHOOL:

It is obvious to any one that the organization of History and Civics teaching will be determined by the objectives which the teacher considers vital and imperative, and the correct understanding of those objectives makes organization of teaching program easier and simpler than it could otherwise be. That the psychology of pupils must be taken into consideration in determining methods, may be taken for granted.

If the study of this subject is to have any direct relation to or value for a dynamic citizenship, it must begin with a survey of evolutionary science, thus giving the student one thing which he nowhere gets in our present teaching: namely, a true perspective enabling him to see the phenomena of society in their true relations. Such a survey will do several fundamentally important things for the student:

1. It will sweep his mind free of the cobwebs of superstition and prejudice which Sunday Schools, churches, and other static agencies have produced, and prepare him to see things as they are.

2. It will give him the knowledge that many human conceptions and most social and political institutions—notably church and government—originated in the minds of savages: in minds which could only form fantastic and false notions of phenomena, with the inevitable result that human minds early became and have remained for hundreds of centuries the slaves of ignorance and cunning.

3. It will impress deeply upon the student's mind perhaps the most important element underlying and promoting effective thought and action: namely, that the universe is indifferent toward man, and that the only proper attitude of man toward the universe is that of the active agent, with the objective of mastering all natural forces for universal human well-being.

4. By opening to the mind of the student the vast period covered by the evolutionary process and the comparatively brief period during which anything like intelligence has existed, the exaggerated notions of man himself and his civilization will be eliminated, and at the same time great reassurance will be given as to the possibilities of effective constructive social action, once this knowledge is made general.

5. Such study will also simplify and clarify the social problem by showing that it is summed up in the task of first understanding the social forces as we now understand the physical forces, and then by social co-operation harnessing these forces for the universal good, as the physical forces have been harnessed by individual initiative and under the incentive of personal gain for increasing the wealth of the few and exploiting the labor of the many.

6. With this evolutionary and sociological survey, the study of history and human institutions becomes an illuminating and inspiring process. Illusions fall away and the student becomes consciously a citizen, not of some greedy section of the race ready to take up arms in utter stupidity at the beck of ignorance as millions did in the recent World War against some other section, but of society as a process of slowly changing an ignorant mob into a purposeful co-operating economic and socially creative partnership.

7. No sane man believes, of course, that so stupendous a task as this of effecting peacefully that social reconstruction for which the staggering problems of today are crying out to the manhood and womanhood of the whole world for solution, can be done easily. One of the most tragic dangers besetting this proposed reorganization of our American school system by men who not only frankly admit the futility of the system we now have, but also see clearly that the loss of the most precious things in civilization is the price we must pay for failure to meet this demand for adequate civic education—one of the gravest dangers—a danger that looks out at us everywhere in the timidity of action and narrowness of vision reflected in this reorganization program—is that **this task will not be taken seriously enough.** Whoever imagines that the job of giving dynamic knowledge to the coming generation can be performed by a mass of teachers who confine their vision and activity within the four walls of a school building however well appointed and to the children there assembled, has no vision whatever of his job. Any program of educational reconstruction and of creating a new and conscious citizenship must be carried persistently and aggressively to the whole community and the whole nation, or it will not be carried to the children at all.

The tragedy of our educational thinking today is the idea of keeping the school system separate and apart from the daily life and struggle of all the people, depriving these embryonic citizens of all voice and participation in the social, economic and political system in which they must live, and at the same time keeping the stimulating facts and truths of social science away from the men and women who outside the school walls are groping and muddling along in political futility or hopelessly stumbling up an economic blind alley. If professed educators in our schools do not know that our so-called representative government is today a complete farce so far as even thinking about the economic problems of farmers and wage-workers is concerned, their proposal to inaugurate a reorganization of the schools for the ends of citizenship is an insult to the nation. The Pickwickian attitude toward the ideals exemplified in Jesus can be understood and perhaps excused; the natural product of an institution which for 1900 years has built itself on the very Phariseeism which crucified Jesus. But the stupidity and ignorance that talks of a new citizenship and exhibits no comprehension of its task and no disposition to pay the price of creating such a citizenship should not be forgiven or forgotten.

The university extension work is a belated and tragically inadequate tendency toward recognizing that any school system fit for America MUST BUILD ITS ROOF OVER THE WHOLE FIELD OF OUR LIFE-ACTIVITIES OR LOSE ITS OWN SOUL. If the people in this country who claim to be educators are intelligent and sincere, they are not going to map out a program based on the question of ward politicians: Will the people support this program? No. They may profitably become acquainted with the facts of that movement in America in the 1770s which created the will and determination for independence. The sole proof of their sincerity will be the adoption of a program which challenges the utmost of their own energy and devotion, and the taking of their program direct to the people at any cost of time and labor.

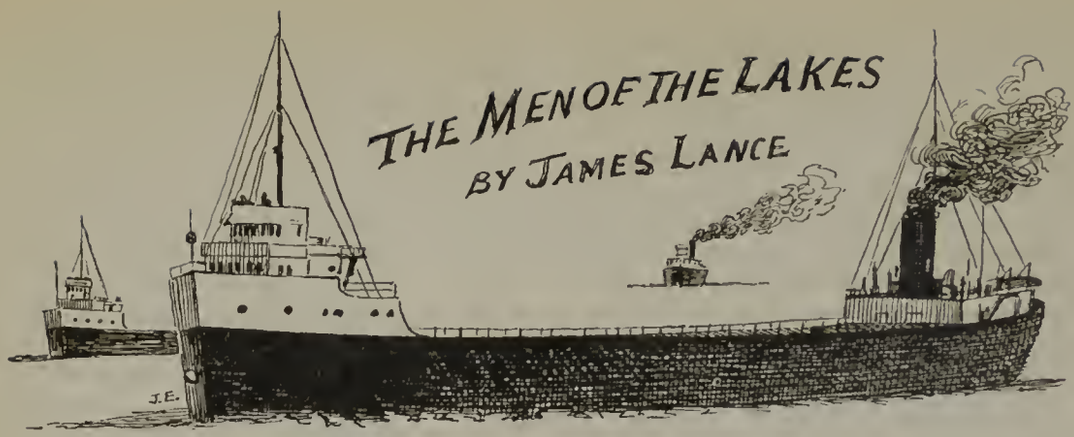
Does some one say: Such a program cannot possibly succeed. It should be answered that any program that does not include the earnest purpose to educate the whole citizenship along with the boys and girls, that does not have complete and far-reaching social reconstruction as its clearly seen goal, IS A FAILURE BEFORE IT BEGINS AND WOULD BE A DISASTER IF IT SUCCEEDED. Openly and frankly to confess that the schools have always followed and never led, and then exhibit no purpose or desire or ability to lead is the confession of hopeless kinship with those who have doomed the school in all its past to its place at the tail end of the human procession.

Here is the first question for those to answer who, as officers of the NEA or as professors and presidents of universities, hold places of highest responsibility in our educational system: DO WE BELIEVE AT ALL IN THE POSSIBILITY OF A BETTER SOCIAL ORDER? And here is the second question: HAVE WE ANY PHILOSOPHY OF HISTORY THAT GIVES US ANY INKLING AS TO THE PATH ALONG WHICH A BETTER SOCIAL ORDER CAN COME? There exist in American history itself two or three extremely suggestive facts for our educators and teachers to ponder: Here is one:

It was not tories, it was not in any sense CONFORMISTS, it was not even a majority of the people, it was not office-holders nor business men who put through the American Revolution and achieved the independence of this nation. IT WAS RATHER AN ENERGETIC AND DETERMINED MINORITY OF MEN WHO HAD VISION AND FAITH AND NERVE AND ENERGY AND COURAGE AND AUDACITY. More than that, if Professor Gettell in his lectures in this same Summer Session at Berkeley was right in his interpretation of the facts of the revolutionary period, it was the man Mr. Roosevelt slandered as "that dirty little atheist"—Thomas Paine, who by his vigorous convincing pamphlets turned the tide of sentiment in the American colonies and CREATED THE WILL FOR INDEPENDENCE.

The story of the anti-slavery movement has a similar lesson. And the story of the overthrow of our war-breeding capitalism from its usurpation of political and social power will be a similar story. But fidelity to the principles of sociology and the repeated lessons of history requires that it be said that the chances that any such vitality or vision or determination will ever show itself in our present educators and take the school from the tail of the procession and make it the virile leader of a march toward a higher civilization are so slim as to be negligible. As Nora in Ibsen's great drama says: "I no longer believe in miracles." So long has the

(Concluded on Page 48)



**The Romance Of Their Lives Awaits The Genius Of the Story Teller In Order To Be Properly Told.**

MANY reams of paper have been used in the telling of sea stories; Mother Ocean, from time immemorial, has been the favorite theme of writers of all countries. Much has been written of the lives of deep-sea sailors, of the golden treasure-troves in Davy Jones' locker, of wild storms, wild lands, wild men and wilder women which have been seen by those who "go down to the sea in ships." The lamp of romance has shed its most colorful rays over the vasty deep.

Salt water has proven an irresistible lure for the ink-slingers and typewriter-pounders; the fact that there are bodies of fresh water here on the American continent which have as many stories on their broad bosoms as Mother Ocean ever had seems to have escaped their notice. Or perhaps it is because most of these stories would have to be written around the subject of Labor—a subject with which the majority of the pot-boilers are hopelesly out of touch—that the Great Lakes have never had much space alloted to them—fortunately—for much of the sea-stuff would give an honest-to-goodness son of the sea the heeby-jeebies, and no doubt, lake stories turned out by the same imaginative individuals would be as far from a portrayal of actual conditions.

### Lakes Full Of Life

Nevertheless, the lakes should be able to break into print once in a while. Enough happens every year between Ogdensburg and Duluth to fill several large sized volumes even after being rigidly censored by an editor with an aversion to windy tales. The lakes are full of life and much can be written around the men who "push the big wagons along with number four shovels," who stand the long watches at the wheels, who balance themselves precariously on the slippery gratings of the engine-rooms, who scrub and paint, make fast and let go the vast fleets of cargo-carriers which plow the waters of the inland seas every summer.

And these stories need not be fiction either. Facts are fully as entrancing as fiction ever was. Romance is ever present in the lives of the men aboard the boats and it only needs some one with the kindred feeling which makes mankind a great brotherhood, some one who has actually soiled his dungarees and bruised his hands along with them to tell the story of the men of the lakes, and to make everyone realize that, here, right at home, one of the greatest chapters of modern history is being unfolded.

### The Romance Of Work

Romance, aye, the romance of the working-class; stories with depths and breadths as great as life itself flicker across the screen, hold the attention for a moment and are forgotten in the intensity of succeeding ones. Stories of strikes and lockouts, stories of hardship and misery, stories of unflinching heroism and stories of senseless sacrifice of precious lives for profit-mad masters, each have to be alloted a brief moment by those who would know the lakes and the men who have made them GREAT.

If you are a sceptic, one who must see to believe, the solution is an easy one. In six or eight weeks every port from Buffalo to Fort William will be awakening from the winter's sleep, men for the boats will be in demand and the beneficent Lake Carrier's Association will only be too glad to give you plenty of opportunities to find out for yourself whether there really is anything worth seeing or experiencing—particularly if you tell the shipping master that you are inexperienced.

If, on the other hand, you do not crave actual experience and are willing to take your excitement second-hand, if life in the raw appals you and you feel safer in a ten-story building securely anchored to the ground, or in a spacious bungalow in the suburbs, and are fortunate enough to be able to finance such a mode of existence, you can find plenty of men who will tell you endless tales of life on the lakes.

### Strolling Along The Lake Front

A stroll down lower Main St. in Buffalo, a few hours spent along Harbor Avenue in South Chicago, a pleasant word to some lad sitting on the dock at

the foot of Fifth Avenue in Duluth or a day spent along Bridge Street in Ashtabula Harbor or along Reed Street in Milwaukee will convince you that events of great importance **have happened** and are **still happening** every day on the lakes.

Perhaps you might be lucky enough to meet "Castalia Dutch" in some of these places; perhaps "Scrap-iron Pete" might be passing along, perhaps "South Chicago Johnny" or "Socialist Sam" might add to your store of knowledge. And, if none of these better-known characters were to be found you could still meet hosts of others who have tales to tell of hard-boiled mates, rotten chuck, lousy fo'cs'les and hard-steaming "workhouses." The tales you would hear would make you stop and wonder—some of them might strain your credulity —but if all of them could be put together they would make a magnificent whole—an epic of life and labor.

### The Story of Exploitation

Running through all of them you would find a general pattern with all the threads centering in one design—and when you looked closely enough—this pattern would become clear and plain and you would see that **the real story, the story around which all the rest revolve, is the story of the exploitation of Labor and that the one outstanding feature in all the narratives is the never-ending struggle between those who have and those from whom it has been taken away "even that which they hath not." In the story of the lakes, as in all other stories, the dominant feature is the CLASS STRUGGLE.**

And, the saddest part of the story is, that until now, these men who have lived the story of the lakes, who have been part and parcel of its tragedy, did not understand why they were unable to delete the misery and the degradation from the tale and put happiness and joy, equality and freedom in their places. The story of the lakes, so far, has been one of sorrow and defeat for Labor—endless toil and scanty reward.

### David and Goliath All Over Again

The story of the lakes has not been molded along such somber lines because the men have not tried; they have, in all sincerity. Many bitter battles have been staged, but the problem has just been too big for them to solve. It has been the story of David and Goliath over again, only this time David was out of luck and the Biblical ending has been supplanted by one nearer what might be expected when an unarmed stripling attacks—or tries to defend himself from—one who has practically unlimited strength.

The Goliath of the lakes is the Steel Trust; its name, of course, has been changed to one more suitable to the element it uses; afloat, the trust has become the Pittsburg Steamship Company—but its tactics are as brutal as those in force in the mills ashore. Against this monster and the weapon it has created—the Lake Carriers' Association—the men of the lakes have battled in vain. Their struggles have been a succession of tragic failures. Union after union has been utterly smashed, strike after strike has been lost, thousands of the best fighters have been driven from the lakes by the use of the blacklist and today the men of the lakes are drinking the bitter cup of sorrow and defeat—not of their own volition—but because they are the threads in the great pattern and because the weaving of that pattern must include sorrow and travail and be colored by the blood and tears and sweat of Labor.

### Breaking the Melancholy

And is the story of the lakes to continue along such melancholy lines? Is there no hope for these men who have been fighting against degradation so long? Is their lifeblood to continue to color the great pattern of the class struggle without ever seeing that pattern finally ended and the story of the lakes started again with a new design—with freedom as the motif? Can the men who have made the lakes GREAT achieve GREATNESS themselves? The entrance of a new factor into the struggle—a union— one entirely different from those found wanting in the past—gives us courage and assurance to answer: YES.

The Marine Transport Workers' Industrial Union of the IWW has appeared on the scene and the coming chapters bid fair to change the trend of the story. A new dawn is breaking over the inland seas and the morrow holds promise of better things. The men of the lakes, can, if they will, use this new union to end their misery and hardship. The story of the sea has had many happier lines written into it since the advent of this new force for Labor's aid. Since its inception it has wrought many changes in the lives of the men who are engaged in heart-rending toil aboard ships the world over. Fresh water will not dim its efficiency, the pattern of the story whose mission it is to change is the same everywhere and its entry into the life of the men of the lakes marks the turning-point from which the story of the lakes will become better and brighter as time goes by.

Always fighters, the men of the lakes are now ready to try again, and **this time** through **this union,** they have the first **real opportunity** of accomplishing anything they ever had. This new weapon will be the long-looked-for influence which will brighten and sweeten the story of the lakes even as it is brightening the story of the sea. And when this union has assumed the directing of the story and recast it along happier lines, the story of the lakes will be one which will task the abilities of real writers, not pot-boilers, but writers who have lived the story they are writing. And the heroes will be those men who have suffered and sacrificed, toiled and died, roasted in midsummer on Lake Erie and frozen on Lake Superior when the howling snowstorms sweep out of the north to take their toll of life. Whose bones lie bleaching on the bottom of "sailors' graveyard"—the men of the Kirby and Merida, the men of the Price and the Cyprus—all those working class heroes who have been sacrificed for the unholy profits of the masters—SONS OF LABOR—who have made the GREAT Lakes truly GREAT.

# Now That the Storm is Subsiding....

By ARCHIE SINCLAIR

San Quentin Where 85 IWWs Are Unjustly Imprisoned

THE long, hard fight against the criminal syndicalism law in California is nearing an end. The forces of Black Reaction have been compelled to moderate their insane persecution. For five years they have striven to outdo the Spanish Inquisition in their treatment of the Industrial Heretics who refused to acquiesce in their exploitation of wage slaves. If a worker dared to question their divine right he was tried, condemned and punished with a prison sentence of from one to fourteen years. Where it was not convenient to hail him into a court controlled by the plunderbund he was subjected to other forms of punishment. Mob law often times took the place of the more refined but none the less drastic method of punishment. The war hysteria was in the blood, and brutality and cruelty were the order of the day.

The nightmare of persecution and terrorism is passing. The people are returning to "normalcy." The masters are finding it harder to agitate mobs to violence against the person of a labor "agitator." The criminal syndicalism law is a dead issue. It is almost safe now to talk of profiteers, to advocate government ownership, votes for women, and to say that the income tax should be enforced against the very rich.

**The criminal syndicalism law is not finding such favor in the eyes of the common people as it did some months ago. We even read in the papers articles condemning this piece of boss-inspired legislation. It is safe now to come out of the woods and to speak your real sentiments regarding this slave law that the predatory rulers, through their vassals have foisted on the people of California.**

Now that the days of terror are over, now that the witch hunting and heresy seeking has subsided, we can look for many champions of the cause of Justice. Many are the ones who will blossom forth and shout their protests against the high-handed methods of special privilege. Politicians seeking a new platform will take up the cause of the downtrodden masses whom they forgot for so many years when the workers really needed friends. Timid liberals who took to cover in the days of the modern inquisition will be seen on the public platform telling of the terrible injustice done to the workers at the behest of the financial and industrial kings. This gentry will, now that all danger is past, try to tell the people that they are the ones who have broken the criminal syndicalism law. They will try to arrogate unto themselves the glory. When the criminal syndicalism law was a real menace, when there was danger in aligning themselves on the side of the persecuted men, they were silent; but they will be silent no longer. Justice (?) compels them to take up the gauge of battle.

Yet even in their championing of the IWW and their condemnation of the criminal syndicalism law, these people will be very careful to tell their auditors that they are in nowise connected with this organization. On the platform they will explain for an hour that they are not "reds" or radicals or members of the IWW, and then for ten minutes they will tell their hearers that they believe in "Justice," "free speech" and all the other shibboleths of the milk and water reformers, and for which they have never been known to fight, except as paid orators on a safe platform.

The same holds true of their press propaganda. While condemning the IWW as strife begetters and radicals they at the same time humbly beseech the oligarchy to cease persecution in the name of Humanity. Liberty and Justice are to them but catch phrases. They know less than nothing of the the dominant Master class and the militant portion of the Working class. In the maelstrom of the class

HE SAYS I SHOULD PAY MORE WAGES
HE SAYS THE CAMP IS LOUSY!
HE IS DANGEROUS. I CAN PROVE IT
JUDGE CASH
THE REAL CHARGES AGAINST HIM.

war they stand helpless and bewildered, and utter their feeble, empty phrases, whieh they, themselves, do not understand.

**Victory over the criminal syndicalism law is in sight. The master class, forced to check their mad onslaught against the industrial rebels, will retreat as gracefully as possible. The liberals will be used to save the retreat from a complete rout. They will not be averse to taking the glory that the masters will try to thrust upon them. They will strive to rob the IWW of the fruits of victory. Through the press and on the public platform the workers will be told that the liberals broke the criminal syndicalism law and saved the IWW.**

Those of us who have followed the fight here in California know who won the vietory. Ask the men in San Quentin and Folsom who earried the fight to the enemy and foreed him to retreat. If you want to know who broke the eriminal syndiealism law in California, go to San Quentin and visit the men who have numbers instead of names. Go into the abode of despair at Represa, called Folsom prison. and talk to the men behind those grim walls about the question. Discuss the eriminal syndiealism law with the members of the IWW in the industries throughout the state, the men with job eredentials in their poekets and literature to give away to the workers along side of them. Talk to the men who filled the stockade at San Pedro last spring, to the men who spent long, weary months in filthy eounty jails. Ask the men who have been beaten, mobbed and deported out of the state who broke the erimінal syndicalism law. Ask all these men and read your answer in their faces and in their zeal for the cause they love. The men whose "heads are bloody, but still unbowed" are the ones who have made California safe for the IWW; who have made the criminal syndicalism law a useless eneumbranee on the statute books.

Climb onto the band wagon, Oh! Gentle Reformers; pour forth your platitudes and fine phrases to the people of the state, but when danger arises again take to the woods and let the "wobblies" battle it out with the boss until the storm subsides.

The same fearless rebels against soeial and eeonomic injustice who have taken the teeth out of the criminal syndiealism law will release their fellow workers who fell in the battle and were eaptured by the enemy. **The fight is in industry, and only those directly concerned can understand how to cope with the situation. Our men in honorable captivity will be released, and the IWW will be the ones who will unlock the doors.**

The fight does not coneern the workers in California alone. It is the eoneern of all the workers from Vaneouver to Key West and from San Diego to Montreal. The splendid eo-operation and solidarity shown thus far in the war against the forces of reaetion must be eontinued, until the men in San Quentin and Folsom are released and return to take their plaees in industry.

# Lovely California

Apologies to Keats. Written by MACBETH

MUCH have I travelled in the realms of hate,
And many jails and city marshals seen;
In many western bull pens have I been,
Where slaves are kept by greed insatiate,
Or left to die or suffer uglier fate,
By those who see the mote and leave the beam.
But never did I know how vampires prey on men
Until I saw how men are hounded in a western state.
There the bloated god of riehes reigns supreme
Oppressing those who will not be afraid
To try to help the world—who dare to dream
Of happier days. Strange nature's beauty does not fade
When dismal walls and dungeons deep blaspheme,
Where gray-haired Saturn easts his melancholy shade.

# IWW Announcement

The IWW announees that it has opened a new hall at 310 Eye Street, where useful members of soeiety (The Working Class) ean seeure illuminating literature on their problems.

The IWW is deeply eoneerned over the expense to whieh the County of Saeramento has been put because your Distriet Attorney has thought it necessary to buy uniforms of open shop pants, twelve-hour leggings and sheepskin eoats to disguise his stoolpigeons and deteetives as honest workingmen. He can save the eounty this expense in the future by merely ealling up the IWW office and stating his desire to perseeute under eriminal syndiealism. The seeretary will immediately pass the word around to the workers in the various industries in the eity. In a few hours the seeretary and a couple of dozen members and delegates will appear at the eourthouse where the Distriet Attorney may piek and ehoose,—any or all. This proeedure ean be repeated an indefinite number of times.

If you must have a eriminal syndiealism law to prevent working people from organizing into the One Big Union of their class, please be consistent, good people of Sacramento, and enforee that law. Meantime, of eourse, the IWW will eontinue to press upon the eonseiousness of your employing class the absolute necessity of more and better food, elothing and shelter for all workers.

Yours for a Better World,

THE IWW.

## THANKS FOR ADV.

The Humboldt Times (Humboldt, Calif.) quotes The Industrial Pioneer for January editorially in order to prove that the IWW is convicted out of its own mouth. Of course, the quotation was a distorted one. That is, the language was ehanged to suit the Times' purpose.

Nevertheless, Industrial Pioneer thanks it for the advertising whieh it (The Pioneer) received.

# The White Goods Girls' Strike

By JENNIE D. CARLIPH

WELL, I don't know if I can tell it. There is much connected with this little tale that must be felt and experienced in order that it be appreciated. However, in the year 1913, February 21st, a call to strike was issued by the White Goods Workers' union in New York City.

There had been talk of a strike for some time, and mass meetings had been held for that purpose, and the day was set and strike called. The New York Call, socialist daily at the time, assured all who wanted to believe that there would be pickets lined up on the streets leading to the dry goods centers, intercepting workers who attempted to go to work in the white goods factories.

The factory I worked in was located in the Masonic Temple building on West 23d street, one of the busiest streets and thoroughfares of the city of New York. On the morning of the strike, I walked leisurely from the subway to the factory, a willing subject, ready to be caught and held.

But, to my chagrin, nobody apprehended me, and so I reached "my" factory without halt or hindrance in the anticipation that a committee would call during the morning and "take us down." My hopes later proved in vain. No committee came that day.

### A Mean Winter's Day

The next day was a mean winter's day, and feeling too sick both physically and at heart, I did not go to work that morning. Being too impatient to stay at home, I went to work that afternoon again, and on arriving was told by the girls that the boss said that a committee of strikers was there, waving a red cloth; that a few of the girls fainted, and that the committee was put out by the boss. The girls did not see that committee themselves, but the boss had told them so. With all that, this was an excuse for the boss to place plug uglies at the door and to take "his" girls home under guard. Well, that was the limit. I could work in that place no longer; so I went on strike with one other girl, whose father was a union man all his life long, and would not let her scab. It was now impossible to take any of the other girls along as the boss, foreman and family, kept the closest watch and sent the girls home in small batches earlier to avoid any possible chance of contact with any inflamatory strike material that might be smouldering in that factory.

As for me, I had been watching the preparations for the strike and even attended some of the meetings, but, having some knowledge of the "labor leading" gentry in charge of the arrangements, I had no desire to take part in their activities but expected that when the strike was called the union would "pull" our shop too and so I would go along with them. In the meantime, I talked to some of the girls and prepared them as much as possible for the event. The few that I could speak to promised to join the strike. Some of them said they would come out, "if the rest of the girls came out."

### A Lone Striker

But the alleged call of the strike committee killed all prospects of the girls going out on strike and the one girl who came out with me left for Philadelphia on a visit to her well-to-do relatives. And so **I was alone on strike in a factory of 150 girls.** The situation was getting grave, and I decided to go up to the union and see the leaders. Mr. Shorr, the strike leader, was a very busy person. First of all his newly-apportioned office had to be set in order. Desks were being put in and doors and gates made. However, I finally succeeded in explaining the situation. Here was a factory centrally located, doing a fine line of work and employing 150 girls at that time. What would the union do about it? Why had it not been pulled out before this? Mr. Shorr promised to send up a committee and "pull the shop." There were other white goods shops in that building and none of them were on strike.

Well, to make it brief, nothing was done by the union. They had a few shops tied up and that was all they seemed to care about. However, they advised me to go up to the Woman's Trade Union League. I knew what I could expect from the dear ladies, but went and spoke to Miss Rose Schneiderman. She, too, was very busy, and after pestering her for some time she finally told me she could do nothing, as the place was policed and they could not get in.

Fortunately, my boss had joined the boss' association and I knew then, that if the strike should be won our shop would be included. So I abandoned my own shop and went on the picket line with some of the girls I knew in other struck factories. My boss, frightened at the two girls going

out on strike, and, perhaps, expecting that many more would join us, became a member of the boss' association.

### The Picket Line

The picket line was a study in itself. Workers who are accustomed to strikes by men perhaps know little about heroic deeds by mere girls. Arrests and jails in freezing weather, on the picket line, with bare heads and no gloves on their hands, is only part of the picture.

Such was the condition of affairs as I found them on the picket line. I was well or warmly clad myself; but most of the rest of them were scantily clad and frozen numb. Police were lined up on the sidewalks and the girls were only permitted to walk up and down, and any slip on their part meant certain arrest. Some of them had already pelted the police and the scabs with some unpleasant objects and had been imprisoned and fined for it. And a close watch by the police was now kept.

I left the picket line and went home to get some warm coverings for the most needy girls. Brought them some gloves, shawls and caps, anything I could lay hands on that might help to keep the cold out. I went on the picket line day after day at the various factories. The strike lasted about five weeks and was finally settled.

### Terms of Settlement

The girls were to receive a dollar a week increase in pay and they were to have a 54-hour week. The gains were trivial, and what is more the conditions agreed upon were not strictly and fully observed. Repeatedly did I go to the union, telling them that the dollar promised was not given to all the girls, and that some of the girls were obliged to work later than the union hours on Saturday afternoon, but to no avail. The "leader" was seen in the office of the boss, and whether it was true or not that he "carried packages out from the office," I don't know, but nothing was done for the workers. Finally, the two girls who struck were found fault with and fired, and our protests to the union and a mock trial of the boss, because of his violation of the agreement, resulted in only the re-instating one of us and that without pay, for time lost; which the girl thus favored, refused to accept and left the shop for good and aye.

In order to understand conditions in a large city and a modern factory, one must take into consideration the peculiar arrangements of a large city that confront one, its peculiar topography as well, We girls who worked in that factory on the ninth floor on the corner of 23d street and 6th avenue, lived miles out of town. So far as I was concerned, I knew but one address of the girls in the entire factory, and that girls I visited many times in my efforts to induce her to join the strike, but to no avail. All she would tell me was, "What's the use of my coming out, when the rest of the girls will remain working?" and that was true. There was no use expecting that she would be out of wages for as long as the strike would last the same as I was. There was no help from the union. The officials were busy lining up members, collecting dues and sending out appeals for funds. But, contrary to all A. F. of L. statements, they paid no strike benefits.

The union office on the corner of Second avenue and First street grew and prospered. It became a regular office, with rooms and doors and gates, and to approach the officials was no more an easy matter. Well, the strike was at an end, and the agreement signed between the union and the boss' association, and we were to go back to work.

I went to see the girl who had left for Philadelphia, and found that she had come back that Sunday and was ready to go to work. Monday, the last of the strikers were to return to the factories. And we, too, returned.

### A Triumphant Return

For all the anguish and suffering and disappointment we passed through during the long and tortuous weeks of the strike, there was one compensation in store for us, and **that was the return to work as winners.** Little as that winning was worth, **it was a victory just the same.** It was a gain; something wrenched from the bosses; something they hated to give us. Not the one dollar increase, not the shorter day; each of us individually might have gained that much. But it was the **power to force them to do something, that galled them.** It's that puny little victory, to come back as winners, that they begrudged us. **And that was the only hour of my life. It was glory to me.**

Can you picture my little, undersized foreman Jesse, to himself the greatest person in creation, and the brother of a member of one of the finest ladies' lingerie and silk underwear houses in the country and the bully of the shop, standing in a side room and calling me in, to ask me if I spoke to Mr. H., of B. & H., if I can come back to work. He was shaking from head to foot when I told him that I did not ask anybody to come back, that Lina and I have come back because Mr. H. had signed the agreement as a member of the boss' association. I said: "Did he not?" and he said "I did." I told him that if that is the case, it was all the better, so he knew that the strike was settled and that the girls had won. And in the factory, the little painted blond who scabbed in my place, on seeing me, slunk back to her own corner at the next table and my place as head worker of my department and my table, were again in my domain as before the strike.

### A Victim of Class War

As stated above, they got the best of me in the end. My summer's vacation with pay was cut off. My former hours were actually increased, as now I made it my business to live up to union conditions and come to work in the morning on time and not an hour later as I used to come to work before the strike; and get paid for it, too. And before I knew it, the bosses discovered that they

(Continued on page 24.)

# General Construction Workers' Campaign Begins

GENERAL Construction Workers' Industrial Union No. 310, Industrial Workers of the World, is preparing to take advantage of the usual spring resumption of work. No less than four conferences have been called in as many districts with that object in view. February 20th a district conference was held at Portland, Oregon. March 15th is the date set for one at Omaha, Neb., and April 2d will have two, one each at Chicago, Ill., and Stockton, California, respectively.

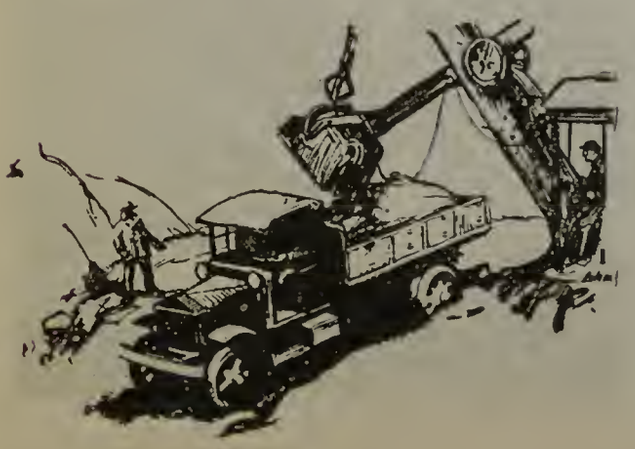
The general construction workers are employed in the paving of streets, building of highways, power dams and tunnels, constructing industrial railroads, as for lumber companies, and the like. Their employers are general contractors, electric, railroad and other corporations. The employees are boarded and lodged in camps, where the food is most often bad, the conditions insanitary and the pay low.

These conferences will outline a program wherewith to secure more wages and better working conditions such as hours, housing and food. Also consider ways and means to carry on extensive organization plans this year.

It is recognized among the general construction workers that only extensive organization will get them anywhere, and that this can only be secured through well-planned campaigns. They recognize that the day of beneficial individual or group action has long gone by; and that this is the day of big contractors' associations, from whom the workers can afford to take a few lessons.

Big contracts have been awarded in California; and 310 is, accordingly, much interested in pushing organization plans and combatting the so-called criminal syndicalism laws, which are applied and interpreted just for the purpose of preventing labor organization there. Three Ten is pushing organization elsewhere as well.

As the Chicago and Omaha conferences show it is as concerned with organization in the Mid-West as on the Pacific Coast and in the Northwest.



# Lumber Workers' Growth

LUMBER Workers' Industrial Union No. 120, reports the recent enrollment of 2,000 members in the forests of Maine, New Hampshire and Vermont. This is the first real stride that the IWW has made in the lumber industry of the east. It shows the eastern trend of the entire organization, too.

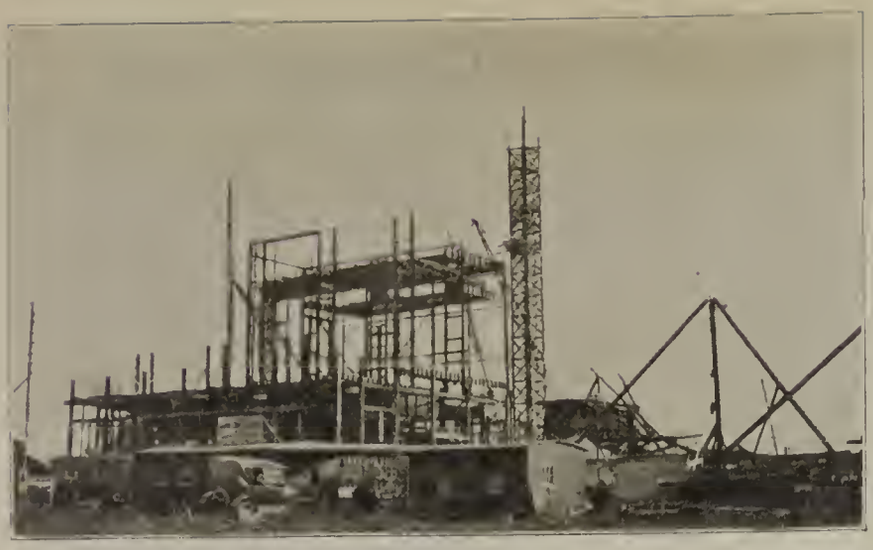
Number One Twenty is also actively at work organizing the lumber workers in Minnesota, Wisconsin and Michigan. The conditions in the Mid-West are worse than in any woods in the northwestern section. Organization is the cure.

Another victory for Number One Twenty is the vote of the annual convention of the Lumber Workers' Industrial Union of Ontario OBU in favor of joining the IWW. This convention was attended by No. 120 traveling organizers.

The Northwest Lumber Operators' Association has inaugurated a blacklist against radicals and IWWs. Some idea of its task may be judged from the fact that it believes four years at least will be required to weed them out.

In the meanwhile, No. 120 is building up organization. Not only is it expanding territorially, but it is also making efforts to interest saw-mill workers, as well. Industrial expansion is also the 120 aim and object. This is in line with its continuous growth.

No. 120 is backing the strike of the 15,000 lumberjacks at Cranbrook, B. C., Canada. All its branches and delegates are actively at work raising finances and otherwise endeavoring to make this strike a success.



## A 10-Million-Dollar Project

Building Superpower Plant, Grand Tower, Ill.

Electricity, generated from "white"—or water—power is the superpower that is silently, without drums and trumpets, forming the basis of the new capitalism.

All over the world, railroads and industries are undergoing electrification. This country especially is literally dotted with great electric power plants. They are built on waterfalls and along waterways.

Apparently, many corporations own these different plants. But really a few big trusts control them all. They are known as the public utilities and hydro-electric trusts.

## General Construction Foreman

And Assistant Are Two Well-Known Wobblies

---

Enormous capital is invested in steam machinery. The capitalist groups owning it are retarding its displacement by opposing electrically-driven machinery. But steam-power is doomed. Superpower is its executioner.

---

The accompanying pictures were taken at Grand Tower, Ill., about 100 miles south of St. Louis, on the Mississippi River. The general foreman of construction and his assistant are two well-known wobblies. Cost, about $10,000,000.

# New Orleans' Costly Scabs

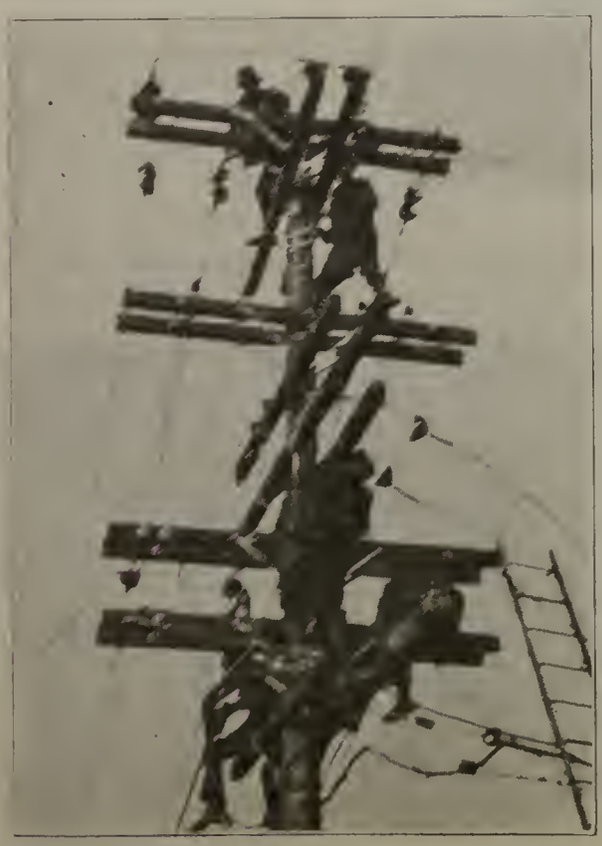
THE strike of the electrical workers in New Orleans still continues with prospects of victory in the near future for the strikers, and if the scabs don't get more efficient in the work they are performing at present, we can see that the gas company, or the hardware stores will have difficulty in supplying the demand of the residences here for gaslight or oil lamps as a substitute for electricity.

For instance we have a plant of the Henry Ford Motor Co. here, noted for efficiency in turning out products of labor. Now through a contract that the Ford company has with the Public Service, the latter has to pay them at the rate of $500 per hour anytime they cut off the juice; and through the blunders of the scab electricians this plant was shut down for four working hours recently, for the want of power.

As yet we have had no definite figures as to what amount of profits the bosses are out through this strike, but it must be enormous with paying for police protection, housing and employing from six to eight strike-breakers where two union men can do the same job more efficiently and in less time. —Note picture No. 1.

Picture No. 2 goes to prove the type of animals the bosses are co-operating with to beat the rooming-house, where the scabs are herded.

The business men in the vicinity are protesting about the low character of the beings in this hangout, with the result that to safeguard the property on either side of this menagerie, they were forced to build fences out in front of both buildings adjoining same, to prevent these low down scabs from looting their property.



PICTURE No. 1

PICTURE No. 2

We have already published some pictures of these scabs in our recent publications, with the result that they are sneaking around under police protection, which caused the arrest of our official photographer.

Propaganda Committee, New Orleans Br. MTW.

## DISARMING

The Tramp (who has entered a country grocery, but notices a policeman)—"And so I humbly ask if you would kindly—give a fellow—your daughter's hand."—Kasper (Stockholm).

## AN ARGUMENT

They were arguing. She insisted that revolution was dependent on the lowest strata of workers. It was a thing that issues from the bottom up. He contended that revolution was the result of forces outside of all classes—of social factors, like invention and war. Who is right, he or she?

**GOOD THINGS COMING! SUBSCRIBE FOR INDUSTRIAL PIONEER!**

# On to the Workers' Administration

**To organize and administer industry will be the function that industrial evolution will impose on wage earners in the industrial democracy that appears to be coming over the horizon of civilized development.**

**To the proper performance of this function, a knowledge and understanding of present day industrial organization and administration are absolutely necessary. Without them evolution will be impossible and chaos alone will ensue.**

**The three articles that follow will contribute to these desirable ends. The first is an ideal description of the General Electric Co. This corporation is representative of big corporations in general. The author of this article is an electrical engineer, thoroughly competent to describe the organization of this great body.**

**The second article analyzes the distribution of a dollar of gross income of the General Electric Co., taking as a basis the company's own tabulation. It is compiled especially for Industrial Pioneer by a well-known economist.**

**The third article treats of the latest phases of development in the Ford Co., and is by a Pioneer staff writer.**

**Read and ponder!**

## Setting Up an Industrial Corporation

BY C. M. RIPLEY
Electrical Engineer, Schenectady, N. Y.

A corporation is an organization. Many years ago, Herbert Spencer defined organization as:

"The means for bringing all available energy and all available knowledge to bear upon the particular problem in hand at the precise time when needed."

The chart accompanying this article shows how the General Electric Company is organized. It does not show the organization of the Manufacturing Department, or the Sales Department, or any of the Engineering Departments but it shows the "Corporate" organization beginning with the 34,000 stockholders who live all over the United States, and includes all of the "general officers" of the Corporation.

The common stock of the company is owned by 34,000 people and 33,000 or 99 percent of them live in the United States.

Every year a flood of ballots pours into Schenectady in the Annual Election of the Board of Directors. Each common stockholder is entitled to one vote for each share of stock he owns.

The directors in turn elect an executive committee which tends to business between meetings of the board.

The directors also elect the general officers as shown on the chart. These general officers meet in an advisory committee for the purpose of exchanging information and co-ordinating their efforts, and the efforts of the departments under them.

---

These general officers are as follows:

Chairman of the Board of Directors, Vice Chairman of the Board of Directors, Honorary Chairman of the Board of Directors, President of the Company, nine vice-presidents, a Comptroller, a secretary and a treasurer.

Looking at the company as a ship, the president of the company is the captain of the ship, while the chairman of the board is the pilot. The president has full charge of the operation of the ship, while the chairman maps out the course of his ship with respect to other ships in the ocean—other companies in the business world.

The Vice Chairman acts in the absence of the chairman and the honorary chairman is in general charge of technical development in this country and abroad.

Referring to the chart, let us take up the duties of the different General officers shown in the bottom row.

The Vice President in charge of Engineering directs laboratories and engineering departments which convert discoveries of research experts into new designs of apparatus and supplies which people will buy; which constantly improves the company's many products and helps to "make G.E. goods the best."

The Vice President in charge of Patents is head

of a Patent Department which works with inventors and secures patents which protect G. E. inventions in all parts of the world. They arrange for royalties and licenses.

The two Vice Presidents in charge of sales are the leading officials of the selling force in all parts of the country; they are responsible for getting orders, studying market conditions and advising the manufacturing departments accordingly.

The Vice President in charge of manufacturing heads the Manufacturing Committee which directs the building, equipping, operation of factories, the supply of materials, the production of apparatus necessary to fill orders from customers. He directs the organization which "delivers the goods."

The Vice President in charge of accounts and the Comptroller head the department with branches in 100 cities; are responsible for the correct keeping of accounts by which are determined the amounts due from 35,000 customers, the cost of the product, and the amount to be paid for materials and labor, totalling millions of dollars per month.

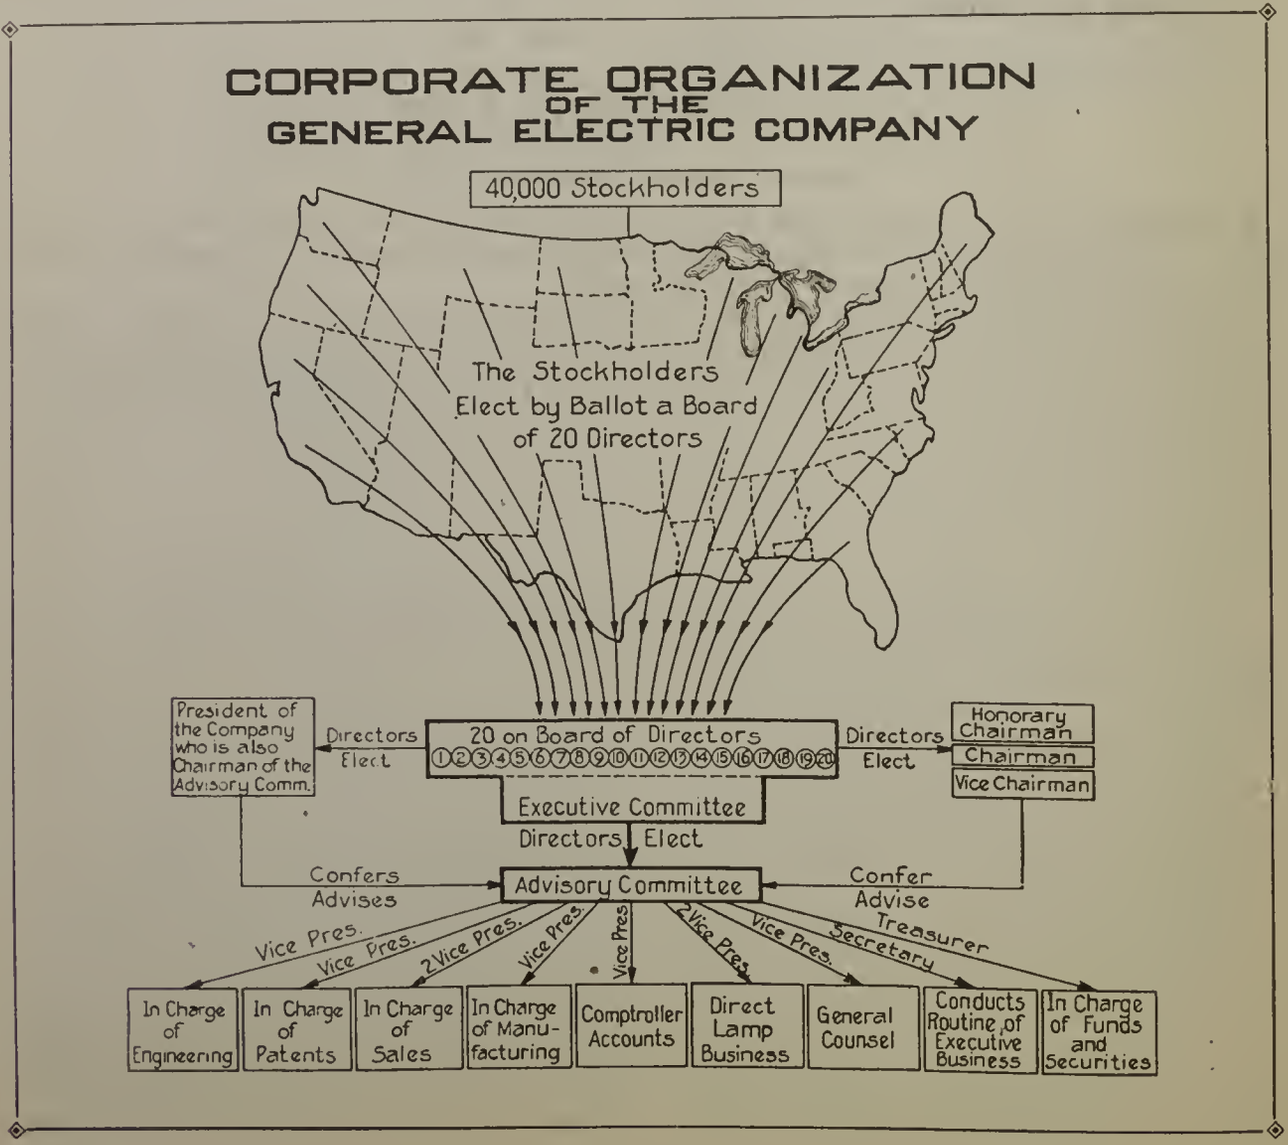
The two Vice Presidents who direct the Lamp business are in charge of the development, production and sale of the incandescent lamps in numerous factories and sales offices.

The Vice President who is general counsel directs the Law Department and advises the directors and officers on questions of policy and general business relations.

The secretary conducts the routine of executive business, keeps records of meetings of stockholders, directors and officers and informs all departments as to decisions which affect them. Also has charge of all insurance, including employers' Group Life Insurance, and manages the company's pension system.

The Treasurer is in charge of funds and securities, is responsible for the custody and safekeeping of all money, stocks and bonds owned by the company, and for all payments.

The chart is a brief outline of the business side of the organization which Dr. C. P. Steinmetz chose to work in. He used it as an instrument or tool to make his ideas and inventions useful to the human race.



# Lo, the Poor G. E. C. Stockholder

## He Not Only Eats His Cake But Has It 1½ Times Over

[Compiled for Industrial Pioneer By A Well-Known Economist.]

THE General Electric Company publishes a chart showing the distribution of a dollar gross income ..received for the years 1918 to 1922 inclusive. This shows that for each dollar received for goods sold the company paid out 42-1/5 cents for materials, supplies, depreciation and losses, 40-9/10 cents for salaries and wages, 3-3/5 cents for taxes, and 2-7/10 cents for transportation, leaving 9-3/5 cents as the share of property or capital. Of this, 1-1/10 cents was paid as interest on borrowed money, 4-4/5 cents as cash dividends, and 4-7/10 cents was left in the business as surplus—being, of course, the property of the stockholders. Thus, owners of property received slightly less than 10 cents of each dollar taken in.

This may be intended to show that the owners of the company are not receiving an exorbitant return. If their property were all turned over to the public or the workers, there would be only 10 cents more out of each dollar of sales to apply to reduced prices or increased wages. On the basis of the $200,194,294 worth of sales in 1922, this would mean about $20,000,000. If all of it were used to raise wages, we can figure that the employes, approximately 85,000 in number, would receive an average of $235 more apiece per year. It is probable, however, that even under public or co-operative ownership the whole amount would not be used for increased wages. Some would have to be left in the business for expansion, and some might still be paid as interest to bondholders. A conservative estimate of the extra amount which might go to the workers through increased wages or reduced prices of the product is $115 apiece per year.

The percentage of profit to sales, however, by no means tells the whole story of the reward of ownership in the General Electric Company.

The company was formed in 1892 by the merger of the Thomson-Houston Electric Co., Thomson-Houston International Electric Co. and Edison General Electric Co. Subsequently it has absorbed many other companies and plants. For many of these properties it has either paid directly in stock, or in cash received from sales of stock to the public. The total outstanding stock which had been issued either for cash or its equivalent, was in the spring of 1923, $120,853,248. If we wish to calculate the total investment of actual cash or real property made by the public in the concern, we must add to this the outstanding bond issues, on which money was borrowed, amounting to $22,-677,440. The total of the stock sold and money borrowed on bonds is thus $153,530,688.

### Conservative Argument Overthrown

Conservative economists argue that a return on money thus invested is necessary, because if a man saves up money and invests it he endures a sacrifice of the enjoyment which he might have had by spending the money, and thus is entitled to a reward, as a stimulus to saving. If capital were not accumulated in some way, society would not enjoy the benefits of large-scale production.

The people who invested this money have received a considerable reward for doing so. In some of the early years dividends were not paid, but for the greater part of the period the stockholders have received 8 per cent annually. Thus a man who invested $100 in 1892 for a share of stock has now received back, in cash dividends on that stock alone, $260, or the entire original sacrifice plus 160 per cent more.

This is by no means all, however. In addition to getting capital from investors, the company has made such large profits that after paying cash dividends out of them, it has put aside $143,530,688 of capital from its own income. Obviously no individual investor endured any particular sacrifice to save that capital. The sacrifice was rather on the part of the consumers who paid the prices and the wage-earner who accepted wages at such rates that the extra profit could be made. This extra capital is almost as large as that secured from investors, amounting to 48.6 per cent of the total capital of the company. (See Table I).

Nevertheless, the stockholders of the company have received a reward for the accumulation of this surplus capital also, just as if they had individually saved it up and invested it. This has occurred through the gift by the company to its shareholders of extra stock. Such gifts are known as "stock dividends." After stock has been distributed in this way, it receives cash dividends at the same rate as stock which has been bought. In July, 1902, the company issued a stock dividend of 66-2/3%—in other words it gave to each shareholder two-thirds as much stock as he already owned. In January, 1913, it issued a second stock dividend of 30%. Beginning in 1918 it issued common stock dividends of 2% every six months, up to January, 1922. Since then it has issued stock dividends of preferred stock at the rate of 5% annually. Thus a total of $72,430, 563 worth of stock has been given away to stockholders, leaving in the treasury $73,-167,048 more of the capital accumulated from profits.

The net effect of these stock dividends has been, for anyone who owned a $100 share in 1892, to increase his holdings to $238,65 of common stock and $10 of preferred, **without the investment of another dollar on his par.** He now draws annually in dividends about 20 per cent on his original cash investment. All this extra reward has come to him

without any labor or foresight on his part since his original investment—unless we count as labor or foresight the signature of a proxy for the annual election of officers. Since the rate of dividend in 1892 was 6%, his annual return has more than doubled.

### The Worst Is Yet To Come

This still is not the whole story. We have said that the company obtained part of its actual cash capital by sales of stock to "the public." This is not strictly true. Such stock was offered in reality to existing stockholders. It was offered at par—or $100 a share. Yet at the same time the stock was selling on the stock market far above par. For instance, in 1918 the company sold to its stockholders $12,296,730 at $100 a share. Yet in 1918 the lowest price of the shares on the stock market was $127.75. The highest was $158.50. Thus the company made a present to every shareholder who purchased this stock, of at least $27.75 for every share he bought. If the buyers wanted to turn around and sell their new shares to the public, they could make an immediate profit of anywhere from $27.75 to $58.50 per share—anywhere from 27 to 58 per cent. The company itself could have raised that much more cash capital if it sold its shares directly to the public. Instead it gave an immediate and tremendous reward to those of its existing stockholders who cared to invest again and had the cash to do so.

There is no reason why this process of piling up the property and returns of the investors should not continue, as things are now. Their rewards as time goes on will bear a larger and larger relation to their original investment. It is difficult to see how large rewards are either deserved on the basis of the investor's "sacrifice," or are necessary to provide for the accumulation of capital or the extension of machine production.

It should be noted in passing that the General Electric Company is by no means alone in this matter of large gains to the investor. Almost all large corporations in the United States—and many small ones as well—have followed the same policy. Many of them, in fact, have done even better by capital.

**TABLE I.**

**Sources of General Electric Capital**

| | |
|---|---|
| Capital from investment: | |
| Total Funded debt, Oct. 29, 1923 | $22,677,440 |
| Outstanding stock, sold for cash or equivalent | 120,853,248 |
| | $153,530,688 |
| Capital from profits: | |
| Stock dividends | $72,430,563 |
| P. & L. Surplus (Not including reserves) | 73,167,048 |
| | $145,597,611 |
| Total capital | $299,128,299 |
| Per cent of capital from profits to total capital | 48.6% |

Buyer of one share in 1892 @ $100 would now own $238.65 of common stock and $10 of preferred. He would receive, at the regular rates of dividend (8%on common, 6% on preferred) $19.09 on his common and $1.20 on his preferred, or a little over 20%on his original investment.

**TABLE II.**

**Stock Dividends**

| | | |
|---|---|---|
| July, 1902 | 66-2/3% | $16,812,600 |
| Jan., 1913 | 30% | 23,297,000 |
| Jan., 1918 | 2% | 2,030,300 |
| July, 1918 | 2% | 2,270,900 |
| Jan., 1919 | 2% | 2,317,500 |
| June, 1919 | 2% | 2,363.800 |
| Jan., 1920 | 2% | 2,410,098 |
| July, 1920 | 2% | 2,705,200 |
| Jan., 1921 | 2% | 2,756,500 |
| July, 1921 | 2% | 3,321,500 |
| Jan., 1922 | 2% | 3,427,900 |
| | | $63,713.298 |
| 6% Preferred stock issued as stock dividends, Oct. 14, 1922 (To be issued at rate of 5% annually) | | $8,717,265 |
| Total stock dividends | | $72,430,563 |

# Where the Workers Work

ACCORDING to the 1919 census there are 290,-105 manufacturing establishments in this country. Of this number 16,437 employ 101 workers or more. These 16,437 establishments employ 6,435,861 workers out of a total of 9,096,372. That is, one-eighth of the industrial plants employ nearly three-fourths of all the workers in American industry.

Out of the 290,105 establishments there were 1,021 in 1919 or 0.4 per cent which employ more than 1,000 wage workers and 2,770 or 1 per cent employing over 500. There were 235,884 or 81.3 per cent, which employed 20 or under, with only 10.3 per cent of the wage-earners.

The remaining plants, namely those employing between 20 and 500 wage earners, number 51,451, or 17.7 per cent of the total, and employ 50.1 per cent or just one-half of the total wage earners.

## THE RIGHTS OF MEN

THE rights of men are a byword; the bones are not yet dust
Of those who broke the shackles and the shackles are not yet rust,
Till the masters are forging new ones, and coward lips are sealed,
While the code that cost a million lives is step by step revealed.

**William Herbert Carruth.**

# The Fords and Billionairedom

## Are Getting There, Thanks To The Exploitation of Labor.

**INDUSTRY today is not, as formerly, a one-man affair. No longer does one man know or do it all, as in the days when the shoemaker not only made shoes but tanned leather as well.**

**Today industry is a co-operative, collective enterprise. It is an affair that engages the attention of many men and women, all working together. These men and women do a wide variety of things, but all of them work as a unit to produce certain commodities or "goods."**

**Some are engineers, others chemists, some accountants, others managers, some mechanics, others laborers—but all work as one and their achievements result from that fact, wholly and solely. Let any great part of them cease their operations and their unity is destroyed. So is their effectiveness as producers. The result is that industry either ceases or is badly crippled, indeed!**

**What is every great strike, like the steel workers', or miners', or shopmen's, but a startling demonstration of the truth of the co-operative, collective nature of modern industry? These strikes involved nearly a million and quarter men, and produced a near-revolution in effect, disabling American society and evoking unusual legal repression!**

But, though modern industry is co-operative, and collective in character, operation and effect, it is private in ownership and control. That is, these great co-operative, collective undertakings, are owned and controlled by private individuals and are conducted primarily for their profit.

In brief, modern industry presents the anomaly and the injustice of being a social institution for private aggrandizement. In no case, is this so evident, as in the case of the Ford Motor Company. Here we have, virtually, two individuals, father and son respectively, reaping the rewards of the labors of 120,000 individuals, co-operatively and collectively united into one productive whole.

### No Deception Here

Other corporations boast of many stockholders, who though dominated by a few financiers, give the appearance of wide ownership and control. But, in the case of the Ford Co. there is no such deception. The Ford Co. is plainly and only Henry Ford and son; and not, as in the case of the General Electric Co., say, with its advertised 34,000 stockholders, J. Pierpont Morgan & Co. predominantly.

The story of the Ford Co. is the story of all big corporations. It is a story of growth and accumulation, in which the muscle and brain of countless numbers have contributed from the very beginning.

### How Ford Began

Henry Ford was a poor wage-slave, working as an engineer with the Edison Co. in Detroit. He did not invent the automobile, but hit upon one that could be cheaply made in large numbers. As he himself has said, the machines for doing this were only evolved after much experiment by many workers. And so with the auto now bearing his name; he gave it a crude beginning, while others perfected it. It is quantity production, by improved machine methods and armies of workers, that has spelled success for Ford.

Ford's beginnings were dependent on the capital of others. He had to incorporate and sell stocks to others, who helped in the original corporation's development; but whom he was latter enabled to buy out, thanks to enormous profits and his hold on over 50 per cent of the original stock.

The first Ford plant illustrates Ford's dependence further. It was only an assembling shop. The various parts entering into the manufacture of his car were made by others. The Dodge Bros., as drop forgers and founders, produced many parts, including engines. They were formerly a part of the Ford Co. and its development made possible the big fortunes they are now investing in their own ventures. Many other concerns made other parts of the Ford car, with similar results.

### Gobbling Them Up

The next step in the Ford policy was to concentrate all these braches in the Ford plants. This required the development of engineering, accounting, financing, construction, and other departments under men of great ability. In this way there arose what is now known as the Ford industrial machine. "The Ford industrial machine," says John Keracher, in 'Brains and Industry', "has embodied in it men with more brains than Ford himself. Thousands of wonderful machines and appliances that called for more ability in their invention or construction than Ford's little improvement or invention itself. The inventors of these machines in most cases are unknown and unrewarded. The Ford System, as it is sometimes called, is but an example of the highest development of SOCIAL PRODUCTION" for private profit.

### A Horizontal Trust

This profit is immense and growing more stupendous "every day in every way". It is being invested in allied industries. Blast furnaces, steel mills, ore mines, lumber forests, glass and lamp factories, rubber plantations, railroads, cloth mills, water power plants, etc. etc., are being swallowed up by the profits of the Ford system. The result is the creation of what is called a "horizontal trust," This is a corporation that interlocks component industries into an immense industrial scheme. It is the result, not of a premeditated plan, but of growth. This growth is largely dictated by competition—by the need of freedom from outside controlling elements and of cheapness in production wherewith to undersell and outdo others. It is also made necessary by the need for investment

—and what investment would be better than in allied industry that insures freedom, cheapness and additional profits galore?

**Fortune Excites Discussion**

The Ford fortune, together with its tendencies, is exciting wide-spread wonder and discussion. Wall St. recently has given it an analysis that is astonishing in its disclosures. According to the New York Tribune:

"The money handlers of New York have made recent appraisals of Henry Ford and his doings, and, after carefully revising figures, they have set down the following high points:

"1. The Ford wealth today, represented by the market value of the Ford Motor company, is close to $840,000,000.

"2. In the twelve months ended February 28, 1923 the company earned upward of $119,000,000, after deducting $34,000,000 for taxes.

"3. The Fords are accumulating wealth at the rate of about $400,000 or $450,000 a day, or, in round numbers, $150,000,000 a year.

"4. Giving Henry Ford ten years more of activity (He is now 65 years old), the money experts of New York say that on Jan. 1, 1934, he will possess $3,000,000,000.

"5. By that time Mr. Ford and his son will be piling up wealth at the rate of $1,000,000 a day.

"This staggering sum surpasses the annual surplus of the United States government, a surplus which is engaging day by day the time of Secretary Mellon and congress. Cutting it in half by eliminating the anticipated decade, the surplus is still probably greater than that of half the civilized nations of the world, some of them with large standing armies.

**"Other Sources of Wealth"**

"Motor production is not the only source of the Ford wealth, for the manufacturer owns railroads, coal fields, mineral deposits, cotton belts, hundreds of thousands of acres of cutover Michigan forest lands which he is reforesting, and, on top of the other things, Mr. Ford owns all or substantial parts of companies that sell coal and transportation. He could sell his manufactured cars without profit and still have an enormous profit from the sale of parts and accessories for his motor cars and tractors.

"The Ford policy is to turn back into the business year by year the greater part of the enormous earnings of his company, thus keeping the federal tax on corporate net income at a minimum.

"He is constantly extending his control of raw materials and supplies; constantly reaching for water power, and transportation. His zest for expansion shows no sign of abating; ....and he is able to look Wall street in the eye and tell it to go plumb to, since he has all the money he wants and is lending Detroit (on good security) a million or two a month whenever that municipality runs short.

**He Is Not a Spender.**

"He spends little or no money on hobbies, and does not believe much in education or philanthropies."

What a climax!

It stands to reason that this climax to co-operative, collective effort is absurd and unjust. What is co-operatively and collectively operated and developed should be co-operatively and collectively owned and controlled. This should logically be the next step in the evolution of the Ford system. This system should be made democratic, i.e., converted into an industrial democracy, as befits its inherent character and growth, both present and prospective.

**Small Potatoes**

But Henry Ford, great man that he is said to be, is essentially as small as are all capitalists. He like they, will do anything for the workers but get off their backs. He will make no attempt to fit them for a higher destiny than that which they now fulfill. His conception of a new society is one full of more wage slaves—machine automatons—Robots, in brief—for Henry Ford. Truly, a magnificent ideal; yet no different from that of Judge Gary, for instance!

However, there are the wage slaves to consider. How about them? Will they forever remain oblivious to the stifling effects of the Fords and their systems? Will they ever awake to the co-operative, collective character of industry, and all that it implies? We wonder!

# White Goods Girls' Strike

(Continued from page 14)

were paying me too high wages· that they could not afford and on that account discharged me. This was a violation of the agreement with the union and I brot pressure to bear that the boss be tried and he was tried with the already mentioned results. I lost my job because of the strike and that was all I gained. But it was all worth while. There was but a little fight and it was poorly done, but when the material is taken into consideration, i.e., poor basic principles, non-class conscious young working girls and weak, incapable leadership, not to say dishonest, the gains were worth the efforts.

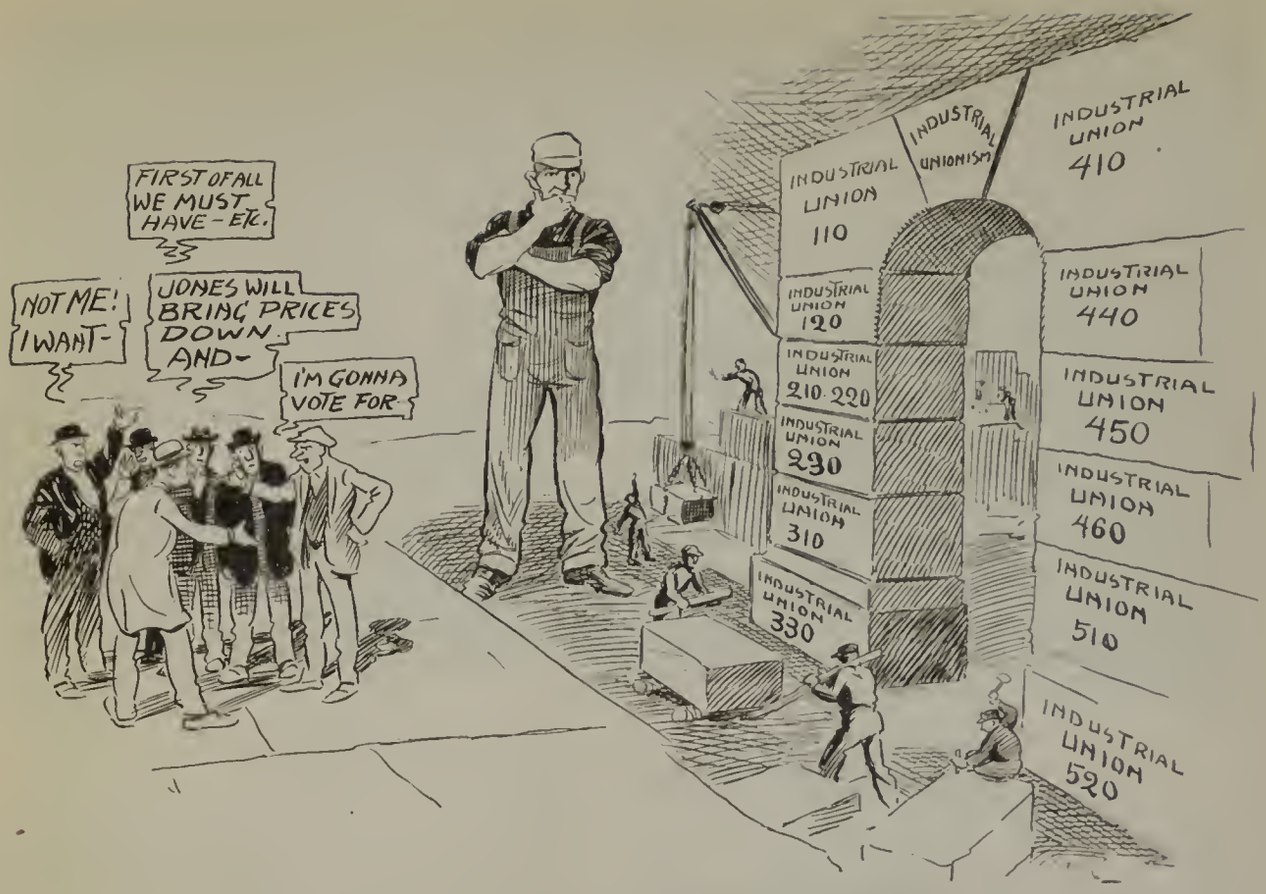
Given correct principles, competent leadership, a class-conscious spirit, and infallible industrial union organization, coupled with a vision of a future society and the deductions must be clear to any who are willing to see—a world won for the workers, and a sacrifice that every member of our class must be proud to make.

## CONQUER CALIFORNIA!

THE conviction of Tom Connors in California will only cause the IWW to redouble its work of organization within that state and to make the boycott more effective outside of it.

The unjust methods by which this conviction was secured are emphatically resented. Connors is one of the ablest IWWs and it was his qualifications that most likely caused Busick's unfairness towards him.

We'll conquer California in retaliation for Connors.



**Building The New Society In The Shell Of The Old**

# Producers Unite!

THE above motto was substituted by John D. Rockefeller for "Producers Compete," in 1870 when the Standard Oil Co. was first organized. The fact that the motto, "Producers Unite," was adopted is all too evident.

Surrounding himself with such men as William Rockefeller and S. V. Harkness, within ten years John D. Rockefeller, through the Standard Oil Co., controlled nine-tenths of the oil refineries of the country.

The position of the Standard Oil Co. was rendered still more secure by its control of the pipe lines, rebate contracts with the railroads, and by its ruthless war on stubborn competitors.

To understand the relative power of the U. S. Government as represented by the Supreme Court and the Standard Oil Co., a few figures are necessary.

### Government Impotency

On May 11, 1911, the Supreme Court handed down a decree declaring the Standard Oil Co. a trust in restraint of trade. Standard Oil Co. stock at this time had a paper value of about 98 million dollars. The market value in 1921 of the Standard Oil Properties, as they are called, was held at 3,276 million dollars or about thirty-five times the capital value in 1911.

These figures show the utter impotency of governments when confronted with economic power, such as is wielded by the Standard Oil Co.

It would appear that the oil workers, the actual producers, would have learned from the object lesson set by the organzation of the Standard Oil Co. and have developed an organization that could have met such an organization of the owners of the oil industry in the daily and continual struggle that the workers are compelled to maintain. But such is not the case. We find the workers in the same position that the owners of the industry were in 53 years ago. The same competition that proved a hindrance to the owners of the industry is proving to be more than a hindrance to the workers; it has become a positive menace.

### Workers' Unity Necessary

The competition among the workers for the ever fewer jobs grows more intense, and as the army of the workers grows larger with the new methods of production, the amount of labor power needed is lessened, and a more intensive exploitation of the labor power employed takes place.

"Producers Unite," is the motto that has to be adopted by the actual producers, viz., the workers, with the same purpose in view that prompted the founders of the Standard Oil Co.

In unity there is strength, but unity of purpose demands organization to carry out that purpose, and on the degree and structure of the organization depends the success in accomplishing any desired end.

The IWW with its industrial form of organization, is the only organization through which the workers can hope to cope with the colossal power wielded by the owners of industry. "All workers in any one industry, in one union, and all industrial unions welded together in one big union," is the weapon that is all powerful.

The strength and importance of industrial unionism as advocated by the IWW is not underestimated by the master class. In spite of the abuse, slander and ridiculous charges made against it by the master class through the kept press, it continues to grow. Witness the recent strikes on the Atlantic and Pacific coasts, and the complete tie-up in the woods of the northwest last year, for the betterment of working conditions.

The workers are beginning to realize the necessity of industrial unionism as never before and they are looking to the IWW as the only organization through which the solidarity of labor can be acomplished.

Craft unionism with its officialdom and complete division of the workers has outlived its usefulness. To meet the One Big Union of the employing class, there must be One Big Union of the workers. To the motto, "Producers Unite," we would add, "Oil Workers Organize," you have nothing to lose, but a whole world to gain.

**Conferences**

Conferences of OWIU 230 will be held in Taft, and San Pedro, Calif., in the first part of March. There will be a conference of delegates and members held in Oklahoma City, Oklahoma, March 17, 1924, to map out a program for an organized drive in the oil industry this summer. Any members in the California district who cannot attend the conferences there and have any suggestions or resolutions they wish acted upon can send same to the branch secretary at San Pedro or Taft. Any member who cannot attend the Oklahoma City conference can send resolution or suggestions to J. H. Miller, 218 Culbertson Bldg., Oklahoma City, Okla.

# Co-operation 100 Per Cent

A BIG restaurant concern states in its company paper that, "The modern industrial corporation requires of every member of its organization for smooth and efficient functioning: 100 per cent co-operation." It is true. Without this co-operation it would be absolutely impossible for big industries to function.

Now we aren't interested in the successful functioning of industry for profits. But we are interested in the building up of an industrial organization that can take over the industries and make them function for the benefit of the working class. This too, will require co-operation.

We are living in an age of social production and achievement. The fatal flaw in the capitalist system is that all wealth is produced co-operatively by the workers but is owned and controlled by a few individuals.

The capitalists know that the success of their business depends on the co-operation of all their employees. They beg for it in their press, in the name of patriotism, Christianity or some other myth. They try to get it by kidding us with vague promises of individual advancement. These efforts failing they compel it with threats of discharge, but regardless of how they get it, **they must have co-operation.**

We workers have learned part of our lesson in 100 per cent co-operation. We have built up great industries that produce all the necessities and luxuries of life in abundance. And what have we gained? Wage slavery, poverty, misery and disease. Are these things the result of too much co-operation? No, they are the result of the blind, unintelligent co-operation of the many workers for the benefit of a few parasites.

We must now learn to co-operate 100 per cent in the building of an organization strong enough to demand the co-operative ownership and control of all the wealth that the workers have co-operated in producing.

The historical successor of the capitalist system is the Workers' Co-operative Commonwealth 100 per cent.

**A. C. H.**

# A New Opportunity

SOCIETY has always been divided into two classes—those trained to give orders and those trained to obey orders. In the former latent executive ability is developed to the highest degree for the purpose of exploitation of the latter, who are shut out from the opportunity for the development of their own executive ability, either in school or in industry.

***

The labor movement seeks to develop the latent executive ability of every worker. The door of opportunity is opened to all. This service to the working class yields efficient and competent managers and executives—not for purposes of exploitation, but for co-operative service.

## CASSABIANCA TO DATE

The boy stood on the burning deck,
With bootleg trickling down his neck.
His daddy beckoned—he could not go,
Because he knew he'd stagger so.

# City Labor vs. Country Labor

By J. M. BEST

THIS article is an original contribution to Industrial Pioneer from a town in Kansas. It is not what one would call an orthodox IWW article. Nevertheless, it is printed here, as it expresses the farmer's standpoint, while, at the same time, reflecting his desperate condition. Its value, on the latter account, is great!

Industrial Pioneer will be pleased to devote a page or two of each issue to a discussion of the points raised in this appeal. Should you desire to take part, make your contribution as brief as possible.

MY whole life has been spent among the laboring people, both in the country and city, and today their condition is largely due to the fact that they do not understand each other, and the problems which confront them as farmers and city laborers. For fifteen years it has been my good fortune to publish a country newspaper. I say good fortune because it brought me in close contact with God's best people. Later I became the publisher of a weekly paper in one of our metropolitan cities in Kansas, and it was there that I mingled with the city's laboring people. Again I learned people who were God's chosen ones. People who were giving their life blood and energy in keeping the wheels of industry moving. When we looked into the faces of these men and women, and saw the havoc the daily struggle was playing in their lives, our hearts went out to them, and their problems became our problems.

If it were possible we would like to switch the whole condition around, putting the farmers in the city and the city laborers on the farms. Nothing would do more to teach each class, whose interests are identical, that they both have a common cause. If this were done and all could see the light, one big union would be the result and they could dictate to one of the rottenest systems in the world.

Why do farmers read farm papers and farm literature and city laborers read literature dealing with the problems of city life? Why not the city man read the problems confronting his brother on the farm and the farmer read of the industrial slavery in the cities?

Am I my brother's keeper? Yes, you are each one of you responsible to the other and to your God. You are either going to educate yourselves to the true condition of affairs or you are each going hand in hand to the worst slavery in history.

My Brother, what do you owe to the world? Let me answer it. You owe the best there is in you for the good of your posterity. If you live in this old world and just kind of slide through, with no thought of tomorrow, you are one of the most deplorable persons in the world. You owe the best there is in you to your fellow creatures, and that will only be brought about by you getting right

down to business and using the thing your father gave you, your head. This old world is being hobbled by having the rank and file of the people on a vacation. You have quit thinking. You must take it on yourself to think the problems through.

The other day we were talking with a fairly intelligent laboring man, one who was above the average, insofar as he was a good mechanic and was capable of drawing down a good salary. He said: "What is the use, it is fixed anyway." Thousands say this same thing to themselves, and this is just the reason we are where we are as a people. Education and agitation are the only things which will bring action, and God hasten the day when the farmers and townspeople can understand each others' problems. When this comes about, and the laborer of the city and the laborer of the country vote together, they can rule the world. When this comes about let's hope they will deal out mercy and justice.

We have watched the hatred grow between the men who are forced into the harvest fields, and as we see it, it is all because we do not understand each other, and the propaganda put out by the ruling class broadens the gulf which keeps them in the saddle. It is true that some of the men who come into our harvest fields are unworthy, but many are brothers in the truest sense of the word, and have loved ones at home whom they are trying to provide for. The pin headed, and those who do not want to be fair, class the honest man from the city with the bad element. We know the feeling here in the country and it bides no good for the masses, and some solution must be worked out. We must become educated in the vital questions that confront us. We would like to see the condition come about which would make these harvest expeditions unnecessary, but while that is coming about we would love to see a plan worked out whereby the advent of our city brothers into our midst would be welcomed.

The world does not stand still and as it is now we are drifting, and where? Did you ever look your dear wife and babies in the face and ask yourself this question, "What am I doing for you to perpetuate your future?" The man who has lived and has not contributed something for the betterment of his people had just as well never have existed . You have a head and why not use it? This country is yours and you deserve something better than the crumbs you are now getting, while many are living on the fat of the land.

In conclusion we ask you this question, "If you continue as you are, what will the harvest be?" Buckle on your armor, get out of this indifferent state and enjoy the freedom our forefathers fought to gain.

# Grounds for Encouragement

THE labor movement everywhere is in a deplorable condition. The rise of the working class that the world war made possible, had the class-consciousness to seize the opportunity been present, seems further away now than ever before. Even in Russia where the breakdown of the pseudo-feudal system made revolution imperative, the proletariat are retreating in favor of the peasant interests and of a statecraft that is dictated by capitalist considerations and necessities. In Italy, Hungary, Finland, Germany and other places where the workers have had a temporary hold of power the results have been the same, namely, bloody disaster and reaction. Apparently, the outlook is desperate and disheartening. Apparently, there is no prospect of the working class ever gaining the ascendancy either in the USA or anywhere else.

We say apparently, for judging from present day appearances, the working class is foredoomed to perpetual slavery. It cannot break the chains that bind it; try as it may, it is forever and eternally damned.

### The Hope of History

But history gives us hope to believe that now, as always, appearances are deceptive. History is repeating itself, not as comedy but as a festival for encouragement.

Following the Napoleonic wars, the English and French working classes were terribly oppressed and enslaved. Associations and combinations among them were outlawed and conditions were of the very worst. Exploitation reached its lowest point, its fiercest phase, then. Nevertheless, the English and French working classes continued to organize and improve their conditions despite obstacles to the contrary; until their labor movements were among the most powerful in pre-war Europe. The same was true of the German labor movement. In Germany, the Bismarck anti-socialist laws crippled and well-nigh destroyed working class organization, only to see its rise in a manner that far surpassed that of all other European countries.

We have also only to compare the Paris Commune with the rise of Russian communism to grasp the fact that evolution may have not only its retrogressings but also its leaps forward on an unprecedented scale.

And look at the history of this country! Consider the wreck and ruin in which the Civil War aftermath left its labor movement. And then recall the million textile workers, miners and shopmen on strike in 1922! What a contrast! In one case, impotence and despair. In the other, vast organization, high hopes, and near revolution!

And so why despair? Let not appearances deceive us; let the light of history brighten our way when the outlook seems darkest. There's no telling what will happen next; especially as capitalism appears to be going through another stage of development

(Concluded on page 40)

# Training for Freedom

## The Great Achievement of the Strike of Lumber Workers in the Canadian Rockies.

BY J. A. MACDONALD.

**IN the Canadian Rockies the thermometer was forty-five helow zero. All around was the snow and the almost unhearahle cold, a cold that burns almost like fire, that stings like needles, that gets in the lungs and half freezes the thin partitions of the air cells. The white hills stood in solemn aloofness as though defying puny man to venture out. It was such a day as has heen featured in many a romance of the Canadian West only much colder for this was the coldest day for many years. It was the first of January, and instead of the fiction of the writer sitting in his steam heated flat imagining what cold is like, the stage was laid for one of those great, true dramas of humanity that show the intrepidity, the determination, verging almost on the superhuman, with which men are able to do and dare when they get the vision of the future that is possible for labor and contrast it with misery, slavery, extortion and oppression of their present lives.**

**In spite of the hiting rigor of the coldest day in years, while those trained to the softer ways of the cities were cursing the janitor hecause he had the thermometer in their rooms at forty-five ahove, at ninety degrees lower the men in the Cranhrook District of the lumher areas of British Columhia were challenging the power of the lumher trust and of the elements. It was no summer vacation on which they were leaving the camps. They were leaving to attain for themselves the status of men, the rights of men and that power which organization alone gives to the industrial slave. They were staking their misery, low wages, inhuman conditions against the profits of their hosses, and nothing, not even a killing cold could freeze the edge off their determination. The sleigh haul which was to hring in the logs which had been produced all summer was heginning, and they were going to win their demands or there would not be any sleigh haul this winter—and to date there has not been.**

Never with climatic conditions so hostile was there a response so heroic. When one remembers that these were the men who could not be organized, one must marvel at the vast new forces that are operating at the basis of modern industry, and at the organization that is moulding the world to the conciousness of greater things lying within the lap of the future, and is operating in the hearts of the workers of the world giving them an aim, ambition, incentive and initiative that makes all things possible.

### The Romance Of Achievement

To my mind as personifying some of this new spirit which the IWW is to the working class comes the memory of Fellow Worker MacNeil, just one of the many heroic figures in the saga of the working class of which I have recently been a spectator. Slow speaking, hestitant, with the gift of thought but not of expression, without the figure that attracts attention, one would say that he was just an ordinary lumberjack, and he is, but at a time when no lumberjack is ordinary, when around all of them is the glow of great deeds done unassumingly. When I saw him in Cranbrook, there was about his unromantic figure the romance of achievement. His nose had been frozen, and his ears nipped and both were peeling. He had won these insignia of rank in the army of labor calling out camp after camp after travelling long distances on the first day of the strike.

As he himself humorously expressed it, he would have frozen to death only for the knapsack of hot IWW literature that he had on his back. Whenever there was a flying squadron to go out, wherever there were things to do for the movement, he was there always insisting that he serve, without sleep, without reward except the inner consciousness of service. With others he would walk to a camp, breaking trail for twenty miles through the snow; then with those that had been called out he would make a campfire, one of the many campfires of the new society that have flared in the Rockies during the last month, with a light that is undying as long as Capitalism exists. Then he and the others would walk back to the station, wait there for hours without food, and back to the headquarters insisting on more service.

### Mine Own People

There are hundreds of men like MacNeil. Men who gave all that was best of themselves, and gave willingly on long hikes that would kill men less rugged, and often without food for a day. Men who would go through hell and back for the IWW, strong, self-reliant thinkers who put their thoughts into action, men who thought in deeds not words, and who saw nothing great in their actions, who would be non-plussed by any suggestion of praise. They were of many races, of many languages, but there is something great in the thought, "these are mine own people, these are the kind of people on which our principles and our organization rests."

Most of them are new members. Only a few in the strike zone have been in the organiztion more than a year, for the splendid foundation of industrial solidarity in Canada is only the achievement of a year. Only a year old—yet the achievements of that year and the resolution and ambition that it has given to the labor movement of Canada is a gigantic labor achievement. Only a year old—yet in that year strategists in the industrial struggle have been developed who have given to the labor movement new tactics that are wonderful in

their effectiveness. Only a year old, yet in that year has been developed an intelligence, a co-operation, a driving force that makes the present strike superior to any I have ever seen.

Out of the workers who were a year ago untaught in unionism, through education, through great sacrifices and efforts has been developed an organization that is a revelation of the forces lying latent in the working class which can be made through organization to function for labor.

### More Than A Union

To these workers, who, while a short time ago unorganized are now carrying on one of the greatest struggles of labor, the IWW is more than a union. It is a science frigid in its analysis of modern industry. It is a light of hope in the jungles of slavery. It is a bugle call to supreme effort in which the individual is merged in the class. It is a vision in the night of the present system of the dawn when mankind is free and science, thought and organiza- have redeemed the world. Around the movement is concentrated all their powers to think, to feel and to live. To them solidarity is more than a philosophy; it is life expressing itself in action. It is a great moral force in their lives, an elevating power, a force expanding their possibilities, giving them inspiration and hope.

### A Moral Lesson

When in one of the papers of the city of Cranbrook the Chief of Police made the statement that the manner in which the IWW conducts strikes is a moral lesson to the citizens, he was stating one of the significant facts of the strike, that the IWW is a great moral force, and this largely because it does not found its morality on the shambles of capitalism, and the lie of class superiority; on a system that while preaching a shoddy morality at the same time places a premium on lying, cheating, theft, and the survival of those who are most ruthless in trampling on the necks of others to power.

The IWW is a great moral force for the reason that it brings to the surface all that is best in the worker, all that higher nobility in men which only a movement with a vision and a mission can touch.

### A Moral Force

Before the organization of the IWW in the lumber camps of the present strike zone, five men would go to Cranbrook, and within three hours at least two of them would be staggering through the streets mumbling the idiocies that come out of bottles. Two days in the joints and the brothels and they would be without money—wrecks before the bright lights of the bootlegging dens, victims of the avaricious steely glints in the eyes of harlots. Their winters' work would enrich the powers that prey on them in the cities as the bosses prey on them in the camps. Then—often back doors, the begging of men on the street, and back to the dismal toil of the camps again. Nor is this difficult to understand when one knows the degradation which the capitalist system produces. It is natural that men who are worked like brutes, housed like brutes, and fed like hogs should seek to regain the fleeting memories of the manhood that the bosses are crushing out of them for profits in the illusions and false invigoration of what is called whiskey in the lumber towns. Men work so hard, and live in such a stultifying environment where there is no organization on the job, that they demand the kick of the booze before they can feel human even for a few hours.

### The Material Of The Movement

Often in the lumber areas in the past, they have been pointed out to me, and sometimes by men who made their graft out of the bootlegging joints, or through ownership which means partnership with the harlots, through the rent on the houses they occupy, for nothing is more unctuously righteous that the capitalist with his foot on a nickel. They would say: "There they are, in town two days, drunk and broke, and this is part of the working class to which your movement wants to give the management of the industries of the world. They are unstable as water, incapable of organization, utterly hopeless; nothing can be made of such material."

Anything with the power to toil is good enough for capitalism. The more hopeless, the less gifted with the power of thought, the less trouble the worker will be, the harder he will be to organize. Capitalism wants hands, not men, for men would demand conditions. Anything with a little more highly developed imitative powers than the gorillas, and with the gorilla's strength will suit the lumber bosses.

### Men Wanted.

But the IWW wants men, real thinking men to fight the struggles of labor, to lead labor to its historic mission and goal. Capitalism deforms the workers into mere work animals. The IWW reforms men to a militant manhood, develops all that is best and highest in them, arouses the impulses and aspirations that the bosses have stifled. This is the underlying fact that I met forcibly as the motive behind the struggle of the lumber workers of eastern British Columbia.

Now the men are the same, but how different are their actions. The enthusiam of a great ideal has entered their lives. They are not a mass of milling individuals, for in the white heat of strife all that is best in them is fused in a common struggle, a common hope and a common endeavor into a wonderful unity. To my mind comes the actions of one of the strikers who claims that he was the biggest "booze hoister" who ever worked in a logging camp in Canada, too great claim perhaps to be taken seriously, although the statement was made in the presence of more than one who had achievements of his own in that particular field, with none denying his superiority. But this man is now organized. He has something better to think of, something higher toward which to direct his energies. He is one of the most active men in the strike, and is working as hard to punish the boss as he was in the habit of punishing the booze. He is no longer in that frame of mind

(Continued on page 36.)

# French Syndicalism in Perilous Condition

By E. MAST, Paris, France

THE labor movement of France is passing, at present, through a critical period the outcome of which may have a very great influence upon the future development of the labor struggles in that country.

French syndicalism always prided itself on being absolutely independent of any political party, and by its "declaration of principles" at the Amiens Congress—usually known as the Amiens Chart—proclaimed syndicalism not only as a means towards an end, but as the end itself. "Syndicalism suffices to itself" was the proud motto of the French labor movement.

But all this was before the war.

Then came the bankruptcy of the General Confederation of Labor (CGT) at the outset of the war, when it accepted that war as a war of liberation and went in for the "sacred unity" with the ruling classes of France. Syndicalism, then—at the only period in its history when it should have shown its strength and its independence—did not seem to suffice to itself in the eyes of its leaders.

After the war, the germ of discontent began to spread faster and faster within the Confederation. The need of an independent labor movement was again the need of the hour, and about two years ago, the revolutionary opposition inside the CGT opposition that had organized itself into Revolutionary Syndicalist Committees within almost all the local branches of the CGT met in convention assembled. The CGT was then shamelessly expelling from its midst the unions that revolted against its reformism. The convention had no other way but to decide to leave the CGT and build up a new labor organization that would fight capital with better arms than the League of Nations and the International Labor Bureau of that League. The newly-formed body — the CGT **Unitaire** — managed to unite almost half of the old CGT membership.

### Politics Win

But it was very soon felt that this new offspring, which gave its adherence to the Red Labor International at the latter's second congress in Moscow, was being systematically driven into purely political channels. Simultaneously the Communist party of France introduced its system of encircling the labor movement by the setting up of "syndical commissions" attached to the local branches of that party whose members were to carry out, inside the unions, the decisions and the dictates of the Communist party. It soon became evident to the non-party elements of the CGTU that the latter was becoming nothing but a tool in the hands of the politicians.

French labor cannot bear politicians and political trickery. It is a tradition. It feels that they exist to mislead, that their aim is to use labor as a tool for their own ends.

It thus came about that very soon the revolutionary anti-political elements within the CGTU came to loggerheads with the majority of that body over the question of the independence of the labor movements from the encroachments of any political party.

The two congresses of the CGTU—at Saint-Etienne in June, 1922 and at Bourges in November, 1923,—both dealing with its affiliation with the Red Labor International and with the relations between syndicalism and party politics, clearly indicated the dangerous turn French syndicalism was taking by submitting to the dictates of a political party. This situation led to the anti-political element of the CGTU forming a revolutionary syndicalist minority whose watchword became: "Syndicalism in danger."

The struggle came to a head on January 11th. On that day the communists of Paris were going to hold a meeting in the "Maison des Syndicats" (Trade Union Hall), and speak upon labor problems. This incensed those of the French syndicalists who considered that the increasing impudence of the party men in hiring the very Trade Union Hall for the purpose of holding a meeting upon questions that were admittedly in the sole competence of labor organizations, had to be met by a vehement protest.

### The Cry of "Dictators"

The meeting was crowded. Passion rose high. The small handful of syndicalists—about 40 in all in a crowd of 3,000—was repeatedly provoked by one of the communist speakers, Treint, who pointed repeatedly at them, taunting them for their opposition and shouting at them, accusingly, "dictators," "dictators," "dictators." This seemed to have been a signal, because immediately afterwards shots rang out. Men began falling; two men, severely wounded, were transported to the hospital where they died shortly afterwards. About 20 others received more or less serious wounds.

A shout of execration rose from every corner of working France against this dastardly outrage. Upon investigation it was found that all the bullet marks were in the wall that sheltered the band of 40-odd syndicalists. Of the two workmen killed, one of them, **Poncet**, is an anarchist-syndicalist; the other—**Clos**—is a syndicalist metal worker, member of the revolutionary syndicalist minority of his union (the metal workers' union is under the control of the communists); all the wounded belong to the syndicalist group. It was thus clear to everyone as to where the shots came from and for whom they were meant.

The funeral of the victims was a pretext to get to Paris the representatives of all the oppositional groups within the CGTU and deliberate upon the attitude to be taken towards the meddling of communist politicians into labor affairs and towards

the CGTU itself which, by its silent connivance could not be considered otherwise than an accomplice in the tragic events of January 11th.

One salutary effect of the tragedy was that at a council meeting of the Administrative Body of the Trade Union Hall it was decided that the hall will, henceforth, be let only to bona-fide labor organizations!

### Opposition's Program

The provisional delegates of the oppositional groups inside the CGTU met on the day of the funeral and passed a general resolution upon the events within the labor movement of France leading up to the tragedy of January 11th. Here are some of the more important paragraphs of that resolution:

"The Congress of the CGTU at Bourges has confirmed the hold of the Communist Party over the CGTU. In allowing a political party the possibility of conducting a specifically labor propaganda, the Executive of the CGTU has proved its powerlessness to carry out the syndicalist program which, more than ever, must be cleared of every vestige of party demagogy as nefarious to the working class as the theory of the common interests of classes.

"The Congress of Minority, painfully shocked by the tragic events that took place in the Trade Union Hall, confirm the declarations sent out to the press by its executive and frankly declares that it considers the Communist party as responsible for and guilty of the slaughter.

"Faced by the abdication of the executive of the CGTU before a political party which dares to speak and act on behalf of the working class; the Congress reminds the entire organized proletariat that such incidents are the logical and unavoidable consequence of the interference of political parties in the syndicalist world; they bring with them nothing but the germs of hatred and discord and reduce to naught the revolutionary spirit of the labor organization.

"But anxious, before everything, to save—as against the politicians—the higher interests of the working class, and in full accord with the Amiens Chart which invites all the workers, without distinction of opinion, to group themselves in the union, the Congress declares that labor unity alone is capable to carry out the labor onslaught against the employers and cleanse syndicalism from any political influence.

"Taking into consideration that neither the formula of united front, nor that of the open door, promulgated by the two Confederations, could lead to such unity, the Congress empowers its bureau to get immediately into touch with the two CGT's and demand from them the calling of a Congress of Unity as the only means to carry out the general unity of the working class." . . .

### Unity at All Costs

It will be seen from these excerpts the main plank of the labor movement in France is, at present, that **of unity at all costs,** because it is felt that since the existence of the two Confederations, there has been no struggle worthy of the name against the common enemy—Capitalism—but just wrangling and squabbling within one's own ranks.

But it was needed that shots should whistle through the air and that killed and wounded should be carried out, to make the French syndicalists aware of the danger they are running when politicians begin to meddle in labor problems. Now that fratricidal blood has flowed, the workers of France are beginning to get restless about the fate of their unions and are looking for a way out of the dilemma that is before them: reformist, with no fighting backbone, CGT—or dictatorial, political, under the heel of a politicians' party, CGTU?

The situation called out by the tragic scenes of January 11th has strengthened the hands of those who were claiming independence from either of the two Confederations, and a spirit of autonomy is now blowing inside the ranks of French syndicalism. The old CGT has become a body unable to undertake any fighting on behalf of the working class; the CGTU, entirely controlled by the communist party, sees every struggle in the light of the conquest of power by that party . . . on behalf of the proletariat!

The true revolutionary elements of France are thus between the devil and the deep sea. They entrench themselves behind autonomy, with the hope that they will become the ferment that will raise the future unity of the French labor movement outside politics and politicians, based upon the complete independence of syndicalism, and upon the capacity of the latter to undertake not only the abolition of state and wage system, but also the reconstruction of a federalist commonwealth of labor.

### Disgusted

A great many workers who until now refused to consider the danger of politics, are now disgusted. Many refuse to continue to pay their membership dues to their unions, under the pretext that their affiliation to the CGTU renders them responsible for the political line taken up by that body. The Council of the Paris One Big Union of Builders—the strongest and most revolutionary union within the Paris area— has resolved to withdraw from the CGTU and remain autonomous—i. e., independent of the two existing Confederations. Owing to this decision, the Industrial Builders' Federation of France (affiliated to the CGTU) in which the Paris Union of Builders is the largest and most important unit, is obliged to follow suit. It may be added that the great majority of branches of this Federation are wholly in agreement with the Paris branch.

We thus see that the wave for unity spoken of above—the main plank of the Revolutionary Syndicalist manifesto— is preceded by a wave of autonomy, of independence from both Confederations. This looks, at first sight, paradoxical. Let us just see how the events might develop within the early future:

In conjunction with the decision of the Conference

(Concluded on page 36.)

# What the Movie Photographed at Centralia, on Armistice Day, Nov. 11, 1919

## Pathé Agents Made Inexorable Record of Mob Attack on IWW Hall

BY RALPH CHAPLIN

STATE OF WASHINGTON )
ss
COUNTY OF LEWIS )

Walter Bland, being first duly sworn on oath deposes and says: That he is a citizen of the United States from 21 years of age residing in the city of Tacoma, Pierce County, Washington; that on or about the 15th day of August, 1920, while riding in a Northern Pacific train between the city of Seattle and Yakima, Washington, he had a conversation with a man whose name is to him unknown who stated that he was a traveling agent for the Pathe Film Company; that said agent of the Pathe Film Company stated to this affiant that he and his assistant were in Centralia on November 11, 1919, [redacted]; that they had been instructed to have their camera on North Tower Avenue opposite the I.W.W.Hall to take pictures of the raid; that in pursuance of said instructions said agent and his assistant were located opposite the I.W.W.Hall on Tower Avenue and had taken pictures of the raid, said pictures showing the soldiers rushing the hall and showing soldiers dropping who were shot while breaking into the hall; that immediately after said raid said agent and his assistant were thrown into jail and kept there six hours; that their camera, worth approximately Seven Hundred and Fifty Dollars ($750.00), was completely destroyed and demolished and after their release they were ushered to a train and told to leave town immediately; that thry did leave town without any resistance whatsoever.

Further affiant sayeth not. [redacted]

Walter Bland

Subscribed and sworn to before me this 6th day of July, 1921.

NOTARY PUBLIC IN AND FOR HE STATE OF WASHINGTON RESIDING AT CENTRALIA.

THE volley that was fired in self defense by the embattled loggers consumed but a second or two of time. Omitting the pursuit of Wesley Everest and the ensuing death of Dale Hubbard the actual shooting was over almost as soon as it started. The shooting at best was ghastly enough but it might conceivably have been worse. It is hard to set bounds to desperation and there were only two really desperate men among the loggers, Wesley Everest and Hanson, who escaped. In view of the provocation it is surprising there were not more like these two. Had the majority of the loggers been in the frame of mind of Everest and Hanson the entire group would no doubt have taken a stand, Alamo like, and fought until the last man was dead. But as it happened things worked out differently. The majority of the loggers felt justified in defending their lives and their hall as they did. Having acted within their legal rights they felt they had nothing to fear in court—if justice were accorded them.

By one climacteric and tragic act they had called attention of the world to the unrebuked and unpunished mob lawlessness that had been directed against their organization for months and years. By resorting to this desperate measure they had achieved all that they wished to achieve. Had their minds and hearts, as was claimed, been set on bitter and remorseless revenge more members of the mob would have died than those whose names are

recorded. The act of the loggers was not only an act of self defense; it was an act of protest as well. By exercising restraint they showed the public that wanton killing was far from being their purpose.

The above facts were plainly evident to all fair-minded persons who attended the trial. It was facts like these that the prosecution and the Judge sought constantly to cover up and confuse. And it was facts like these that the defense attorney, using all means at his disposal, attempted to bring to the attention of the jury.

### Unanimous Testimony

One of the outstanding features of the courtroom testimony was the unanimity of nearly all witnesses regarding the firing following the attack and not preceding it. Discounting, for the sake of argument, the testimony of the loggers themselves on the ground that it might be "self serving"; there still remains the testimony of numerous impartial eyewitnesses who viewed the parade from various points along the line of march. This testimony was never successfully rebutted in the courtroom. In addition there was the testimony of legionaires and paraders who, in justification of their manhood and honesty, were impelled to testify for the defense. Besides this—and even more convincing—are the damaging admissions of guilt which Attorney Vanderveer wrung from the reluctant lips of witness after witness for the prosecution.

Starting with the somewhat flippant admission of Dr. Bickford, it may be safely said that the case for the defense might have been proved under ordinary circumstances out of the mouths of the prosecution's own witnesses.

It must be borne in mind that everything the jury learned, or could learn of the facts of the case was from verbal testimony—one side claiming one thing; the other another. The jurymen were high-strung, nervous and impatient for facts—tangible facts; and they were given little else to consider but words. Out of these words—this veritable deluge of words—these twelve men had to form a picture in their minds of the actual happenings of November 11th. The facts were simple enough, but it was a case of "not seeing the forest for the trees." Also the judge seemed determined that they should not learn of the facts.

### Positive Evidence

In these days of mechanical progress it often happens that evidence of a positive and definite character can be offered for the consideration of men in the jury box. Many ingenious and scientific devices and processes have been invented to prove innocence or guilt with a fair degree of certainty. The fingerprint system is pretty well established. Many a man has been convicted or acquitted by the silent testimony of "thumb prints on the scenes of crime." "Here is the gun or knife that did the job," the jury is told, "and on it the impression of a whorl or loop identically the same as or altogether different from the index print of the defendant." If the fingerprints are not forged, their evidence is considered valid and the jury influenced accordingly. The dictaphone has been used to good advantage, and the photograph also.

In the Mooney case both of these wonderful devices were used to show that Mooney was framed and that he could not possibly have been at the place the prosecution claimed. In the Sacco-Vanzetti case enlarged photographs of the barrel of the Sacco gun prove beyond doubt that it is of different caliber and could not therefore have fired the bullet which killed the man for whose life he is asked to pay the extreme penalty. In the Centralia case little technical evidence of this kind was submitted. One instance, although of comparative unimportance, is worthy of note. It may help to indicate the value of weightier things which were not permitted to be given to the jury at all: Earl Watts and Ben Casagranda were shot, the prosecution claimed, while standing around the corner from the IWW hall. Both were shot with hard nosed bullets. But Attorney Vanderveer from the prosecution's own witnesses had established the fact that the only hard nosed bullets used were fired from the inside of the hall. This would put the prosecution, if it wished to press its contention, in the impossible position of claiming that these particular bullets swerved from their natural course, followed Watts and Casagranda around the cornor and there did what bullets are supposed to do. Evidence of this kind is conclusive. It enables the brain of the juror to grasp the image. It makes the fact almost visible. It enables one side or the other to demonstrate its case clearly before the jury and to build up a true picture of the point or points in dispute.

### Eloquent Testimony

Photograph, fingerprint and dictaphone are considered strong evidence. When genuine exhibits of this sort are placed before a jury they reveal more eloquently than words the facts of the case. The word "genuine—" is used advisedly, for, with the exception of fingerprints, such evidence is almost impossible to fake. There is but one thing on earth that would make more unanswerable testimony as to the truth or falsity of conflicting claims in a court room—the moving picture. A full sized, life-like reproduction on the silver screen of a man committing a crime would convict that man before any jury in a minute. The identification would be positive. It would remove all doubt. Also it would free an innocent man unjustly accused, because the jury, unconfused by verbal testimony, could see in a flash the difference between the man on trial and the man who did the job. A burglar, for instance, would not relish the idea of the jury viewing a moving picture of himself crawling out of a certain window with a bag full of swag. And if the burglar, or one of his pals, could lay hands on that reel of film before the trial, they would be likely to try to destroy it. This brings us to one of the most dramatic incidents in the history of the Centralia Conspiracy—the roll of film taken

during the raid and afterwards destroyed by men who feared to have their dark deeds come to light!

**Movie Shows Attack**

Strangely enough the defense almost secured cinematographic evidence of the mob attacking the hall to present to the jury. This would have done in a minute or two what thousands of words of evidence were unable to do—brought the actual happenings on Armistice day before the eyes of the jury. It would have saved weeks and months of the jury's and every one else's time. It would have established the innocence or guilt of one side or another in an incredibly short time.

How the moving picture machine happened to be stationed opposite to the union hall on Armistice day and who sent it there is another story; the fact remains that the machine was there. Some enterprising director of the Pathé Corporation in the northwest had dispatched an operator and his assistant to the IWW hall in anticipation of the raid. And the Centralia Armistice Day raid had been expected for some time even in Seattle. No doubt this director sent the movie man to Centralia just as he would have sent one to a town that anticipated a flood or one that stood in the way of a forest fire. The catastrophe might not be serious, and then again it might. You never can tell. And it's good business to have your man stationed where things are likely to happen.

Somehow or other, moving picture managers—the kind who feature weekly news stuff of the spectacular kind—always manage to get in on the ground floor. Their "nose for news" invariably leads them to get the material that will give the public a "kick." Whether it be a mine explosion, a train wreck, a booze raid or a marriage of distinguished social parasites, the movie camera always is found sticking its inquisitive nose into the scene. And so it was at Centralia.

The Pathé man, in all probability, was not aware of the fact that the mobsters intended the raid to result in tragedy. No doubt he believed the legionaires would merely "roughhouse the Reds a little," and let it go at that. Newspaper reports of incidents of this sort had been appearing with monotonous regularity; they were fast becoming too stale to feature. But a moving picture of such a patriotic ceremony (with appropriate captions) would make a real hit. There could be for instance the neatly dressed and firm-faced legionaires entering forcibly the dark den of iniquity and dragging its occupants into the light of day. A close-up could show a laughing soldier holding a ragged logger by the scruff of the neck and saying, "Get out, you Bolshevik; there's no place in this town for you." This picture would have tickled the funny bone of whatever good citizens were in the audience. Main Street would have applauded heartily—the women and the men and some of the kiddies.

All this might have been, and no doubt would have been, had the movie man guessed right. But he didn't guess right. How was he to know that the paraders carried ropes and that their purpose was sinister? How was he to know that instead of the customary quasi-comedy of 100 percent militant there was to be tragedy in the grimmest sense of the word?

A reproduction of one of the affidavits giving hitherto little known facts about the movie camera and its operators is reprinted elsewhere. It is noteworthy of serious consideration. The mind cannot help but dwell on what a convincing and unanswerable bit of evidence this reel of film would have made for the defense. . . . .The parade passing and returning to the hall; the legionaires bunching up, rushing the hall door and crashing it open with blows . . . A bewildered pause, men dropping in their tracks. . . .And all the time the movie machine turning inexorably—recording a truth that could not be gainsaid.

Some reader may say the above, perhaps too plausible outline was sketched only from disputed verbal testimony given in court, and that this remarkable film, had it not been destroyed, might have shown the very opposite—the loggers shooting the paraders down in cold blood. Then why, I ask, were these films destroyed by certain dignitaries of the City of Centralia, and why was the camera wrecked and its operators driven from the city as soon as it became known that the pictures had been taken. Only guilty men had reason to fear those pictures. The defense did not fear them. The defense would have welcomed them gladly and staked its whole case upon them without fear or reservations. We are positive that those pictures would have been worth the lives and liberties of eleven innocent men if they had not been destroyed in order to cover up the action of the real Armistice Day criminals.

Let the prosecutors explain to the Centralia jurymen and to the world why these films were destroyed!

## STRIKES IN NEW YORK

Strikes in New York in 1923 involved 122,179 workers and caused a stoppage of work totalling 1,009,520 working days, according to the report of the bureau of mediation and arbitration, state industrial commission. One hundred five strikes are recorded, in which ten or more laborers were involved. Of the strikers, about 10 per cent, or 12,000, were women. More strikers emerged from the needle trades than from any other industry, it is asserted.

Go west, young workingman!—and get arrested for "criminal syndicalism" whatever that is—whenever you go on strike for higher wages and better conditions.—**Covington Hall.**

"Dead men tell no tales." Say, bo, did you ever listen to Lloyd George and Hughes laying out a moral issue? If you did, you wouldn't talk thataway.

# Training for Freedom

(Continued from page 30)

which made the booze necessary to him. He is no longer dispirited, hopeless, with nothing to look forward to but slavery, and nothing to look backward on but the unrequited toil and the fleeting emancipation from capitalism which comes in bottles. He has been active and like hundreds of others has not touched one drink since the strike began, and he will not, for no one in the strike zone would sell him a drink; he has been so active in making the bootleggers obey the laws of the province as long as the strike lasts at least.

### Can't Fight Booze and Boss

Five men could and did do more drinking before the IWW started organizing in the strike zone, than two thousand five hundred organized men are doing at the present time. "You can't fight booze and the boss" is the motto, and fighting the boss is so much more interesting, so much more elevating and important that the booze is forgotten even by those who in the past were lethargic, fought the booze, their own interests, everything but the industrial robbery on the job.

I have seen men who had broken solidarity, and whose cards had been taken away from them for drinking cry like children to be given back their cards. Invariably they were told that the cards would be given back when the strike was over if they remained sober for the remainder of the strike. That a card which merely represents the power to struggle for higher goals for the workers, to sacrifice for an ideal, should mean so much is itself an indication of the nobility which the IWW is developing in the working class, and the grandeur of the movement which the card represents.

In addition to being the greatest of all labor organizations because it is the weapon of Labor united as a class, the IWW is also the greatest moral movement in the world. It is developing not the slave morality of a slave society, but the morality of the future when man can be his highest and greatest because he is free and fitted for freedom.

### Victory Over Themselves!

Victory over the bosses in the strike area would be merely a small achievement in comparison with the victory that the men on strike have achieved over themselves, the petty prejudices that divided them along lines of nationality, language and creeds and that disorganization and bickering which was holding them in slavery. Now they are united, and in such unity, and the vision and ideals that actuate them is the hope of the working class of the world. In the chaos and welter of a money crazed industrialism they have developed the spirit that fits them for freedom. This is the crowning achievement which makes other achievements possible. This is the lesson of the present strike, its grandest victory. No other can compare with this.

# French Syndicalism

(Continued from page 32)

of the Revolutionary Syndicalists on the day of the funeral of the victims, an invitation was sent by the bureau of that Conference to the two Labor Confederations, asking them to call a united congress of all the unions of France with a view of re-establishing one single national organization. The invitation concludes with the following words:

"We consider it useful to inform you that in case of refusal (to call a congress), the minority, anxious as it is to reach its aim and placing itself above all questions of 'shop,' reserves itself the right to consult directly all the labor organizations and to convene if, as it hopes, the local bodies will increase their desire for unity, the Congress which you will have refused."

It does not seem probable that either of the Confederations will reply with a plain affirmative. Each of them will put certain conditions which the other side will be glad to declare unacceptable.

What will happen then?

The minority will, as it threatens, itself call together the Congress and will invite to it all the unions of France over the heads of the two Confederations.

### Another Confederation?

There are sufficient chances to believe that most of the unions, thus invited by a "third party," will remain true to their respective National Executive Committees and will, therefore, refrain from attending the hybrid Congress. The only practical result of such a Congress would be—**the creation of a third Confederation of Labor!**

Too many cooks spoil the broth, we are told. Three Confederations will certainly not endanger the existence of French Capitalism!

But it will become clear to all concerned—at least to those who are earnestly striving towards the building up of a powerful labor organization capable of withstanding the onslaughts of reactionary France—that the fusion, under the guarantee of absolute independence, of all the unions of France into one great National Confederation of Labor, is the only remedy of the French working class.

The next few weeks will clear the atmosphere and will show whether the creation of a third Confederation will be averted by bringing the CGTU to its senses by a return to the revolutionary traditions of French syndicalism, or whether the wave of autonomy will sweep over the whole country and compel the two existing Confederations to bow before the will of the workers to exclude definitely politics from their midst.

## MAY THEY INCREASE!

Our idea of a union man: The chap who says, "No, thanks, I know it's a great show and I appreciate your inviting me, but my union meets tonight and I make it a point never to be absent."

# WOBBLES

## SOME DECAY

It was a regulation company "blow-out." The superintendent, in the absence of the parasitic principal stock owner, who was in Paris enjoying himself in an entirely different way, was "doing the honors" i. e., acting as the royal patron to the employees present. He was passing out some sandwiches. Among the cheese sandwiches were several of limburger.

One of these the "super" handed to a Negro workman. He tasted it very gingerly and it could be seen he was having an awful struggle getting it down. Finally he asked, "Say, Boss, is this cheese really good?" The "super" reassured him and the Negro continued, "That's sure strange stuff. I wonder how they tell when it's spoiled."

At this Mike butted in: "Sure," said he, "they can never tell when anything is spoiled under the present system. Capitalism is limburger gone to decay, but the capitalists know it least of all."

## SOUND PSYCHOLOGY

Following a dinner of savants, a certain professor of psychology thought he would test a colored cloak attendant as to his memory. Although the professor pretended to have mislaid his check, the boy without hesitation handed him the right hat.

"How did you know this one is mine?" asked the learned man.

"Ah don' know dat, suh."

"Then why do you give it to me?"

"Cause you give it to me when you come in, suh."

## ANOTHER "ECONOMIC RETREAT"

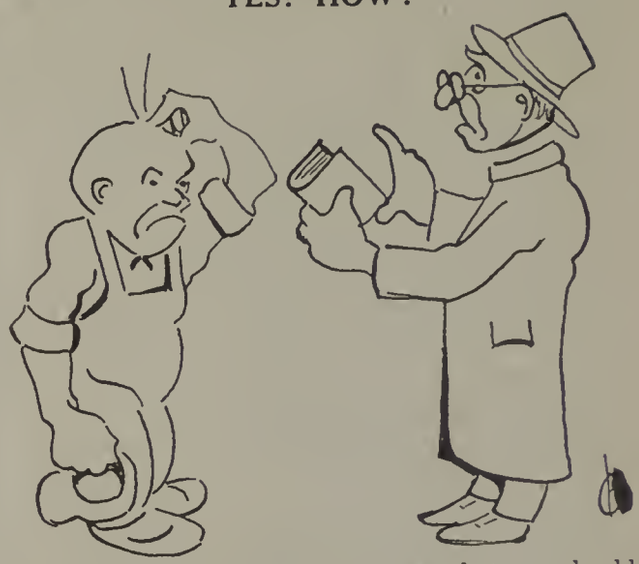
The speaker of the evening: I will answer the first speaker last as I want to take him up at length. Why, Comrade, you have forgotten your Marx or you never knew it. Marx doesn't say, . . . . And do you expect that by organizing the workers in industrial unions to be able to change the system? Why, there will still be the army, the navy, the police, who are going to fight you . . .

A voice from the audience: Yes, that's right. But when the comrades start a revolution, the government will at once pack and ship arms and ammunition to the Chicago office of the Proletarian Party, so that the comrades will have weapons to shoot down the army and navy with.

A laugh from the audience, and the speaker makes for the nearest stairway to avoid answering the usual after-the-meeting questions.—J. D. C.

## SUBSCRIBE FOR THE PIONEER.

## YES! HOW?



Preacher—The good book says that we should both work and pray!

Mike—Begorra, thin the good book is no good to me. Fur I hav no wurrck; so how in the divil kin I pray, thin?

## A DRAMATIC MOMENT

His jaw dropped.....

A tremor passed over his frame. He sat bolt upright in his chair with his fist doubled in his pocket—He turned deathly pale and shook like a leaf—"Great God," he said, "I lost that dime.....my last one!"

## NOTHING ALARMING

Walsh: "All the passenger trains in the country are going to stop tomorrow."

Clothier: "Good gracious! What's wrong now? It's surely not another strike?"

Walsh: "Oh, no. It's just to let the passengers get off."

## MARIONETTES

"Journalists are the tools and vassals of rich men behind the scenes. We are the jumping jacks. They pull the strings and we dance. Our talents, our possibilities, our lives, are the property of other men."—**Jerome K. Jerome.**

## AN INTERNATIONAL CONUNDRUM

When is oil not a lubricant?

When it causes friction between nations.

# We Upon the Firing Line

By LESTER SWEET

COMRADES, can't you hear us calling,
Calling from the firing line,
Hear our voices echoing faintly
Through every age and every clime?

Comrades, we are gray with waiting,
We upon the firing line,
With a courage some call stupid,
Others designate divine.

From Europe's plains to Mexico's mountains
Winds and twists its changing way,
Now advancing, now retreating,
Now flares up, now dies away.

Here the bold slave fought his master,
Here daring serf fought feudal lord;
Now a thin, red line of workers
Challenges King Capital's horde.

Just beyond his servile followers
Beckons us a wondrous sight—
Marble structure, jeweled columns
Flicker in the fitful light.

We it is who best can view it,
We who bear the battle's brunt,
When the furious fires of conflict
Brighten up the space in front.

Hence has murderous Mars been driven,
Lean Poverty has followed him;
And that vile hag, old Prostitution,
Fled outward down the road of sin.

And there 'mongst palaces of marble,
Shall dwell a fair and noble race.
Music, science, sculpture, painting,
All shall beautify the place.

Look! along great Russia's vastness
See the thin, red line advance!
Where we thought the foe was strongest
And our old valiants had no chance.

Crash! the foemen break like thunder
And a mighty surging wave
Sweeps through all the earth, in wonder
Stirring each astonished slave.

Slaves who toil behind in shadows
With a thin, white mask upon the head,
Slaves who cringe before the trenches,
Though your brains be dyed in red.

Millions, look there! See the red line,
Reinforced a thousand-fold,
Despite the foemen's furious war cries,
Enter in the city's gold.

Hurry, Slaves, the line is broken!
Crowd them in their waning might,
Where now stands but one old warrior
Tomorrow let a hundred fight.

Forward, Slaves, the chance of centuries
Perhaps may never come again,
Throw your white masks to the ages,
Let your red blood leap. Be men!

See King Capital's minions, frantic,
Crazed with futile rage and fear,
Try to close the breach, gigantic,
While it widens far and near.

Let tomorrow's new light see thee
All upon the firing line,
Pressing in the jeweled city,
There to live true lives, divine!

■ ■ ■ ■ ■ ■ ■

## SOME SUGGESTIONS

Anent party conventions and platforms let me suggest the following:

The Party Without a Name. (Call us whatever you choose.)

"We point with pride to—nothing;
"We view with alarm—everything;
"We pledge—anything you want."

The standard-bearer of such a party, running on such a platform, would sweep the country.

—W. G. Daniel.

## GOT HIS RIGHTS WRONG

Pat was on a sinking ship and was watching with interest the frantic passengers grabbing life preservers, putting them on and jumping overboard. "Shure," said he, "if everybody is stealing, I can too." Immediately he picked up a heavy piece of iron and jumped overboard with it.

## ZIPS FROM RADIO

Be sure you are right, then organize.

***

Sometimes you can believe the weather reports in the capitalist papers.

***

Those stories about Judas hanging himself and again about him falling down and his bowels bursting out must be all bosh. Judging by the number of traitors now-a-days he must have gone forth and multiplied.

***

When you see a hundred percenter put a clothes pin on your nose, the accent should be on the cent.

***

Deflation is the name of a new compound for reducing weight. It may affect the brain, though.

# The Miner's Dream

BY HAROLD ALLINGER

THAT vast parasitic organism that men call Capitalistic Society, has various strange methods of disposing of its human wreckage, after it has sucked the life blood out of its victims.

When the broken slave, his body weakened to the point where it is not possible to squeeze any more profits out of him, is told, curtly, that he is of no further use, as he drags his tortured body away from the machine, he has the choice of three alternatives. If he has raised a family and the members see fit, he may attach himself to them, with the accompanying humiliations that his position forces him to bear. Or he can go to the poor house; or he can become a beggar on the street. One of these ways are almost sure to be your end, fellow worker. Take your choice.

### With Spirits Unimpaired

In rare cases the victim, though ruined physically, still retains his spirit unimpaired, and resorts to desperate measures to revenge himself on a remorseless society, that has filched from him the rewards of a lifetime of labor. And others disdaining the insignificant pittance doled out in the name of charity, and realizing the folly of attempting to wreak their vengeance by individual action on the combined forces of society, relinquish entirely the will to live, and like the broken toiler in my story, seek only for a means to utterly efface themselves and hope in the silence of annihilation to win surcease from a world that gave them only disappointment, and robbed them of what they created.

My companion that spring night, by the camp fire in the forest, was a strange creature. His huge bony frame was twisted monstrously. One hand was twisted around so that when his arm hung at his side, the palm was outward with the thumb pointing back. And when he coughed, which was often, or when he spoke, you saw that the man was without teeth.

As I looked at him part of the line from an old poem came back to me across the years, describing a demon in Hell as he "toyed with a shrieking thing," and the thought came to me, that when the fiend had grown tired of the "thing," and threw it down, it must have resembled this man. Only another Hugo could do him justice.

Our meagre supper finished, we lay by the fire smoking, and my new friend discoursed on many things, till at last the thought that was uppermost in both our minds found voice in his tortured soul.

### A Great Chance

"Would you think?" he asked, "that less than two short years ago, I was as straight a man as you are. Yes, straighter! for you too have the bent shoulders of toil.

"You are a strong man, but I could have broken your back without much effort. I am not boasting of what has passed, I am speaking of things as they were."

Now no man likes to have his physical ability compared unfavorably with that of another, so I asked somewhat shortly, "Well if that is true how did you get this way?"

The horror on the far side of the fire laughed bitterly, and I shivered at the noise of it, there in the night in that lonely forest.

"I'll tell you in a very few words how I got this way. I was a good worker! I am not boasting this time either, God knows I am not.

"Yes, that was my reputation in every camp I ever worked in, for I was a miner. I know now that I was doomed to burrow beneath the surface of the earth, like a mole from the day of my birth; for I was born and raised in the mining camps and knew no other life.

"I have delved in the deep mines of Butte, and the 'hot holes' of the Comstock where the scalding water dripped on you incessantly. In Manhattan, Nevada, where the poisonous red arsenic stopes are like vast raw wounds in the world's living flesh.

"And always I chose the places of hardship and danger. Why?—you ask—why? Because they paid the best! Was there not a bonus, or higher wages where Death hid in a dangerous stope? Where a rock no larger then your head, if it fell from above, would change a man to a lifeless piece of clay?

"But falling rock is only one of many snares Death lays for the man who works underground. Some are slower but none the less certain in the end.

### A Living Corpse

"Lead, that finds its way into his blood, and twists him into a horrible, grotesque, toothless caricature of a man; gas that hovers unseen in the air of the drift: and most deadly of all the 'dry machine,' that chugging, roaring, insensate monster, that as it eats its way into the living rock, loads all the air with the dust of its endeavors, covering him who is at the same time its master and its victim, with a gray rock dust, and with every respiration the miner breaths in Death, for in a few years, often in a few months a strong, rugged man is changed to a pallid, sunken chested thing, a living corpse, a victim of the miners' consumption."

Once more that terrible cough, then a short pause, and my companion continued.

"Yes, I was a good worker, and I took a fool's pride in the reputation I had gained. But there was something else that drove me on. Only a dream? Yes, but what does any man strive for but that his dreams may be realized? My dream was to escape from the Slavery of the Pit. To live as I believe man was intended to live, on the top and not in the interior of the earth. I dreamed of breathing pure air, of drinking from clear running streams, and

feeling the warm sun on my face every day of my life. I wanted to have a home with bright faced boys and girls at my knee. And I believed I could win to that happy consummation by saving my wages and investing them. Ha, ha.

"Why should I recount to you my many failures. How each time I had laid by a puny hoard, collected at the cost of every pleasure that is the birthright of youth, it disappeared, and I began again the heart-breaking task of piling up another heap.

"But ever my dream beckoned me on. Ever I should say, till the lead got me, and the teeth dropped from my shrunken gums, and my manhood was a memory. That was last fall, and I left the hospital in the shape I am in today, I left the hospital with the knowledge also that I had the 'miners' con' and had about eighteen months more of life.

"I see now, that my life was one long hellish joke, and that I was the butt of the jest.

"I can realize now that it is too late; that the only way I could have helped myself was to have helped every other worker and accepted their help in turn.

"I know now, that the only way disease and death will disappear from industry is when profits are eliminated. The only way any worker can have a happy home is when every worker has one. That time can not come until they cease chasing the phantom of wealth by wages, and bend all their efforts toward establishing the Commonwealth of Labor."

My companion drew his threadbare coat closer about him, and again gave vent to that awful laugh.

"Yes; I was a good worker and you can see the results. But though I am feeble, my very weakness has been the key that set me free from the prison of the mine. Though burdened by disease it is the first time I have ever had a measure of liberty.

"This summer I intend to enjoy that liberty to the utmost, while the sun is shining and the streams are flowing; while the flowers are in bloom, and the woods are green. I have just enough left of what I managed to save through my lifetime of work to last me through the summer months, and I must satisfy the cravings of a lifetime before the snow begins to fall."

"But what of the winter?" I could not check the words.

At the question my friend laughed. That hideous laugh with a vein of madness in it.

"Why should I worry about the winter?" he cried. "Do you not know that a spoonful of cyanide is sufficient to end the cares, in the twinkling of an eye of any one who has grown weary of this existence? This winter holds no terrors for me. When the wind grows cold, and the snow begins to fall, what then is left for me but the poor house or the jail. But I will not go to either. I have enough cyanide to settle the winter problem for me."

My companion arose and shuffled away to where he had made down his bed. And I lay by the dying fire musing on the strange rewards the master holds out for the "good worker."

# Grounds for Encouragement

(Concluded from page 28)

in which the working class attitude will mean its life or death!

### Is Capitalism Prehistoric?

Is capitalism, as Mussolini contends, only in its prehistoric period, then its historic development will mean a more highly developed working class than has already appeared in its first twilight stages of growth! A more highly developed working class —that is already evident to all who think and thinking can anticipate the future!

Whether capitalism rises to greater heights or sinks into decay, working class solidarity is necessarily the one unavoidable feature of social evolution and social evolution is more of a necessity to the race than is capitalism, whether most highly or most poorly developed. Increased population and the danger of overpopulation will eventually require an industrialism and culture that is both collective and co-operative not only in operation, but also in ownership and control. Economic necessity, economic determinism, makes the latter one of the probable outcomes of the future.

And so does the changing viewpoint of the working class itself. Conditions, pre- and post-war conditions, have caused the working class to become more economic than political; and more technological than sociological. They scent the fact that economics and technology are more basic and important than are politics and sociology and that with their mastery through industrial union organization the mastery of all else is not only possible but certain.

Apparently, class-consciousness was never at a lower ebb than at present. But what is really the fact, is its high percentage amid such adverse conditions. The fair-weather revolutionists have deserted the revolution. So have the parlor and the political varieties. But the proponents of economic change grow and carry on despite all hell itself. And that is some reason for encouragement, also.

### Capitalism on Defensive

But the best reasons of all are to be found in the defensive tactics of capitalism itself. Everywhere capitalism bristles with militarism and force. Everywhere it crushes and intimidates; and lives in the very fear that itself creates! It was different only a quarter century ago. Then the proletarian revolution was considered as merely an academic theory, to be treated with disdain and laughed out of existence. Now it must be grappled with and **murdered** out of existence; i. e., got rid of by **every** and **any practical means** possible. Bribes, spies, jobs, fascism,—anything that will preserve and perpetuate capitalism is now resorted to!

However, that cannot go on forever. Labor notices the difference, and is encouraged by it. Capitalism now laughs on the other side of its face; and, in another quarter century it will not be laughing at all, but begging for its very existence. Times move and so does social development.

# Words of Cheer for the Pioneer

WRITING from Oklahoma City, Okla., Covington Hall says, "At Newllano, the Pioneer came in just before I left, but I did not have time to read it. It sounds strange, but one can't lay down an IWW paper there without someone grabbing it and carrying it off. Many complaints were made because the Wob papers were always carried out of the library. **This is a compliment to you all, I think.**"

***

Frank Jarvis pens these lines from Yakima, Washington: "As a member of the rank and file of the IWW, I would like to say a few words about our magazine. **If the January number could have been improved on, I cannot see how or where.**

"I intended when writing you about it to pick out some one article which seemed especially good. But, after reading from cover to cover, I saw it was not for me to judge, as every article is certainly 100 per cent.

**"What struck me most forcibly on opening the January number, and sure appealed to me, was the size, type and red headline of The Preamble. It has always seemed to me that the Preamble should always be in the most conspicuous place in all of our publications."**

***

Jim Manly, Missoula, Mont., mails in these words: "To my way of thinking, The Pioneer is getting better and better every issue. Keep it up!

**"In the January issue, 'What Might Have Been," by James Lance, is a hum-dinger. Let's have more stories like it; and it won't take so long to get what we, the working class, produce."**

***

Even from Liverpool, England, come these words of good cheer, sent by Joe Kennedy:—

"The Industrial Pioneer is well received here, the only difficulty being that it is a little expensive for the workers here, as their wages are all gone down to the starvation point.

**"But the fellows who get them tell me that they would do without a meal to get The Pioneer."**

***

Archie Sinclair writes from 'Frisco, "the golden gate," in "the golden state":—

"I want to tell you how much I think of The Pioneer. It's just fine! It is the only labor magazine on the market.

**"Until the people out here got accustomed to it we had some trouble selling it, but now the only trouble is in keeping supplied. Keep up the good work. While The Pioneer maintains the present standard it will be sold."**

***

Edward Lloyd writes the following letter from Cleveland, Ohio:—

**"Having a few minutes to myself, I thought I would drop a line and let you know that I am sending to the main office of Industrial Union No 440 for an increase of my order for The Pioneer.**

OAKLAND, CAL., PIONEER NEWSBOY

"I have been receiving twenty-five, but we will go one hundred per cent better and take fifty. I hope that by the end of next month we will go another one hundred per cent.

**"Everyone I have sold a paper to is very pleased with The Pioneer, and I was glad to see that a newspaper distributing agency is handling it in Chi.**

"I have a bunch of fellow workers here who go into all the news stores and ask for it, and they are beginning to wonder what it is. I think after a few more doses they will be ordering some of them. A non-member I sent a sample copy to in Midland, Pa., sent in a subscription.

**"Yesterday I received a letter from him asking me to send him an application blank for membership. He is a mechanical engineer and altbough I sent him a strong letter on Industrial Unionism, I am convinced that The Pioneer was the main factor in making him decide in favor of an application."**

## SELL A BUNDLE

The thing that gives the Saturday Evening Post its big circulation is its army of newsboys all over the country.

Help us interest the boys to sell The Industrial Pioneer. Get a bundle for some one of them to sell, and pay for it, until he gets going.

Or better still, tell them to write direct to The Pioneer. Bundles of five or more, 15 cents, returnable; 12 cents non-returnable.

# The White Collar Worker

By ARTHUR C. WARD

HARD may seem, and hard may be, the life of the migratory and "common worker," but compare him with his fellow slave of the white collar and it will strike the observer that there is another class whose efforts to keep the traditional wolf from the threshold are as great as those of his fellow workers in overalls. In California—"golden state," "the beautiful," land of injunctions, syndicalism laws, and penitentiaries; the haunts of virtuous movie stars, Better America Federations, just judges of the Busick type and these shining monuments of veracity and honor, Coutts, Dymond, and Townsend,—especially, the white collar workers are so thoroughly guarded against any possible intrusion of working class ideals that the labor movement as a whole is utterly lost to them, rendering them helpless to combat the almost intolerable conditions: unpaid overtime, and wages insufficient and inconsistent with the training and experience required of them.

The means of keeping this class free from the consciousness of its relation to all labor, from higher wages and better conditions? They are many and shrewdly applied. To get a clerical job one must answer advertisements, interview innumerable employers or pay a placement bureau from fifteen to thirty per cent of the first month's salary.

### What's Required

An advertisement usually requires that the applicant be ambitious, unafraid of work and must live home with parents. He or she must be ambitious (to prefer legendary "chances for advancement" to living wages), "unafraid of work," to take "an interest in the business" (at such wages); and to "live at home" because the applicant can then be dependent upon relations instead of the employers' insufficient wage.

If the job seeker chooses the interview he must submit to a searching verbal quizzing by the employer who conducts the examination not unlike a prosecuting attorney seeking to uncover some dark spot in the character or past of a defendant. The applicant is asked from what state he comes, what his religion is, what organizations (if any) he is a member of and what salary will "interest" him. If his figure is too high his name and address is placed "on file." If accepted he must fill out an application accounting for his time and employments for the previous five years, must be examined by a company doctor and pay him a fee, be instructed in his routine and be enrolled in the "employees' association."

The employees' association is a supposedly beneficial association which all large firms force their employees to join. It is supposed to give sick and death benefits, to arbitrate wage agreements and to carry on social meetings. However, when an employee becomes a claimant for benefits the issue is dodged and if possible ignored altogether. Sometimes the association, instead of paying death benefits conducts a collection as is the general rule in the Western Union Employees' Association. The "association" usually puts out an official organ which stresses "efficiency," "chances for advancement," and "are you worth the money your employer invests in you?" Besides these propaganda clubs supported by the workers under the direction of the boss and for the boss there is a bulletin posted in nearly every office of any size. These bulletins carry the same version the employees' association papers do. These bulletins are illustrated to impress the worker with the duty to the employer and usually carry mottoes like: "Have a kind thought for the man above you, a good action is better than a good word." Another bulletin with an illustration of a worker chasing brightly colored bubbles labeled "the new job" is intended to impress the slave with the futility of seeking better conditions by a change of jobs.

### Big Ability; Small Pay

The stenographer—that person who is supposed to be the very symbol of efficiency and speed—receives salaries so out of proportion to the amount of training, experience and ability that it is amazing how the number of girls and young men who are enticed into taking the stenographic courses is so large. A stenographer must have completed a two-year term in a secretarial or business school in addition to a regular high school education. On leaving business college the stenographer must start at from seveny-five to ninety dollars per month. A stenographer seldom gets more than $135.00 per month no matter how extensive his or her training or experience may be. When the costs of city living, carfare and ferries to and from the office, clothes, laundry bills and rents are taken into consideration it will be seen that the white collar slave of the city ekes out an existence probably as mean and more monotonous than the migratory worker of the camps.

Alas for the white collar man, his thoughts are planned even as his bosses plan and proscribe his work and very movements! His class will be the last, no doubt, to choose organization to misery because of the mental drugging they undergo each day.

---

The Industrial Pioneer acknowledges receipt of two dollars, one from Covington Hall for the Lumber Workers' strike and the other from C. Q. Nelson for "the most needy fund." Both have been forwarded to Box 761, Cranbrook, B. C., Canada.

## BE A BOOSTER

Are you a subscription getter for Industrial Pioneer? Our subscription list is steadily growing.

Among our best subscription getters are the readers of the Hungarian IWW organ, **Bermunkas** (Wage Worker). They send in several batches every week. **Bermunkas** boosts The Pioneer in every one of its weekly issues.

Are you a Pioneer booster, too?

# Oil and the Germs of War

REVIEW BY GEO. WILLIAMS

THE world is swamped with books and pamphlets on every conceivable economic subject, and economics being a difficult study there are consequently many books of this trend that are trash. Besides, many writers with a real message on economics seem unable to serve what they have to say in an easy, digestible style, with the result that only a few are able to assimilate its contents. And even such books, it seems, require that the reader have more than common knowledge to understand them. Such books are wasted on the masses of people who have not the patience nor the intelligence to wade thru the statistics and professional phraseology that typifies this class of economic treatises.

However, there has appeared in circulation recently, a pamphlet by Scott Nearing, entitled "Oil And The Germs Of War." This pamphlet, as its name implies, deals with the dominating position that oil has acquired in international politics. It is presented simply and in such a comprehensible style that it is, as such, a distinct contrast to works of a similar nature. Nearing's pamphlet has the double value of telling you something and (by some unstandardized method) of keeping the facts in your mind ready to quote at any time. This is an achievement with any book and stamps it as worth reading.

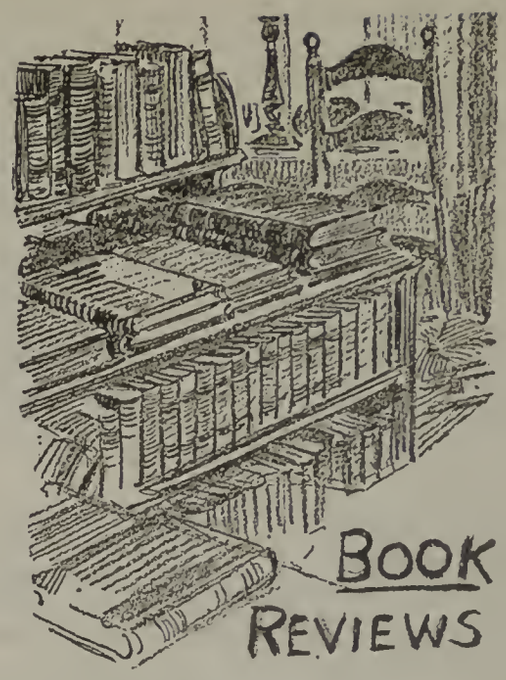
### The Magic Fluid

The economic interpretators of history having recorded gold, iron and other metals as germs of past wars are now learning that the magical fluid —Oil—rates as the first economic consideration in the manuevers of international capitalism.

Now, while oil may not have started the last world's slaughterfest, we are convinced entirely by Nearing's pamphlet that oil did end it, or, in other words, the lack of oil within the German lines and the ability of the Allies to get it in sufficient quantities, decided the victory.

But in the meantime, our friend oil, ending one war starts several more, and then yet more, until one is convinced that oil really did not stop the big fight but merely segregated it into many smaller wars, having in mind perhaps, to bring the contestants together again in one grand splurge of blood. When that transpires (which is as sure as death), what with former friends and allies(?) hacking at each others' throats and sending out their poison gas squadrons to pollute the atmosphere, perhaps then, some other force will have manifested itself; maybe an internationally industrially organized working class. But at present it **is OIL** and the ownership thereof that holds the reins of destiny in international politics.

We have known that agents of the large oil trusts have attended every so-called Peace Conference, and that the main (suppressed) topic was **oil.**



Only political platitudes reached the people and diverted their minds into a less inquisitive mood.

The dickerings of the various countries with Russia arose chiefly from oil considerations, France, the implacable enemy of the present Russian government has had injury added to rage by the clever soviet financiers who liquidated the old Russian debt to France by purchasing the Czarist bonds as ridiculously low prices. Yet France with all her animosity deals with Russia about a mysterious something. That something is **Oil.** And what of the latest scandal in American politics—**Oil again.**

The importance of oil comes, of course, because of its application to power machinery of various sorts: airplanes, automobiles, motor trucks, warships, submarines, are mostly all motivated by oil products. Thus the nation without oil is totally handicapped in the necessary implements of war; while nations controlling the supply of oil will dominate in international politics.

### Common Sense

That is common sense, and Nearing, to repeat again, tells it so that common folks can read and understand. And when common folks, or the working class, grasp the significance of these things, it will be only a short logical step to reason thus: If war and peace lie in the hands of those in control of oil, then we the workers who produce oil WILL organize and control the output of oil and the purposes to which it is put. In that way we can surely abolish all wars.

**(Oil and The Germs of War, Scott Nearing. Nellie Seeds Nearing, Ridgewood, New Jersey).**

# The Crane Doctor Who's an Ostrich

BY PETER FORBES
